This day, with Portrait. 2 vols. 8vo., 26s.

LIFE OF GENERAL SIR ROBERT WILSON.

From Autobiographical Memoirs, Journals, Narratives, Correspondence, &c. Containing an account of his Birth, Parentage, Early Life, Entrance into Army, Various Campaigns, Diplomatic Services, &c., down to the Peace of Tilsit. Edited by his nephew and Son-in-Law, Rev. HERBERT RANDOLPH, M.A.

Also, by the Same Editor,

SIR ROBERT WILSON'S PRIVATE DIARY of Travels, Personal Services, and Public Events, during Missions and Employment with the European Armies in the Campaigns of 1812-14, from the Invasion of Russia to the Capture of Paris. Map. 2 vols. 8vo., 26s.

SIR ROBERT WILSON'S RUSSIAN JOURNAL: Narrative of Events during the Invasion of Russia by Napoleon Bonaparte, and the Retreat of the French Army, 1812. Second Edition. Plans. 8vo., 15s.

JOHN MURRAY, Albemarle-street.

JAPAN AND CHINA.

The following New Work is just ready,

YEDO AND PEKIN: Narrative of a Journey to the Capitals of Japan and China. With Notices of the Natural Productions, Agriculture, Horticulture, and Trade of those Countries, and other Things met with by the Way. By ROBERT FORTUNE. With Illustrations. 8vo.

Also now ready,

THE RISE AND PROGRESS OF THE TAEPING REBELLION; from Documents and Information collected in China. By Commander BRINE, R.N. With Maps and Plans. Post 8vo., 10s. 6d.

FIVE MONTHS ON THE YANGTSZE; with a Narrative of the Exploration of its Upper Waters. By Captain BLAKISTON, R.N. With Map and Illustrations. 8vo., 18s.

JOHN MURRAY, Albemarle-street.

RAWLINSON'S ANCIENT MONARCHIES.

Now Ready, with Maps and 230 Illustrations (To be completed in 3 Vols.), Vol. I. 8vo., 16s.

THE FIVE GREAT MONARCHIES OF THE ANCIENT WORLD; or, the History, Geography, and Antiquities of Assyria, Babylonia, Chaldæa, Media, and Persia. By PROFESSOR RAWLINSON.

JOHN MURRAY, Albemarle Street.

NEW VOLUME OF FERGUSSON'S HISTORY OF ARCHITECTURE.

Now Ready, with 312 Illustrations, 8vo., 31s. 6d.

A HISTORY OF THE MODERN STYLES OF ARCHITECTURE. Being the Completion of the "Handbook of Architecture of all Ages and all Countries." By JAMES FERGUSSON, Fellow of the Royal Institution of British Architects.

JOHN MURRAY, Albemarle Street.

FARRAR'S BAMPTON LECTURES, 1862.

Now Ready, One Volume (744 pp.), 8vo., 16s.

A CRITICAL HISTORY OF FREE THOUGHT IN REFERENCE TO THE CHRISTIAN RELIGION; being the Bampton Lectures for 1862. By Rev. ADAM STORRY FARRAR, M.A., Michel Fellow of Queen's College, Oxford.

JOHN MURRAY, Albemarle Street.

UNIFORM WITH "IN MEMORIAM."

Now ready, with Portrait, fcap, 8vo., 7s. 6d.

REMAINS IN VERSE AND PROSE OF ARTHUR HENRY HALLAM. With Preface and Memoir.

"Arthur Henry Hallam had the happiness to possess the friendship of one then as young as himself, whose name has risen to the highest place among our living poets. What this distinguished person felt for one so early torn from him has been displayed in those beautiful poems entitled 'In Memoriam,' which both here and in America have been read with admiration and delight."—*Advertisement.*

JOHN MURRAY, Albemarle Street.

NEW VOLUME OF LECTURES BY PROFESSOR STANLEY.

Now ready, with Plans, 8vo., 16s.

LECTURES ON THE HISTORY OF THE JEWISH CHURCH: Abraham to Samuel. By the Rev. A. P. STANLEY, D.D., Regius Professor of Ecclesiastical History at Oxford, and Canon of Christ Church.

JOHN MURRAY, Albemarle Street.

MAYNE'S VANCOUVER ISLAND.

Now ready, with Map and 20 Illustrations, 8vo., 16s.

FOUR YEARS IN BRITISH COLUMBIA AND VANCOUVER ISLAND: Their Forests, Rivers, Coasts, and Gold-fields, and Resources for Colonization. By Commander MAYNE, R.N.

JOHN MURRAY, Albemarle Street.

Now ready, 10th Thousand, with Portrait, 8vo., 10s. 6d.,

H.R.H.

THE PRINCE CONSORT'S PRINCIPAL SPEECHES AND ADDRESSES; with an Introduction giving some Outlines of his Character.

FROM THE INTRODUCTION.

"It must be obvious to the reader of this Introduction that the writer has received the most valuable and important aid from those who, by their constant intercourse with the Prince Consort, could best appreciate the high qualities in him which shone forth in domestic life—from persons in the Royal Household, who saw him daily—from Members of the Royal Family—and especially from the Queen Herself. To Her Majesty the writer is indebted for a view of the Prince's character, in which a loving and profound appreciation is combined with the most earnest desire for exact truth and faithfulness. There is not any one who could have been cognizant of all the various traits of the Prince enumerated in this Introduction, unless he had been instructed by Her, who alone saw, with the full light of a complete affection, into the whole beauty and merit of the character of this remarkable man."

JOHN MURRAY, Albemarle-street.

NEW WORKS.

I.

HISTORY OF SAVONAROLA AND HIS TIMES. By PASQUALE VILLARI. Translated with the Author's co-operation by LEONARD HORNER, F.R.S. 2 vols., post 8vo., price 18s.

II.

HISTORY OF THE REFORMATION IN EUROPE IN THE TIME OF CALVIN. By J. H. MERLE D'AUBIGNÉ, D.D. Vols. I. and II. 8vo. [*Just ready.*

III.

THE CAPITAL OF THE TYCOON. By Sir RUTHERFORD ALCOCK, K.C.B., Her Majesty's Minister Plenipotentiary in Japan. 2 vols., 8vo., with Maps and above 100 Illustrations. Price 42s. [*On Wednesday next.*

IV.

BIOGRAPHICAL SKETCHES; viz., Sketches connected with the French Revolutions, Legal Sketches, and Miscellaneous Sketches. By NASSAU W. SENIOR. Post 8vo., price 10s. 6d.

V.

THE PENTATEUCH AND BOOK OF JOSHUA CRITICALLY EXAMINED. By the Right Rev. J. W. COLENSO, D.D., Bishop of Natal. PART II. The Age and Authorship of the Pentateuch considered. 8vo., price 7s. 6d.

VI.

CHRISTIANITY AND ITS EVIDENCES. An Essay, with an Epistle of Dedication to his former Congregation. By JOHN MACNAUGHT, M.A. Fcap. 8vo., 3s.

VII.

H.R.H.

THE PRINCE CONSORT'S FARMS; an Agricultural Memoir. By JOHN CHALMERS MORTON. Dedicated, by permission, to Her Majesty the QUEEN. With 40 Illustrations on Wood. 4to., 52s. 6d.

VIII.

THE LIFE OF BISHOP WARBURTON, with Remarks on his Works. By the Rev. J. S. WATSON, M.A. 8vo., with Portrait, 18s.

IX.

THE STORY OF A SIBERIAN EXILE. By M. RUFIN PIETROWSKI. Followed by a Narrative of Recent Events in Poland. Translated from the French. Post 8vo., price 7s. 6d.

X.

OUTLINE OF THE NECESSARY LAWS OF THOUGHT: a Treatise on Pure and Applied Logic. By the LORD ARCHBISHOP OF YORK. Fifth Edition. Fcap. 8vo., 5s. 6d.

XI.

PSYCHOLOGICAL INQUIRIES. Part I. Essays on the Mutual Relations of the Physical Organization and the Mental Faculties. By Sir B. C. BRODIE, Bart. Fourth Edition. Fcap. 8vo., 5s.

XII.

LECTURES ON THE SCIENCE OF LANGUAGE, delivered at the Royal Institution of Great Britain. By MAX MULLER, M.A. Third Edition. 8vo., 12s.

XIII.

THESAURUS OF ENGLISH WORDS AND PHRASES, classified and arranged to Facilitate the Expression of Ideas and Assist in Literary Composition. By P. M. ROGET, M.D. F.R.S. Twelfth Edition. Crown 8vo., 10s. 6d.

XIV.

CRITICAL AND HISTORICAL ESSAYS contributed to the *Edinburgh Review*. By the Right Hon. LORD MACAULAY. Library Edition (the Tenth). 3 vols., 8vo., 36s.

XV.

WORKS of the Rev. SYDNEY SMITH, including his Contributions to the *Edinburgh Review*. People's Edition, complete in 2 vols. Crown 8vo., price 8s.

XVI.

ESSAYS IN ECCLESIASTICAL BIOGRAPHY. By the Right Hon. Sir JAMES STEPHEN, K.C.B. Fourth Edition. Complete in 1 vol., 8vo., price 14s.

XVII.

LETTERS FROM ITALY AND SWITZERLAND. By FELIX MENDELSSOHN BARTHOLDY. Translated from the German by LADY WALLACE. Second Edition. Post 8vo., 9s. 6d.

XVIII.

SKETCHES ON THE NATURAL HISTORY OF CEYLON. By Sir J. EMERSON TENNENT, K.C.S., LL.D., &c. With 82 Wood Engravings. Post 8vo., 12s. 6d.

XIX.

ON FOOD AND ITS DIGESTION: being an Introduction to Dietetics. By W. BRINTON, M.D. With 49 Woodcuts. Post 8vo., 12s.

XX.

DICTIONARY OF GEOGRAPHY, forming a complete *General Gazetteer of the World*. By ALEXANDER KEITH JOHNSTON, F.R.S.E. Second Edition, revised. 8vo., 30s.

London: **LONGMAN, GREEN, & Co.,**

LONDON: Printed by CHARLES WYMAN, at the Printing Office of Cox & Wyman, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the County of Middlesex; and published, for the Proprietors, by JOHN KELLETT SHARPE, at No. 11, Southampton-street, Strand, in the same County.—SATURDAY, FEBRUARY 7, 1863.

THE COUNTRY'S MINISTERIAL NEEDS.

THE political requirements of the country change faster than its political ideas. The tactics and traditions of party long survive the circumstances which gave them their origin and meaning. Parliamentary combatants range themselves, session after session, in the same battle array as they used to do in their youth, use pretty much the same watchwords, and fight as far as they can under the same banners and in the name of the same principles, though the contest has long been over and the victory has long ago been won; though the watchwords have degenerated into dreary commonplaces, and the principles have been irrevocably settled. This necessarily introduces a certain mischievous element of insincerity into all the struggles and strategy of St. Stephen's, gives to party a nasty taste of faction, and too often replaces combats by intrigues.

But this is not all. The country at large has as little realized the change which has come over the spirit of its dream, as the Senators whom it sends up to represent it. Men still seem to fancy that there are grand political doctrines to be contended for, grand patriotic objects, as to which statesmen are divided, grand legislative achievements still needed, which have to be fought for as well as to be wrought out. Consequently, in their elections they strive to choose candidates who think as they do,—or rather who belong to the set or party that used to think as they do,—forgetting that now nearly all those who think at all, think very much alike. Conservatives choose a Tory—or one who has the reputation of deserving that time-honoured but somewhat vague appellation—in assumed or real ignorance of the fact that now-a-days the Whigs are just as conservative as the Tories, and that free trade, a free press, retrenchment and reform, are as much a part of the Tory creed, or the Tory profession, as of that of their antagonists. But there is more even than this to be admitted and recorded, before we can be conscious of our actual position and our true requirements. On nearly all questions of home or foreign policy,—on all questions that are not merely matter of administration, of means, and of moments,—the mass of the people not only think very unanimously, but they think pretty clearly and decidedly; and such is their despotic authority when they do so, that whatever Ministry is in power must, even in its own despite, give effect to and virtually adopt the policy of the country. The practical points for electors to determine, therefore, are really narrowed to these two—whether they will have their purposes carried out by men who share them, or by men who only accept them—by conscientious servants, or by zealous associates; and whether they will confide them to skilful men, either party friends or party foes, or to party friends, either skilful or the contrary. Statesmen and Ministers, whether Conservative or Liberal, have to consider not so much what policy they will carry out, as by what means, at what rate, and in what spirit, cordial or lukewarm, they will carry it out. Thus, whatever Government was in power would equally find itself compelled, and would probably be nearly equally disposed, to maintain the defensive strength of the country, and perhaps to complete its system of fortifications, though Lord Palmerston would do so *con amore*, and his successor with less zeal and fervour. Every Chancellor of the Exchequer would be under an equal pressure to unfetter trade and reduce taxation, though Mr. Gladstone might do it restlessly and boldly, Mr. Disraeli ingeniously, dodgily, and "*catchpennily*," and Sir Cornewall Lewis cautiously and quietly. Any Foreign Secretary, whatever his private predilections, would be equally under the necessity of upholding the Italian cause with energy and spirit; but Lord Derby and Lord Malmesbury would do it in one fashion, and Lord Palmerston and Earl Russell in another.

There is, however, an exception to be noted to the general unanimity of the country. There are three small sections of politicians who have their own special notions and do not share the common sentiment of the British people. There is the Irish Brigade, who, caring little about general principles of any sort, are bent upon Galway jobs because they are Irishmen, and are hostile to Italian unity because they are Papists. There are the thoughtful, generous, and cultivated Radicals, represented by Mr. Forster and Mr. Stansfield, who are inclined to economy and to democracy; but who would not purchase the first by any derogation from the national honour or the European influence of England, nor assist the second to place the intellect under the feet of the ignorance of the people. Lastly, there are Mr. Bright and Mr. Cobden, personally powerful, without influence at present on public affairs, because they have chosen to sever themselves from all sympathy with the sound heart of the nation, but who may at any moment become once more controllers of the destinies of their country, whenever they accidentally fall into harmony with the popular feeling of the hour, or whenever their fits and the people's fits of parsimony may chance to synchronise. The numerical strength of these three sections would not be in itself formidable even when united, and union between them would appear to be a thing almost impossible; but in the present nearly balanced numbers of the two great parties, who alone are the real competitors for office, the support of any one of these sections might, on a critical night, decide the victory, and the temptations to purchase that support by unworthy and dangerous compliances may, therefore, be overpowering.

Now, such being the state of affairs, what sort of Ministers

Digitized by Google

does the nation want, and what qualities would it be wise to look for in those to whom it entrusts the management of its concerns—the right to do its work, to wield its strength, to speak in its name? Clearly, it wants hearty, capable, and honest men—whatever their shade of opinion, whatever the *nuance* of their party connections. To meet this threefold need there can be no doubt that, as a whole, the present Government is far better adapted than any that can succeed it; and therefore, notwithstanding local losses and casual indignation, we think Lord Palmerston will remain in power, and we are certain that he ought. He is undeniably hearty in that cause in which at this moment England is more interested than any other—the cause of Italy; and his Foreign Secretary is yet more earnest and single-minded than himself. If Lord Malmesbury and Mr. Disraeli came into power to-morrow, they would abide by old engagements, they would proclaim the old policy, they would write despatches speaking apparently the same language as their predecessors; but the spirit would be different; the *tone*, therefore, could scarcely be identical; and, at all events, we know well that the mere advent to power of statesmen who, though they expressed the national wishes, did not share the national sentiment, would give secret strength and courage to the enemies of Italy, would encourage the reactionary appetencies of Austria, might retard for long the evacuation of Rome, and by deluding one set of men and disheartening others, might even lead to the renewal of hostilities, which a little longer continuance of a firm and cordial friendship in the high places of England would soon have made impossible or hopeless.

As to ability, there can be no comparison instituted between the actual holders of office and the expectants. Experience, as well as talent, is all on the side of the *Ins*. We are no thorough-going supporters of the Government *en masse*, as our readers well know. Against the Home Office and the India House we have often been forced to bear testimony—to cry aloud and spare not. With the exceptions of Lord Derby and his son, there is no commanding ability of any sort in the Conservative ranks; and, eloquent and sensible and wonderfully clever as he is, administrative skill is not Lord Derby's *forte*. There is no one among the Opposition statesmen who, for sound, cool, critical judgment, capacity for work, unimpressible and imperturbable sobriety of mind, can be named along with Sir G. C. Lewis; nor can any one look without dismay on the possible substitution of Mr. Disraeli for Mr. Gladstone at the head of the finances of the country. The one keeps the commercial world sometimes in a mischievous and irritating fever of expectation and suspense; but the appointment of the other would be the signal for indefinite and dangerous alarm. Mr. Gladstone has too active and restless a mind to be a perfect Chancellor of the Exchequer; but his integrity and genius are above all question; and no one feels any confidence either that Mr. Disraeli would see what was wise, or that some political stratagem or fancied party gain would not divert him from doing it when seen. And no one who considers how many hundred actions and decisions a Minister must inaugurate in the privacy of his office, for one which comes before the public or is made the subject of parliamentary discussion, will be disinclined to place administrative capacity and judgment in the very foremost rank of Ministerial qualifications.

As to honesty,—of course all British statesmen are honest in one sense. But the honesty which we refer to now as of special obligation and importance, is that political integrity of purpose and of resolution which withholds a Minister from purchasing the aid or alliance of "free lances" or floating sections of the Parliamentary world, on occasions of critical conflict, by concessions which he knows to be dangerous, or measures which his conscience disapproves. The necessity of compromise in a Government by party, such as ours, and, indeed, in all free states, we fully admit; but there are compromises of which the benefit is momentary and the evil enduring and irrecoverable. And when parties are evenly balanced, the least want of political honesty in either may virtually hand over the direction of the policy of the country, and sometimes even the decision of its destiny, to a small knot of men who love their country far less than their crotchets, and whose sight is even feebler than their love. We have already incurred this danger and this suffering more than once. Now, few can contemplate the relative position of the Government and the Conservative party without seeing which party will lie under the greatest temptation to yield to the unworthy barter we are describing. And no man who remembers the character of the leaders of that party and their antecedent acts, will doubt on which side of the House that sort of temptation will be most readily succumbed to.

THE PRUSSIAN DEAD-LOCK.

"NON POSSUMUS" is clearly the order of the day on the Continent. The note of defiance which has been bandied to and fro between Rome and Turin, to the discomfiture of the French Emperor and M. Drouyn de Lhuys, is now caught up and re-echoed at Berlin. "Non possumus!" shouts the King of Prussia, clutching probably at a hazy notion that, by virtue of Divine right, he shares the infallibility of the Vicar of Christ; and a very resolute "non possumus" comes back to him from the Lower Chamber of his Parliament. There is now, therefore, an absolute dead-lock in the Government of Prussia; and before it can resume its normal and constitutional action, either the King and his Ministry, or the House of Deputies, must abandon their present attitude. But neither side as yet seems disposed to abate one jot or tittle of its claims and pretensions. "It will be the aim of the Government," says the King's latest utterance, "firmly to maintain the position which it has taken up, at the same time remaining open to any approaches which may be made by the Chamber of Deputies, with the view of increasing the greatness of Prussia through her military power." Equally firm and explicit are the declarations of the Deputies. "One or the other side must give way," exclaimed Herr Twesten, amid tremendous applause, "and the Chamber will not yield—no, not though the Constitution itself should fall." The slow, tranquil spirit of the Prussians has at last been thoroughly roused by the stupid obstinacy of the King and the outrageous insolence of his first Minister. Every move in the game now must be momentous in its consequences to the future of Prussia. Things have now gone too far for the Deputies to recede without bringing upon themselves the scorn of foreign nations, and the loss of all true liberty at home. Smooth and easy is the downward path that leads to despotism; and the Prussians know what measure of forbearance M. Bismarck will mete out to them, if they let him remain master of the field.

The struggle between the Crown and the Chamber of Deputies is now just a year old. In the early part of last year, it will be remembered, the Prussian Deputies, having taken a hint from M. Fould's famous report to the Emperor, required a more detailed specification of the charges for which provision was made in the budget; but the Government resisted, and prevailed upon the King to dissolve Parliament. The country returned a House of Representatives more hostile to the Government than the preceding one had been; and in the autumn of last year the Ministerial budget for 1862 was thrown out in the Lower House, as making provision for a large increase of military expenditure which had been incurred without the sanction of the people's representatives. A budget, smaller than the one brought forward by the Government, was accordingly voted, whereupon some of the Ministry resigned, and M. Bismarck became Premier. The budget voted by the Lower House then went to the Upper House, who threw it out on the ground that it was insufficient, and voted the budget originally proposed by the Government. Thereupon the Lower House passed a unanimous resolution declaring that the Upper House had violated the constitution, inasmuch as, not confining itself to adopting or rejecting the budget voted by the Chamber of Deputies after the rejection of the Minister's budget, "it adopted the budget project of the Government, which did not come under its powers at all; that consequently that resolution was null and without value, and the Royal Government could not derive any right therefrom." For this declaration the session was forthwith closed, and the Deputies were dismissed to their homes; but in the course of the session the budget for 1863 had also been brought forward and then withdrawn, when the Government saw that there was no hope of its passing. During the recess, fresh fuel was daily added to the flame. It was the plain interest of the Government to suffer angry passions to cool, but this did not suit the bitter and haughty nature of M. Bismarck. The people were assiduously goaded into a fury by the constant seizures and persecutions of the Liberal press, the King's ludicrous harangues to absolutist deputations, and the lan-

Digitized by Google

guage of insolent defiance hurled at the people by the organs of the Court party. When Parliament, therefore, met again last month, the Deputies were in a very savage mood; but they have fought their battle in the present session with admirable temper, firmness, and discretion.

The address of the Deputies, which the King has been childish enough to have sent to him through the post, combines perfect respect for the King himself with the most sweeping denunciation of his Ministers. The previous session, it says, has closed without the budgets for 1862 and 1863 being passed within the period prescribed by the Constitution; and "since then the Ministers appointed by your Majesty have, in opposition to the Constitution, carried on the administration without a legal budget, and also, disregarding an express declaration of the Chamber, have incurred expenditure which that Chamber had definitely and explicitly refused." To this the King replies that there has been no violation of the Constitution, inasmuch as an occasion has arisen for which the Constitution makes no provision. The Constitution requires, it is true, the assent of the King and *both* Chambers to all loans and budgets; but the Chamber of Deputies has obstinately withheld its assent from the Government budget, and therefore, according to the royal logic, the Government has been compelled to carry on the administration without a legal budget, and it means, of course, "to wield public affairs outside the conditions prescribed by the Constitution," until such time as the representatives of the Prussian people have descended to the degrading level of French Deputies, and have learnt to vote all that is required of them with obsequious alacrity.

Such men, however, as the King of Prussia and M. Bismarck are, after all, not very formidable opponents, for they are quite incapable of masking their designs. Though M. Bismarck is a devout admirer of Louis Napoleon, he has not yet learnt the mere rudiments of the Napoleonic system. The art of saying one thing and meaning another, of disguising despotism under the garb of liberty, and of "strangling a nation in the night-time with a thing called a plébiscite," he does not seem so much as to have heard of. He blurts the whole truth out at once. His theory of the "hiatus" in the Constitution, and the consequent necessity for carrying on the administration without a legal budget, strikes an open blow at the very root of constitutional government—namely, the right of the people's representatives to control the public expenditure. According to this theory, the Ministers can at any time make themselves absolute masters of the public purse by bringing forward an extravagant budget, certain of rejection in the Chamber of Deputies. The broad, simple issue, therefore, of the present struggle amounts to this,—shall constitutional government, as it is understood in England, or virtual absolutism, be established in Prussia? M. Bismarck takes no pains to conceal his contempt for our Constitution. "The English Ministry," he says, "call it what you will, is only the Ministry of Parliament, but we are the Ministers of the King. The House of Hohenzollern is not yet ripe to become a mere ornament of your constitutional edifice, or a mere part of a machine in the mechanism of the parliamentary regimen." But constitutional government in its fullness we will have, reply the Deputies. Where the Ministers and Parliament cannot agree, the constitutional remedy is a dissolution, and the appeal to the country must be final; in other words, the days of right divine have passed away for ever, and the will of the people reigns supreme in its stead. Such, then, are the objects of the present conflict between the Prussian King and his Parliament. The whole gains of previous political developments, as the Deputies remarked in their address, are now called in question. If they are worsted now, they will very soon have despotism back again at their doors; but they are evidently alive to the gravity of the crisis, and give no sign of flinching. Their eyes are steadily fixed on one mark; and there is no mistaking what they mean, when they tell the King that stirring foreign complications is not the way to heal internal discord, and that not until constitutional government has been re-established at home, will Prussia exercise her legitimate influence abroad.

With the King beyond all others lies the responsibility for the present state of affairs. His darling project, the re-organization of the army, was at first supported by the Chamber of Deputies; and if they support it no longer, the King has only to thank his own obstinacy in forcing unpopular Ministries upon them. He refuses to bow his stiff neck to the constitutional principle of choosing Ministers whose opinions are in harmony with the national will. So recently as last autumn Baron Vincke and Herr Twesten, eminent leaders of the Liberal party, gave their support to the Government budget, but now they have been driven into the most determined opposition. All differences in the Liberal party have been effectually healed by M. Bismarck, and it meets him with a compact front. Had the King last year accepted a Liberal Ministry with a good grace, all would have been well now, and he would probably have been allowed to carry out his military reforms without hindrance; but he took M. Bismarck for his chief counsellor, and such an appointment at such a time was an insult and a challenge to the people, which they have not been slow to take up. He listens only to the voice of a clique of the most narrow-minded, bigoted, and insolent aristocracy that cumbers the face of the earth,—men who tell him that his relation to the Constitution is that of Christ to his Apostles, and that his contest with the Chamber of Deputies is the fight of Christ and Antichrist; and thus he has driven his subjects fairly to bay. He has placed himself in a position where Liberal Europe is eagerly looking for his signal defeat and humiliation.

LORD LLANOVER AGAIN.

WE had hoped that we had heard the last of Lord Llanover, and of the discreditable squabbles in which his lordship is eternally engaged with his unlucky subjects in Monmouthshire. We had hoped that the conversation which took place in the House of Commons, in June, 1862, respecting the Herberts of Clytha and their change of name, would have convinced his lordship that the law, as it stands, is dead against his view of the case in question; that, at present, every Englishman has a right to assume and bear any name he pleases, with or without Royal Licence; and that a Royal Licence is but the recognition, in the highest quarter, of an act already accomplished. We do not dispute that this law may be defective and objectionable; that it may be fairly considered desirable that some check and order should be imposed by the Legislature on the indiscriminate and wanton assumption by *roturiers* of noble names; and that Lord Llanover may with justice plead that,—as he has made the name of Hall illustrious by his Radical struggles in Marylebone, and by the various pitched battles, which he has fought with a variety of Welsh insurgents, since he has been raised to the dignity of Lord-Lieutenant of Monmouthshire,—he has acquired a vested and exclusive interest in that name, and is entitled to claim that no inglorious Smith or Brown shall intrude upon it. But then it rests with his lordship to propose and carry through Parliament a new law to this effect; for at present, as we have already said, no such law exists; and Englishmen can only be expected to observe the laws of their country as they are, and not as Lord Llanover is of opinion that they ought to be.

The question between his lordship and the Herberts of Clytha, is a very narrow one. Lord Llanover's own son-in-law, Mr. Herbert (late Jones), of Llanarth, is first-cousin to Mr. Herbert, of Clytha, and himself assumed the surname of Herbert, in 1848, by Royal Licence. The claims of the two families of Llanarth and Clytha to that name, whether valid or invalid, are precisely alike. The only grievance under which Lord Llanover, therefore, suffers is, that in the Clytha case the name of Herbert has been assumed *without* a Royal Licence. This fact appears to be intolerable to his lordship. He considers it as "disrespectful to the Queen;" as "casting scorn upon the sovereign's approval" of the change of name in question; as "unworthy a member of the untitled aristocracy;" as indicative of "ultra-Liberal and democratic tendencies;" as a proof of "pride and vanity, which always tend to rankness."

Recollections of the great days of the Marylebone Vestry may possibly raise a smile on the lips of those who have not forgotten the style of ladder by which a certain Benjamin Hall raised himself to the peerage, and which that worthy has since kicked down. But that *honores mutant mores* is a trite adage, and we will not pain the aristocratic Lord-Lieutenant of Monmouthshire by dilating upon it at present. In order to punish the delinquents of Clytha for their "ultra-Liberal and Democratic" proceedings, Lord Llanover is now straining his official powers of Lord-Lieutenant to the utmost. He has excluded them from the Magisterial bench and the Militia; he has gibbetted them

Digitized by Google

and the ladies of their family in the local press; he has actually condescended to act as *amateur* policeman to the Lord Chamberlain, and has warned that official against his own near connections as impostors likely to intrude improperly into the presence of the Sovereign; and this species of persecution he has continued up to the present moment; having, within the last few weeks, warned the members of the Association for the Preservation of the River Usk, that if they dare to admit Mr. Herbert of Clytha as a member of their body, he, their Chairman, will instantly withdraw his name and support. And all this, simply and solely because the Herberts of Clytha have assumed the name which they bear without the sanction of a Royal Licence.

The contest between the two parties is apparently an unequal one. Mr. Herbert, of Clytha, is a quiet country gentleman, unaccustomed to the "rough and tumble" of political squabbles; distressed at the notoriety thus forced upon him, and in no way able to compete in such a vulgar conflict with the *quondam* "Pet" of the Radicals of Marylebone. He enjoys no access to the backstairs of the Home Office, or to the *boudoirs* of the wives of Cabinet Ministers; nor has he any opportunities of privily earwigging the Lord Chancellor, or of button-holding the Lord Chamberlain. His only advantage is that he has got the law and public opinion on his side; and we venture to predict that with such powerful auxiliaries he will ultimately make good his case.

As an example of the injustice of the persecution to which this Welsh gentleman is being so unworthily subjected, we will adduce a well-known instance of the assumption of a name not only without, but in spite of a Royal Licence, to which no Lord-Lieutenant, Lord Chancellor, or Lord Chamberlain has taken exception. In 1836, Mr. Robert Adam Dundas assumed, by Royal Licence, the surname of Christopher *only*, dropping his original name, such being the condition of a will by which he inherited a large estate. In 1852, Mr. Christopher, who had sat for many years in Parliament under that name, was made a Privy Councillor, and took office in Lord Derby's Government. But in 1855, without obtaining the revocation of the licence granted to him in 1836, or the concession of a fresh licence, Mr. Christopher assumed, *proprio motu*, the additional surnames of Hamilton Nisbet. As Mr. Nisbet, his name appears on the roll of Privy Councillors of that date, and as Mr. Nisbet he voted in Parliament up to 1857. In 1857 Mr. Nisbet once more, without Royal Licence, altered his name, and assumed the final surname of Hamilton, and as the Right Hon. R. A. C. N. Hamilton his name now stands on the roll of the Privy Council and on the list of Magistrates for Lincolnshire.

Now if Mr. R. A. C. N. Hamilton, a Privy Councillor, a Member of Parliament, and a Justice of the Peace, may act thus; why may not Mr. Herbert, of Clytha—nay, why may not poor Mr. Buggy, of Bedford, at a humble distance, follow his example unmolested by the Llanovers of society? It is clear, from this Dundas-Christopher-Nisbet-Hamilton case, that a Royal Licence does not either confer a name, or even imply a Royal command that the individual obtaining it shall be known by any particular name; for, if it did, Mr. Christopher would be Mr. Christopher still, and would not be—as he is—either Mr. Nisbet or Mr. Hamilton, or both. It is clear from it that a change of name, *proprio motu*, does not necessarily exclude a man from the Privy Council or the Magisterial bench, for if it did, neither Mr. Nisbet nor Mr. Hamilton would have enjoyed, as they have done, either of those dignities; and it is equally clear from it that every Englishman has a right to adopt whatever name is most convenient to him, and that he ought not to be subjected to official persecution for having exercised what is and will unquestionably continue to be his legal right, until "the Llanover Act" to the contrary has been brought in and passed through both Houses of Parliament.

We will, in conclusion, say a few words on behalf of a more humble class of persons, who are also deeply concerned in the question which Lord Llanover has so unnecessarily and offensively raised—we mean the class to which Mr. Buggy, of Bedford, belongs,—obscure men whom accident or malice has invested with ridiculous or indecent surnames, who find those surnames distressing and detrimental to them in their progress through life, and who, therefore, seek to avoid them. Mr. Buggy, to judge from his letter to the *Times*, is actuated by no ambitious or aggressive motives; he claims no affinity to the ancient and noble family of Stanhope, as, without any great stretch of imagination, he might do. He modestly asks to be allowed to escape from his present designation and to take refuge in his mother's maiden name, Newman. But as he holds a public situation, it is clear that he cannot do this, without running the risk of considerable annoyance should he have the ill-fortune to meet with a Bedfordshire Llanover, who would, of course, amiably improve the opportunity of holding up—under the pretence of discharging an important public duty—the humble-minded Mr. Buggy to the derision and execration of his fellow men as a social delinquent of the deepest dye. It appears to us to be a serious evil that any uncertainty should exist, as to what relief a man may legally claim when circumstanced as Mr. Buggy states himself to be, and a still more serious evil that high public officials should condescend—as we fear the Home Secretary and the Lord Chancellor have done in the Clytha case—to connive at the persecution by their subordinates of individuals exercising their indisputable legal rights.

It is a favourite argument with neo-aristocrats of the Llanover class, that men seeking to change their surnames must be invariably impostors, unworthy of all consideration. To this it may be replied, that many members of the House of Lords have not disdained to resort to such a measure; and that whenever any of their lordships' daughters marry men bearing unpleasant or indecent names, the happy bridegrooms are speedily Normanized, by Royal Licences, into De Mowbrays, De Horsays, De Frevilles, De Burghs, and the like. One instance occurs to us of a change of name effected worthily, for an obvious and reasonable purpose, by one of the foremost Englishmen of the present day, which is so germane to Mr. Buggy's dilemma, that with a sketch of the circumstances under which it was effected we shall conclude our article.

About forty years ago a young Etonian of extraordinary promise used to be grievously persecuted by the idlers and the ribalds of the school, who had invented an obvious and abominably obscene paraphrase of his surname. The boy grew up to man's estate, and more than fulfilled the promise of his youth. Entering Parliament, and speedily acquiring in that assembly influence and consideration, one of his first acts was to obtain for himself and all his family a Royal Licence to drop a single letter in his name, by which slight alteration the atrocious jest under which he had so often blushed when an innocent child was deprived of its sting.

We have not mentioned the name of the distinguished statesman to whom we allude, because we do not, in the discharge of our public duties, take that odious delight in inflicting pain upon individuals which appears to characterize Lord Llanover's public proceedings in Wales. That this story is true may be easily ascertained by anybody who chooses to inquire; and we conceive that the public has a right to know, if an embryo Cabinet Minister may act thus, why, *pace* Lord Llanover and his allies at the Heralds' Office, Mr. Alfred Buggy, of Bedford, actuated by precisely the same motives, may not go and do likewise without being exposed to the *peine forte et dure* of his Lordship's displeasure?

THE FRENCH ASSEMBLY.

THE discussions in the French Senate close—as they usually close—with the triumph of the Emperor's Government. "Rien n'est plus docile au fond," says M. About, "que les Assemblées." M. Ollivier and M. Jules Favre spoke in vain; for they spoke to a body of listeners who worship the powers that be with almost Oriental unanimity. The entire Corps Legislatif seldom bow the knee to any but one idol, and arguments, sarcasm, arithmetic, were thrown away upon them. The more M. Ollivier demanded an increase of liberty, the more they applauded the resolute Minister who, upon this occasion, unhesitatingly maintained that liberty was an apple from a forbidden tree. M. Jules Favre proved conclusively the nature of French intervention in Mexico; but he had to sit down silenced by the uproar which his words provoked. M. Baroche and M. Billault had easy tasks. They rose after the Opposition orators, as the sun arises after a storm. Never were the mouthpieces of the Emperor's closet more grand, more successful, or more impressive. They did not stay to deal with figures, but soared at once to generalities. During their respective speeches they seldom sank below

Digitized by Google

the destinies of France, her mission, and her sensitiveness where the honour of her flag is concerned. It was not to be wondered at, if they carried the Assembly with them.

There can be no question that the French Empire and constitutional liberty are hardly compatible. M. Baroche can scarcely be blamed as imprudent for seeming to admit a truth so incontrovertible. The French Emperor himself, who repeatedly promises that France some day shall be free, never has gone so far as to maintain with that voice of impassible irony to which Europe is accustomed, that France actually is free at present. The recent debate in every single point affords conclusive evidence that the French Cabinet are not restrained by any decent modesty from telling their countrymen that Frenchmen, as a nation, are unfit to be left to themselves. It is scarcely more than a fortnight since M. de la Guerronnière informed Paris, through the medium of his journal, that Government interference in the elections was a constitutional measure, and much to be desired. The French Minister in the discussion on the address has openly and ostentatiously endorsed the insolent falsehood. In the same manner it is now announced that the press will not be allowed to outstep the limits laid down for it by a jealous and tyrannical executive. The question naturally arises, has France no feeling of indignation at hearing the policy of reactionism at home so audaciously put forward by the Tuileries? It seems, in truth, that France cares very little about the matter. The Emperor has managed by an ancient and useful stratagem to make the French utterly indifferent to freedom of election and the liberty of the press. He thinks, with reason, that he may hold the Paris press and the Corps Legislatif in the hollow of his hand, provided he is clever enough to degrade both in the eyes of France. The French Representatives are a body who confine themselves closely to the glorious duty of voting as they are told, and sounding the praises of their sovereign; what does it signify to the French nation how they are elected? The Paris journals—even the most disaffected—are only dissatisfied and discontented echoes of the *Moniteur*. Their fellow-subjects have little interest in what befalls them, and are ready to leave them to their fate. The journalists of France are not France in any sense of the word, but are merely a French coterie, and the gross acts of injustice which they have to suffer daily are lightly regarded by the world at large. The declamations of the lovers of liberty in the Corps Legislatif have produced a singular result. The cords which bind the press have been drawn a little tighter in consequence. In the pride and flush of conscious power, the Government answers all criticism by a home-thrust. An official admonition has been issued to remind all the newspapers of the capital that it is against French law to publish in their columns summaries of the discussion in the House. They may content themselves henceforward with the official *procès verbal*, served out to them under the supervision of the Executive. To this repressive and severe measure they submit with suppressed indignation. How insulting and annoying is the restriction, may be gathered from the fact that M. Emile de Girardin, who, in virtue of his talent, stands first among the Imperial writers of the day, has turned restive, and has determined to brave the terrors of the law. The mass of his fellow-citizens are not interested in the contest. They know that they cannot have the Empire and liberty at once, and for the present they have chosen the Empire. They accept its disadvantages, for the sake of what they imagine to be its benefits.

When, therefore, in replying to the figures of M. Jules Favre, and the sarcasm of the other Opposition speeches, the Minister contented himself with a burst of eloquence about the mission of France, he was neither illogical nor inconsequent. We are not free, say the Opposition. The Empire is great and glorious, replies the Minister. France complains now and then of the price she has to pay, and it is a natural rejoinder to remind her of what she has bought. It is intelligible enough that the French should at the present day be willing to sacrifice something for an Imperial policy moulded by a strong Imperial arm. It is the natural reaction after the *bourgeois régime* that was blown away in the Revolution of 1848. The nation at large does not view the argument of the Imperial panegyrist as it would be regarded by the sober shrewdness of an English House of Commons. It is true, they say to themselves, that M. Persigny is a little hard upon the journalists, but what is that in comparison with a *régime* which has torn the treaties of 1815, restored to France her prestige and influence in Europe, and added, in a time of profound peace, two provinces to the national territory? The Empire is to be judged as an Empire, not to be criticized as if it belonged to the category of constitutional monarchies.

There is, however, one portion of the Opposition attack which will lay more hold on the French nation than any oratorical invectives against the coercion of the press or the intimidation of the electors. The empire is not a republic, and cannot be expected to have a republic's virtues. But Frenchmen will not fail to ask themselves from time to time, does it possess the grandeur, the nobility, and the influence that imperial France has a right to claim? "I have not," France may say to herself, "the wisdom, the calmness, the cold and clear accents of Pallas. Have I the royal step, the eye, the majesty of Juno?" Two important parts of the Imperial programme have failed, and the failure reflects discredit on the Empire, judged by its own principles. The double fiasco was cleverly pointed out by M. Favre. The French people will read what relates to it with more interest than they vouchsafe to theoretical vindications of the right of the press to abuse the Government. In both cases, the appeal is made to the honour and sensibility of the nation. First and foremost, there is Mexico. M. Favre conclusively proved that the flag of France had been despatched to the New World to protect and defend a villainous commercial intrigue. M. Billault retorts, as usual, with Imperial commonplaces, but on this point his commonplaces condemn himself. If the Empire is to be upheld because it looks to the honour of the French eagles, what shall we say when it sends the eagles abroad to fight for the interests of a clique of private and unprincipled speculators? The Mexican war is only tolerable in the eyes of the French because they are not aware of the truth about Jecker and his financial adventures. The revelation begins to dawn upon them, just as news arrives of French disaster in Mexico itself. Thus, the French Empire is placed in the position of having espoused the quarrel of a rascal, and having experienced a grave military mishap in his defence. France will not like this—indeed, it would be unnatural if she did. The French public will say to M. Billault, that they have chosen the Empire, and are ready to pay for the Empire, but that the Empire must not carelessly prostitute the dignity of France.

The attitude of the Imperial Cabinet on the subject of Italy and Poland is another thing, which will touch the French a good deal. It is quite true—as the Ministerial speakers said in the Corps Legislatif—that it is not dignified for France to interfere between Russia and Poland, unless interference is to be backed, if necessary, by something more than moral force. Nor are the body of the French anxious to go to war for the sake of Poland. But the French Empire has set before itself a *rôle*, and every time it falls short of its *rôle*, it damages the cause of Imperialism. What has become of the Imperial promise that the flag of France would be found everywhere where the cause of civilization was to be found? The cause of civilization is certainly to be found just now with suffering Poland. The Empire, however, does not propose to do anything for Poland, though it wastes men and money in Mexico. If non-intervention was its rule, nothing could be said. England, whether rightly or wrongly, gives out that she never means to go to war for an idea. Nobody, therefore, can blame her for not going to war for Poland. But the Empire professes to deserve the admiration of the world because its policy is different. Why, then, does it sit still when Polish freedom is at stake? Intervention is the order of the day in Syria, in Mexico, in Italy, and even in Cochin-China. The only person with whom Louis Napoleon declines to meddle is the Czar. The rumoured losses in Mexico occur, therefore, this week most inopportunely. Thousands of the French will think that if blood was to be shed, it had better have been shed in the service of the Poles than in the service of Jecker. The truth seems to be that the French Emperor's good fortune has deserted him of late. It is not difficult to see the reason. He has become capricious and reactionary, and instead of doing battle for ideas, has begun to go to war for crotchets. Sooner or later the change will tell upon his popularity; and if M. Favre and his friends were wise, they would confine themselves to pointing out not so much that the French Empire is an empire as that it is an incompetent and inglorious empire.

PRIVATE BILL LEGISLATION.

MR. WHALLEY has for a moment abandoned the task to which he has hitherto devoted the whole of his parliamentary energies, to undertake another which is almost as onerous. He has descended from the lofty position from which he is accustomed to keep watch against the enemies of the Protestant faith, to enter for a little into the arena of secular politics. The member for Peterborough is the guardian of the interests of Protestantism all over the world, but he is at the same time the chairman of a local railway company. In the latter capacity he has become aware of the very great inconvenience attending the present system of Private Bill Legislation. His experience is that nothing could be more adapted to prevent the investment of money in the improvement of districts at present unprovided with railways. The expense of the proceedings before parliamentary committees is so great, and the result so uncertain, that works of great local importance are not seldom left undone, from the difficulties of obtaining the proper powers from Parliament. Mr. Whalley has just obtained leave to bring in a bill for diminishing the expenses of private bills relating to railways. It is to be regretted that this important subject was not brought before the House by some member who had given more special attention to the question. Mr. Whalley's previous labours have lain in another direction. An honourable member who keeps one eye constantly on the Pope and the other on Cardinal Wiseman cannot be well qualified for dealing with the intricacies of this complicated subject. There are several members, among whom Colonel Wilson Patten holds a high place, who have devoted much labour and thought to the improvement of this branch of legislation, and who might have brought forward a measure on this subject with much greater chance of success. Mr. Whalley is well aware of the evils and disadvantages of the present system, but he is not sufficiently impressed with the difficulties of applying a remedy to them. His present attempt, if we may judge from the account of it given by himself—for the bill is not yet before us—has not the slightest chance of passing the House of Commons.

A Private Act of Parliament requires the same ceremonies as a public general statute. The bill must pass both houses, and be read three times in each. The promoters of private bills are, moreover, required by the Standing Orders to comply with a great deal of preliminary procedure as to notices, deposit of plans, and such matters. But in addition to this, after the bill has been read a second time in the House in which the proceedings commenced, it is referred to a Select Committee, in which its real merits are investigated, and by the report of which the fate of the bill is decided. This is the portion of the proceedings which is peculiar to private bills, and it is here that the enormous expense attending private legislation is principally incurred. It is to be observed that, if the bill passes this committee, it has afterwards to go through the same ordeal before a similar committee of the other House. Thus there is, in most cases, the expense of a double inquiry. The same witnesses must be examined, the same facts proved a second time, just as if no previous inquiry had taken place. The enormous expense which is thus incurred by bringing numerous witnesses up to town and keeping them there during a protracted inquiry, is further aggravated by the extreme uncertainty of the results. There is no uniformity in the decision of parliamentary committees, and the most experienced persons are therefore unable to advise with any confidence as to the result of an application to these tribunals. This uncertainty is the necessary result of the constitution of the committees. They are composed of judges who are constantly changing, and who are therefore unable to fix on any certain rules, and thus establish uniformity of practice. Different committees may come to different decisions on the same facts. There are instances where a railway has been carried in one session on exactly the same grounds on which it was rejected in the previous one, simply because it was submitted to a different tribunal. This uncertainty is in itself an evil of very great magnitude. It is the cause of much litigation. If decisions were uniform, persons would not venture to oppose a bill before a committee on grounds which had been held insufficient on several previous occasions. Agents and counsel could advise with some certainty as to the result of a contemplated opposition, and expense would therefore be checked at the beginning. At present it is a lottery, and the principles on which committees decide are as little fixed now as they were ten years ago.

All schemes for improving the present system of private legislation have reference to the defective constitution of the tribunals to which private bills are referred. It is certain that uniformity of decision is impossible as long as the judges are constantly changing from year to year. Mr. Whalley's plan is a trenchant one, and goes to the root of the matter. A parliamentary committee is admittedly a bad tribunal—so bad that it is useless trying to mend it. Therefore do away with it altogether, and substitute another in its place. Let the merits of any proposed Bill be referred to a Board or Commission appointed for the purpose, who shall report thereon to the House. Mr. Whalley proposes that the Board of Trade should undertake that duty with respect to Railway Bills. In this proposal he follows the precedent adopted with reference to Inclosure Acts. When an application is made for the inclosure of a certain district, an assistant Commissioner is sent to hold a meeting, and hear evidence on the spot. Thereupon the Inclosure Commissioners make a report, on which Parliament acts. Against this report there is seldom any appeal. Mr. Whalley makes the mistake of supposing that the course of Railway Bills would generally be as smooth and easy as that of Inclosure Bills. If it is intended that the report of the Board of Trade should be final, and should decide the fate of the measure as completely as the report of a parliamentary committee does at present, then Parliament would, in fact, be surrendering an important part of their functions with respect to private legislation. If, on the other hand, that report is not to be final, this measure will only add one new source of expense to those already in existence. In every case of an opposed railway bill, there will be an appeal from the decision of the Board of Trade. Two great railway companies competing for traffic will not be satisfied with anything short of a decision by a parliamentary tribunal. Experience has shown that all preliminary inquiries and reports made previously to the investigation before the committee have ended by simply adding to the expense without increasing the certainty of the result.

For these reasons the present attempt to improve the system of private legislation cannot be regarded as a very hopeful one. Mr. Whalley seems to suppose that there was a very unanimous concurrence of opinion, among the witnesses who gave evidence on this subject before the Lords' Committee in 1858, in favour of some such scheme as that he has embodied in his bills. But this is very far from being the case, and that committee did not go farther than suggest some minor improvements in the way of conducting the business. Much of the evidence is, in fact, conclusive against his plan. That of Colonel Wilson Patten shows that he anticipates improvement rather from a simplification of the business than from the substitution of another tribunal. The committees that sit on several classes of bills have succeeded in introducing uniformity into their decisions, and establishing fixed rules for conducting their business. This is accomplished by always selecting the chairman of these committees from two or three members who have devoted special attention to the subject, and who always consent to sit. The decisions of the Roads Committee have in this way attained as much certainty as those of a court of law, where the judges are strictly bound by preceding cases. The labour of sitting upon railway committees is so great, that members who have once acted as chairmen are not willing to consent to do so a second time. If, however, the issues that are brought before these tribunals could be narrowed, and the labour thus diminished, as in a variety of ways it seems possible to do, it would be possible very much to improve railway committees, without affecting to so great an extent the power of Parliament over private bills.

THE THRONE OF GREECE.

THE papers which have just been laid before Parliament on the revolution in Greece are chiefly interesting because they contain in full the correspondence which has passed between Lord Russell and Prince Gortschakoff on the succession to the vacant throne. We are thus furnished with the key to that mysterious delay which seemed intended to encourage the Greeks to persevere in the election of Prince Alfred as their future king, and which at one time almost induced the belief in this country that her Majesty's Government had departed from the policy which it was understood they had decided to adopt, and were disposed seriously to consider the expediency of yield-

Digitized by Google

ing to those national aspirations which were being so fervently expressed in Greece. In the papers before us, however, we are enlightened as to the motives which influenced a policy apparently of so vacillating a character; and if Lord Russell has laid himself open, in his late correspondence with the Pope, to the charge of ingenuous simplicity, which may have somewhat shaken our faith in his diplomatic proficiency, he has redeemed himself in our eyes by the skill with which he has foiled the manœuvres of Prince Gortschakoff. Considering the intriguing character of Russian policy in the East, and more especially the means which the agents of the Emperor have for many years past unblushingly employed to gain an influence in Greece, there is something suspicious in the anxious disclaimer of Prince Gortschakoff to Lord Napier in one of the first conversations on the subject which takes place between them. Lord Napier had reported that the Vice-Chancellor, Prince Gortschakoff, "had disclaimed" any designs whatever on behalf of the Duke of Leuchtenberg, or "any secret policy." The Vice-Chancellor seemed to object, but slightly, to the expression "designs whatever;" he, however, added that Lord Napier's statement was scarcely sufficiently strong; he had in a former conversation reiterated twice that Russia had no mental reservation, no cupidity ("arrière-pensée"—"convoitise") in regard to the Greek succession. He begged Lord Napier to state these words exactly and emphatically. Had Prince Gortschakoff honestly said, "We do not pretend that we are not especially interested in this succession; our policy in Greece is too well known for me to deny that we have a definite object in view, and I will not conceal from you that we shall endeavour to carry it out by all the fair means in our power," this Government would have been considerably embarrassed. We must either have accepted Prince Alfred's nomination and run the risk of a war with Russia, or we must have allowed Russia to push as a candidate the Duke of Leuchtenberg. Fortunately the Prince, judging of others by his own standard of morality, was only the more convinced, by our protestations to the contrary, that we were as anxious to place Prince Alfred on the throne of Greece as he was to secure it for the Duke of Leuchtenberg; and, by allowing this idea to obtain full possession of his mind, and encouraging it during the period of the election by that reticence which was so much blamed at the time, our Government induced Prince Gortschakoff to assent in a panic to a joint note, excluding his candidate, as well as our own. These transactions all appear very fully in the papers before us, and we cannot but derive a secret gratification when we follow the phases through which the Russian Minister passed. First, in October, he attempts to clear the ground for the Duke as follows:—"His Excellency then stated that on one point the Emperor will not fail to insist, namely, that the future Sovereign of Greece, whoever he may be, shall belong to the national religion, in conformity with the stipulations in force on that subject." At this time he is prepared to maintain that the Duke of Leuchtenberg is not a member of the Imperial family; so he does not hesitate to say, "That the Emperor will adhere to that engagement by which the protecting Powers have declared the members of their respective reigning families incapable of occupying the throne of Greece." Upon this, Lord Russell replies, that her Majesty's Government are prepared "to instruct her Majesty's Minister at Athens to declare that Great Britain will not consent, any more than the other two protecting Powers, to the throne of Greece being accepted by such a Prince, such a declaration applying to his Imperial Highness the Duke of Leuchtenberg." The Vice-Chancellor hereupon observes to Lord Napier, "that the Russian Government could not accede to the proposal to make the desired declaration by anticipation at Athens." The Vice-Chancellor at the same time demurred to giving him a definite answer to his question respecting the quality and exclusion of the Duke of Leuchtenberg. The question whether the Duke was a Prince of the Imperial family, in the sense contemplated by the treaty, and thus excluded from the throne of Greece, "was susceptible of juridical discussion." This, it will be remembered, was the Duke in whose favour there was no "arrière pensée" or "convoitise." It was not to be wondered at if, after this, Lord Russell resorted to a very justifiable ruse to thwart the intrigue of the Russian Minister. He allowed it to be supposed that the British Government might accept the nomination of Prince Alfred to the vacant throne. The declaration of the Emperor of France on the matter did not tend to reassure the Cabinet at St. Petersburg. "The Emperor's Government," says M. Drouyn de Lhuys, "would not think themselves authorized to refuse indefinitely their recognition of a Prince whom the Hellenic nation, without taking account of these declarations, should elect by free suffrage." So far, then, as France was concerned, Prince Alfred had nothing to fear. Meantime, the national enthusiasm was attaining a pitch little short of frenzy in Greece; it was evident that under no circumstances could a Russian Duke hope for election, and the Prince, in a fit of spleen and mortification, refers the progress of events in Greece to English instigation. "His Excellency alluded again to the contrivances and incitements by which the alleged candidature of his Royal Highness Prince Alfred had been promoted in Greece—to electioneering arts, to the exhibition of specious inducements, the encouragement of hopes, and the distribution of gold." How thoroughly mistaken his Excellency was, in his ideas of the sentiments by which the British public were actuated, may be imagined, when he could suppose we would spend gold to secure Prince Alfred's election. It was upon this hypothesis he acted; convinced that the darling object of English ambition was to see one of our own princes on the Greek throne; convinced also that the election of a Russian was out of the question, Prince Gortschakoff sets his wits to work in order to thwart so dire a catastrophe. It is of no avail to hold out any longer upon the "juridical" question of the Duke of Leuchtenberg's relationship; there is nothing to be gained by insisting upon a candidate of the Greek Church; the time has gone by for such petty obstacles to stay the overwhelming force of universal suffrage. Now, he regrets not having acceded to the declaration at first proposed by Lord Russell; he has himself rejected the only means by which he could now hope to carry his point. Unable at the outset to conceive it possible that we were disinterested, in a proposal by which we voluntarily excluded the popular candidate, he suspects even yet that one of those "arrières-pensées," which he disclaimed so vehemently himself, may influence England. Something must be done. He decides on abandoning the Duke of Leuchtenberg. This is how he does it: "If, however," said the Vice-Chancellor, "we turned from the mere contemplation of the treaty to regard the question as one of general policy, the exclusion of the Duke of Leuchtenberg might be recommended on many considerations. He had from the first moment never contemplated the election of the Duke as desirable. He had always been personally opposed to it, and in all his communications with the Emperor this sentiment had been constantly expressed. He held that the election of the Duke of Leuchtenberg would not be in the interests of Russia."

We are at a loss to conceive why he did not say so at first. He would have saved the Greeks a grievous disappointment, and himself the charge, which these papers so clearly confirm, of a crooked and tortuous policy. Of course, there is no objection now to his making the joint declaration, the notion of which was so repulsive to him at first; and so at last we have the following laconic and significant despatch from Lord Napier: "My Lord,—When I was with Prince Gortschakoff this afternoon, his Excellency telegraphed to Count Blondoff, in reply to an application from that Minister, that he might combine with his English and French colleagues in a joint communication to the Greek Government, in the sense of the declarations exchanged in London, in relation to the exclusion of Princes of the three reigning Houses from the throne of Greece." And so ends this very instructive diplomatic episode, in which it is some consolation to see that a straightforward, honest policy fully justified the old proverb by its success.

MORAL POWER IN POLITICS.

"WHAT is this moral power, the exercise of which is now the policy of England?" asked Mr. Disraeli in the course of last session, and the answer he gave himself was as follows:—"I will tell you what moral power means. It means warlike armaments in time of peace. It means garrisons doubled and trebled. It means squadrons turned into fleets. And in an age of mechanical inventions to which there is no assignable limit, it means a perpetual stimulus given to the study of the science of destruction. That is moral power." But this definition was not of a kind to satisfy the milder wisdom of Lord Palmerston, and he, too, tried his hand at some-

Digitized by Google

thing better. "Why, sir, what is moral power?" he asked in his turn. "It is simply the power of persuasion. It is simply the power which opinion exercises." When we have thus had from the rival leaders of the House diametrically opposite definitions of a power, the use of which, it is agreed on all sides, should constitute the essence of English policy abroad, it becomes a problem of interest to discover where the truth really lies, and to whom belongs the better understanding. When Lord Palmerston gets up in the House night after night and declares that England has bound herself to non-intervention, and will exercise no power abroad but moral power, and then explains moral power to be "simply persuasion," it is, of course, open to any member who is foolish enough to take him *au pied de la lettre*, to denounce the folly and the wickedness of maintaining enormous armaments in time of peace, unless the Government anticipate an unprovoked attack upon ourselves—a contingency which they strenuously refuse to contemplate, everlastingly declaring that they are on the best possible terms with all their neighbours. Simple persuasion wants nothing more than good counsels and the ability to give them adequate expression. It belongs as much to the weak in material power as to the strong; but by the sad teaching of experience, we know that the hand of a potentate stretched out to plunder and to wrong, with a prospect of impunity, has never yet been stayed by mere logic and rhetoric. No man living, perhaps, has less faith in the efficacy of pure and unadulterated persuasion than Lord Palmerston himself. He probably believes in it about as much as he believes in original sin. In loud and often blustering tones, he has declared that the only secure foundation for the Anglo-French alliance and the "entente cordiale" is a wholesome respect for each other's material strength. But if England and France are to influence each other by simple persuasion, what have they to consider but the excellence of the advice that may be mutually tendered from time to time? and with that the relative measures of their material strength have no legitimate connection.

It is a mere truism to say that much of the moral power, which has made a fair show in state-papers and in the speeches of kings and ministers, was precisely the kind of moral power which a highwayman exercised when he demanded a traveller's purse with a pistol at his head. Moral power in another form, equally simple but less coarse than the highwayman's, is exercised every day at a public school. Sometimes a small boy has the luck to secure the especial protection of a big one, and as soon as that is known, the small boy is sure of an unmolested life. The protector is very possibly quite incapable of persuading anybody to do any single thing by purely intellectual resources; but there, however, is moral power enshrined in two yards of stature, a muscular arm, and a vigorous leg; and the value of this support the little boy learns when his protector departs. Very similar to this, if we may ascend at once from small things to great, was the moral power, in the shadow of which the peasants of a Piedmontese valley were able to worship God in peace after their own fashion, while Cromwell lived; for these poor folk, as the Pope, the Duke of Savoy, and all Catholic Christendom well understood, had a promise of succour from a man who kept his word, and was himself the consummate general of perhaps the finest soldiers the world ever saw. Take again that holy, meek, and modest thing which plays so large a part in the affairs of mankind at the present time—the moral power of France, or rather of Louis Napoleon. The essence of his moral power is simply this—that he is the head of a people the most prone to aggressive warfare, and can by a word set in motion the greatest of European armies. When a not very scrupulous man has his finger on the trigger of a very formidable weapon, his neighbours will, of course, tolerate a certain amount of annoyance to avert the discharge of the piece at them. Among peace-and-quiet-loving people it answers for the most part to be overbearing up to a certain point. The worst-tempered member of a family is usually allowed to have his own way; and it is the same in the family of nations. When peace is a matter of paramount importance to the mass of mankind, any nation readier than the rest to come to blows, and able to hit very hard, must always exercise immense moral power of a particular kind. So long, then, as Louis Napoleon plays skilfully on a few chords of the French character—their vanity, their dread of anarchy and socialism, and the materialism of their desires—and thereby remains absolute master of the French army, his single voice will be the weightiest in the councils of Europe; and this it will be without the display of any great ability on his part in international politics. His vacillating policy would ruin a weak State in six months. What he did during the siege of Gaeta is a fair sample of his tactics. For a time he muffled the Sardinian attack by laying his fleet between them and the land; but he eventually removed his fleet, having kept it there long enough to give the bitterest offence to the Italians, but not long enough to save Gaeta and win the gratitude of the king of Naples. Cavour, the responsible minister of a small State, beat him, the unquestioned lord of a hundred legions, by sheer force of intellect. To retain, however, the kind of moral power which Louis Napoleon now exercises, care must be taken not to carry insolence and encroachment a little too far. There is a limit to the patience of the most peaceable people; and when that limit is reached, they will begin to use their arms and legs. Louis Napoleon has hitherto shown himself superior to his greater uncle in this,—that he has known where to stop. The first Napoleon made himself such a dire curse to all Europe, that it could endure him no longer.

As the world goes now, the foundation of moral power, in international politics, is the possibility of an ultimate resort to physical power; and, hope as we may that a better time will come when this shall be no longer, its advent is still far beyond human ken. Where critical negotiations are being carried on between Powers of equal or nearly equal strength, whose interests have clashed, the most fatal of diplomatic mistakes is the premature betrayal of an intention, on one side, not to fight in any case for the subject-matter of the dispute. When that secret is out, the other side is pretty sure to win. The practised diplomat of a Power that does not mean to fight will, to the last moment, neither threaten nor bluster, but talk solemnly of "grave consequences" and the cessation of cordial relations. For a mistake of this kind made by ourselves we need only go back to the time of the annexation of Savoy and Nice. If moral power, as represented by simple persuasion, had any effect on our ally across the water, these annexations would assuredly not have been carried out. There was no lack of persuasiveness either in the English Parliament or press. Both the one and the other were lavish of arguments, warnings, remonstrances, and appeals to the Emperor's feelings, without the smallest effect. Indeed, they did more harm than good, and defeated their own object; for, through these discussions in Parliament and the papers, the Emperor saw clearly that the English people had no intention whatever of fighting for Savoy and Nice. Thus we suffered him to sound the depths of our forbearance without finding bottom; and from that hour he could snap his fingers at Lord Russell's despatches, and the fate of the two provinces was sealed. There is, again, the other dangerous mistake of allowing your opponent to think that you will not on any account go to war, when in reality you are prepared to do so if it be necessary. Of this kind of mistake the origin of the Crimean war has left us a melancholy instance; and Mr. Kinglake has only adopted what has been for some time a popular idea,—that the Crimean war was, in a great measure, brought on by Lord Aberdeen's known horror of war, and the Emperor Nicholas's conviction that the Peace party were true representatives of the national feeling in England.

Even, however, in these days, there is a kind of moral power purer than that of which we have hitherto been speaking; purer, in that recourse to physical power is here more kept out of sight. It is admitted, for example, that the strength and greatness of England is a moral support to the Liberal party in every state on the Continent. That party stands to the England of to-day in a relation something like that in which the Protestant sects on the Continent stood to the England of Elizabeth and Cromwell. The prospect of armed assistance from England was, no doubt, much nearer to the Continental Protestants of old than it can be to the Liberal party now. To Elizabeth and Cromwell non-intervention would have seemed a strange doctrine; but the Continental Liberals well know that, lavish as we are with our sympathy, we never dream of firing a shot out of pure love for them. Some day, they hope, when the defence of our own private interests has dragged us into a war, and our hands have warmed to the work, as they always do, then, perhaps, we may do a little business for them; and this is their utmost hope. They have, nevertheless, a direct interest in the prosperity and greatness of England, which they can point to as the practical results of the principles that they strive to establish in their own countries. Tranquillity and wealth within, respect and influence abroad, are what all men desire for the states to which they belong; and the condition of England goes to prove that these good things may very well exist together with Liberal and constitutional principles. The years immediately following the Crimean war were a gloomy period to the Liberal party on the Continent; for the military prestige of England was then at a low ebb, and constitutional government was thought to have broken down under the rude trial of a great war. This kind of moral power has also been exerted, with brilliant success, by the constitutional government of Piedmont; by moral power alone it

Digitized by Google

sapped the foundations of other Italian governments which rested on despotic principles and the support of Austria, and thus it became itself a centre of attraction to all Italy. Even behind this moral power there lurks the shadow of physical power; but here recourse to physical power will not be had by the state which exerts the moral power. Such a state acts only upon the minds and opinions of men in other states; it forms parties abroad, who advocate its own principles. And, if all goes well, these parties will in time become strong enough to establish such principles by their own physical force, if necessary; in other words, they become strong enough to undertake successful revolutions. And, with respect to moral power of this nature, we may quote the testimony of a man who thoroughly understood the forces that govern the political world. "In the economy of wealth, in politics, and in religion," said Count Cavour, "ideas alone can contend with effect against ideas,—principles alone get the better of principles; material compression goes for little in such a struggle. For a while cannon and bayonets may silence doctrines and maintain the existing order of things; but if these doctrines come to prevail in men's minds, sooner or later they will pass into practical results, and change the face of the world."

Public opinion, we often say, rules the world, and so, no doubt, it does; and public opinion is a vast aggregate of moral power. When public opinion is brought to bear adversely on any state, its strength lies in the apprehensions which it excites of a recourse to arms. Among nations, one towards the other, mere moral disapprobation goes for very little. Witness the Emperor Nicholas's attack on Turkey, and the annexation of Savoy and Nice. The more searching, however, the glare of publicity, and the greater the body of opinion thrown on every political act, the better it will be for the world. Fewer will be the wrongs perpetrated. As Mr. Kinglake has observed in his recently published volumes, the interests, the passions, and the foibles which lead to war, are more likely to be found in one man armed with absolute power than in a Cabinet of Ministers. The anger, the petulance, or the wounded vanity of one minister may be held in check by the other ministers who do not share the feeling; and in the same way the wrong-doing tendencies of one nation should be restrained by the opposition of other nations. Public opinion is the chief instrument of restraint. A large ingredient, of course, in the formation of public opinion on most questions, is merely a calculation of selfish interests; but there is nothing to lament in this, for the world requires an equilibrium of interests and forces. The main strength, however, of public opinion, lies in the fact that when men are not swayed by interest or passion, they deliberately prefer good to evil. To regret that men condemn in others the very things they do themselves when they fall under a like temptation, is a great mistake. It is well for the world that one imperfect being condemns another, for if it were not so, public opinion would have for its standard what men think and do in their worst moments, instead of in their best moments, as it should be. The pressure, therefore, of a vast body of disinterested and adversely interested opinion upon any nation disposed to do wrong, is the best security for peace; for it is generally impossible to foresee when opinion will have recourse to arms. That the time may come when moral disapprobation alone will be sufficient to restrain, is what we must all devoutly desire; but assuredly the time is yet far off. If we would hasten its coming, we must labour to strengthen the bonds of international intimacy. Isolation begets indifference to the opinion of others. The more dependent men become on one another, the more they covet the approbation, and shrink from the censure of those among whom they live. Meanwhile, for many a long day to come, it will be difficult to find any moral power, exercised in international politics, which is not more or less remotely connected with physical power.

BREACH OF PROMISE OF MARRIAGE.

Since the great leading case of *Bardell* v. *Pickwick*, a more comical action than that of *Russell* v. *Adams*, which occupied the Court of Exchequer during the first half of the present week, has seldom, if ever, been tried,—comical as regarded its general effect; to the unlucky defendant it was no laughing matter at the time, though we hope it will be now for the rest of his life. The scene was laid, as most of our readers are aware, in a station of life rather more genteel than that in which poor Mrs. Bardell moved, with her friends—Mrs. Mudberry "which kept a mangle," and Mrs. Bunkin "which clear-starched." Our leading novelists are in the nature of social detectives, whose business it is to know the amusing classes of society; and Mrs. Russell and her daughter would appear to belong rather to the beat of Mr. Thackeray than to that of Mr. Dickens. She seems to have talked in the witness-box just like the shabby-genteel characters in "Vanity Fair" or "Pendennis;" indeed, she may, perhaps, have studied the part of Mrs. M'Kenzie in the "Newcomes." She was, it appears, an Irishwoman, in what are called reduced circumstances, though of a high family and magnanimous disposition. It appeared from her examination in chief, that one of her uncles was an admiral, another a dean, her brother a rector, and three of her nephews also rectors. It appeared from her cross-examination that "she might have said" to tradesmen she was a connection of Earl Russell's, which was very probably true if she went far enough back. She had "made use of an accomplishment acquired in earlier and happier days," by teaching music—at first "under the patronage of the Hon. and Rev. Baptist Noel," and afterwards in other distinguished families. Where she lived at the time of the action, she declined to say, objecting to have her private affairs dragged before the public, and referring the inquisitive Mr. Lush to her solicitor. This heroic matron was acting as housekeeper to a Mr. Crump in November, 1860. According to her statement, she was to have 40 guineas a year. According to Mr. Crump, she was taken in out of charity, was to have nothing at all except board and lodging, and could not be got out of the house, when she was once in it, for nearly five months. During the residence with Mr. Crump she had occasion to take one of the children to Mr. Adams, an eminent medical man, on account of a deformed foot; and when she could not go herself, she sent her daughter on the same errand. Mr. Adams carried on his business in London, but he had also a house at Hampstead, where he lived openly with his wife and family, coming to town to attend his patients. According to Mrs. Russell's statement, she heard from her daughter in November, 1860, that Mr. Adams had made her an offer of marriage, and wrote him a letter, describing her circumstances and connections. The copy of this letter she said she had lost, and on the part of Mr. Adams, it was denied that it had ever been written. Mrs. Russell also said that she called on Mr. Adams in the winter of 1860, and took lodgings, at his request, at the house of a Mrs. Lama, in Osnaburgh-street, in March, 1861. She did undoubtedly take the lodgings, and gave a reference to Mr. Adams as her medical attendant. They lived at Osnaburgh-street till July 6th, and Mr. Adams frequently called there. According to Mrs. Russell, his visits were those of a lover. He used to put his arm round Miss Russell's waist, and make references to their future marriage. According to Mr. Adams, the visits were those of a medical man to a patient. Mrs. Russell's evidence was altogether uncorroborated. Indeed she was the only witness called for the plaintiff. Mr. Adams, on the contrary, called Mrs. Lama, the lodginghouse-keeper, who said that his visits lasted only for ten or fifteen minutes, except on one occasion, when he stayed from 9·30 till 12, and sang. He put in letters from Miss Russell, which related chiefly to her mother's health, thanked him for a loan of £5, were signed "Yours faithfully," and contained no expressions of endearment. He also called his coachman, who said that when he drove his master there, Mrs. Adams was generally in the carriage, and a boy often on the box; that his master used to take his visit to the Russells in its turn with other visits, and that on one occasion he asked him (the coachman) whether there were any more visits on the list? The coachman answered, "Only them people in Osnaburgh-street;" to which Mr. Adams replied, "They be damned!"—an excusable observation from a busy doctor with regard to a tiresome patient, but a wonderful speech from a gentleman to his servant about a young woman with whom he was in love. Mrs. Lama also said that, after the Russells had been a few days in the house, Mrs. Russell told her that Mr. Adams was going to marry her daughter, and ran in debt with her to the extent of £34, a large part of which was for a quantity of gin and brandy drunk by the two ladies. Mrs. Lama spoke to Miss Russell several times about her marriage, and asked her, amongst other things, who the lady was that came in the carriage, and where was the mother of the boy on the box. Miss Russell replied, that the mother of the boy "was in her grave," and that the lady was Mr. Adams's sister. After the Russells left, Mr. Adams called, and Mrs. Lama told him that they said he was engaged to Miss Russell; upon which he immediately said, "What, me paying my addresses to Miss Russell? why, I am a married man with a family." Mrs. Lama also told Mr. Adams she kept them in the house on the faith of the engagement.

After the Russells left Osnaburgh-street, Mr. Adams and a Mr. Blaise, the instrument-maker who made the shoe for the deformed

Digitized by Google

child, called together on Miss Russell at other lodgings, and had some conversation with her. Mrs. Russell says :—

Mr. Blaise said, "Will you excuse me, but did you ever hear that Mr. Adams is married?" I was staggered. I said, "Mr. Adams a married man! how could I have heard that, when he has been engaged to my daughter nearly twelve months; and not only engaged, but he wanted to have a private marriage unknown to me?" Mr. Adams said, "Who told you that?" I said, "My daughter." He said, "Pray, can you tell me when I made that proposition for a private marriage?" I said, "Yes, on the 23rd of December." He said to her, "Oh, I did not think you would tell every word to your mamma." I put my hand on the Bible and said, "Here my hand is on the sacred volume, and the other in yours; you know we never heard that you were a married man. If you have behaved dishonourably it will be bad, indeed, to her widowed mother." I put my arm round his waist, and said, "How often have I seen you do this and say, 'My dear, dear girl, thank God you will be mine.'" I then turned to Mr. Blaise, and said, "How could I believe Mr. Adams was a married man when I have seen him do that to my own child?" He said, "Oh, if my wife heard one-fourth of this about me she would not stay under my roof."

Why Mr. Adams should have taken Mr. Blaise to hear all this eloquence it is impossible to suggest. Mr. Blaise's account of the matter was very different. He said that they found Miss Russell alone at first, and Mr. Adams said to her, "Did I ever propose marriage to you, or take any liberties with you?" She said "No."

Mrs. Russell then rushed in, very much enraged, and said, two to one was not fair, and she would not have her daughter abused. She then asked what it all meant by his being there, and said that Mrs. Lama had told an untruth, and that her solicitor would write to Mrs. Lama on the subject. Mrs. Russell then said to her daughter, "Is it true that you have written to Mr. Adams without consulting me?" and her daughter said, "Yes;" upon which Mrs. Russell exclaimed, "Then you have made us lose all."

There was some more evidence in contradiction of Mrs. Russell, upon whose unsupported testimony the whole case of the plaintiff rested. The jury at one point in the case interfered, and most of them seemed to think that the case ought to stop; but one juryman, with considerable warmth, said it must go on, and after a long consultation they coupled their verdict for the defendant with the observation that they found for him, because "the plaintiff has not made out her case to our entire satisfaction." They would have been the strangest jury that ever sat in a box if she had. It should, however, be observed, that one of them put a question to the judge "in a strong Irish accent." Blood is thicker than water, and Mrs. Russell's eloquence may have touched a chord in a countryman's heart, though to an English ear such expressions as "My hand is on the sacred volume and the other in yours," and "There are three things which money cannot purchase—virtue, family, and a British jury," is the peculiar dialect of perjury. Whatever the jury may have thought, the public at large will think Mr. Adams the most unlucky man that ever suffered for his good nature.

Two or three points connected with the case have more general interest than its ludicrous and painful features. To a lay eye, the rejection of some of the evidence tendered on behalf of the defendant may seem surprising. He offered to prove that the plaintiffs had obtained credit at two other places, by pretending falsely that the daughter was going to be married. This evidence was rejected as tending to raise a collateral issue. In the particular case it was probably a hardship. Certainly, if such evidence had been given and believed, no one in his senses would have hesitated a moment about the verdict. Why, then, was it excluded? The answer is, that rules of evidence are merely practical expedients devised for the purpose of bringing trials into a manageable and compendious shape. If every question which has any relation to the main point at issue were examined to the bottom, there would be no end to such inquiries. Suppose, for instance, evidence had been given that Mrs. Russell had falsely told—say Mrs. Smith—that her daughter was to be married to Mr. Jones, and had so obtained credit, and suppose Mrs. Smith had been called as a witness for that purpose. By the same principle, Mrs. Smith might have been asked whether she had not committed perjury, and, on her denial, Mrs. Thompson might be called to prove that she had. Mrs. Thompson might be charged with being a woman of dissolute habits, and this might depend on the evidence of Mrs. Watson, who might be taxed with being an habitual drunkard on the credit of Mrs. Brown; and thus the contagion might spread through the whole London Directory. The experience of courts-martial shows that this is by no means an imaginary risk. When Captain Robertson was tried a year ago at Dublin, the contradictions on collateral points ran to such a length that the case seemed endless and was utterly unintelligible; and the same is often the case in French trials. The rule in our courts is that a witness may be asked questions as to his credit, but unless they are relevant to the issue, his answer cannot be contradicted, though, if false, he may be punished by an indictment for perjury. If Mrs. Russell really did say what it is suggested she said, she is liable to an indictment. On the whole, it would be difficult to make a better rule for practical purposes.

We can suggest another complaint against our existing system which is far more reasonable. Why could not Mr. Adams and Miss Russell be called to tell their own stories in their own way? This is now permitted in nearly every action, and it is impossible to suggest any reason why this particular action should form an exception. Modesty can have nothing to do with it. In actions for seduction, the woman seduced always has to give evidence; and if a woman has acted with propriety, and has really been ill-treated, why should she be ashamed to tell her story if she is not ashamed to bring the action? People who will take money for their feelings are not usually so thin-skinned. The truth is, that these actions, as well as the cognate action for seduction, are great blemishes to the law. They proceed upon a misconception of the whole theory of actions. The object of an action is to compensate a sufferer, not to fine a wrong-doer; and in both of these classes of actions the two functions are mixed up in a most undignified and even ludicrous way. There is something very offensive in the notion of paying a woman for a wound to her feelings; and this is generally the chief injury which a breach of promise to marry inflicts. Cases may no doubt occur where it is otherwise. To break such a promise after a long engagement, for instance, might consign a woman to want for life; but means might be taken to provide for this, and at the same time to free the law from the scandal which such proceedings are calculated to bring upon it.

BLUE JACKETS AND STEAM JACKETS.

The sailor, who chose all the grog in the world and all the tobacco in the world for two of the three wishes, the realization of which was offered to him by the benevolent genius, could think of nothing further that human nature could possibly desire, and for his third wish chose "more grog." If what the newspapers tell us be true, a change has come over the spirit of the British navy. A strange yearning for roast beef has suddenly penetrated and inflamed those rough hearts, whose march is o'er the ocean wave and whose home is on the deep. Jack is turning gentleman, and looking out for the comforts of life. He does not despise grog and tobacco in the abstract; he will say nothing against them; they have had their day, and very good fellows, in their way, have been content with them. But it is an age of progress, and sailors, as well as others, must advance with the times. He would himself prefer his food tender, succulent, and with the gravy in it. He will be always happy to serve his country as before, and if the deck of one of her Majesty's ships wants swabbing, he will swab it. But henceforward it must be understood that with regard to cookery he has the feelings of his kind. He does not wish to thrust himself forward out of his place; the undercut was no doubt intended by Nature, if not by the Articles of War, to belong to the boatswain and boatswain's mate, and far be it from him to interfere with their prerogatives. But when all prior claims are satisfied, let the able-bodied seaman have his due. Let it be roasted not too fast, done to a rich brown, and let it be served hot. The request is really so reasonable that our Admiralty would have indeed a heart of stone if they refused it. Hot let it be, replies Lord Clarence Paget, and brown. A distinguished naval officer has taken the trouble to invent an arrangement by which meat is roasted without a kitchen-range, and his method is to be tried, in the first place, on a single ship, by way of experiment. We are prevented, by total ignorance of the subject of culinary engineering, from explaining completely the mysterious apparatus in question, further than by saying that it employs the services of a steam-jacket, whatever that may be, to keep the meat warm. The grand result, however, is, that if it should be introduced into the navy, the bold mariners of England will, for the future, enjoy roast beef for dinner for the nine months of the year during which, upon an average, each ship of the line is in harbour. Whether the machinery produces horse-radish sauce by the same process at the same time, does not appear. We are inclined, upon *à priori* grounds, to believe that it certainly does.

The ordinary fare of the navy has hitherto not been such as to pamper the crews into effeminacy. As compared with a Lord Mayor's dinner, for example, or the daily repast of a convict at Dartmoor, it has been distinctly bad. There is much to be said in favour of boiled beef, as boiled beef appears at the tables of the richer classes; not over-salt, that is, and with the appurtenances and condiments which custom has immemorially sanctioned. But

Digitized by Google

this is not the form which it takes on board the gallant Thunder-bomb. Plunged into the ship's coppers for some hours, it manages to issue again a mass of tough fibre, a *rudis indigestibilisque moles*, so to speak, which can only be sanctioned by the authorities on the broad but delusive ground that meat is meat. The salt pork chiefly differs from the salt beef in being rather worse. It is more hard, more salt, more unwholesome, more unsuited for beings who are not debarred by a life of maritime adventure from the possession of an alimentary canal. Look at the pease, again. Art and nature might in vain compete to produce anything more tasteless than the regulation maritime split pea. Part of the system the pease may be, but they are a hard part. Ye gentlemen of England that live at home at ease, how little do ye think upon the uncalled-for, the truly abnormal insipidity, of the pease. Now, at the small charge of eight shillings per man, everything can be changed. Eight shillings per man, and every vessel in the service can have its steam-jacket to itself, and cook accordingly. The meanest sailor in the forecastle will have the pride of knowing that if he has a bit of sirloin to roast, he can have it roasted to a turn. The time has clearly come that the kitchen department of the navy should, to use Sir John Pakington's phrase, be reconstructed. Henceforward when we style a person the "son of a sea-cook," we shall imply a pedigree full of dignity and honour. Henceforward Britannia, when she rules the waves, will leave upon every line she traces the fragrance of her national dish.

There were three sailors of Bristol city, says the brief but touching epic, and they took a ship for to go to sea. If ever the story of naval adventure which it embodies should gain the wide renown of the "Odyssey," it will be easy for the commentators of future ages to fix the date of the poem by the allusions which it contained to the commissariat of the enterprising west-countrymen. To steam-jackets there is not a single allusion, and there is nothing whatever in the whole narrative to imply the possession of a roasting apparatus :—

> Then with pork and captain's biskee,
> Then with pork and captain's biskee,
> They victualled She, they victualled She.

Such is the simple account, the truth of which commends itself to the reader's mind by its faithful representation of manners, and its conformity to fact even in its minute details. The primitive customs of the nineteenth century—so it will be argued a thousand years hence—are represented to the life in a story which is, to its very grammar, natural and unaffected. It is true that the commentator of the future will be in error if he infers the existence of cannibalism on board modern English vessels, from the proposal which the poem contains, of sacrificing the life of the youthful William ; but the mention of salt-pork and biscuit he will justly regard as belonging to the class of undesigned, and, therefore, suggestive coincidences. It is not uninteresting to speculate what, at this remote period, will form the staple of maritime dinners. Slight as are the materials for the problem, it can hardly be wrong to conjecture that, now that improvements are once started, the taste of the navy will rapidly follow the fashion of the age. As a matter of course it will be held as brutal to supply a monotonous diet of roast beef as it would now be thought liberal to grant it on festive occasions. The fare will be generous, but it will be varied. Perhaps it will be best to leave the question of dining *à la Russe*, or retaining the old insular fashion, to the judgment of the men themselves. We do not think that a Government need ever consider itself bound to provide more than one *entrée* a day, unless public opinion and the good of the service imperatively demand it. The cellar, too, on board ship must always be furnished, even by the most liberal of purveyors, with due regard to national economy. But in regard to drumsticks, for example, or cold meat, or the miserable compromise of hash, it may be safely prophesied that no future Lord of the Admiralty will ever be hurled from power by the unanimous voice of an indignant people for an attempt to return in such matters of culinary detail to parsimonious traditions worthy only of the age of pork.

But is all this to be believed? Is a sea-faring life really to become a sumptuously-faring one, and are our sailors to be treated to as generous a diet as our malefactors? Can the change be a salutary one? Can discipline be maintained upon roast beef? Can the forecastle pay sufficient reverence to the quarter-deck when it is no worse off in respect of its daily cookery? Is Spartan courage, or is it not, the companion of Spartan diet? It is a question for the Admiralty to take into its mature consideration. Trafalgar and St. Vincent were won by men who were glad enough to get their rations boiled. If the food which was good enough for Nelson's crews is not good enough for the crews of to-day, is it degeneracy of race that is at fault, or is it only degeneracy of digestion? Certainly, if the mariners of England who guard our native shores do become seriously addicted to the pleasures of the table, the sun of our nautical supremacy is set. It is no use expecting that a sailor who has just been enjoying a surfeit of the Sunday-side can be in a fit state to belay a marling-sheet, or tant a bowline, or handspike a main-jib-boom. Tom Bowling, if he is to perform the traditional feat of "going aloft" with any degree either of comfort to himself or credit to his employers, must have prepared himself for the task by a judiciously severe *régime*. A clear eye and steady hand is surely required for the difficult task of reefing the jury-masts, or any of the other manœuvres with which Captain Marryat's novels have rendered us all so familiar. Still, if the service will not suffer for it, we wish the sailors well fed. Within the bounds of reason let them have all the luxury that steam-jackets are able to afford. If our humble voice can have any influence over the eminent naval officer whose tones in the House of Commons always so ably unite the wisdom of the minister and the harmlessness of the sea-captain, we would urge Lord Clarence Paget to concede the eight shillings'-worth of roasting. We only hope that the British tar will not hereafter look back with longing eyes at the simple fare of his earlier career, and, amid the luxuries of a civilized *ménu*, and the choicest delicacies of the season, pine remorselessly for the grog and tobacco of his uncultivated, but not unenjoyable, repasts.

DUTCH NOTES.

When we remember that the passengers on board a steam-vessel, of very moderate power, which crosses the bar of the Brill at one o'clock, may easily, in fine weather, see the light on the North Foreland by nine, it does seem strange that so very little is known in this country about Holland. It is not that people never go there, for a fair proportion of our autumn travellers begin or end their tour with a visit to Rotterdam and the Hague ; but three or four days are thought enough to devote to "the simple secrets of the Dutch ;" and Paul Potter's "Bull" would appear to be the object which dwells most fondly in the imagination of many, who have no particular interest either in cattle or their painters.

The small number of Dutchmen who find their way into English society is not less remarkable. Let any one who can look back on thirty years of London life try to recollect how many he has met, putting out of question members of the diplomatic body. And yet the Dutch travel a good deal, and believe, rightly or wrongly, that they travel nearly as much as we do. Why they do not come to visit us we really cannot say, unless it be that, like most northern nations, their impulse is always to hurry to the sunny south. Why we pay their country such flying visits is more easily explained. The hotels are a disgrace to a civilized community. The *cuisine* in those establishments is so ludicrously bad, that to leave Rotterdam for Brussels is a real pleasure. Then the language appears at first singularly uncouth and disagreeable. It is difficult to realize that it has been illustrated by great authors, and that even now it is used by men of most distinguished ability in parliamentary debate, in the pulpit, and in the lecture-room. Further, although everybody with whom the traveller is likely to care to communicate, speaks either English, French, or German, there is always a sense of constraint in hearing a language spoken around us which we cannot follow. Lastly, we are absurdly ignorant about Holland, and not one traveller in ten, when he crosses its frontier, is aware that he is entering a country which, in more than one respect, is far in advance of his own.

Till recently there have been no books about the Netherlands published in any language which is familiar to any considerable number of Englishmen ; now, however, there are two, from either of which they will get a fair general idea of the country. The first, and far the best, is "La Neërlande et la vie Hollandaise," by M. Esquiros, published originally in the *Revue des Deux Mondes* and since reprinted in two small volumes. The second, which is considerably larger, is by Dr. Albert Wild ; its full title is, "Die Niederlande, ihre Vergangenheit und Gegenwart."

This book has been constructed on the basis of the work of Esquiros and of the accurate Guide of Baedeker ; but it contains a modicum of valuable new matter. The author lived some time in Holland, and took much pains ; he has, however, plundered his predecessors with far too little acknowledgment, and he has that delight in all vulgar and mean detail which is characteristic of the worst kind of German traveller, and makes him an exceedingly offensive, although useful, companion in a Dutch tour. Somewhat too much is generally made of the oddities of Holland. People go to see an exceptional place, a mere toy, like Broek, and suppose that all its absurdities are repeated up and down the land. This is

Digitized by Google

not the side of Dutch life to which we wish to call attention. Beckford and Andrew Marvell have said all that need be said on that subject, and Mr. Murray has duly reproduced their exceedingly good jokes for all English tourists.

Neither shall we linger amongst the pictures, though that would be a more tempting theme. For not only is the great collection at Amsterdam at least as well worth seeing as the more celebrated one at the Hague, but almost every wealthy family possesses, if not a gallery, yet a small collection of pictures, of real merit. The contemporary Dutch school is extremely respectable; and the numerous class in this country which buys pictures because it is the fashion to do so, would be much better employed in encouraging real excellence, on the other side of the water, than in stimulating the production of pre-Raphaelite monstrosities to affright the ages to come. Indeed, the taste for collecting can be better gratified in the Netherlands than in most places, or rather could be, for of late the prices of old china, old furniture, and so forth, has risen prodigiously.

Whatever pursuit it may be which draws the Englishman to Holland, he will soon find out that there is no European country in which his language is so generally spoken, and his literature so extensively read. Nowhere has Macaulay exercised so wide an influence. We have heard it said that not less than 100,000 copies of one or other of his works had found their way into circulation either in Dutch or English in that small country. The greatest of Dutch philosophers, Professor Opzoomer, of Utrecht, is now engaged in publishing an edition of the English text of Shakespeare, with Dutch notes. "Adam Bede" was translated by the wife of an eminent theologian, and there is hardly an educated household in which the novels of Mr. Kingsley are not read with avidity. Dean Milman is honoured at Leyden as much as he deserves to be; and we saw Dr. Davidson's second volume in a shop there, within a fortnight after its appearance.

Esquiros begins his book by remarking that too often the traveller or the moralist neglects to reconstruct the physical theatre on which the different civilizations of Europe have developed themselves. It is said that an English writer, who is best known to the public as a man of science, was led by his study of antiquities to inquire into geology, and by geology to the speculations which have made him famous. This, which could only happen accidentally in Great Britain, would be perfectly natural in Holland. Till quite recent times, the chief history of that country is the history of great changes in the relations of land and water. The other events of the Dutch middle-age are insignificant by the side of the tremendous convulsions which created the Zuyder Zee and the Dollart, and made fish swim over the steeples of countless parishes.

Holland is the Egypt of Europe. Its wide and fertile meadows are the gift of the Rhine; but what the river gave, the sea has too often tried to take away, and the river is perpetually seeking to reclaim its own gift. We hardly realize to how great a danger our Dutch neighbours are constantly exposed, or how very important are the functions which are performed by the department of the State which is intrusted with the regulation of the waters. The king, long unpopular, has in the last year or two risen very much in the good graces of his people, on account of his spirited and sympathizing behaviour on the occasion of the last great inundation, which happened in 1861. If the storms which took place last December had coincided with a freshet in the Rhine, he might have had an opportunity of adding to his popularity. As it was, the water was in the lower stories of half the houses in Rotterdam, and the flood spread far and wide on either side the Maas.

The dykes, by which all the exposed parts of the coast are protected, are less striking to the eye of the unlearned than might be supposed. Even the mighty bulwark which defends North Holland—the great dyke of the Helder—has nothing imposing in its appearance, although it takes high rank amongst the most gigantic works of man. On the other hand, the ship-canal, which joins Amsterdam with the ocean, does not disappoint expectation. The canals of our own country look like mere threads of water as long as one retains the impression of its gigantic proportions. It is but the other day that the draining of the stormy and dangerous Haarlem Lake was finished, and now we begin to hear of proposals to reclaim the bed of the Zuyder Zee itself, and to open for the commerce of Amsterdam a new communication through the Y to the North Sea.

It is the strange and unusual appearance of the landscape and the great works by which the swampy delta of the Rhine is made fit for human habitation,—it is the wondrous network of canals,—the great cities, with their bustling quays and the Indiamen unloading before the doors of the merchants to whom they belong, which would, we think, most attract the notice of the passing traveller; but what we wish to do is to induce some one to make a longer visit to Holland, and then to give us a work of importance on the following points, with regard to each of which we propose to jot down some hints in subsequent articles:—

First, the political condition of Holland and the steps by which it has arrived at its present distinguished position amongst free nations. Secondly, its religious sects, their relations and peculiarities. Thirdly, the state of education. Fourthly, the colonial question; and fifthly, the national literature.

LORD WROTTESLEY ON CHARITIES.

THE statesman with the courage to purge the Augean stable of public Charities, has not yet arisen. Five and forty years ago Henry Brougham, in the vigour of his early manhood, managed to get Commissioners appointed to inquire into the subject, and the result of their inquiries fills a library of folio volumes. Since then some feeble attempts have been made to put an end to Charity abuses. But, in truth, they are perpetrated and maintained by men so thoroughly respectable and so well-to-do in the world, that the task is all but impossible. The value of the public Charities in this country is not less than £75,000,000. The larger portion of that sum was intended for the poor. But so gross has been the neglect or corruption of those who have had this property under their control, that the mass of it has been usurped by the upper and middle classes, or systematically applied to promote demoralising political bribery. Take the list of the towns, and even villages in England, and it will be found that there is scarcely one which does not possess some endowment for the benefit of the Poor. If the endowment is very small, it is too often wasted in bribing old men and women to come to church. If it is large, as is the case of Christ's Hospital, the revenues of which amount to £60,000 a year, it is appropriated to the children of the middle classes, who ought to be clothed and educated at the expense of their friends. If it be an hospital or an almshouse, the solicitor and the architect exercise a sort of prescriptive right to deduct some 30 per cent. out of the revenue for management and repairs; whilst in other cases some *faineant* clergyman, under the imposing title of Master, derives a comfortable income of £400 or £500 a year for professing his readiness to supply spiritual consolation to half a dozen old ladies and gentlemen. Any one who chooses to read the evidence of Mr. Hare or of Mr. Martin, both of them Charity Inspectors, published by the Education Commissioners, may satisfy himself of the gross abuses which even now attend the distribution of public Charity. And when it is remembered that a sum of £200,000 is annually wasted, it might seem clear that something ought to be done in the way of reform.

Hitherto all such attempts have proved fruitless. In the year 1853 a Charity Commission was appointed, with certain powers. But the gentlemen selected to fill the office of Commissioners were quite unequal to the task assigned to them. The chief was an eminent conveyancer, who had won his reputation in picking out flaws in title-deeds; the others were superannuated barristers. Had they been men of vigour, they might by this time have roused such a feeling in the public mind that some sweeping reform would have become imperative. The abuses are so gross that they cannot bear the light. The powers of inquiry vested in the Commissioners were ample—their powers of reforming abuses absolutely *nil*. But wherever there are charitable funds, there are persons who are dissatisfied with the mode in which they are distributed, and who are ready to demand inquiry. In all such cases, the Charity Commissioners should have dispatched their Inspector to the spot to make inquiry. In many cases this has no doubt been done, though it is known that in one of the most flagrant cases, the Inquiry which had been fixed was actually stopped in consequence of a representation made from a powerful quarter. But they should not have been satisfied with mere inquiry. They should have published the results of these inquiries. Instead of this, however, the Reports of the Inspectors have remained in manuscript, buried in the dust of some garret in the offices in St. James's-square. When the Education Commissioners attempted to obtain an account of these Inspectors' Reports, many of them were not forthcoming. Though the Charity Commissioners publish a so-called report once every year, it contains scarcely anything of general interest, and nothing whatever of the gross abuses which it is their duty to investigate and make public. The object of these Commissioners seems to be to do nothing—to avoid irritating local prejudices—and, in short, to lead a quiet life. The truth is, that for all practical purposes of reform, the present Charity Commission is absolutely useless. It was natural enough that at the original creation of such a board, some jealousy should be dis-

Digitized by Google

played, and that their powers should be restricted within narrow limits. But in ten years they ought to have gained for themselves public confidence, or, at all events, they ought to have furnished us with some information on the subject of the public Charities. Neither of these things have they done, or even attempted to do. Their timidity has been their destruction.

But matters cannot be allowed to remain as they are. Lord Granville, indeed, is not the man to lead a great reform, or to dare the obloquy of attempting to interfere with the comfort and ease of other men. He sets too high a value himself on such luxury. But Lord Wrottesley was quite right in saying that if nothing was done the lower classes of this country would have good reason to complain. It is but the other day that the wills of ancient founders, with all their absurd restrictions, were set aside for the benefit of the middle and upper classes in this country. The College Statutes of Oxford and Cambridge have been reformed, and young men excluded from the benefits of the original foundations have been admitted with the sanction of Parliament to those benefits. Upon what ground is the same principle inapplicable to the lower classes? If the changes have worked well in the case of the Universities, it may reasonably be supposed that they will work well in other cases. The poorer classes are quite as much entitled to the interference of Parliament as their wealthier and nobler brethren. And if this interference is withheld, it will be difficult to persuade the poor that it is withheld for any better reason than that it would disturb the usurpation of the upper classes over the property which really belongs to the poor.

There is, however, another view which ought to exert some influence on those who profess themselves financial economists. It is believed, upon the best authority, that, if the existing Charities were properly applied, they would go far to supply all the aid which is required to promote the education of the poor in this country. At present the means of education are supplied partly out of the Parliamentary grant, and it is an important fact that this Parliamentary aid is often furnished to the very places where the Charities are most abundant. Thus, one year's income of the Middlesex Charities, including London and Westminster, exceeds all the grants towards education in the same county during the last twenty-six years. Eighteen months' income of the Bedford charities would have supplied all the education grants to the same county during twenty-six years. In the wealthy county of Lancashire, which has received most money from the Education grant, the Charities amount to £35,222 a year; so that the whole annual Parliamentary grant might have been defrayed by half of this sum. So in Wales, it appears that the Parliamentary grant would have been met by applying little more than a half the sum of money devoted to doles, apprenticeships, and almshouses. Such being the state of things, it is surely a serious question how far Parliament is justified in making grants out of the Exchequer to promote education, seeing that there are already ample funds devoted to Charity which could be devoted to the Education of the Poor without depriving them of any real benefit.

It is, however, idle to suggest any improvement in the use of charities until some means are provided for carrying these improvements into practical effect. Grievously as the Charity Commissioners have failed, they ought not to be visited with censure for having failed to put new charitable schemes in operation. They could not do so of themselves, for they had no power. Their only course was to call in the aid of the Court of Chancery or Parliament. The Court of Chancery is the most unfit tribunal which can be imagined for remodelling obsolete or useless charities. It is not only expensive, but the judges who preside there are not fitted to discharge duties of this nature. Parliament is perhaps even more unfit. It seems to be impossible to get a Bill embodying any scheme through that assembly when there is the slightest opposition. As Sir G. Grey once told the Chief Commissioner, "You must select the bills which you think will receive any local opposition, and you must abandon them all."

It is absolutely essential, therefore, to construct some new tribunal, which shall have power to remodel charities at a moderate expense. Probably, the best plan is that suggested by the Education Commissioners. Retaining the present Charity Commission, which is chiefly composed of lawyers, it would become part of the Privy Council of Education; so that, in settling any new schemes, both these departments would be responsible, and would be able to bring their experience to bear in settling new schemes. And when it is remembered that a sum of £300,000 a year is actually devoted by the terms of the endowment to education, and that a sum of £200,000 in addition might be applied advantageously, the importance of connecting the Charity Commission with the Education Committee is obvious. The schemes thus settled would be laid before Parliament, as in the case of the reformed statutes for Oxford and Cambridge, and unless appealed against in three months, would become law.

ENGLISH COMFORT.

No boast is more commonly made by Englishmen than the vaunt that they alone know what is meant by comfort. Metaphysics may be left to Germans, wit to France, and artistic skill to Italy; but the science of being comfortable is the special possession of England. Perhaps, however, not one in a hundred of those who use the word have formed any distinct notion as to what is really meant by the expression "comfortable." It is sufficiently clear that the term is wholly inapplicable to any high intellectual delight, or to any kind of enjoyment involving excitement. To hear a sonata of Beethoven's, to listen to an eloquent harangue, to become excited over a game, may each, in their way, be pleasant occupations enough; but none of them produce an effect which could be described as comfort. On the other hand, mere bodily pleasure, such as the drinking of good wine or the eating of well-cooked dinners, does not of itself produce the special feeling of which Englishmen believe themselves to have the monopoly. It will, on examination, be found that what is meant by comfort is a certain combination of physical well-being with mental satisfaction. To have your body thoroughly at ease, and to know that it is so, without being tormented by any care or pain which may take or may distract attention from the contemplation of your physical satisfaction, is the essence of comfort. Hence, a certain amount of drowsiness, or, at least, of intellectual quiescence, is essential to its existence. A dog basking by the fire, a father of a family filled with dinner, dignity, and complacency, warmed by his own hearth and resting in his own arm-chair, are the types of ideal comfort. What, therefore, is understood—as far as any definite meaning can be attached to the vaunts in which one nation parades its supposed superiority to others,—by the well-worn assertion that Britain is the land of comfort, is simply this; that the physical arrangements of life are so well ordered by Englishmen as to produce, more frequently than do the habits of other nations, that peculiar kind of enjoyment arising from the consciousness of physical ease.

It is hard to suppose that a nation can fancy itself possessed of exactly those qualities in which it is deficient. Still, in the mind of any critic, who takes a pleasure in trying the truth of popularly received doctrines, there must occur considerable difficulties in admitting the claims of Englishmen to the knowledge of what is comfortable. After all, there is nothing like bringing a specious generality to the test of comparison with particular facts, and it is easy enough to find points which will enable us to compare the degree in which foreigners and Englishmen succeed in making existence agreeable. Few Englishmen, it may be supposed, however patriotic, would care to stand up on behalf of certain of the social arrangements of their country. Evening parties — "at homes" — "drums" — formal calls, may all be institutions which possess a merit not to be perceived by careless observers, but they assuredly are not comfortable. To stand in a room where you are in the way of everybody and everybody else is in yours,—to pass an evening in boring others and being bored yourself,—to fritter away an afternoon in wasting the time of all your acquaintance, are, it may be, acts of salutary discipline, but assuredly the most uncomfortable of employments. Nor, again, would any prudent advocate wish to stake the ease of England upon the agreeableness of her places for public resort. The worst foreign town has in its *café* at least a place where, at no great expense, it is possible for any one away from home to pass his time, without absolute suffering. What a person in the same position is to do, even in London, it is difficult to say. Indeed, among the most miserable spectacles that the world offers, is the sight of a foreign traveller who has just had his dinner at a London eating-house. He asks plaintively of sympathetic strangers where he is to go. The waiters give obvious signs that, now he has eaten his fill of the joint, his room is decidedly more desirable than his company, and the hints of the servants are made the more forcible by the extreme unpleasantness of a room reeking with the smell of hot joints. The foreign gentleman excluded from a club, and with no acquaintance, not unnaturally longs for his *café*, and becomes somewhat sceptical about the agreeableness of life in England. He may, it will be said, go to the theatre. This resource he has if he is staying in the metropolis, and does not already know by heart the whole of that very limited number of plays with which managers for months together entertain the public. If he is in a country town, his case is desperate. A

Digitized by Google

theatre, indeed, exists; but it is of course shut up, or, if open, probably used as the scene of a missionary meeting. An Englishman, on the other hand, passing through a German town, finds that he is freed from half those discomforts which would inevitably overpower him if journeying through the minor cities of his own country. A good *café*, a tolerable theatre, opportunities of hearing music better than that provided even for educated audiences at home, enable travellers to pass a solitary evening without meditating on the advantages of suicide. Moreover, it should be remembered that—whilst in England all amusements are provided for the respectable, or, in other words, the rich portion of the community, and no man is supposed to deserve the least entertainment who cannot pay down a shilling,—pastimes are provided abroad for those who can afford nothing more than the price of a cup of coffee. Some people, indeed, may consider it a sort of crime to be deficient in shillings, just as others regard it as an offence to haunt the theatre, or to seek for any enjoyment out of the so-called "family circle." Moralists of this order may derive a grim satisfaction from the thought that England provides no comforts for a quasi-criminal population. But though the full force of this plea be granted, it will still be found that the English promise of comfort often breaks down when there is no excuse for failure. No nation travels so much as Englishmen, nor can it be said that travelling is tainted with the least slur of disreputability. Moreover, almost the whole pleasantness of a journey turns on the existence of arrangements for the physical well-being of travellers. In these, if in anything, Englishmen might be expected to excel. In no department of life, however, do they fail more lamentably. A foreign artisan journeys in conveyances more comfortable than the second-class carriages, in which are to be found the mass of the busy or holiday-making population; whilst the places ironically called refreshment-rooms, which at Wolverton or Swindon offer an unwholesome diet of stale buns or suspicious pork-pies, are too bad even for comparison with the little buffets scattered at short intervals over all the railroads of France and Germany. Prussians, though not supposed to be quick at inventions, have contrived a device, which triumphantly disposes of one of the minor difficulties of English journeys. Any one who happens to desire a cup of tea or coffee finds that even when he at last seems likely to obtain the object of his wishes, he has still, before he can quench his thirst, to solve an almost insoluble problem. How can he drink his tea hot within the space of three minutes? As a matter of fact, only a courageous fraction succeed in accomplishing the feat, and rows of scarcely tasted cups testify the general failure. Some ingenious German, who ought particularly to be commended to the notice of Mr. Gladstone, has invented a paper cup, which will completely hold a draught of the hottest liquid, and can be bought for a farthing. By means of this invention, the good people of Berlin take up and drink at their ease, as they go along the railroad, the cups of coffee which comfort-loving Englishmen find it impossible to swallow without scalding their throats.

Patriots, driven to confess that English theatres, hotels, refreshment rooms, and railways, cannot be termed comfortable, will probably take their stand upon the comfort of English homes. Here, if anywhere, the great national quality is to be found in perfection. It takes some heroism to muster up courage sufficient to attack the last stronghold of national prejudice. When men have rallied round their homes and hearths they are apt to grow desperate, and must be treated with respect. We are willing, therefore, to concede that the family comfort of Englishmen is unquestionable; that husband and wife never disagree and never seek for divorce; that children are always respectful, and brothers and sisters always affectionate; and that, to add the crown to family comfort, the home circle, which is always admirable, is never dull. But when we have conceded that the moral comfort of home life must be placed beyond dispute, a daring scepticism may be allowed to question whether the physical arrangements of English houses are absolutely perfect. An open fireplace, it may be granted, is more pleasant to look at than a stove, though Germans think the superiority of a stove indubitable, and the beauty of a wood fire can never be forgotten by those who have had the opportunity of seeing it; but even of open fires it is possible to have too much; and a large dinner party assembled in a small room, seated with their backs to a furnace, which the hospitality of the host has heated sevenfold hotter than its wont, presents the most vivid picture of purgatory which human experience affords. Rooms, indeed, are often small in other countries, but the custom, which requires each man to have a separate house and each apartment a separate fireplace, produces rooms smaller and hotter than are used by the miserable and degraded foreigners who delight in stoves and flats. Still we are loath to believe our national boast to be entirely unfounded. It may be the effect of a partiality for one's own country which no philosophy can cure; but we are inclined to think that candid observers will confess the vaunt of English comfort to have this, if no other foundation, that Englishmen possess better coals, and make more lavish use of water than any other European nation.

THE PAST WEEK.

On Friday week, in the House of Lords, Lord Llanover put a question as to the intention of the Government about carrying out the recommendations in the report of the Commissioners on the state of the Volunteer force. Earl De Grey and Ripon, after several noble lords had spoken, said perhaps there would be other patterns selected for volunteers' uniforms in addition to the single grey pattern, but those who were in receipt of Government aid in clothing would be confined to certain definite regulation patterns. In the House of Commons, Mr. Layard gave explanations respecting the differences between her Majesty's Government and that of Brazil. On the report on the Address, Mr. Bentinck, speaking of the cession of the Ionian Islands, questioned whether we should derive any great military advantage from the possession of Corfu. He thought, regarding the American war, a change of feeling had taken place recently respecting it in England, and he considered it cant to say that slavery was the real cause of contention. Mr. Locke wanted to know what had been done in the manufacturing districts to take advantage of the Act of last session respecting a rate in aid. Mr. Newdegate complained of the weight with which the French treaty had fallen upon his constituency, and he had a doubt whether the treaty with Belgium, in connection with the 5th article of the French treaty, might not injure our interests. After various members had enunciated opinions rather discursively, the report was agreed to. Mr. Herbert alluded to the removal of Irish paupers from England to Ireland, under the provisions of the Act 24 and 25 Viet. He spoke of irregularities to which Irish paupers had been subjected in removal. Mr. Villiers could give no explanation as to the alleged irregularities. The Poor-Law Board was irresponsible for dereliction of duty on the part of persons who were called upon to execute the law. Mr. Whalley moved for leave to introduce a bill for reducing the expenses of passing bills relating to railways. A discussion ensued, in which Mr. Milner Gibson said he did not think the House would consent to part with any of its powers without due deliberation. Leave was given to introduce the bill. Permission was given to Sir John Trelawny to bring in a bill to abolish church-rates. Mr. Hadfield and Mr. Dillwyn obtained leave to introduce new bills on minor subjects.

In the House of Lords, on Monday, little other business than bringing up her Majesty's answer to their Lordships' Address, was transacted. In the House of Commons, Mr. Hennessy failed to raise a discussion on the affairs of Poland. Sir G. Grey obtained leave to introduce a bill to amend and continue the law relating to corrupt practices at elections. It was agreed that the responsibility of preparing estimates of the charge of the disembodied militia of Great Britain and Ireland be undertaken in future by Ministers of the Crown, in lieu of appointing a select committee. Leave was given to Sir R. Peel to bring in a bill for the Registration of Births and Deaths in Ireland. A motion made by Mr. H. Seymour for the re-appointment of the Select Committee to inquire into the present state of the Ecclesiastical Commission, was agreed to. A conversation on Tuesday evening took place in the House of Lords on the ticket-of-leave system. Lord Carnarvon commented rather severely on the Home-office administration. Leave was given on the same evening to Sir J. Trelawny to introduce a bill in the House of Commons, allowing persons to make affirmations in all cases where an oath is required. Mr. Alcock and Sir G. Bowyer obtained leave to introduce bills—the former for voluntary redemption of church-rates, the latter to amend the law regarding the jurisdiction exercised by the benchers of the four inns of court in England, in certain cases. Lord Palmerston, in replying to Mr. Hennessy, said no proposition was made by Austria during the Crimean war to England and France, to assist in forming a separate kingdom in Poland.

There was no sitting of the House of Lords on Wednesday. In the Commons a discussion ensued on the order for the second reading of the Salmon Fisheries' (Ireland) Bill. An amendment was proposed by Mr. Butt, and was afterwards withdrawn. The bill was read a second time. Mr. Newdegate had leave given him to introduce a bill to establish a charge in lieu of church-rates for the commutation thereof, and to afford facilities for the provision of other funds applicable to the purposes of the church-rates. Lord Raynham is to introduce a bill for the prevention of aggravated assaults on women and children.

In Thursday's sitting of the Corps Legislatif, the amendment proposed by M. Jules Favre to paragraph 2 of the address was rejected. The amendment to the address in favour of Poland was then discussed, and was brought forward by M. Guyard Delalain, who wished to learn whether it was intended to restore the Constitution granted by the Emperor Alexander. He was followed by M. Jules Favre, who spoke in favour of Poland; but M. Billault contended that the present was an inopportune moment for discussing the question of Poland, though France did not lack sympathy for her, neither did the French Government, and he

Digitized by Google

thought Poland might expect more from the liberal sentiments of the Emperor of Russia than from insurrectionary movements. On Saturday, in the Corps Legislatif, the debate on Mexico was resumed by M. Billault replying to M. Jules Favre; he maintained that France had cause of complaint against the Government of Juarez, which had "broken its sworn faith." France was resolved, like England, to make its countrymen everywhere respected. He repudiated the doctrine of M. Jules Favre, that the Government had shown a want of foresight in reference to the Mexican expedition. He protested against rumours that scandalous and secret speculations lay behind French intervention in Mexico. M. Jules Favre maintained that the Minister sought to distort the question when he submitted that the expedition was only undertaken in defence of the national honour; and that the acts put forward as forming motives for the expedition could not be imputed to Juarez, as many of them were committed before his government succeeded to power. The amendment to the address relative to Mexico was rejected. In the Chamber of Deputies, M. Billault has replied to the speech of M. Favre respecting Rome. The policy, he said, of France towards Italy was neither powerless nor equivocal; and France could not suffer to see the Pope a slave. France required tranquillity upon her frontiers, and she would prefer a federation of Italian States; but did not wish to raise any opposition to the unity of Italy. Was Rome, he inquired, necessary to Italy? To France, Rome represented one of the foundations of the independence of the Holy See; Rome as the capital of Italy was of secondary importance to France. France had never promised Rome to the Italians. The political and religious interests of France were opposed to the abandonment of Rome. M. Billault alluded to what he called the uncertain attitude of England in the beginning of the French occupation of Rome. In 1860, England made propositions by accepting which the French would have left Rome, and Austria would have remained mistress of Italy. Were the French to leave Rome the Pope might ask assistance of Austria, and France would not be in a position to offer opposition. Italy had two courses open to her—an appeal to revolution, or to lean upon France while perfecting her organization; but the Emperor would continue to labour to effect a reconciliation with the Pope and Italy. The paragraph in the address referring to Rome was passed.

We have received intelligence by the *Damascus* from New York to the 27th of January, from which it appears that General Burnside has resigned the command of the army of the Potomac, and his successor is General Hooker. General Burnside in his letter of resignation says that under circumstances more fortunate the army would have accomplished greater results. Unfavourable weather retarded any onward movement of the army of the Potomac. It is stated that the Federals in North Carolina, under General Foster, have made no advanced movement. Land forces on the 16th had been sent towards the railroad, and 1,300 Confederates had been met at Pollocksville. From an engagement the Confederates were driven back with the loss of a flag. A Confederate steamer, after a severe contest, sunk the Federal gunboat *Hatteras*, off Galveston. Engagements with the Federal gunboats took place on the 14th, at Bayoutchi, Louisiana, and the Federal commander was killed. The Finance Bill, emanating from the Committee of Ways and Means, passed the House of Representatives. By the *Hibernia* we have news relating chiefly to successes in the south-west of the Federals. M'Clernand's expedition was on the Louisiana side of the Mississippi, in view of Vicksburg. The Federals have destroyed the Confederate iron-clad steamer *Catton*, in Bayoutchi. A resolution has been introduced in the Jersey Legislature that the people are discouraged by reverses for which the generals are not responsible, and that the only means to save the country are by restoring to power General M'Clellan, who is now in Boston, receiving great attention. The proposal in Congress to place him at the head of the army was hailed with applause from the galleries. The *Tribune* says that the French Minister denies being implicated in any scheme to bring about intervention.

A very serious poaching affray occurred on the night of the 6th instant, on the estate of General Hall, at Weston Colville, Cambridgeshire. The head gamekeeper, named Tilbrook, was out with an assistant watcher of the name of Hart. Shots were heard, and the game-watchers discovered three poachers, armed, in one of the preserves. In an attempt to capture the poachers Tilbrook was fired at by one of the party and a part of his face blown away. Joseph Biggs has been apprehended on suspicion of being one of the offenders, and upon him were found seventeen bullets; he had also a wound in the loins, sustained during the conflict with the keepers. Tilbrook remains in a dangerous state. On the same night, a desperate affray between gamekeepers and poachers took place in the preserves of Annesley, a few miles from Nottingham, belonging to Mr. J. C. Musters. Four gamekeepers were watching, and discovered nine or ten poachers setting nets and beating for game. Attempts were made to capture the poachers, who, seeing their danger, began throwing stones, and being armed with bludgeons, forks, and stakes, a close encounter with the keepers commenced, and much personal injury was the result. One of the men, named Gelsthorp, was apprehended, and with his head bandaged and clothes saturated with blood, was taken before the county bench of magistrates and remanded.

Respecting the reception to be given to the Princess Alexandra on her arrival in London on the 7th March, a deputation, consisting of the Lord Mayor, Mr. Anderton, and the City Remembrancer, had an interview on Saturday with Sir George Grey at the Home Office. The route to be taken will be from the Bricklayers' Arms station through the Borough over London-bridge, through King William-street, by the Mansion House, the Poultry, Cheapside, St. Paul's-churchyard, Ludgate-hill, Fleet-street, the Strand, and on to the Great Western Railway at Paddington. The precise hour at which her Royal Highness the Princess will arrive is not yet known; in the meantime the South Eastern Railway Company have determined as far as they can to give the greatest *éclat* to the proceedings at their stations—the Bricklayers' Arms and Gravesend. The train intended to convey the bridal party and their respective suites has been taken in hand to be thoroughly beautified, and the engine that is to draw the train will bear the British and Danish flags. On the part of Mr. Commissioner Harvey and Sir R. Mayne efforts will be made to prevent the traffic of the streets impeding the procession. Various military corps will line the thoroughfares of the city. The Mansion House is to be gaily decorated, and seats for a limited number of persons in the balconies will be provided. No doubt the loyalty of the citizens of London will add greatly to the rejoicings by a display of flags and other emblems of goodwill. Steps are being taken in nearly all the provincial towns, great and small, for celebrating the day of the marriage in a manner worthy of the occasion.

The Polish insurrection is far from being quelled. Under date, Warsaw, February 7, we hear of a great battle fought near Woucsock, and the defeat of the insurgents. From Breslau it is reported that Sosnowice—a town on the Russian frontier, opposite Kaltowitz, the seat of a Custom-house—had been taken, after a sanguinary conflict, by the insurgents. The *Schwäbische Zeitung* says, on the 8th, that matters in Poland are so serious that a battalion of Russian infantry had been forwarded to the frontier by special train from Oppelen. The *Breslauer Zeitung* has a telegram from Myslowitz, saying that fugitive Russian troops were arriving there on the 7th instant, in very large numbers, 500 of whom, however, had been disarmed. From Lemberg there comes intelligence that 6,000 insurgents, under the command of Baron Heidel, have been beaten by the Russian General Mack, near Woucsock. Two battalions of peasants threw down their arms immediately on being attacked; many of the insurgents are wandering in the forests, while the Russians have set fire to the town of Woucsock. News from Cracow, of the 8th instant, relates that the insurgents were daily augmenting their forces, and that the Polish portion of the Warsaw and Vienna Railway was in their power. Three thousand of them were in the neighbourhood of Myslowitz. The National Government of Sandomir has been suspended. The *Breslauer Zeitung* of the 7th gives news from Beuthen of the 6th, from which it appears, that Prussian troops had been despatched from that town to Seimanovitz, because the insurgents had much increased at the Polish frontier town of Czelacz. It is said the insurgents have invaded the Prussian territory near Sublinitz. The *Journal de St. Petersbourg*, of the 7th, reports that Wengrow had been taken by the Russian troops after a desperate conflict. An attempt to poison the Marquis de Wielopolski has been made. The family of the Marquis and his servants are seriously ill in consequence; the poison was mixed in the provisions of the family. The prorogation of the Galician Diet has been proclaimed by the Emperor of Austria; this step has been adopted because Prince Sapihea had signified his intention of proposing that the Diet should vote an address to the Emperor, requesting his diplomatic intercession with the Emperor of Russia in favour of Poland. From Myslowitz and Beuthen on Sunday and Monday, the insurgents are reported as being unchecked; in Beuthen the great landed proprietors were assisting the insurgents with horses and provisions. From Berlin intelligence has been conveyed, that the insurrectionary movement is spreading, and great excitement prevails in Kulm among the Polish landed proprietors. News from Lemberg, of the 10th inst., describe the defeat of the insurgents by the Russians in various districts. Rumours from Berlin set forth that some parts of Western Prussia are to be declared in a state of siege. From Warsaw and Wilna intelligence comes of the defeat of the insurgents. News from Lemberg, of the 11th, describes the discomfiture of the insurgents in various parts, and the entrance of 2,000 Russian infantry and 200 Cossacks into Sandomir unopposed.

A correspondence relating to the Pope, emanating from Earl Russell to Mr. Odo Russell, has been issued, and is of much importance, because clearly indicating the views of her Majesty's Government on the occupation of Rome by French troops, and the position of his Papal Holiness. Earl Russell's first letter is dated Foreign-office, October 25, 1862, and begins by alluding to the correspondence of the Emperor of the French in the *Moniteur* of September, in which it was pointed out that great evils flowed from the present aspect of affairs in Rome. The Emperor called the attention of the Pope to the fact that while everything that was liberal in Europe condemned the resistance of his Holiness to every proposal of arrangement, the most attached adherents of the See of Rome found their consciences troubled by the antagonism between their "political convictions and religious principles which would seem to condemn modern civilization." Earl Russell then proceeds to comment on the conduct of his Holiness—that he allowed his spiritual authority to be impaired by his resistance to the wishes of the Italian people. On the part of her Majesty's Government, Earl Russell maintains that, in opposition to the picture drawn of his Holiness by the most eminent of his own Church, his territory had become a refuge for one of the contending parties, and the name of religion had been used as a justification for civil war. Conflicts of a ferocious kind were seen to take place under the pretence of their necessity to vindicate the temporal power of the

Digitized by Google

Pope. Her Majesty's Government were of opinion that Rome should be the capital of the Italian Kingdom; but they had been informed that the Pope believed a time would come when his lost territories would be restored to him and his temporal power regain its former splendour. It is then asked, whether instead of the Pope being himself the principal cause of the civil war in Italy he should not retire and expect in tranquillity the issue which in the order of Providence may await the Papacy or determine the fate of Italy. Had his Holiness thought proper to retire, the Admiral of her Majesty in the Mediterranean would have conveyed him to Malta, to Trieste, to Marseilles, or to Valencia, and in Malta a mansion suitable for him would have been provided. There he would have been surrounded, if he had chosen, by his chief cardinals and trusty counsellors. Civil war, it was conjectured, would then subside in Italy, and the Italian people would be at liberty either to enjoy the complete possession of their own territory or again assign to the Pope, if they thought fit, a temporal dominion. In a letter to Earl Cowley, Earl Russell states that the wishes of the Italians could not be carried out because for thirteen years French troops had prevented any freedom of choice on the part of the Romans; at the present time the people were less reconciled to the rule of their Sovereign than before, and the English Government thought that the foreign occupation should end; although the French Emperor had conceived the design of reconciling the Pope with Italy, they could not share in his expectation. Earl Cowley, in acknowledging the letter of Earl Russell, said he communicated the nature of it to M. Drouyn de Lhuys, who remarked that the views of the Emperor Napoleon and the English Government were, he thought, quite irreconcileable, but his Majesty looked ardently for the time when he could withdraw his troops from Rome with honour. On the 11th of November Mr. Odo Russell wrote to Earl Russell that he would visit Cardinal Antonelli and read to him his lordship's despatch. Mr. Russell subsequently learnt from the Cardinal that the Pope was disposed to remain in Rome so long as he could do so with advantage to the spiritual welfare of the Church; he thanked her Majesty's Government for their intentions, but he could not share their opinions.

Occasionally some rather singular evidence is given in trials for breaches of promise of marriage. A remarkable case has been heard in the Court of Exchequer, promoted by a Miss Russell, daughter of a surgeon named Russell, who died some years ago in Dublin, against Mr. Adams, surgeon, of Henrietta-street, Cavendish-square. The principal and only witness for the plaintiff was her mother, who, in reply to the cross-examination of defendant's counsel, became rather petulant. Mrs. Russell stated that when her husband died she began teaching music, and that plaintiff was her only daughter. She and plaintiff went some time ago to reside at the house of Mr. Crump, at Hornsey, and on one occasion, when having the charge of a child of Mr. Crump's, at the Orthopœdic Hospital, made the acquaintance of defendant. Mrs. Russell stated that defendant promised her daughter marriage, and at his request expensive apartments were engaged in London, where he visited daily. A painful disclosure took place; Mrs. Russell found that Mr. Adams was already a married man, instead of an attractive bachelor; therefore an action was instituted. The reply to the charge on behalf of defendant was that no promise had ever been made, and that the whole affair was a conspiracy, and that defendant only saw the fatherless and fair plaintiff in a professional capacity. Several witnesses contradicted strongly Mrs. Russell's testimony. The case occupied nearly three days, and resulted in a verdict for defendant, as the jury said the plaintiff had not made out her case to their entire satisfaction.

Advices to New York from Vera Cruz, to the 9th ult., state that it was rumoured that General Legrate, with 10,000 Mexicans, had made a sortie from Puebla, and routed a French division of 14,000 men, slaughtering 2,000 of them. Rumour says, that the French fired upon each other when surprised in a fog by 8,000 Mexican cavalry at Rio Seco. Another rumour says that Puebla had surrendered to the French.

Convocation met on Tuesday, and in consequence of the accession of a new Archbishop, an opening with all due ceremonial accompanying the meeting, after an election, took place in St. Paul's Cathedral.

Four prisoners under remand have made their escape cleverly from a recently-erected lock-up in Derby.

The case of Clare against the Queen, which commenced early last week, terminated on Friday, the 6th inst. The plaintiff sued for damages for an infringement of his patent by the Admiralty, in constructing the *Warrior*, *Black Prince*, and other vessels; and further for a breach of contract in not paying him 5 per cent. for all ships built on his plans. The case occupied five days in hearing, and excited much interest among ship-builders. The jury found that the patent had not been infringed, *i.e.*, in the construction of the hull; that plaintiff's specifications did not show longitudinal and vertical framing separate from the plates; and the question of novelty they desired to be excused from answering. The verdict of the jury was therefore entered for the Crown.

The treaty with Denmark for the marriage of the Prince of Wales to the Princess Alexandra has been published. The usual declarations are made of the consent of both Royal houses to the approaching marriage, and that the ceremony is to take place in Great Britain, according to the rites and ceremonies of the Church of England. Her Britannic Majesty engages that the Prince of Wales shall secure to the Princess Alexandra, out of any revenues of his Royal Highness, or guaranteed to their Royal Highnesses by Parliament, the sum of £10,000 annually, to be paid half-yearly to her Royal Highness the Princess Alexandra for her sole and separate use; and in case of her Royal Highness becoming a widow, her Britannic Majesty engages further to recommend Parliament to pay the annual sum of £30,000 sterling to her Royal Highness in lieu of dower, and the above sum to be paid in quarterly instalments.

T. B. Rae, secretary to the Marylebone Board of Guardians, has become a defaulter in his accounts, and is now in custody. He was found to be *minus* a sum of money, and when interrogated admitted that he had appropriated £670 belonging to the parish to his own use. With the assistance of friends, prisoner said he could make up the defalcation in a week. This was unheeded, as the Guardians felt called upon to prosecute; and on Saturday, at the Marylebone Police-court, prisoner was charged with the offence, and remanded for a week.

The decision of the Duke of Coburg has now been made known respecting the vacant Crown of Greece. For several reasons, his Royal Highness has positively refused to allow his name to be put forward as a candidate for the Hellenic throne. This will give rise to new anxieties among the Greeks.

At the weekly meeting in Manchester of the Central Relief Committee for Lancashire distress, Mr. Farnall reported a continued diminution of paupers in the cotton districts. Mr. Farnall said it was generally believed that the operatives will probably be but half employed during the year, therefore it was important that other spheres of labour should be sought.

At Mountain Ash, near Aberdare, on Saturday, a colliery explosion took place, and thirteen men were at first reported "missing;" but only two have been killed.

Another ballet-girl, named Neilson, has met with an accident at Sadlers' Wells Theatre, by her clothes taking fire. The poor girl ran screaming across the stage, and was rather severely burnt before the flames were extinguished. She is likely to recover.

Mr. Powell, Conservative, has been returned M.P. for Cambridge, by a rather large majority.

A telegram from Lisbon of the 8th inst. says, that an English steamer had insulted a Portuguese steamer in the port of Angola, but that the English commander gave satisfaction on the following day.

An election will shortly take place at Devizes, owing to the death of Captain Gladstone, who has represented the borough since 1852. Deceased was the brother of the Right Hon. W. E. Gladstone, Chancellor of the Exchequer, and was throughout his career a steady supporter of Conservative principles.

A vacancy at the end of the present session will be created in the representation of the city of Dublin, by the retirement of Sir E. Grogan.

Between seventy and eighty carpenters employed in preparations for the Royal wedding at the Chapel Royal of St. George, Windsor, struck for an advance of wages from 4s. 2d. per diem to 4s. 6d., and have obtained a promise that their terms shall be complied with.

On Saturday, General Serrano, acting for Marshal O'Donnell, who is ill, read a royal decree at Madrid, suspending the sittings of the Cortes. This step in Madrid has created some consternation, and a belief prevails that a dissolution of the Congress will follow. The Government, it is said, desires to unite by a conciliatory policy all the divisions of the liberal party. The Queen declares her confidence in Marshal O'Donnell. The Minister of Justice has resigned. France, it is said, has asked Spain to send back troops to Cochin-China, and that Spain has replied that she will respect the treaty which she has made with that country. Later accounts speak of Marshal O'Donnell's health as improving.

The *George Griswold*, laden with contributions for the Lancashire Distress Fund, entered the Mersey on Monday, and was hailed with a discharge of artillery. The cargo of the vessel comprise 13,236 barrels of flour, 315 boxes of bread, 50 barrels of pork, 167 bags of corn, 175 barrels of bread, 102 boxes of bacon, 3 tierces of rice, and two bags of rice.

A serious accident has occurred at the Bow extension of the Blackwall Railway, by a truck of a heavy goods-train running off the metals. Several other trucks were thrown off the metals and dragged along by the engine in fearful confusion. A part of the permanent way was torn up, and a quantity of brickwork destroyed.

An accident has befallen the Duke of Rutland. His Grace was out hunting near Grantham, and his horse fell in taking a brush fence, pitching the Duke on his head and shoulders. He was taken up insensible having sustained much injury.

Her Majesty has arrived at Windsor Castle from Osborne.

A letter has been published from President Lincoln, dated Washington, January 19, 1863, addressed to the working men of Manchester, in reply to an address to resolutions sent to the President on New Year's eve. The President says, when he went through a constitutional election in 1861 he found his country on the verge of civil war. His duty was to maintain the integrity of the Federal Republic. Circumstances had induced him to expect that if justice and good faith should be practised by the United States they would encounter no hostile influence from Great Britain. He was pleased to find that the working men of Manchester wished that peace and amity towards America should prevail. The utterances of the Manchester men had exhibited the inherent power of truth, and of the ultimate and universal triumph of justice, humanity, and freedom. The President concludes his letter, by saying that this interchange of sentiment he regards as an augury that the peace and friendship now

Digitized by Google

existing between England and America would be perpetual, and he should labour to that end.

The season of railway meetings has commenced, many of the principal companies having held their half-yearly meetings.

From the west coast of Africa the steam-ship *Macgregor* has arrived bringing twenty-seven passengers, and 2,801 ounces of gold dust. 200 houses have been destroyed at Lagos by a large fire. The negro King of Cape Coast Castle is reported dead.

A meeting to support the Emancipation policy of the American Government has been held in a chapel in the Commercial Road, Whitechapel. The Rev. C. Stovel, the minister of the chapel, proposed a resolution strongly condemnatory of slavery, and disapproving of European intervention. He spoke of the effrontery of men who said that slavery was sanctioned by the Bible. In the Jewish times he would admit that the Scriptures recognised a condition of subordinate servitude, but there was nothing in that akin to the ingredients of which American slavery was formed. The resolution was passed, after being supported by a speech from Mr. W. Wilks.

Lord Ravensworth, in the House of Lords, on Thursday, dwelt on the necessity of affording asylums to ships and seamen when caught in a gale, and he thought the present a good time for attending to the subject, as there was a surplus in the revenue. The Duke of Somerset opposed the creation of various harbours of refuge before the four great harbours at Dover, Alderney, Holyhead, and Portland were completed. He disagreed with having new ports paid for by public money. The subject dropped through. A conversation arose about Redpath, the forger, who is now in Western Australia, and the Duke of Newcastle said the convict resided in a house of his own, and received a remittance annually of £200 from his wife, who is in England.

Mr. Villiers, in the House of Commons, moved for leave to bring in a bill to extend for a further period the provisions of the Union Relief Aid Act of last session. Boards of Guardians viewed the Act as one of value, and the reason why it had not been used to the extent it might have been in the cotton districts was owing to the handsome voluntary contributions received for Lancashire from all parts of the empire. In replying to remarks by Lord Stanley, Mr. Cobden said that, assuming the present state of things to continue, the condition of the cotton districts would be more serious next winter than during the present. Details were given of the large voluntary contributions which had come from the districts themselves, besides poor-rates, loss of wages, and depreciation of capital, making an aggregate of £12,445,000. Leave was given to introduce the bill.

Sir William Armstrong has sent in his resignation of the position he has held for several years past of ordnance engineer and superintendent of rifled ordnance construction to the War Department. Sir William has only tendered his resignation that he may be enabled to attend more closely to the Elswick Ordnance Company, in which he has a large interest.

The election at Devonport has resulted in the return of Mr. Ferrand, Conservative. Great excitement prevailed among the people during the proceedings.

The overland mail has brought news from India, China, and Australia. Lady Elgin reached Calcutta on the 8th of January. Through a disturbance between the Ranee Wudjee and her son, about 200 men had been killed at Khettoree, in Central India. The rebels in China still hold Nankin. From Queensland news comes of the safe arrival there of Miss Rye and her female emigrants.

The Prince of Wales has taken up his freedom of the Worshipful Company of Fishmongers. The freedom was inclosed in a gold box.

Another inquest has been held on a young lady whose clothes caught fire through her crinoline. She was attending a few days ago to her mother, who was unwell, and when stooping near the fire, her clothes became ignited, and she was so severely burnt that she died two or three days after the accident.

Arrests in Paris are reported in consequence of intended demonstrations in favour of Poland. A large number of young men belonging to the normal schools and to the faculties of jurisprudence and medicine took part in the demonstration when leaving the public lectures.

Reviews of Books.

FARRAR'S BAMPTON LECTURES.*

It is much to be wished that the University of Oxford, among its other reforms, would make some alteration in its present system of Bampton Lectures. Most of our readers are aware that the Rev. John Bampton, in 1751, left certain estates for the endowment of "eight divinity lecture-sermons to be preached in St. Mary's Church by a lecturer, chosen by the heads of colleges only, on certain specified subjects, with the object of confirming the Christian faith and confuting all heretics and schismatics." Now, we do not say that, as at present constituted, these lectures have not been productive of good: there is no need to refer to well-known and really able treatises, the publication of which the Bampton endowment has given rise to. This has been the case especially in the last few years. The lectures delivered by Mr. Wilson and Mr. Mansel made no inconsiderable stir in the theological world both of England and the Continent, and constitute valuable additions to Christian philosophy. At the same time, every one who reads Bampton Lectures, and, still more, every one who hears them, cannot but feel that they lose much by being compelled to take the form of a "lecture-sermon," and to submit to the very minute provisions of the founder's will. To mention only some of the disadvantages: the terms of the said will have to be considerably strained even to admit many of the subjects, the discussion of which has been of the greatest value. Then, whatever be the subject, its treatment must be compressed into eight lectures, neither more nor less, and must be printed almost exactly as delivered. Besides, the lectures must be preached at a particular time from the pulpit of St. Mary's, and so must assume some properties of a sermon in the shape of a text, practical lessons, occasional flourishes of rhetoric, adaptations to the spirit and tone of an academical, and, for the most part, a clerical audience. Now, although the subjects specified by the founder might admit of the sermon style well enough, some of those chosen by later lecturers, however excellent in themselves, are eminently unsuited to it. We recollect hearing that undergraduates used to flock to Mr. Mansel's lectures because, in the way of logic, they were so "good for the schools." Possibly, a similar motive as regards history might have influenced some of Mr. Rawlinson's audience. By this sort of lecture the pulpit can gain nothing, and the subject may often lose much. It would, we think, be far more satisfactory, and the purpose of the founder would be equally answered, if, instead of a series of "lecture-sermons to be preached," the University (imitating in some degree the example of the French Institute) were annually to put forth, under its sanction, a written treatise on some subject connected with Christianity, not only to be chosen by the author, but to be handled at whatever length and in whatever form he may deem best. Many a valuable monograph, we venture to say, would thus be produced by clerical or lay thinkers; indeed, we should expect to derive all the benefits of the present system undiminished by its inherent disadvantages.

If this idea had not occurred to any one before, it might be sugested by a perusal of this course of Bampton Lectures by Mr. Farrar. The subject is an excellent one, though hardly coming under those enumerated by the founder; much erudition and careful study are shown throughout in its treatment; but every reader must feel that the work would have been done much better if it had been independent of the pulpit altogether. While the greatest portion of these lectures reads just like so many pages of a literary review, we must acknowledge that those parts are very superior to others, which contain the practical conclusions, the lessons and warnings, the monotonous exhortations to "study" and "prayer," the apologies for candour (!) in the examination of his subject, which, we presume, were considered necessary to invest the discussion with the character of a "sermon-lecture."

"A Critical History of Free Thought in reference to the Christian Religion" is a topic interesting enough to induce us to lay before our readers a brief sketch of the way in which it has been handled by Mr. Farrar. By "free thought" he would mean "the resistance of the human mind to the Christian religion as communicated through revelation, either in part or in whole; either the scepticism which disintegrates it, or the unbelief which rejects it;" while the stand-point of criticism is the only one that could well be adopted by a university preacher, the "teaching of Scripture as expressed in the dogmatic teaching of the creeds of the Church." The causes, then, of the insurrection of mind against authority, of reason against revelation, being two-fold, moral and intellectual, Mr. Farrar selects the latter for investigation, with only occasional reference to the former, Bishop Van Mildert having, though from a peculiar point of view, discussed these in his Boyle Lectures of 1802-4.

The principal intellectual causes, as considered by our author, which make thought develope into doubt or unbelief are—(1) new *materials* of knowledge, such as the results of physical or metaphysical science, which may present truth and furnish conclusions opposed to the teaching of Scripture; (2) new *methods* of criticism and new grounds of belief, the application of which creates opinions differing from those of the traditionary faith: as, for instance, when the doctrines of revelation are submitted to the particular tests, predominant or exclusive, of sense or reason, intuition or feeling. Such being the causes, their influence is traced in the four great epochs that have most signally exhibited the struggle of reason against the authority of the Christian religion.

The earliest of these periods, comprising the first four centuries, we may pass over hastily, as, however interesting may be the forms and sources of doubt or disbelief in such opponents of Christianity as Lucian, Celsus, Porphyry, and Julian, they illustrate but very imperfectly, if at all, the intellectual causes assigned for such mental states by Mr. Farrar, in his first lecture. The second period is that between 1100 and 1400, when the Christian faith is viewed in its struggle with the sceptical tendencies exhibited by Scholasticism. The data for this epoch are not copious; but the lecturer has succeeded in tracing what vestiges he can find of free thought in respect of religion during these centuries to the new method and spirit of criticism introduced by the Nominalists, with Abelard for their representative, and to the disposition awakened by the scholastic movement in general to make dogmas submit to the test of reason. We doubt if Mr. Farrar has not attached more importance than is due to the contact with Mahometan life and

* A Critical History of Free Thought in reference to the Christian Religion. Bampton Lectures for 1862. By Adam Storey Farrar, M.A., Michel Fellow of Queen's College, Oxford. London: John Murray. 1862.

Digitized by Google

opinion prevalent at this period, as imparting a latitude and a nascent incredulity to Christian thought; he has more reason for concluding, from the appearance of the book called the "Everlasting Gospel," and the excitement it caused, that the new idea of the progressiveness of Christianity, and its ultimate replacement by a superior revelation developing from natural causes, exercised no inconsiderable influence on the views entertained towards the Christian faith about the middle of the thirteenth century.

The third epoch is the age commencing with the Renaissance, and closed by the creation of modern philosophy—1400-1625. Although this period includes the Reformation, whatever of free thought was exhibited in that great movement does not enter into these lectures, treating as they do only of such opposition as was made against Christianity by reason acknowledging no authority beyond its own unassisted light. In these centuries, two chief movements of unbelief are investigated and traced to their respective causes: the one in Tuscany and Rome, engendered by the revival of classical studies and heathen tastes, regarding the Christian faith with indifference; the other of a Pantheistic kind, awakened by the material and rational studies of the great medical school of Padua, and, in the doctrines of Bruno and Vanini, expressing itself in disbelief of the spiritual altogether, and denial of the immortality of the soul. The fourth period, from the seventeenth century to the present day, is of course by far the most interesting, though we need hardly say not to be treated adequately in five "Sermon-lectures." In these Christianity is seen in conflict with modern philosophy and its results, as manifested in (1) English Deism; (2) in French Infidelity; (3) in German Rationalism. One of the best parts, it appears to us, in Mr. Farrar's book, is that in which he treats of the new method of inquiry introduced by Bacon and Descartes in the seventeenth century, and the indirect influence which that method soon began to exercise on theological speculation. Their point of view was emphatically a new one; and the influence of their spirit, however different its direction, was to beget a critical, subjective, analytical study of any topic. Accordingly, when applied to religion, "This is the feature which subsequently characterizes alike the unbelief and the discussion of the evidences. Difficulties and the answers to difficulties are found in an appeal to the functions and capacities of the interpreting mind."—(Lecture IV.) In England this discussion of first principles and appeal to reason, when applied to religious inquiry, produced Deism, allowing the existence of a Deity on the evidence of reason, and creating a religion on the basis of the moral conscience. The several phases of deistic belief in England, from Hobbes to Hume, are sketched with much discrimination, according as the several assaults were directed against the method, the morality, the doctrines, or the evidences of revealed religion. It is in this part of the work that the action of the intellectual causes above mentioned is best seen; the new methods of Descartes, Bacon, and Locke, on the one hand, and the new physical discoveries of Newton on the other, forcibly operating to direct free thought into a sceptical tendency. Our space will not permit us to enter on the infidel form assumed by free thought in the France of the eighteenth century, as the lecturer traces it, from the sneers of Voltaire to the blasphemies of Volney, which he ascribes in a great measure to the spread of the extreme sensationalism of Condillac, Helvetius, and Cabanis, and the diffusion of the deistic literature of England.

But far more remarkable than English Deism or French Infidelity is that form of free thought which in Germany has been denominated "Rationalism." As Mr. Farrar well remarks:—

"The whole movement is distinguished, not only as being the most singular instance in history where the action of free thought can be watched in its intellectual stages, disconnected in a great degree from emotional causes, and where the effort was exercised by the friends of religion, not by foes; but also in the circumstance that though referable to the influence of similar intellectual causes as former epochs of free thought, it is characterized by wholly different forms of them" (Lecture VII.).

Much praise is due to the author for the care with which he has analyzed the several stages of the theological movement in Germany, and its relation to the Wolffian, Kantian, and Hegelian philosophies. We do not know any work wherein so much information is imparted on this subject within so little compass. We must content ourselves with giving Mr. Farrar's summary of it:—

"Commencing in the first period in doctrine with the disbelief of positive religion, replacing dogma by ethics, and in criticism supplying a rationalistic interpretation; in the second, it was improved on the doctrinal side by the separation of religion and ethics, and on the critical by a spiritual acknowledgment of the literary characteristics and psychological peculiarities of revelation; in the third, by a total reconstruction of both inquiries in a more historic and orthodox spirit. . . . . The solution of the problem how to reconcile faith and reason was attempted, in the first, by obliterating faith; in the second, by uniting them; in the third, by separating them."

But the lecturer is bent on being exhaustive, and not only carries his investigations of free thought down to the days of Bentham and Coleridge, and their influence on modern religious speculation, but pushes his intrepid analysis into the rationalistic tendencies of Mr. Maurice, Professor Jowett, and the writers in "Essays and Reviews." No one, however, can complain of Mr. Farrar's tone, even when he treads on such delicate ground. Throughout his work he has displayed a fairness of judgment and kindliness of spirit which, whether proceeding "from pity for the heart wounded with doubts" (or what seems to us a more adequate as well as probable cause,) from intelligent acquaintance with the many phases of history and speculation, is seldom met with in Bampton lecturers. In his preface he tells us that he had studied the subject for his private information without any design to write upon it, but simply from the desire of bringing his own views and principles perpetually to the test. This speaks well for the author's candour; but we should have expected that this early disposition to test his own opinions would have generated a more efficient criticism of those of others. As it is, we prefer the historical to the critical side of Mr. Farrar's Lectures: when his criticisms are good, they are rarely his own; when his own, they seldom strike us as profound. On Collins's "Discourse on Free-thinking" we have the safe comment made "that undoubtedly free inquiry is right in all departments, but it must be restrained within the proper limits which the particular subject-matter admits of," &c.; and as the chief effect resulting from the extinction of Christianity in France during the great Revolution, Mr. Farrar adduces "the irreligious mode of spending the Sunday in French society." But we would not wish to dwell upon these and other small blots in a book which, both in the text and the elaborate notes appended to it, bears everywhere marks of conscientious study and impartial judgment, if not of a very penetrating criticism. The Bampton Lectures of 1862 may not fulfil the writer's wish of affording "guidance" or "comfort;" they will not, we are sure, fail of conveying "instruction," where instruction in a manageable compass was particularly needed.

LORD STANHOPE'S MISCELLANIES.*

This book possesses at least one merit, not common in these book-making days—it is exceedingly short. We have here altogether not much more than a hundred pages of print, and even this amount of printing is neither small nor close. Any man skilled in the art of judiciously skipping, will be able to "read and mark" all that is really good in this volume in an hour, and to "inwardly digest" the same in half an hour more. After this acknowledgment it may appear ungrateful to say that even as it is the book is too long. Yet this is what candid criticism must pronounce. The first forty pages more especially, which are devoted to Pitt, would have found a more appropriate place elsewhere. They should have been incorporated with the "Life of Pitt" by the noble editor of the "Miscellanies;" and, although thus to bid them "part in peace" would be indeed to consign them to a living tomb, still it is unquestionably a right judgment. Lord Stanhope tells us that the miscellaneous pieces, here collected, were omitted from his life of Pitt as not "material to the narrative." We cannot acquiesce in this reason. On the contrary, it appears to us that such matters as Pitt's difficulties with Ireland, and his correspondence with the Duke of Rutland regarding these difficulties—his dislike to the customs duties and his wish to abolish them—his habits of hard work, and his courtesy towards his subordinates, were all eminently matters fit to be dwelt upon in a book which professed to be at once a record of the statesman and a biography of the man. Nay more, we think that if they had been embodied in such a work, they would have been at once more interesting and more instructive than when thus thrown upon the world as unconnected fragments. We cannot, indeed, assert that they would have made Lord Stanhope's "Life of Pitt" interesting or instructive. That would have been an achievement beyond hope. But they might have improved it; and they would there have occupied their right place, whereas here they are by no means in their right place. If Lord Stanhope was determined to revert to his conspicuous failure to commemorate the great commoner worthily, he might have done better than give to the world the leavings of his note-book. He might have supplied many omissions, and corrected many blunders. It would have been something had he even corrected the errors, of which the Auckland Correspondence convicted him as to Mr. Pitt's love affair with Lady Eleanor Eden.

After we have done with Mr. Pitt the interest of the book begins. It is not an interest which criticism can, with much profit, illustrate or enlarge upon; in fact, the collection is hardly susceptible of criticism at all, or at least only of that style of criticism which consists in giving specimen extracts. To read it is like listening to the conversation of a man who has lived in the best society: we hear of distinguished men, and we hear of them in their familiar life; but *what* we hear will be valued by some readers and despised by others. No principles of criticism whatever can be applied to such a collection. Every one will think of it as seems good in his own eyes; and the critic cannot feel that he has any claim to regulate that judgment. He can but indicate to the reader the nature of the entertainment prepared for him. The men who show out best—the heroes of the book, if we may so call them—are beyond question Lord Macaulay and Sir Robert Peel. Perhaps the most interesting thing in the whole collection is a memorandum by the greatest Conservative premier on the character of the greatest Whig premier. Lord Mahon sent the original "character" of Sir Robert Walpole, which he had prepared for his history, to Sir Robert Peel, for his approval. Sir Robert did not approve at all, thinking Lord Mahon's judgment far too severe, and gives with great force and clearness his reasons for his opinion. There is a certain sedate humour in the way in which Sir Robert shows up the absurdity of Lord Mahon's contrast

* Miscellanies. Collected and edited by Earl Stanhope. London: John Murray, Albemarle-street. 1863.

Digitized by Google

between Walpole and Strafford, which is exceedingly amusing. Here and there, too, passages occur, betraying, we think, very surely that the warmth of the defence of Walpole was in some measure attributable to personal feeling.

"But in estimating the characters and conduct of men living at different periods, in apportioning to each their respective merit or blame, justice cannot be done unless due allowance be made for the difference of circumstances imposing different duties, and calling into action different qualities.

"You must have a new test by which to try the conduct of public men, varying with the lapse of time, with the altered character of events, and with the changes of public opinion.

"In my opinion men, and the conduct of men, are much more the creatures of circumstances than they generally appear in history. Infamous as Robespierre and Marat unquestionably are, it would be no easy matter to assign to each their due share of infamy without a very dispassionate inquiry into many minute events which contributed to shape their course, and into the degrees of conflicting dangers between which they had to choose."

The following sarcastic remarks on the outcry against Walpole's corruption are perfectly sound, and show a love of truth and a contempt of humbug which tend materially to elevate our conception of Sir R. Peel's character:—

"When one recollects what other Ministers, the predecessors of Walpole, had so recently done; the shameful bribes which had been taken by Cabinet Ministers—by Sunderland, and Aislabie, and Craggs—for the furtherance of the South Sea scheme; and when one reads the report of that committee, the bitter enemies of Walpole, their horror at his attempts on the virtue of the Mayor of Weymouth, their indignation that in order to secure a favourable returning officer he had promised the mayor a place in the revenue; that he had committed the shocking atrocity of dismissing some excise officers who voted against the Government candidate, one cannot help smiling at the virtuous rage of these incensed patriots, who seem, like the giants in Rabelais, after having swallowed windmills for their daily fare, to have been choked by a pound of butter."

By a somewhat similar device, Lord Mahon elicited from the Duke of Wellington a memorandum containing a comparison between Napoleon and Marlborough, and between Marlborough and himself; but this, as might have been expected, is rather jejune. The object was to prevent Lord Mahon from inserting in his history some casual expressions which the duke had used in conversation, and which no one but the most literal of men would have thought of so inserting, and to this object it was strictly confined.

All the world has heard stories without number of the vast learning and wonderful memory of Lord Macaulay; we have here a few more added to the stock. Mr. Stirling wishes to discover the origin of an apocryphal story told by Robertson, to the effect that Charles V., at Yuste, finding that he could make no two of his clocks go alike, remarked that perhaps he had erred in attempting to compel uniformity in the more difficult matter of religion, and accordingly, "would like to ask Mr. Macaulay, who knows where everything is to be found." Lord Mahon does ask Mr. Macaulay, and gets an answer, if not beyond doubt the correct one, certainly the most plausible which has yet been given. Again, Lord Mahon and the Duke of Wellington have a difference as to when the English army first wore red, and the point is referred to the omniscient Secretary for War in 1851, who determines it by a quotation from Hudibras. A more difficult question, namely, whether human sacrifices were in use among the Romans, is referred to the same authority, and also to Sir Robert Peel. The latter, being an ex-Minister, goes into the matter very fully, and quotes passages tending to show that they were; the former, being then in office contents himself with arguing from the references furnished to him, and comes to the conclusion that they were not. The following quotation from a letter to Lord Mahon will give readers some idea of the labour with which Lord Macaulay's learning was acquired and kept up:—

"I am certainly much better, and I begin to hope that six weeks more of the Downs will completely restore me. I have been reading a great deal of execrably bad Latin—Suetonius, Vulcatius, Spartianus, Trebellius Pollio, Julius Capitolinus, Lampridius, Vopiscus—and I am going to try to take the taste of all the barbarisms which I have been devouring out of my mouth with the 'Andria' and the 'Heautontimorumenos.' I have read Herodian too. His Greek is not first-rate, but is immeasurably superior to the Latin of his contemporaries. After all, there is a great deal to be learned from these writers. Hume was quite in the right when he said that Gibbon ought to have made more of the materials for the 'History of the Empire' from the Antonines to Diocletian. Indeed, Gibbon very candidly admitted the justice of Hume's criticism."

Dignity unbending is always a pleasing spectacle, and dignity has seldom unbent more gracefully than in the following lines:—

"*Valentine to the Hon. Mary C. Stanhope (Daughter of Lord and Lady Mahon).* 1851.

"Hail, day of Music, day of Love,
On earth below, in air above.
In air the turtle fondly moans,
The linnet pipes in joyous tones;
On earth the postman toils along,
Bent double by huge bales of song,
Where, rich with many a gorgeous dye,
Blazes all Cupid's heraldry—
Myrtles and roses, doves and sparrows,
Love-knots and altars, lamps and arrows.
What nymph without wild hopes and fears
The double rap this morning hears?
Unnumbered lasses, young and fair,
From Bethnal-green to Belgrave-square,
With cheeks high flushed, and hearts loud beating,
Await the tender annual greeting.
The loveliest lass of all is mine—
Good morrow to my Valentine!

Good morrow, gentle Child! and then
Again good morrow, and again,
Good morrow following still good morrow,
Without one cloud of strife or sorrow.
And when the god to whom we pay
In jest our homages to-day
Shall come to claim, no more in jest,
His rightful empire o'er thy breast,
Benignant may his aspect be,
His yoke the truest liberty:
And if a tear his power confess,
Be it a tear of happiness.
It shall be so. The Muse displays
The future to her votary's gaze;
Prophetic rage my bosom swells—
I taste the cake—I hear the bells!
From Conduit-street the close array
Of chariots barricades the way
To where I see, with outstretched hand,
Majestic, thy great kinsman stand,*
And half unbend his brow of pride,
As welcoming so fair a bride.
Gay favours, thick as flakes of snow,
Brighten St. George's portico:
Within I see the chancel's pale,
The orange flowers, the Brussels veil,
The page on which those fingers white,
Still trembling from the awful rite,
For the last time shall faintly trace
The name of Stanhope's noble race.
I see kind faces round thee pressing,
I hear kind voices whisper blessing;
And with those voices mingles mine—
All good attend my Valentine!

"T. B. Macaulay."

"St. Valentine's Day, 1851."

On the whole it is impossible to deny that Lord Stanhope is a disappointing writer. He reminds us, not to say it offensively, of Mr. Pecksniff's horse—always giving promise of great performance yet invariably leaving that promise unfulfilled. His books are never so good as they should be. "Much worse than we seem," should be their motto. He is always meritorious and always tiresome. His materials have always been the very best; his workmanship has always been inferior. He has written the history of a most interesting time, he has written the life of one of our greatest statesmen, and the record and the memoir alike are insufficient and unsatisfactory. This "Collection" is of the same stamp. Few men, with Lord Stanhope's opportunities, would not have made a better thing of such an undertaking. However, if we cannot heartily praise, most certainly we will not blame. It would have been worth while encountering a far more ponderous tome than this to be rewarded by Sir Robert Peel's memorandum and Lord Macaulay's valentine.

AURORA FLOYD.†

For some months past the attention of the young-lady section of the novel-reading community has been almost entirely devoted to the consideration of bigamy under various aspects. It may be that the responsibility of making the topic fashionable rests with Mrs. Theresa Longworth Yelverton; but we doubt whether she had not more justification than those authoresses who, for the purpose of producing sensations in the minds of romantic and unsophisticated girls, construct plots which, skilfully contrived and brilliantly narrated, possess a piquancy denied to the reports of the proceedings in the Divorce Court. It may be, indeed, that this same court has much to answer for in the matter; and that a class of novelists are rising up amongst us who will make it their duty to illustrate, in a style at once artistic and thrilling, those varied legal details which are often too concise in their terms, and too undisguised in their expression, to be agreeable to the general reader. We can hardly take up a *Times* without perceiving the skeleton of a sensation novel only waiting to be appropriated by Mrs. Wood or Miss Braddon, and put on the stage tricked out with the necessary amount of tawdry morality and high-flown sentiment. We have always understood that "Jack Sheppard" and the "Newgate Calendar," which professed to be the record and illustration of crime, and not the inculcation of it, were, nevertheless, the favourite reading of those who warred upon society; and that, so far from the pictures which these books exhibited of the sad results of a misspent life warning others by the examples they contained, they possessed a strange fascination for criminals of all classes, and in many instances actually tempted their readers into

Digitized by Google

the vicious life they portrayed. One of the chief duties of the novelist is, doubtless, to present pictures of society at once truthful and interesting, but we cannot sympathise with those who select for illustration scenes of domestic misery and crime. We all know that incidents such as those it is now the fashion to popularize, do happen, but fortunately they rarely come before the public, and it is time enough for young women to become familiar with their details should they be unfortunately involved in them themselves. We would not for a moment accuse the two most popular authoresses of the day of wilfully endeavouring to corrupt society; we give them every credit for the attempt to point the moral, by involving the misguided heroes and heroines in every description of misery—though they usually end happily—but we utterly dispute the efficiency of the means to the end; we deny that the picture presented to us in "East Lynne" of a divorced woman living as governess with her former husband and his wife is a profitable subject for society to contemplate. We fail to see the advantage which the reader is to derive, while following with breathless interest the intrigues of a Lady Audley, whose whole energies and talents are devoted to concealing from one husband her marriage with another, whose every breath is a lie, and who does not shrink from murdering the man she swore to love. Lastly, in the novel before us, the inconvenience attending the clandestine marriage of a young lady with her groom is very clearly set forth; but we do not think this is a fact which young ladies generally would be inclined to dispute, and we do not see what point is gained by making the heroine marry a rich Yorkshireman while she is still the groom's wife, and, the groom being subsequently opportunely shot, live happy ever after. Still, whatever may be said against the moral, there can be no doubt that "Aurora Floyd" is infinitely the best of the bigamy novels. It is as far in advance of "Lady Audley's Secret" as "Lady Audley's Secret" is of "East Lynne." Not only is the plot more skilfully contrived and better sustained towards the end, but the style is more finished. There are touches of humour and pathos which we look for in vain in Miss Braddon's former work, and often an elevation of thought which would have accorded better with a loftier subject.

The character of John Mellish, the honest Yorkshire squire, is drawn with a skill that is all the more remarkable when we remember that the artist is a woman. Aurora Floyd herself is a specimen of the sex whose personal appearance we might admire, but, in spite of our authoress's evident desire to enlist our sympathies in her favour, she fails to attract them. A masculine woman with a heart is not a loveable being; but a masculine woman without a heart borders on the repulsive, even though her eyes are unexceptionable. Aurora Floyd is of this type. She hates the groom she runs away with,—the only common bond of sympathy between them having been horses and dogs. She is then engaged to be married to Talbot Bulstrode, and although she is mortified at his final rejection, in consequence of her own act, she soon gets over it. Two years afterwards "Aurora might have been shipwrecked and cast on a desert island with Talbot Bulstrode, and might have lived ten years in his company, without ever feeling for ten seconds what she had felt for him once." She had, in the meantime, married John Mellish, the Yorkshire squire, but, says our author, "I do not know that she ever felt any romantic or enthusiastic love for this big Yorkshireman;" in fact, she was obliged to put up with him, and consoled herself by bullying him. "He was not a creature to despise, for his very weaknesses were manly. Perhaps Aurora felt this, and that it was something to rule over such a man." To judge by the glimpses afforded us of the fiery nature of this young lady, the hand of steel was not always concealed by the velvet glove. This is her method of "ruling" a groom—not the one she ran away with and married.

"Aurora sprang upon him like a beautiful tigress, and, catching the collar of his fustian jacket in her slight hands, rooted him to the spot upon which he stood. The grasp of those slender hands, convulsed by passion, was not to be easily shaken off; and Steve Hargraves, taken completely off his guard, stared aghast at his assailant. Taller than the stable-man by a foot and a half, she towered above him, her cheeks white with rage, her eyes flashing fury, her hat fallen off, and her back hair tumbling about her shoulders, sublime in her passion.

"The man crouched beneath the grasp of the imperious creature.

"'Let me go,' he gasped in his inward whisper, which had a hissing sound in his agitation, 'Let me go, or you will be sorry; let me go.'

"'How dared you?' cried Aurora, 'How dared you hurt him? My poor dog? My poor, lame, feeble dog? How dared you to do it? You cowardly dastard; you—'

"She disengaged her right hand from his collar, and rained a shower of blows upon his clumsy shoulders with her slender whip—a mere toy, with emeralds set in its golden head—but stinging like a rod of flexible steel in that little hand."

It was this "little hand" that the big Yorkshireman adored, so there is nothing more to be said on the matter—it was one of his "manly weaknesses." For our own part, if a woman is to marry two husbands at the same time, we would rather she were a muscular heroine of this stamp, with whom we have no sympathy, than the wicked but fascinating Lady Audley. In neither case is the picture a pleasant one to look on; and Miss Braddon showed no little courage and knowledge of her public when she ventured on her second illustration of this favourite crime.

If we have failed to convey a very favourable impression of her last effort, it is not because we deny Miss Braddon's talent as a writer, but because we regret to see it employed on so unlovely a theme; and because, moreover, we foresee that the effect of familiarizing the public mind with highly wrought scenes of misdirected passion, will in all probability lead to the extension of sensation plots into a region of social experiences at present almost entirely appropriated by French authors. It is not long since we had occasion to notice a novel in which the interest was centred in a love affair between a step-daughter and her step-father, during the lifetime of the mother, and we regret the indications these works afford of a growing tendency in this direction. The influence of a pernicious literature, however well disguised, cannot fail to have an insidious effect upon the class of minds chiefly devoted to sensation reading; and it is in no spirit of ill-nature that we have alluded thus strongly to the unfortunate bent which Miss Braddon's imagination seems to have taken, but rather in the hope that she may be induced to employ her pen to charm, rather than to shock society. The task will be more difficult, and therefore more worthy her talent.

THE BISHOP OF EXETER.*

Mr. Shutte has got out his book after all; here at least is one volume of it. He might have spared himself that rebuff with which the Bishop met his application for "your lordship's assistance towards supplying myself with reliable matter." Indeed, he now tells us that all he had ever wanted of the Bishop was—1st, his lordship's consent to the printing of some extracts from letters of the Bishop's which were in Mr. Shutte's possession; 2nd, to learn from his lordship's own lips the right interpretation of some "doubtful and difficult points." For, as might have been expected, on examining the Bishop's published writings, he had "occasionally found that statements and facts were capable of more than one interpretation." Now, let us suppose that the Bishop had agreed to confer with Mr. Shutte on those matters. If such an interview had taken place, we know that one of the two would have been a very clever man; but which of them would have been the more candid is "a doubtful and difficult point." Yet an extraordinary degree both of candour and cleverness must be presumed in him who can be trusted by himself to supply his biographer with "the right interpretation" of the facts of his own life. Wisely, therefore, as it seems to us, the Bishop declined to have anything to do with it; remaining deaf to Mr. Shutte's plea, that the terms offered him by Messrs. Saunders & Otley "were so liberal," that he could not refuse to undertake the task. But a more serious question for Mr. Shutte is, whether, in telling the Bishop that "if I cannot have your lordship's free assistance, I have no alternative but to fulfil my engagement with the publishers in the best way I can," he meant to threaten his right reverend diocesan with the publication of the letters in spite of him. Mr. Shutte indignantly denies that he ever meant to do or to threaten any such thing. The Bishop, however, by instantly applying to the Court of Chancery for an injunction, took care that, at any rate, it should not be done. As to this point, again, as we observed at the time, we think his lordship was in the right.

It is now our turn to see how Mr. Shutte, lacking whatever help he sought of the Bishop, has made up his book. He assures us, of course, that he needed no such help, and preferred writing quite independently of the Bishop; he repeatedly told Messrs. Saunders & Otley that he was sure that the Bishop's co-operation would never be obtained. But, in his second letter to the Bishop, last July, he complained of "not receiving from your lordship the assistance which can alone make the book valuable." With this discouraging intimation, we began its perusal, having the author's word for it that its contents were of no value; and, after reading through the whole volume, we find his admission confirmed. Mr. Shutte tells us really nothing about the Bishop of Exeter that we did not know before. From the Clergy List, the printed pamphlets of Dr. Phillpotts, a few volumes of Hansard, and one or two old files of local newspapers, almost the whole of this information might have been gathered with very brief research. These materials, indeed, would have been sufficient for a writer with any historical faculty, and tolerably acquainted with the general state of things, political and ecclesiastical, in England during the first thirty years of this century, to have composed, in much less space, a far more complete account of Dr. Phillpotts' public life, up to the second year of his episcopate, at which point this volume leaves him. Mr. Shutte, however, as a mere compiler, is a most unskilful one; his grasp on the substance of his narrative is so feeble, that he is fain to drop it, every now and then, and totters into long extracts lugged in with a few commonplace phrases of commendation, so filling half a dozen pages at once with a huge cutting from some one of the published tracts or speeches, which, though more readable than any passage which he himself has written, is utterly destructive of the continuity of his work. This habit makes it a painful exercise to get at a distinct view of a group or series of events; and the biographical interest is entirely lost sight of. Mr. Shutte has a trick of shifting the incidents of a person's life to and fro, postponing the earlier, or anticipating the later events, for the sake of bundling them together with all of the same kind which he picks up on his way. This is not the proper method of biography. The development of individual character and agency and position, should be the leading and connecting idea from first to last.

It will not do, for instance, in relating the career of Dr. Phillpotts, while describing the rapid preferment which he gained by

* The Life, Times, and Writings of the Right Rev. Dr. Henry Phillpotts, Lord Bishop of Exeter. By the Rev. Reginald N. Shutte, B.A., Rector of St. Mary Steps, Exeter. Vol. I. Saunders, Otley, & Co.

Digitized by Google

Bishop Barrington's favour, to defer considering the services he rendered to that prelate, in his controversy with Dr. Lingard, until we come to his controversy with Mr. Charles Butler, twenty years later. Mr. Shutte knows, as well as we do, that a step on the golden ladder of Church dignities and emoluments was the price which Dr. Phillpotts received for every pamphlet he wrote against the Catholics or against the Whigs. Mr. Shutte does not affect to deny, that "this may help to account for the controversial tone of the whole of Mr. Phillpotts' writings up to the time of his elevation to the Episcopal Bench." We have said no more than this of the earlier portion of his career, as an able and ambitious partisan who had resolved, like Jonathan Swift, to win his way in the world by the dexterous use of his pen. In a short memoir of him, which appeared in this journal six months ago, he was treated simply as a type of the clerical politician of the last age, when it was by denouncing the opponents of a Tory Ministry, and especially the promoters of Catholic Emancipation, that a polemical champion might earn the patronage of the ruling powers.

A writer unknown to us, who has felt moved, after some delay, to publish * his "strictures" upon our unpretending sketch of the Bishop's public life, admits what he calls the "imputation," that the Mr. Phillpotts of fifty years ago, in his literary efforts to procure himself Church preferment, "studied and served the times." In the opinion of this apologist, "as much or as little may be said of any man, whether of High Church, Low Church, or no Church, Whig, Radical, or Tory opinions, whose abilities advance him in the world." Mr. Shutte, likewise, while professing to admire the present Bishop as, "of all the illustrious prelates who have ruled the diocese of Exeter," one who has done the most to merit the homage of the Church, admits that he rose to the cathedral throne by such means as we have suggested :—

"But fifty years ago the case was different. Clergymen then mingled freely in all the contests of a stirring age. It was not thought beneath the gravity of their calling to assume the part of whippers-in at elections, or of political lampooners. A pamphlet had often led the way to a stall. Rich livings had been won by still more questionable means; hence it was that men fitted to shine in the world of letters, or ambitious to earn a minister's regard, were dragged, however reluctantly, into the whirlpool of political controversy. The fault was not entirely their own. They might, indeed, have followed the obscurer life of pastoral usefulness; but once having quitted it, they were impelled by the necessities of an imperious age. And this may help to account for the controversial tone of Mr. Phillpotts' writings."

We are quite satisfied with Mr. Shutte's explanation, since, with regard to the actual circumstances of Mr. Phillpotts' early achievements and early success, his statement agrees with our own. It was not as a ground of personal reproach, but as an example of the different spirit which in that age prevailed among the dispensers of Church patronage and the candidates for Church promotion, compared with those of our own day, that we deemed fit, in an historical point of view, to notice those facts of his early career. To all sincere friends of the religious institutions of this country, it is a matter of congratulation that rich benefices, canonries, deaneries, and mitres, are no longer bestowed upon the most vehement champions of a dominant political party. All the Crown appointments in the Church for the last fifteen or twenty years have recognized other qualifications for her sacred offices—learning, piety, or "pastoral usefulness" being the most essential. We will not hint a doubt that, if the same considerations had influenced in this respect the governments of which Lords Sidmouth, Eldon, and Liverpool formed part, Dr. Phillpotts might have risen, by the exhibition of more distinctly evangelical gifts, to be, as he is, an ornament of the Episcopal Bench.

His biographer, indeed, gives us very slight opportunities of judging in what degree his capacities for "pastoral usefulness" were really proved. The two livings which he held jointly, at the outset of his clerical life, being situated, the one near Bath, and the other at Stainton, near Durham, "it is believed" that he never resided at either. His next benefice, held along with the chaplaincy to the Bishop of Durham, was that of Middleham, where "no traces of his incumbency remain, beyond some anecdotes which prove him to be an active and not always a popular magistrate." As for the rectory of Gateshead, a populous parish, in which a zealous clergyman, with an income of £1,250, might have laboured with conspicuous results, his biographer says, "There are no details of interest during the short incumbency of Mr. Phillpotts; the only circumstance to be recorded is, that his second son was born in this parish." His presentation, soon afterwards, to the parish of St. Margaret, caused "some ill-feeling." He is remembered, however, in that parish for his "great administrative ability," as well as for "the tact and address with which he controlled turbulent spirits at the vestry meetings." Meantime he received, from the unfailing partiality of his diocesan, first one, and then another still more lucrative cathedral stall.

All this time, be it observed, he was writing pamphlets against the Catholics; the time came for writing pamphlets against the Whigs. The rectory of Stanhope, valued at from £5,000 to £7,000 a year, was given to him in the year after his attack upon Mr. Lambton, on the occasion of the meeting to protest against the Peterloo massacre. "But whether," as Mr. Shutte observes, "it was at all necessary for Mr. Phillpotts to appeal to the public on such a matter as this, is a question which will be answered according as people think on the subject of political pamphlets being made a stepping-stone to ecclesiastical preferment." The amiable biographer is pleased, however, to inform us not only that Dr. Phillpotts, while at Stanhope, built himself a parsonage house, or rather a parsonage palace, which cost him £12,000, but also that, if we know how to accept the remark made by an old woman to his successor, he "sent two of her sons to heaven." With this apostolical residence and vocation, the writing of his pamphlets against Earl Grey and Jeffrey, on Queen Caroline's affair, brought him the offer of an Irish bishopric, which he refused. We do not learn that in those years when Dr. Phillpotts displayed all the keenness of his wit and the agility of his logic in disputing the pleas of Mr. Canning for religious liberty, his cure of souls was so much better discharged than his neighbours', as, in return for the very large amount of his various emoluments, the Church and the country might have required. The merits which gained him, in 1828, the Deanery of Chester, and the Bishopric of Exeter in 1830, were confessedly of a different kind.

The gift of a deanery was, in Mr. Shutte's opinion, "a substantial recognition of his labours in resisting the claims of the Roman Catholics;" but Mr. Shutte is *not* of opinion that the bishopric was given him as a reward for his vote in support of Mr. Peel, at the Oxford University election, when Mr. Peel had espoused those claims. We shall not, however, be tempted here to re-examine that transaction, since the documents with which Mr. Shutte has furnished himself are precisely those to which former writers had referred. It was admitted by us that, as the bishop himself has shown, in his "Letter to Sir Robert Inglis," he had always avowed that he would consent to admit the Catholics within the pale of the Constitution, if every individual Catholic would declare that it was not necessary for salvation to hold the Catholic faith. The proposal of such terms was tantamount to a perpetual denial of Catholic emancipation. The upshot of it all was, that Mr. Peel and the Duke having at last made up their minds to an unconditional act of emancipation, Dr. Phillpotts made up his mind to support Mr. Peel. But we now leave him in the see of Exeter, to which Mr. Shutte conducts him at the end of this volume; and we should prefer a more skilful guide than Mr. Shutte is likely to prove, in the volumes which may follow, to lead us through the Parliamentary squabbles, the incessant litigations, the diocesan scandals, and the conflicts of ecclesiastical authority, which have marked the uneasy rule of Bishop Phillpotts for the last thirty years.

* The Bishop of Exeter and the *London Review*. A Reply to Strictures on his Lordship which appeared in the *London Review* of August 30, 1862. W. Thompson.

A FEMALE RAGGED SCHOOL IN EGYPT.*

Miss Whately had visited Egypt once before, as an ordinary tourist; but she went there again, and lived for a twelvemonth in her own hired house at Cairo, for the purpose of establishing a day-school, in which plain needlework and the reading of the Bible might be taught to the poor little girls of that city. The result of her labours and observations is put before us, in a very unaffected and pleasing manner, in this little book. Since "The Englishwoman in Egypt," we have not had such a glimpse into the domestic life of the native population there. Miss Whately really lived quite among them, and sought by neighbourly kindness to persuade them to trust her with their children. Her chief assistance was from a Syrian Christian family who occupied the lower storey of her house. The mother, Um Usuf, or "Mother of Joseph," entering very readily into Miss Whately's plan, went round with her into the lanes and alleys of the quarter to canvass for scholars, while the eldest daughter, Menni, was teacher and Arabic reader; Miss Whately, who knew only a few words of the language to begin with, superintending the school. Before the twelvemonth was out, she was able to talk pretty freely, both to the children who were gathered in, and to their parents whom she visited at home. A Syrian lady, Mrs. R——, who seems to have been an educated person, the wife of a European settled at Cairo, sometimes accompanied Miss Whately in going amongst the people. With all this, it may still be imagined that the difficulties of opening confidential intercourse with the motley folk of Egyptians, Moslem and Copt, the Bedouin Arabs, Syrians, Turks, and others, who came in her way, must have been extremely formidable; and the cleverness with which she got through this courageous enterprise, though she herself may not think much of it, will rather surprise the home-staying reader. But we know that a good will can go a good way; Miss Whately found the power to talk, when called upon to explain her proceedings, in the presence of thirteen or fourteen Moslem grown-up persons, because she had something which she earnestly desired to say to them.

With rare prudence, however, she refrained on all occasions from directly assailing the Mohammedan faith, and rather strove to assure her Moslem hearers that our Book, since they hold it as an axiom that a true Religion must be founded on a Book, contains the full histories of Joseph, Moses, David, and Jesus, who are venerated as prophets by every true disciple of Mecca. When asked if she wanted to make Christians of them, she replied, with a touch of evangelical diplomacy, that she was not able to do so; that to make Christians was beyond any human power, but that she would show them the truth, and leave God's word to operate on their minds,—since it was one great point in her favour, that the Mahommedans are taught to regard both the Old and New Testament with reverence, as preliminary to the Koran. Miss Whately's harmless stratagems to make the people acquainted with the New Testament may provoke a smile, but would have

* Ragged Life in Egypt. By M. L. Whately. Seeley, Jackson, & Halliday.

Digitized by Google

been an inexcusable deception if its reading had been forbidden to them. It is pleasant to see how she bribed the professional story-teller to recite, in a public coffee-house, the parables of Christ instead of the popular tale of "Abou Hassan's Slippers," while the missionary ladies, from their own windows on the opposite side of the narrow street, listened for the well-known words of St. Matthew's Gospel, to make sure that he had faithfully performed his bargain. A scene of deep interest is that of one evening on board a Nile boat, where the simple boatmen, waiting in idleness, after they got tired of their rude songs and dances, were entertained by the strange lady with the reading of "stories," being those of the lost sheep, the lost piece of silver, and the prodigal son. They heard all this, followed by the Ten Commandments and the fourth chapter of St. John, with earnest attention; after which, one old white-bearded man, "who seemed to have the spirit of a little child, lowly and ready to learn," looked up at her, with a touchingly wistful expression, and said, "What shall I do? I cannot read, and you will soon go; I hear no more of this; how am I to know what God would have me do?" None of us can refuse to join in Miss Whately's hope that, from these few attempts of hers to scatter amongst an ignorant race the seeds of a purer morality and of a more spiritual faith than that of the Koran, some good fruits, though unobserved, may grow.

One serious obstacle to her special work of instructing the native girls was the notion of Mahommedans that the souls of women are essentially inferior, and unworthy of cultivation. To this prejudice, one of the most pernicious features of Eastern superstition, the vices of their social life are in a great measure due. Polygamy, indeed, is seldom practised by the lower classes; but the denial of female education, attended by the monstrous custom of disposing of mere children in marriage, has most degrading and distressing effects. We are told, for instance, of a little creature eleven years old, "neither in looks nor manners at all older than girls of that age among city children of the poor in England," being espoused to a lad of fifteen for a bridal gift of fourpence, which she spent in buying sweetmeats, and got a beating from her mother for so doing; in the very week before this she had stayed away from school in a huff, because another girl had torn off the arms of her doll! This shocking haste of parents to get rid of their daughters by premature matrimony is owing, perhaps, in many cases, to their scanty house accommodation; for poor Salhah, the child-wife just mentioned, is seen, in one of the woodcuts from Miss Whately's drawings which illustrate her book, actually seated upon the roof of a small hovel about the size of an English pigstye, in which her mother crouches, with no room to spare, while the father smokes his pipe outside, and the little ones crawl in the mire. One young matron, whose frank and confiding disposition soon gained Miss Whately's heart, was Shoh, *i.e.*, "Ardently Beloved," not fifteen years of age, and still the victim of a maternal as well as of conjugal tyranny which moved the author's compassion. On her first visit to the school, leading in her little sister, she stood listening and smiling, but thought herself, perhaps, too much of a woman to join the A B C class; she came, however, again and again, with a dirty baby and a lot of oranges; till one day, fired with a sudden resolution, she put the baby on the floor, presented the oranges to the teacher, and, seating herself on the mat at Miss Whately's feet, seized an alphabet-card, and began to pronounce the letters, that she might learn to read with the busy little maids around her. Poor Shoh! whenever she could get away from household drudgery, her husband being absent with his donkey on errands of trade, she would come to the foreign lady's house, "and bounce in with an air of joyous triumph," kiss Miss Whately's hands, then run to wash her own, pulling off her headkerchief to show that her plaited hair was neat, and, settling down in a corner, repeat the lessons in which she delighted. Overhearing a conversation, in which Miss Whately assured the suspicious women that her only motive for opening this school was her love for the children whom she would try to benefit, poor Shoh anxiously whispered to Menni, pointing at Miss Whately, "Does *she* love *me?*" It was impossible to resist all this, and we do not wonder that the eager, affectionate girl became a special favourite. "*Ya habeeby*, oh yes, my dear, certainly I do love you, Shoh, and all of you. I want you to go to Heaven with me!" replied the good English lady; at which declaration we can fancy how those wild Egyptian girls, having never heard the like of it in their lives before, opened their great black eyes, and stared at the friendly speaker, as though an angel had visited them from some brighter and happier sphere.

These touches of true humanity, which abound in Miss Whately's narrative, give to her little book an interest even for those who may not reckon on much positive outward success of missionary schools in Egypt. "She kissed my child!" exclaimed a fond mother, on returning from her first interview with the stranger who had come, for such incredible objects of Christian philanthropy, to dwell amidst the neglected poor in a Moslem quarter of Cairo; it seemed wonderful to those lowly people that anybody, most of all that a Frank and a *Sitt* or "lady" should care for them. "I believe you love God, for you love the children," said the Turkish milliner, Sitt Haanem, or Mrs. Hanuem, as we might call her, as she sat, smoking and directing her work-girls, when Miss Whately called upon her. This logic could scarcely be disputed in the case of one who was approaching, in the name of Christ, the hearts of an alien and jealous population, with the gentle entreaty, "Suffer your little children to come, and forbid them not." Indeed, the mothers sometimes feared that Miss Whately might be too fond of their children, and carry them off to England. She exclaimed indignantly, at this charge of being a kidnapper, "Listen, Oh woman! we have girls plenty in our country,—more girls than we want" (which, as Miss Rye and Miss Faithfull tell us, is but too true),—"why should we take yours?" This disclaimer was borne out by Shoh, testifying that she had seen pictures of Miss Whately's own *bint och* or sister's daughters, who were much nicer, prettier, and cleaner, than her young country-folk, and therefore Miss Whately was not likely to want to carry these away. An elder sister of Shoh's, likewise a married woman, named Fatmeh, her own three children having died within a fortnight, burst into passionate tears when she saw the portraits of Miss Whately's fair little nephews and nieces hang upon the wall. What less could the kind Englishwoman do than try to soothe her sorrow with the only words of universal comfort, "Dear Fatmeh, God is good?" It is for incidents such as these, full of that natural feeling which makes the whole world kin, that we are charmed with Miss Whately's humane and womanly book.

We should like to know what has become of poor Shoh, the "Ardently Beloved." She has, perhaps, since Miss Whately's departure, had rather a hard time of it, with a cruel mother and aunt, who disliked her attending the school, and who once set upon her in the street, beating her most unmercifully, tearing her hair, and dragging her along the ground, and bidding one of the boys to bite her savagely in the arm. It may well be believed that Miss Whately had some pain in leaving these poor people, when the twelvemonth was over, after the many affecting conversations she had had with them, and the children's holiday feast in the tamarisk grove, and "the mothers' meeting," at which she bade them farewell. Her hope and promise is, that this work of charity, which she began in faith and conducted with exemplary prudence, shall not be discontinued. We know little, as yet, of the "Society for Promoting Female Education in the East;" but if its counsels and operations are always guided by such a spirit as that which pervades this volume, we should be pleased to hear of its success. Difficulties, however, still greater than any of those to which she has alluded, will probably arise in any attempt to uproot Mahomedanism, and to plant Christianity in its stead, on the banks of the Nile. Meantime, we are glad that a countrywoman of ours, having commenced this generous experiment, gives us, in such an interesting narrative, a genuine picture of the lower strata of social life in Egypt.

SHORT NOTICES.

It was in 1848 that Mr. Mitchell* crossed the Atlantic; and though Richmond, in which town he had some friends, was his immediate destination, he could not possibly have then foreseen that observations on its social life would ever possess for us any such interest as they may now derive from the mighty strife of which Richmond is the centre. If we pass over his personal adventures on landing in the James River, which, though humorously told, were scarcely worth the telling, we come to a scene that really invites our attention,—the plain and comfortable household of a Virginia planter, in that very district which, for the last year or two, has been ravaged by the civil war. Mr. Mitchell's description of the manners of this class, or rather of the families by whom he was entertained, is not only that of an agreeable, but of a respectable sort of people; and we cannot, apart from our abstract disapproval of slavery, regard them with wholesale detestation, or even refuse them, on non-political grounds, a certain share of our sympathy in the terrible ordeal they have lately gone through, involving so much private suffering. The country gentleman, for example, whose hospitality Mr. Mitchell first accepted on his arrival in America, was neither a harsh master nor a licentious and covetous trafficker in human flesh; simplicity, peace and good order, with homely plenty abiding in the house, hallowed by family affection as well as by domestic piety, reminded the visitor, in his first evening there, of Burns' "Cottar's Saturday Night," but that there was nothing rustic in the manners of its inmates. The townsfolk of Richmond, with whom Mr. Mitchell had a more prolonged intercourse, seem, upon the whole, to have made rather a favourable impression upon him, though he was startled, as most Englishmen would be, upon entering a sale-room, to see half a dozen of his fellow-creatures "knocked down" by the slave auctioneer. In some respects he found that Richmond middle-class society, under the influence of what are called "church members" or "professors," was characterized by a tone of mild prudery which tempered the honest mirth of the elders, and kept the innocent freedoms of the young people within bounds. This we see displayed in his amusing sketch of a "frolic," or festive party, where the treat consisted of plum-cake, lemonade, and ices, with some rather "slow" and guarded talk, varied by timid singing, until they warmed up to a tolerated substitute for dancing, which is called "jogging along." But one fair, plump, good-humoured girl was called to order even for this. "Miss Ellen, I shall report you, and have you turned out of the church, for if that ain't dancing, I'll be blamed!" There is a vein of pleasantry in this part of Mr. Mitchell's book; and he enjoyed the mellow summer evenings at Richmond, when youths and maidens strolled about in the quiet streets of the little town, under the watchful eyes of their parents seated at the open windows or in the house porches; while the banjo music and laughter of the careless negroes, mixed with the voices of social converse, or notes of the pianoforte from

drawing-rooms above, were sounds of peace, the recollection of which, now that Richmond has become associated with the fiercest of modern wars, appears to him worthy of note. These Virginian experiences of his, though involving no extraordinary incidents, are the best part of his book; for his acquaintance with the other States of the Union seems to have been extremely limited, and his political reflections, which are decidedly hostile to the Northern Abolitionist party, will command but little attention. He would have done better to have presented his reminiscences of social life in Virginia, without those trite and tedious discussions, in a volume of half this size, or in the pages of a magazine.

Mr. Hugo Reid, whose outline of the "History of the United States"* may naturally be taken next in our way, is described as "late Principal of the Dalhousie College" at Halifax. His book, which is compactly arranged, concisely written, and correct, so far as we have had leisure to test its statements, is calculated to be useful to those who would examine, aided by a brief synopsis like this, the historical antecedents of the great revolution now going on. To such inquirers, we may add, Bacon's "Guide to American Politics"† will, at the same time, be no less serviceable, as it supplies the text of all important documents relating to the political constitution of the Union, from its establishment to the present time, with a strict analysis of its purport, showing respectively the limitations of the Federal power, on the one hand, and of the State Legislatures on the other, as well as its provisions for the temporary government of the territories immediately subject to Congress, and for their final incorporation as new States. The second part contains all the Secession ordinances lately passed by the Southern States, with the new Constitution adopted by the Southern Confederacy, and a statistical appendix, in which the wealth and population of all the thirty-four States are set forth. We can safely recommend this little handbook, as well as that of Mr. Hugo Reid, to all who would form an impartial and accurate opinion of the present dispute. American politics lead us, unhappily, to the subject of Lancashire distress, on which Miss Ellen Barlee, whose treatise on the destitute classes in London we noticed last week, has published the result of her inquiries‡ in a visit to three or four of the cotton-manufacturing towns in December last. She first stayed with the Rev. Mr. Jeaffreson, rector of a large district in Stockport, where, in his night-schools and sewing-classes, and in her daily calls at the homes of the suffering people, she learnt much of their usual habits, and of their present needs. In Manchester, she inspected one or two of the chief institutions which have been created provisionally for the assistance and comfort of the unemployed; but most of her information about these is borrowed from the locally-published reports. She then went to stay with Mr. Hopwood Hutchinson, the ex-Mayor of Blackburn; and in that town had sufficient opportunities of learning what efforts are made there by the Relief Committee, the different religious congregations, the Strangers' Friend Society, and other charitable agencies dealing with the temporary distress. Miss Barlee testifies that the mill-owners themselves are "doing a great deal, in a practical and unostentatious manner;" and their liberality is acknowledged by the operatives, who, amidst the privations which they must endure, "make little or no complaint." We regret, however, that she has too readily adopted the besetting prejudice of most unofficial and irresponsible inspectors of the poor, against the mode in which the legal ratepayers' funds are administered by the Poor-law guardians. Her strictures upon those necessary rules which, though involving sometimes a hardship to individuals, protect the distribution of public money from vast abuses, and protect the poor from the demoralising influence of a reckless system, appear too hastily conceived. The remarks which she makes upon the social aspects of the manufacturing operatives' life, in general, and upon the employment of married women in the cotton-mills, which prevents their properly attending to their domestic duties and "child-ward care," are worthy of attention, though not quite original, or bearing very directly on the existing distress.

The author of "Beauties of Tropical Scenery"§ has not only read Humboldt, but he has been in the West Indies. He has also read "Childe Harold," but has not become a Byron. A poet's mission is not to apostrophise a group of islands, individually and collectively, in laboured stanzas of eight or nine lines apiece, with triply-rhymed terminations, in fine rhetorical phrases of flattery. There is a lack of human interest in this performance. It may, indeed, serve as an incentive to the study of natural history or geography; but literature is not much indebted to it, except as another proof of the unconscious imitation of mere style—the author's favourite models being confessed by the turn of his language and versification in every page. Besides the descriptive passages of "Childe Harold," he seems occasionally to have caught the manner of Darwin's "Botanical Garden." Thus, invoking that new-fancied mythological personage whom Arthur Clough has styled "the Goddess of Bathing," the author, after having enjoyed his swim, vociferates, while drying himself on a rock—

"Divine Ablution! antidote to heat!
Pure pristine pleasure, unalloyed with bane,
Arm'd in thy panoply, secure I meet
The noonday sun," &c.

All which, in a sanitary point of view, is correct.

MUSIC.

The performance of Mendelssohn's "Elijah" by the Sacred Harmonic Society on Friday week was, in most respects, one of high excellence. This oratorio has, by frequent repetition, become almost as familiar to our choristers and instrumentalists as Handel's "Messiah," "Israel in Egypt," and "Judas Maccabæus," which works, indeed, it bids fair to rival in popularity if not even in permanence. The difficulties, both vocal and instrumental, which "Elijah" at first presented, have now been smoothed down so as to leave no impediments to its thorough and effective realization, even by the vast concourse of voices and instruments over which Mr. Costa presides at the concerts of the Sacred Harmonic Society. It is questionable whether a finer performance of "Elijah," as regards the chorus and orchestra, was ever heard, than that to which we now allude. Much of the splendour of the general effect was undoubtedly owing to the admirable and efficient band, comprising most of our best solo-players, and so strong in numbers as to form an adequate balance to the great mass of vocal sound. Hence all the fine traits of the instrumental score—those delicate details and minute touches of colouring which so admirably contrast and relieve the choral effects,—had their due prominence and significance, and served to complete a grand musical picture, every portion of which has its importance. In such a work as "Elijah," abounding as it does in all the rich elaboration of modern orchestral effects which have an interest apart from the vocal portion of the score, any inadequate proportion of the band to the chorus is much more seriously felt than in the works of the older masters, where the instruments frequently play the same passages as those sung by the chorus, any special feature in the orchestra being there rather the exception than the rule. Thus, in "Elijah," among other choruses, "Blessed are the men," "Thanks be to God," and "He watching over Israel," lose much of their effect and charm if the independent features of the orchestral score are weakened by the disproportionate smallness of the band. This is a point that cannot be too strongly enforced, since the general effect of all musical performances must depend on that nicely adjusted balance of sound which answers to the harmony of colours in a picture. Mr. Costa is well aware of this, and his name as conductor is always a guarantee of orchestral completeness and excellence. At the performance of "Elijah," to which we now refer, the principal singers were Madame Rudersdorff, Madame Sainton Dolby, Miss Lascelles, Mr. Henry Haigh, and Mr. Weiss. Madame Rudersdorff sang with an energy and intention which proved her to be a cultivated and intelligent artist; and if her vocalization be not always irreproachable, there is yet a meaning and significance in her reading which place her far above a mere mechanical executant. Mr. Henry Haigh, who was the tenor, has an agreeable and sonorous voice, but is wanting in that breadth of style and power of rhythmical phrasing which are specially requisite in music of such fervid expression. He sings as if more accustomed to the sentimental ballad or the *suave* Italian opera than to that grand and elevated style which the music of the great German masters (and especially their sacred music) so imperatively requires. Even the unquestionably rich quality of his voice will avail little in this department of the art unless allied to greater command of declamatory expression. There is scarcely any other English basso who can give such dignity and force to the music of the prophet as Mr. Weiss, whose delivery of the declamatory song, "Is not His word like a fire?" was as forcible as his singing of the air, "It is enough, O Lord" was expressive. The pathos which Madame Sainton Dolby imparts to the air "O rest in the Lord" generally procures an *encore*, and the present occasion was no exception. The subordinate parts were allotted to Mrs. F. Lucas, Mr. Patey, Mr. John Morgan, and Mr. Smythson.

Mr. Balfe's new romantic opera, "The Armourer of Nantes," was produced on Thursday, at the Royal English Opera. We reserve a detailed criticism of the work for our next publication.

CONTEMPORARY SCIENCE.

The Royal Society of Literature, on Wednesday evening, presented a scene of the most animated kind. The report on the Mayer papyri and the Simonides' "Uranius," adopted by the Council, was read.

The report began by referring to the exhibition of Mr. Mayer's papyri in January last, at the society's rooms, for the examination of such gentlemen as wished to inspect them. Amongst those who availed themselves of this opportunity were Sir Frederic Madden, Sir Charles Nicholson, Mr. Birch, Mr. Bonomi, Mr. Eliot Hodgkin, the Rev. Dr. Cureton, Dr. Hunt, Sir H. C. Rawlinson, Mr. Hamilton, Mr. Poole, Rev. Mr. Hugo, Dr. Guest, and Mr. Goodwin. Dr. Simonides, accompanied by Dr. Dracachis, was present during the whole time, and Mr. Vaux, and other members of the council, on the part of the society. No formal decision was come to by those gentlemen who inspected the documents, but nearly the whole of them, the report stated, were adverse to the admission of the genuineness of the papyri. It was remarked, *inter alia*, that there was a great similarity in the handwriting of the different MSS., more than could be the result of accident; that

Digitized by Google

letters characteristic of very different periods were frequently found in the same MS.; that occasionally forms of Greek letters occurred, the existence of which in other ancient documents those most accustomed to palæographic studies did not recognize; that, in some instances, the presumed ancient letters in the papyri bore a strangely suspicious resemblance to modern Greek characters; that the descriptions of the contents of the papyri recently placed on them seem to be in one and the same hand with the inscriptions on the papyri themselves; that the colour of the papyri was generally different from that usually noticed in MSS. of the same nature, and was possibly derived from artificial staining; and lastly, that in some instances portions of papyri of different textures had been joined together, so as to make up one piece. The report further stated that the papyri exhibited, with one exception, had been so fastened down that it was impossible to see what was on the other side of the written portion, and that, therefore, no opinion could be formed of the state of the papyrus when first unrolled. Nothing new had been elicited in proving the identity of the MSS. exhibited with those taken from Mr. Mayer's museum to be deciphered by Dr. Simonides, and the statement of which was published two years ago by him. Gentlemen who had seen the collections of the Rev. Mr. Stobart, and of Mr. Sams before they were purchased by Mr. Mayer had said that they had no remembrance of such fragments as those exhibited; and the report went on to point out that in the papyri the writing was sometimes bent down so as to fit existing cracks or holes, and that in fragment No. 7 the writing was written round a hole previously made. Attention was also called to the unusual length of the lines of writing, which would induce suspicion on the part of those best versed in palæographic studies.

Besides the papyri, Dr. Simonides had also exhibited two rolls of Hieratic writing, of the genuineness of which there was no doubt whatever; as also the famous volume of "Uranius," about which there has been so much discussion amongst the scholars of Germany. No definite objection was taken to this MS., as the nature of the writing could only be determined by microscopic examination, the means for which were not provided at its late exhibition. A particular phrase, *κατ' ἐμὴν ἰδέαν*, originally occurring in it, and objected to by the German men as wholly unlike ancient Greek, had been erased, and another Greek phrase, *ὡς ἐμοὶ δοκεῖ*, substituted in its place.

Such was the substance of the Report. After the reading of it, the Chairman proposed that a paper by Mr. W. Wright, "On the Codex Sinaiticus," should be read before the discussion. But some friends of Dr. Simonides objected to this course as notice had not been given of the second paper, they had come prepared to discuss only the first, and that that discussion would be restricted in time and in its results by the introduction of other matters. The meeting deeming it right to give "fair play" to Dr. Simonides as a foreigner, decided to take the discussion on the report forthwith, which was then opened by Mr. Hodgkin, who said that he had examined the manuscripts with very great care and, as far as the natural senses could be depended on, he could find nothing in their actual state which should impugn their genuineness. He had been asked by Mr. Vaux if Mr. Mayer could trace the identity of these manuscripts, and since then he had seen the curator of Mr. Mayer's museum, who saw and assisted at the unrolling of the manuscripts, which, he added, it was important to state had not been removed from Mr. Mayer's museum until after the meeting of Mr. Mayer's friends there on 1st May, 1860, when the passages which were now subjected to dispute had already been brought under public attention. He stated further that the curator could identify by their form and appearance the portion of St. Matthew, and the letter of Hermippos, the "Periplus" of Hanno, and the "Dynasties of Carthage," as belonging to the series unrolled by Dr. Simonides and himself in the Mayer Museum, although he could not read the writing. The large letter the curator remembered distinctly as belonging to Mr. Stobart's collection. As to Mr. Goodwin's assertion about the adherence of some minute portions of blotting-paper, it would have been important if the fragmentary matter had been under the writing; but as that was not the case, the imputation of Mr. Goodwin had evidently no value whatever. While the manuscripts were under exhibition, in the Society's rooms, he had asked for a microscope, but no instrument having been furnished there, they had since been submitted to such an examination by the very eminent microscopist, Mr. Deane. Mr. Thomas Wright confirmed Mr. Hodgkin's statement of the publication of the papyri before Mr. Mayer's soirée, which took place before the papyri had left Mr. Mayer's possession. Mr. Yates said he had examined the "Hanno" and the "Uranius" most minutely, and could detect no flaw that could militate against the genuineness of the writing. He also had seen Mr. Mayer's curator; and he explained to the meeting in detail the manner and method of unrolling the papyri in Mr. Mayer's museum. Dr. Simonides unrolled, and the curator pasted down the pieces on calico. The curator had recognized the identity of the Gospel of St. John. The great importance of the assumed readings of these manuscripts was such that no doubt it was right closely to scrutinize them; but other important inscriptions had been found in unlikely places besides these. For himself he could say that he had called on Dr. Simonides at his residence, and no man in his conduct could be to all appearance more sincere or more honest. It had been urged against Simonides that he only brought inferior documents for sale in this country, but it was that gentleman's intention, naturally enough, to present his finest manuscripts to the University of Athens. Mr. Deane, whose examination had been somewhat chemical as well as microscopical, pointed out an important fact in respect to the appearance of one writing over another. When the manuscripts were submitted to him, casting his eye over some "crossed" letters lying on his table, he perceived that at the junction of the two writings there was a tendency of the fluid used in the upper one to run out into the line of the lower writing; and by experiments he found that this took place, through the chemical affinity of the writing-fluid irrespective of whether the paper was dry or damp. This fact had a strong bearing on the question of the genuineness of the "Uranius," for his examination showed at least that the whole of the under, or uncial, writing must have been written *before* the dark, or ecclesiastical, writing was written *over* it; and which inference was confirmed by the fact that the fine cracks in the superior or dark writing had not been filled up with any writing fluid, as would have been the case if the pale writing had been carried over them.

He had used a binocular microscope, and he was satisfied also by this means that the pale writing ran *under* the dark writing; and lastly, this could be proved by mechanical means—such as scraping off the upper or dark writing with a penknife. If, therefore, the "Uranius" was a forgery, the uncial writing was forged first and before the ecclesiastical writing was put over it. His assistant had also examined this work, and had come to the same conclusions. He had also gone over the Hieratic papyrus. At one end a portion had been washed away by accident. He was informed this was admitted to be genuine. He wished, therefore, to see what appearance this part exhibited. He had also washed and examined some fragments of papyri given him by Mr. Hodgkin, but he could detect nothing in the Mayer papyri that had the appearance of fraud. In the part of the Epistle of St. John it had been said there was a number of minute white spots which had been supposed to be fungi. He had looked at them with a lens, and, if they were fungi, they were *above* the letters. They may be chemical compounds or chalky matter; and inorganic materials will travel it was well-known a long way in damp substances. These specks must, however, tend towards the genuineness of the document, at least as far as Simonides is concerned, because if he had put any writing on the papyri he must have obliterated the spots. It was then urged by Sir F. Madden as inimical to Dr. Simonides' claim for the validity of his documents that there were letters of unusual form in them, for instance, the lines of the Greek *η* were carried above the line far higher than usual in other documents. A sloping *η* was very rarely met in old documents; and it was singular that the same kind of letter should be used in Dr. Simonides' publications. Mr. Birch, of the British Museum, thought the question of validity should not depend on the belief of a curator, but should be decided by the internal evidence of the documents themselves. There were two ways in which the genuineness could be proved or disproved—palæographically and philologically.

It was impossible, in his opinion, these manuscripts could be genuine. He then referred to the Greek passage which was alluded to in the report, and jocosely asked if, like a chamelion who could change its skin, a parchment could change its writing. Moreover, the coincidence with Bunsen's statements were, to his mind, too close to allow him to accept these disputed manuscripts.

Dr. Dracachis said it was not likely that any man in his senses would have done what Dr. Simonides had been supposed to have done in giving such valuable documents as mere substitutions to Mr. Meyer. If they had been his, and he could not have sold them himself, he could have disposed of them to advantage through another person. In respect to Mr. Goodwin's assertions, that he could wash out in a few minutes the writing from the papyri, he (Dr. Dracachis) had tried for forty-eight hours, and then failed to effect that object—some particles of the writing-fluid would remain in the tissue of the papyrus. Mr. Deane confirmed this statement, that traces of the colouring matter would remain in the tissue after the most careful washing. Mr. Hamilton, of the British Museum, said he had washed out some writing from papyrus. Dr. Dracachis challenged him to produce the sample, and he would show him the traces remaining. The Chairman pressed for time, and said the philological questions were the most important. Dr. Dracachis said Mr. Goodwin had looked over Lepsius, and some other authors, and had found some words coinciding with some words in the inscription in the Hermippos of Mr. Mayer. If any person were to take down an ancient work and find the words "father" and "daily bread"—words expressive of things in every day life, in every age, he might with as much reason, or more, contend that these words were proof of the existence of the Lord's Prayer. He then read Mr. Goodwin's attempted translation of one passage, and followed by reading Dr. Simonides' translation, showing, he remarked, a sensible translation in the latter, and a nonsensical one in the former case. As to the asserted substitution of a passage in the "Uranius," that passage was correct in the MS. "Uranius," but the misreading was an error in Tischendorff's printed work, which it was known was full of orthographical and other errors. Mr. Goodwin said it was impossible for him to make himself understood to gentlemen who knew nothing about Egyptology or palæography. The phrases in Egyptian rituals were often very obscure, and most persons when they read a translation would not know what it meant. All he could say was, that on the Champollion principles the translation he had given was correct; and he asserted that the so-called inscription was nothing more than three or four lines from a ritual. In reply to interrogatories from Dr. Dracachis, Mr. Goodwin believed the writing might be washed out.

Mr. W. Wright's paper was then read. It consisted of a notice of Tischendorff's discovery of the MS. Codex Sinaiticus; and some personal imputations upon Dr. Simonides, of having written the letters in the *Guardian* and *Literary Churchman*, and purporting to be from the Greek priest, Kallinikos.

A Greek present, M. Nicolaidis, attacked Dr. Simonides, and said that at the time Dr. Simonides had stated he was at Mount Athos, he was not there; and that if he had been he was too young to have been admitted into the monastery. Dr. Simonides, however, confronted him with a short decisive statement of the cause of the personal animosity towards himself which had caused the utterance of these mis-statements. And as, in reply to cross-questions from Dr. Dracachis, this gentleman—understood to be an excommunicated priest—contradicted himself on a material point of dates as to his own residence at Mount Athos, it is not worth while to encumber our space with what at most can be only regarded as a personal squabble. In reply to a question from the chairman, Mr. Curzon said that he had been in the library of the monastery of Mount Sinai, but because he did see the disputed MS. there at that time it by no means followed it was not or had not been there. Sir F. Madden made some further remarks, and a gentleman made a calculation of how much manuscript Simonides must have

Digitized by Google

written per day to have made the Codex Sinaiticus, as Simonides asserts he did. Dr. Simonides was present and spoke but little. His addresses were in Greek, short, concise, and to the point. As the chairman remarked, in concluding the meeting, which lasted until near 12 o'clock, the subject seemed interminable, and would doubtless be carried to other arenas before the public heard the end of it. It is certainly to be hoped, considering the importance of the questions at issue, which are not merely antiquarian, but historical and theological, involving in the latter phase the very authenticity of certain readings of the New Scriptures—that the absolute truth or absolute falsity of the disputed documents should be incontrovertably established.

At a recent meeting of the Royal Society, Dr. Angus Smith gave an interesting account of researches made by him on the "Absorption of Gases by Charcoal." This paper, the first of a series, was confined to oxygen, hydrogen, nitrogen, and carbonic acid. The remarkable fact that oxygen is absorbed by charcoal, whilst the nitrogen of the air is not touched, seems to have been hitherto overlooked, although it was well known to be more readily absorbed than nitrogen; or, to use the words of the "Handwoerterbuch der Chemie," by Liebig and Poggendorff, "Tarrot, Grindel, Nogel, and Saussure have shown that oxygen was absorbed from air more readily than nitrogen, and that with certain proportions of charcoal no oxygen was left." Dr. Angus Smith showed that for a time there was no nitrogen absorbed, but that only oxygen was removed by the charcoal; also that a similar separation takes place when oxygen and hydrogen are exposed to charcoal. This, however, can only occur within certain limits; if charcoal saturated with oxygen be exposed to nitrogen, the oxygen is itself removed to make way for some nitrogen. Although this result must, in some measure, depend on the compressibility of gases, it is without doubt a form by which electric action is produced in porous bodies. This may be taken in connection with the theoretical portion of the paper, in which the author gives his reasons for believing that there is no distinction to be drawn between the attraction called physical, which results in cohesion, and that attraction which has for an ultimate result chemical combination, and which is ascribed to chemical affinity. Bodies show an inclination to combine, and are attracted towards each other, but the final result—combination—is not always possible, although it is only when possible that the action can be called purely chemical. The author, wishing to avoid the multiplication of natural powers, or names to natural force, reasoned to prove that the one is only the incompleted action of the other, or that both the chemical and so-called physical are one. When a piece of charcoal containing nitrogen is put into a tube of oxygen gas over mercury, the nitrogen first comes out of the charcoal so as to depress the mercury considerably, and then the oxygen becomes absorbed. If there be little nitrogen, and the absorbing power of the oxygen be great, this effect is not seen. This phenomenon may be remarked more frequently with other gases which are less rapidly absorbed than oxygen.

The oxygen cannot be removed by warming or by boiling water. The charcoal is then found to give out carbonic acid instead. The combination of oxygen with probably the finer parts of the carbon has occurred at a temperature even below the temperature of boiling water. The author has not decided how much below.

Animal-charcoal has this combining power much more active than wood-charcoal, probably on account of this very fineness.

Wood-charcoal absorbs oxygen for a month when put into the pure gas, carbonic acid only for a short time, and hydrogen still shorter. The author thinks that the oxygen ceases to be absorbed on account of the presence of carbonic acid formed. He views nearly the whole surface of the earth as a porous body, therefore continually absorbing and evolving gases where exposed to change.

LIST OF MEETINGS OF LEARNED SOCIETIES FOR NEXT WEEK.

Monday, 16th February.

Asiatic—5, New Burlington-street, at 3 p.m. "On a newly-found Bactrian Pali inscription." By Professor Dowson.

Medical—32A, George-street, Hanover-square, at 8½ p.m. "On the Differences between the Diseases of the Nervous, Circulating, and other Systems of the Child and Adult." By Mr. Thomas Bryant.

Tuesday, 17th February.

Ethnological—4, St. Martin's-place, Trafalgar-square, at 8 p.m. 1. "On the History of the Gipsies." By J. Crawfurd, Esq., President. 2. "A Brief Account of the Yenadies of the Chingleput District." By Dr. Shortt.

Civil Engineers—25, Great George-street, Westminster, at 8 p.m. Discussion on "Drainage of Dundee," and "Sewerage of Newport."

Pathological—53, Berners-street, Oxford-street, at 8 p.m.

Royal Institution—Albemarle-street, at 3 p.m. "On Animal Mechanics." By Professor Marshall.

Statistical—12, St. James's-square, at 8 p.m.

Wednesday, 18th February.

Geological—Burlington House, at 8 p.m. 1. "On the Middle and Upper Lias of Dorsetshire Coast." By C. E. K. Day, Esq. 2. "On the Correlation of the several Divisions of the Inferior Oolite of the Middle and South of England." By Dr. Harvey B. Hole.

London Institution—Finsbury-circus, at 7 p.m. "Vertebrata." By C. Carter Blake, Esq.

Society of Arts—John-street, Adelphi, at 8 p.m. "On the Best Means for Promoting the Growth and Improving the Quality of Cotton in India." By A. Nesbitt Shaw, Esq.

Thursday, 19th February.

Royal Society—Burlington House, at 8½ p.m. 1. "The Effect of Temperature on the Secretion of Urea." By Dr. E. Becher. 2. "On Clinant Geometry, as a Means of Expressing the General Relations of Points on a Plane, Realizing Imaginaries, and Extending the Theories of Anharmonic Ratios." By A. J. Ellis. 3. "On Skew Surfaces, otherwise Scrolls." By A. Cayley, F.R.S.

Antiquaries—Somerset House, at 8½ p.m.

Linnæan—Burlington House, at 8 p.m. 1. "On the Geographical Distribution of the Aculeate Hymenoptera collected by Dr. Wallace in the Eastern Archipelago." By F. Smith, Esq. 2. "On the Anatomy of Filaria Medinensis, or Guinea Worm." By Mr. Bastian.

Chemical—Burlington House, at 8 p.m.

Numismatic—13, Gate-street, Lincoln's-inn-fields.

Royal Institution—Albemarle-street, at 3 p.m. "On Chemical Affinity." By Dr. Frankland.

Friday, 20th February.

Royal Institution—Albemarle-street, at 8 p.m. "On Recent Discoveries at Jerusalem." By Rev. Geo. Williams, B.D.

Philological—Somerset House, at 8½ p.m. "A Scientific Analysis, Classification, and Representation of the Sounds in English Words attempted." By Rev. D. Coleridge.

Geological—Somerset House, at 1 p.m. (Anniversary.)

London Institution — Finsbury-circus, at 7 p.m. "Non-Metallic Elements." By Professor Field.

Saturday, 21st February.

Royal Institution—Albemarle-street, at 3 p.m. "On the Science of Language." By Professor Max Müller.

LIST OF NEW PUBLICATIONS FOR THE WEEK.

Ada Fortescue. By the author of "The Dalrymples." Three vols. Post 8vo., cloth, £1. 11s. 6d.
Alcock's (Sir Rutherford) The Capital of the Tycoon: Three Years' Residence in Japan. Two vols. 8vo., cloth, £2. 2s.
Bellamy's (J. C.) The Housekeeper's Guide to the Fish-market. 18mo., cloth, 1s.
Bennett, Rev. Dr. James, A few Memorials of. 8vo., cloth limp, 1s.
Better Times Coming; or, More in Prophecy. Fcap., cloth, 2s.
Books for the Household. Nine vols. Fcap., cloth, 1s. each.
Chitty's (J.) Treatise on the Law of Contracts. Seventh edition. By J. A. Russell. Royal 8vo., cloth, 32s.
Collins's (Wilkie) No Name. New edition. Three vols. Post 8vo., cloth, £1. 11s. 6d.
Destiny (The) of the Human Race. By the author of "The Study of the Bible." Two vols. Crown 8vo., 12s.
Dickson's (N.) The Books of Lindsay & Son, Merchants: Book-keeping by Single Entry. Fcap., cloth, 2s. 6d.
Epigrams: Ancient and Modern. With Preface, by the Rev. John Booth. Fcap., cloth, 6s.
Eyebright: A Tale from Fairy-Land. By the Hon. Augusta Bethell. Second Edition. 16mo., cloth, 2s. 6d.
Fisher's (Jas.) The Assembly's Shorter Catechism Explained. Twenty-third edition. 18mo., cloth, 2s.
Freeman's (E. A.) History of the Federal Government. Vol. I. 8vo., cloth, 21s.
Hoare's (Dean) English Roots and the Derivation of Words. Third edition. Fcap., cloth, 4s. 6d.
Hopps's (John Page) Discourses of Daily Duty and Daily Care. Second edition. Crown 8vo., cloth, 2s.
Illustrations of the Beauty of Tropical Scenery. By the Author of "The Nuptials of Barcelona." Crown 8vo., cloth, 6s.
Jervis's (Capt. White) The Ionian Islands during the Present Century. Crown 8vo., cloth, 3s. 6d.
Kinglake's (A. W.) History of the Invasion of the Crimea. Second edition. Two vols. 8vo., cloth, 32s.
Laing's (Samuel) England's Mission in the East. 8vo., sewed, 1s.
Latham's (R. G.) The Nationalities of Europe. Two vols. 8vo., cloth, 32s.
Lyell's (Sir Charles) The Geological Evidences of the Antiquity of Man. 8vo., cloth, 14s.
Lyra Anglicana: Hymns and Sacred Songs. Collected by the Rev. R. H. Baynes. New edition. Fcap., cloth, 3s. 6d.
Magnet Stories (The) for Summer Days and Winter Nights. Vol. V. Fcap., cloth, 2s. 6d.
People (The) of Europe. Second series. Twelve coloured pictures. 18mo., sewed, 1s. 6d.
Pirn's (Capt. Bedford, R.N.) The Gate of the Pacific. Illustrated. 8vo., cloth, 18s.
Rask's (Prof.) Short Tractate on the Longevity ascribed to the Patriarchs. Crown 8vo., boards, 2s. 6d.
St. Olave's. Three vols. Post 8vo., cloth, £1. 11s. 6d.
Sears' (Edmund H.) Regeneration. Fcap., cloth, 3s.
Senior's (Nassau W.) Biographical Sketches. Crown 8vo., cloth, 10s. 6d.
Smart's (John) The New Theology. Edited by his Wife. Crown 8vo., cloth, 3s. 6d.
Smith's (Dr. Wm.) Principia Latina. Part III. Latin Poetry. Fcap., cloth, 3s. 6d.
Smith's (J. Denham) Winnowed Grain: Selections from Addresses. Second edition. Fcap., cloth, 3s. 6d.
Sutton's (F.) Systematic Handbook of Volumetric Analysis. Post 8vo., cloth, 7s. 6d.
Therry's (Justice) Thirty Years' Residence in New South Wales and Victoria. 8vo., cloth, 14s.
Waddell's (Rev. H. M.) Twenty-nine Years in the West Indies and Central Africa. Crown 8vo., 10s.
Westropp's Eighteen Selected Vocal Duets, with Pianoforte Accompaniments. 4to., sewed, 1s.
Yearsley's (Dr. James) Deafness practically Illustrated. Sixth edition. 8vo., cloth, 6s.

THE LONDON REVIEW

OF

POLITICS, SOCIETY, LITERATURE, ART, & SCIENCE.

Published every Saturday. 32 pages. Price Fourpence.

CONTENTS OF No. 136, FEBRUARY 7, 1863:—

The Opening of Parliament.
New Phase of the Cotton Scarcity.
The Military Situation in America.
British Trade in China.
The Brazilian Difficulty.
New Banking Companies.
The Marquis of Lansdowne.
Colenso on Kinglake.
A Horse-Stealer in Search of the Beautiful.
Fire and Fashion.
The Throne of Greece.
The Comic Press in Prussia.
The Trial of Effie Deans.

The Past Week.

REVIEWS:—
Daniel Manin.
Les Matinées Royales.
Mr. Story's "Rome."
Bellew's "Afghanistan."
French Literature.
Short Notices.

ART AND SCIENCE:—
Music.
Contemporary Science.
The Royal Institution.
The Anthropological Association.
List of Meetings.
List of New Books.

OFFICE: 11, SOUTHAMPTON-STREET, LONDON, W.C.

ADVERTISEMENTS.

ROYAL ENGLISH OPERA, COVENT GARDEN. Under the Management of Miss LOUISA PYNE and Mr. W. HARRISON, Sole Lessees.

On Monday, Feb. 16th, Tuesday, 17th, Thursday, 19th, and Saturday, 21st, will be presented (third, fourth, fifth, and sixth times) Balfe's Grand Romantic Opera, in three acts, entitled—

THE ARMOURER OF NANTES.

The Baron de Villefranche. { Envoy of Louis XII. of France. } Mr. W. H. Weiss.

Fabio Fabiano, Count de Beauvoir—Mr. Santley.

The Count de Moulac, The Count de St. Breux, M. de Ploerchartel, M. de Kerkoudn } Nobles of Brittany. { Mr. Goodwin, Mr. James, Mr. Price, Mr. C. Lyall.

A Jew—Mr. H. Corri. Pascal (a gaoler)—Mr. A. Cook.

and

Raoul, the Armourer—Mr. W. Harrison.

Anne, Duchess of Brittany—Miss Anna Hiles.

Dame Bertha—Mrs. Aynsley Cook.

and

Marie (an orphan)—Miss Louisa Pyne.

The Music by M. W. Balfe. Libretto by J. V. Bridgeman.

Conductor—Mr. A. Mellon.

On Wednesday, Feb. 18th (being Ash-Wednesday), there will be no performance.

After which, on Monday, Tuesday, Thursday, and Saturday, the Burlesque opening of the Grand Pantomine, entitled BEAUTY AND THE BEAST; or, the Gnome Queen and the Good Fairy. Concluding with the Grand Transformation Scene, Moonbeam and Sunlight; or, the Descent of Morn's First Ray.

Doors open at Half-past Six. Commence at Seven. Private Boxes, from 10s. 6d. to £4. 4s.; Orchestra Stalls, 10s.; Dress Circles, 5s.; Upper Boxes, 4s.; Amphitheatre Stalls, 3s.; Pit, 2s. 6d.; Amphitheatre, 1s. Box-office open daily from Ten till Five. No Charge for Booking or Fees to Box-keepers.

CHRISTY'S MINSTRELS, (Last Week but two) every Night at Eight, and Wednesday and Saturday Afternoons at Three o'clock, in ST. JAMES'S HALL. Thursday, Feb. 19th, Mr. Wambold's Benefit.

ART-EXHIBITION for the Relief of the LANCASHIRE DISTRESS, 6, Suffolk-street. Open from 10 a.m. until dusk. Admission, 1s. Catalogue, 6d.

F. W. DICEY, A. L. CHETWODE, } Hon. Secs.

MR. and Mrs. GERMAN REED, with Mr. JOHN PARRY, will appear EVERY EVENING (except Saturday) at Eight, and Saturday Morning at Three o'Clock, in THE FAMILY LEGEND; after which Mr. John Parry will introduce a new Domestic Scene, entitled MRS. ROSELEAF'S LITTLE PARTY.—ROYAL GALLERY OF ILLUSTRATION, 14, Regent-street.

GEOLOGICAL EXCURSION.—PROFESSOR TENNANT will accompany his Class from King's College, on Wednesday, February 18th, to AYLESFORD, to examine the CHALK, GAULT, and GREENSAND of the District. Any old Student or Member of the GEOLOGISTS' ASSOCIATION desirous of joining the party, Professor Tennant will be glad to see. He hopes to have the assistance of the Rev. T. Wiltshire, B. Waterhouse Hawkins, and Mr. Bensted.—The Train leaves London Bridge at 10·15 a.m.

ROYAL SCHOOL OF MINES, Jermyn Street.—The following Courses of LECTURES are about to be commenced:—

Thirty Lectures on PHYSICS. By Professor TYNDALL, F.R.S. To be delivered on every week-day but Tuesday, at 10 A.M., commencing on 16th February. Fee for the Course, £3.

Thirty-six Lectures on APPLIED MECHANICS. By Professor WILLIS, M.A., F.R.S. To be delivered on every week-day but Saturday, at 12, commencing 16th February. Fee for the Course, £3.

Thirty Lectures on GEOLOGY. By Professor RAMSAY, F.R.S. To be delivered on Mondays, Tuesdays, Wednesdays, and Thursdays, at half-past one, commencing 16th February. Fee for the Course, £3.

TRENHAM REEKS, Registrar.

PUBLISHERS AND THE BOOK TRADE

TO LET in PATERNOSTER-ROW, newly built PREMISES.—Enquire of JOHN KNIGHT & SONS, Soap Works, Old Gravel-lane, St. Georges' East.

HYDE ABBEY SCHOOL, Winchester.—Head Master, the Rev. EDWARD FIRMSTONE, M.A. (Oxon), assisted by resident graduates from the Universities of Cambridge, London, and Paris. Sons of of gentlemen are prepared for the public schools and the universities, also for Sandhurst, Woolwich, and the naval, military, and civil services.—Terms, references, and list of pupils who have recently passed examinations from this school will be forwarded on application to the Head Master.

BEN RHYDDING, ILKLEY, YORKSHIRE
A WINTER AND SPRING RESIDENCE.
PHYSICIAN.—Dr. MACLEOD, F.R.C.P.E., F.A.S. Scot.
SURGEON.—THOMAS SCOTT, M.D., Edin., M.R.C.S.E.

Ben Rhydding is one of the most complete and most comfortable establishments in England for the reception of patients and visitors. While the method of treatment pursued at Ben Rhydding proceeds on Hydrotherapeutics as to its main principle, it is by no means confined to that, but includes the systematic application of the Art of Cure in its whole range, and with all its resources.

NORTH BRITISH AND MERCANTILE INSURANCE COMPANY.—Established 1809.
JOHN WHITE CATER, Esq., Chairman, CHARLES MORRISON, Esq., Deputy Chairman } Of the London Board.
The Directors have opened a Branch Office at
8, WATERLOO-PLACE, PALL MALL.

NORTH BRITISH AND MERCANTILE INSURANCE COMPANY.—Established 1809.
Incorporated by Royal Charter, and Special Acts of Parliament.
Paid up Capital, £250,000.
INVESTED FUND equal to nearly TWO MILLIONS.
JOHN WHITE CATER, Esq., Chairman, CHARLES MORRISON, Esq., Deputy Chairman } Of the London Board.
The Company carries on Business both in Fire and Life. Annuities and Reversions Granted and Purchased. Foreign Risks undertaken.
In the Life Department, the number of Policies issued during the last four years were in—

		Sums Insured.
1858	405 Policies	£377,495
1859	605 ,,	449,913
1860	741 ,,	475,649
1861	795 ,,	527,626

The Books for 1862 not yet made up.
The leading features of the Office are—
1. Entire security to Insurers—both from the Subscribed Capital and Invested Funds.
2. In the Life Department large Bonus additions. The Company allowing nine-tenths of the Profit on the Life Business to Policy Holders on the participating Class.
3. Varied Tables of Premium to meet all cases.
4. Liberality and promptness in settlement.
Head Offices:

Estimates given for Work in any of the above branches, and for the Erection of Observatories.

31, SOUTHAMPTON-STREET, STRAND, W.C.

THE PERFECT SUBSTITUTE FOR SILVER.
The REAL NICKEL SILVER, introduced more than 30 years ago by WILLIAM S. BURTON, when Plated by the patent process of Messrs. Elkington & Co., is beyond all comparison the very best article next to sterling silver that can be employed as such, either usefully or ornamentally, as by no possible test can it be distinguished from real silver.
A small useful set, guaranteed of first quality for finish and durability, as follows:—

	Fiddle or Old Silver Pattern.	Thread or Brunswick Pattern.	Lily Pattern.	King's or Military, &c.
	£. s. d.	£. s. d.	£. s. d.	£. s. d.
12 Table Forks	1 13 0	2 4 0	2 10 0	2 15 0

IMPORTANT ANNOUNCEMENT.

JOSEPH GILLOTT,
METALLIC PEN MAKER TO THE QUEEN,

BEGS to inform the Commercial World, Scholastic Institutions, and the Public generally, that, by a novel application of his unrivalled Machinery for making Steel Pens, he has introduced a NEW SERIES of his useful productions which, for EXCELLENCE of TEMPER, QUALITY of MATERIAL, and above all, CHEAPNESS in PRICE, must insure universal approbation, and defy competition.

Each Pen bears the impress of his name as a guarantee of quality; they are put up in Boxes containing one gross each, with label outside, and a fac-simile of his signature.

At the request of numerous persons engaged in tuition, J. G. has introduced his WARRANTED SCHOOL and PUBLIC PENS, which are especially adapted to their use, being of different degrees of flexibility, and with fine, medium, and broad points, suitable for the various kinds of Writing taught in Schools.

Sold Retail by all Stationers and Booksellers. Merchants and Wholesale Dealers can be supplied at the Works, Graham-street, Birmingham; at 91, John-street, New York; and at 37, Gracechurch-street, London.

DR. DE JONGH'S
(*Knight of the Order of Leopold of Belgium*)

LIGHT-BROWN COD LIVER OIL, prescribed by the most eminent Medical Men as the safest, speediest, and most effectual remedy for
CONSUMPTION, CHRONIC BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GENERAL DEBILITY, DISEASES OF THE SKIN, RICKETS, INFANTILE WASTING, AND ALL SCROFULOUS AFFECTIONS,
Is incomparably superior to every other kind.

SELECT MEDICAL OPINIONS.
Sir HENRY MARSH, Bart, M.D., Physician in Ordinary to the Queen in Ireland.
"I consider Dr. De Jongh's Light-Brown Cod Liver Oil to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

Dr. LANKESTER, F.R.S., Scientific Superintendent, South Kensington Museum.
"I consider the Cod Liver Oil sold under Dr. De Jongh's guarantee to be preferable to any other kind as regards genuineness and medicinal efficacy."

Dr. GRANVILLE, F.R.S., Author of the "Spas of Germany."
"Dr. Granville has found that Dr. De Jongh's Light-Brown Cod Liver Oil produces the desired effect in a shorter time than other kinds, and that it does not cause the nausea and indigestion too often consequent on the administration of the Pale Oil."

Dr. LAWRANCE, Physician to H.R.H. the Duke of Saxe-Coburg and Gotha.
"I invariably prescribe Dr. De Jongh's Cod Liver Oil in preference to any other, feeling assured that I am recommending a genuine article, AND NOT A MANUFACTURED COMPOUND IN WHICH THE EFFICACY OF THIS INVALUABLE MEDICINE IS DESTROYED."

DR. DE JONGH'S LIGHT-BROWN COD LIVER OIL is sold only in IMPERIAL Half-pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.; capsuled, and labelled with his stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable Chemists and Druggists.

METZLER & CO.,

37, 38, 35, and 16, GREAT MARLBOROUGH-STREET, LONDON, W.

SHEFFIELD SCHOOL of PRACTICAL SCIENCE and METALLURGY.

PRESIDENT.

His Grace the Duke of Devonshire, K.G., F.R.S., D.C.L., Chancellor of the University of Cambridge.

VICE-PRESIDENTS.

The Mayor of Sheffield, John Brown, Esq.
The Master Cutler.
The Right Hon. Lord Wharncliffe.
Sir David Brewster, K.H., D.C.L., F.R.S.L. & E., M.R.I.A.
Sir Roderic Murchison, F.R.S., Director of the Royal School of Mines.
John Percy, Esq., M.D., F.R.S., Professor of Metallurgy in the Royal School of Mines.
William Fairbairn, Esq., C.E., F.R.S.
Robert Hunt, Esq., F.R.S., F.S.S., Keeper of Mining Records.
Warrington W. Smyth, Esq., M.A., F.R.S., Professor of Mining and Mineralogy in the Royal School of Mines.

DIRECTOR.

The Rev. G. B. Atkinson, M.A., Principal of the Collegiate School, late Fellow and Assistant Tutor of Trinity Hall, Cambridge.

PROFESSORS.

Chemistry, Metallurgy, and Geology.—James Allen, Ph.D. F.C.S., of the Universities of Giessen and Berlin.
Engineering and Mining.—J. Thompson, C.E.
Mathematics, Natural Philosophy, and Applied Mechanics.—Rev. G. B. Atkinson, M.A.

The Sheffield School of Practical Science and Metallurgy will afford a complete scientific and practical education to students who are destined to become civil, mechanical, or mining engineers, or manufacturers of any kind. Its object is thoroughly to discipline the students in the principles of those Sciences upon which the operations of the Engineer, Metallurgist, or Manufacturer depend.

The education will be given by means of systematic Courses of Lectures, by Catechetical Class Instruction, by Practical Teaching in the Laboratory and Drawing-room, and occasionally by Field excursions.

The School of Practical Science and Metallurgy will be conducted in the buildings of the Sheffield Collegiate School. The two Institutions, although both under the superintendence of the Rev. G. B. Atkinson, Principal of the Collegiate School, are, however, entirely distinct.

A detailed Prospectus, containing Syllabuses of all the Courses of Lectures, and all other information, arrangements for boarding, &c., may be obtained by application to the Director.

THE SCHOOL WILL OPEN IN THE FIRST WEEK IN FEBRUARY, 1863.

GEOLOGY and MINERALOGY.—ELEMENTARY COLLECTION, to facilitate the study of this interesting Science, can be had, from Two Guineas to One Hundred, also Single Specimens, of J. TENNANT, 149, Strand, London, W.C. Mr. Tennant gives Practical Instruction in Mineralogy and Geology.

GOD BLESS the PRINCE of WALES.—National Song, by BRINLEY RICHARDS. Sung with enthusiastic applause by Mr. Sims Reeves, at St. James's Hall. Price 3s.

"It is indeed seldom that we have to record a success so complete. This happy inspiration of Mr. Brinley Richards is to be repeated on the 5th of February at the National Concert, at St. James's Hall, when Mr. Reeves will again sing it."—*Morning Post*, Jan. 26th.

BRINLEY RICHARDS'S WARBLINGS AT DAWN, Romance for Piano, 3s.; Warblings at Eve, 3s.; Piano Duet, 3s.; The Swiss Boy, for Piano, 3s.; Welsh Fantasias: No. 1, North Wales, 4s.; No. 2, South Wales, 4s.; and his Recollections of Wales, 12 Books, 2s. each, or in one vol. 21s.

Just issued.

ROBERT COCKS & CO.'S QUARTERLY CIRCULAR OF NEW MUSIC. May be had gratis and post free on application.

A SUPERB MUSICAL PRESENT.—The BURLINGTON ALBUM for 1863, of Pianoforte, Vocal, and Dance Music; containing New Compositions by Vincent Wallace, Brinley Richards, S. Glover, G. F. West, A. Wright, Faust, Leduc, Miss M. Lindsay, Abt, Kücken, Anne Fricker, Johnson. Beautifully illustrated, handsomely bound, gilt edges, 15s.; post free, 16s. 2d. A superb musical gift.

London: ROBERT COCKS & CO., New Burlington-street.

PIANOFORTES.—"A good Instrument is a valuable desideratum, and Messrs. COCKS & CO., of New Burlington-street, have conferred a boon on the Public in the production of the UNIVERSAL PIANO. The price is only £25, and is quite a marvel of cheapness, combined with excellency of quality. It may be had in rosewood or walnut case, with ogee fall, silk front, and full fret, at the above moderate price. This is worthy of consideration by all who are contemplating making a purchase."—Vide *Christian Herald*, Oct. 10.

GOD BLESS THE PRINCE OF WALES.

National Song, 3s.; as a Four-part Song, 2d.; ditto for Piano, 4s.

ORDER OF ALL MUSICSELLERS.

HEDGES & BUTLER,

London, 155, Regent-street, W.; Brighton, 80, King's-road,

(Originally established A.D. 1667.)

CAUTION.—The extraordinary success attending the use of Dr. J. COLLIS BROWNE'S CHLORODYNE has induced certain unprincipled persons to vend spurious compounds under this name. This wonderful remedy allays pain, soothes the system, and invigorates nervous debility. It effectually cures, as will be seen by medical testimony, CONSUMPTION, COUGHS, ASTHMA, BRONCHITIS, NEURALGIA, RHEUMATISM, &c. Never be tempted to buy Chlorodyne except in sealed bottles, having the Government Stamp, with the words "Dr. J. Collis Browne's Chlorodyne" engraved thereon. A sheet full of medical testimonials accompanies each bottle. Sole Manufacturer, J. T. DAVENPORT, 33, Great Russell-street, Bloomsbury, London. Sold in Bottles, 2s. 9d. and 4s. 6d.; sent carriage free on receipt of Stamps or Post-office Order.

HERALDRY,

WHO'S WHO IN 1863. The 15th Annual Edition. Peerage, Baronetage, Knightage, Parliamentary Guide, Dignitaries of the Church, Judges, &c. The most useful and cheapest book of reference published.

London: BAILY & CO., Cornhill.

Illustrated with 27 exquisite Engravings. Imperial 4to., in illustrated cover, 5s. Plain cloth, 7s. 6d. Cloth extra, 10s. 6d.,

MOTHER'S PICTURE ALPHABET.

Dedicated, by the Queen's special permission, to the Princess Beatrice.

"Notable for its permitted dedication to the Queen, its rich paper and noble type, and for the excellent engravings with which it is embellished, this picture alphabet is the handsomest book of its kind offered to the general public. Its system of instruction is also good. To each letter there is a set of verses, into which are introduced as many words as possible beginning with the particular letter of the lesson."—*Athenæum.*

With 160 Engravings, cloth, 5s. Coloured Plates and cloth extra, 7s. 6d.

ILLUSTRATED SONGS AND HYMNS
FOR THE LITTLE ONES. Compiled by UNCLE JOHN.

"These 'Songs and Hymns' are about to be reissued in Sixpenny numbers, each containing about twenty engravings, with coloured illustrations in several of the parts. Ten numbers form the volume, and are sold for five shillings, bound in cloth. We hardly know a present likely to be more acceptable to an intelligent child, and which the parent or teacher could give with greater confidence in its utility."—*Ladies' Newspaper.*

Bound in cloth, Illustrated, price 1s.

THE LATE PRINCE CONSORT: his Life and Character. By the Rev. J. H. WILSON. Tenth Thousand.

"We cordially recommend this simple, touching, and eloquent biographical sketch of the best and most beloved of princes and of men. It is written in a manly, Christian spirit. . . . . We will only say that to all who love our widowed Queen, and all who mourn her best friend and guide, this memoir will be a treasure."—*Weekly Times.*

London: S. W. PARTRIDGE, 9, Paternoster-row.

LORD OUR SHEPHERD: an Exposition of the Twenty-third Psalm. Twenty-fourth Thousand. Cloth, 5s.

VIII.

STEVENSON (Rev. JOHN, D.D.), GRATI-

TUDE: an Exposition of the One hundred and third Psalm. Fifth Thousand. Cloth, 6s.

IX.

A Third Edition of

THE CLERGYMAN'S LEGAL HAND-

BOOK; or, Compendium of Clerical and Parochial Law; being a Manual of the Laws affecting the Relative Rights, Position, and Duties of the Clergy and their Parishioners, including the Law applicable to New Parishes and Ecclesiastical Districts. By JAMES MURRAY DALE. Revised and Enlarged. In cloth, price 6s.

X.

Now ready, the Fifth edition of

THE REV. E. B. ELLIOTT'S HORÆ

APOCALYPTICÆ. Revised, corrected, and enlarged, with 38 Illustrations, price £3. 16s., cloth. In this edition the author has left his maturest thoughts and corrections, the proofs being now, he trusts, made complete. The late Sir James Stephens in his "Essays on Ecclesiastical Biography," thus speaks of this work:—"The 'Horæ Apocalypticæ,' by the Rev. E. B. Elliott; a work of profound learning, singular ingenuity, and almost bewitching interest."

SEELEY, JACKSON, & HALLIDAY, 54, Fleet-street.

New ready, Second Edition, in 2 vols, 8vo, with Maps and Illustrations, price 24s.

LIFE IN NORMANDY:

SKETCHES OF FRENCH FISHING, FARMING, COOKING, NATURAL HISTORY, AND POLITICS.

DRAWN FROM NATURE.

Edited by J. F. CAMPBELL, Esq.

"It is one of those books which at once fascinate and humiliate the reader,—the former because it is full of good matter, put in a most interesting light; the latter because the material and the interest are derived from such simple and obvious sources that we wonder to think how these good things have been missed so long. It is the same sort of feeling which that delightful book, White's 'Natural History of Selborne' suggests. What is Selborne more than the other villages of England? Which of us is confident that, taking up some obscure hamlet, keeping our eyes open, and merely recording what we see from day to day in the dull neighbourhood, we could produce a book which should be one of the treasures of every library? The scope of the present work is wider than that which Gilbert White set himself, but is similar to it."—*Times.*

"Life in Normandy" is a most dainty work. To the intellectual epicure it will prove exceedingly appetising. . . . . The rule followed in the preparation is pretty much the same as that recommended for dining by the gastronomic marquis, and the results for the reader are as satisfactory as those predicated for the diner. The heaviest portion of the work (that is, heavy in comparison with what follows, not heavy in the sense of dulness), is found in the preliminary chapters. These being passed, each succeeding stage of the literary banquet, although concocted from the simplest viands, becomes choicer and choicer, until the gratification of the intellectual palate culminates in the last chapter."—*Morning Post.*

"The freshness, the minuteness of description, the generous tone of feeling everywhere perceptible, the novelty given by the keen insight of the narrator, even to familiar objects, combine to render the book every way a satisfaction and a pleasure, whether to the naturalist, sportsman, or student of human nature."—*Globe.*

"A very pleasant and spirited account is this, of the out-door and in-door life and occupations of our kith and kin across the Channel. . . . . Let all who care for a bright fresh country-book, and don't want to talk of Gothic mullions, tracery, or bosses, read this 'Life in Normandy.'"—*Reader.*

"The volumes abound with a variety of natural history information evincing a keen appreciation of this fascinating science. Indeed, the 'Highland gentleman' has done for a small area of Normandy what Gilbert White did for Selborne."—*Parthenon.*

"A sensible well-bred book, which deals largely in humour and liberally in ridicule; but the humour is that of a gentleman, and the ridicule never degenerates into sarcasm and bitterness. It is a book that an invalid might take up with the certainty of finding in it much quiet amusement, without anything to overexcite the nerves, and an undercurrent of sound piety, without a particle of offensive demonstrativeness."—*Daily News.*

"They are simple, homely, unaffected; but they are delightful reading, much more so than any description of their contents would convey, for they are principally about sporting, cooking, and natural history; and books of this sort are apt to be wearisome to people who do not care for angling or zoology and leave cooking to cooks. But this book is an exception, because the writer had qualities that are very charming and very far from common."—*Saturday Review.*

"The author of these volumes had shrewdness and humour, a kind heart, and a very clear head; and this tale of love and shipwreck shows that he possessed literary power of no common order."—*Standard.*

WHERE ARE THE POLICE?

THE noise of the Polish revolution is beginning to echo over the Continent. The French nation, with chivalrous interest, pricks up its ears at the sound of a nationality in arms for independence, and every clang of Polish scythes stirs a sympathetic chord in the heart of Europe. While bystanders in the streets of London and of Paris are talking of the movement, the Polish nation is dying by inches in a desperate and bloody effort to remove the yoke imposed upon Poland by the treaties of 1815. It is impossible not to be moved at the spectacle. The way the hapless Poles cling, living and dying, to their old traditional history must win our pity, at least, if not our approbation. It is impossible not to feel that half-armed men are being slaughtered this day to preserve the balance of power established by Vienna diplomatists nearly half a century ago. Whatever be the virtues or the failings of the Polish race, they fight for freedom with a gallantry that goes to the heart of every generous Englishman and Frenchman. This is no rising of a democratic mob. Every class and order in Poland—nobility, clergy, peasantry—have taken part in it, and fight to the death, with pikes, with scythes, with cannon hollowed out from the trunks of trees, in forests, in morasses, on mountain sides, against the barbarous but disciplined soldiery which Russia pours down upon them. It is said that the principles of non-intervention are or should be sacred. Liberal Europe, accordingly, shudders and stands aloof. But there is a monarchy—to its eternal infamy be it spoken—which seems unmoved by the miserable tragedy. Of the Prussian people we have nothing to say that is discourteous. But what will history say of the Prussian Ministry, which at such a moment steps in to assist at the massacre of the Polish nation? It is intelligible that a reactionary Cabinet should tremble lest the brand be kindled also within the Prussian frontier, and the kingdom of Prussia be destroyed by the incendiary flame. The monarchy which rose by the Congress of 1815 to the rank of a first-rate Power naturally measures its influence in Europe by the number of territorial miles over which the military flag of Prussia floats. We have nothing to do with the internal merits of a policy which seems destined to bring the Liberals of Prussia into direct conflict with the throne. The question for us is, how long are England and France to endure so monstrous an intervention?

The rumour of France's dissatisfaction grows stronger every day. There is, however, as yet, no movement behind the tapestry that conceals the Imperial Cabinet. Either Baal is hunting or he is sleeping—or perchance he dances. Golden sandals and bare feet glitter at Compiègne, while Poland is being undone. The attitude of the French Government would be the less remarkable, if the Imperial policy on these occasions had been less loudly dinned into our ears. The mission of France, we are told, leads her wherever civilization suffers. Does not civilization suffer when "Order reigns at Warsaw?" The Emperor has, we all know, constituted himself the policeman of Europe. What has become of the police? The answer is obvious. The active policeman is not here, he is round the corner. He is redressing the wrongs of the Arabs, or taking care of her Holiness the Pope, or busying himself about the Catholic missions in Cochin-China, or has gone down an area in the next street to look after the kitchen arrangements of Mexico. The most energetic of constables cannot be everywhere at once. At present his time is amply occupied in the protection of financial virtue in distress. It is little use for Poland and liberty to shriek. The policeman hears a voice they cannot hear, that beckons him away. It is the voice of Jecker. When such interests as those of Jecker are at stake, even Warsaw must give way.

As the French journals are asking what is to be the policy of the Imperial Government on the Polish question, it will be for English Members of Parliament to see that the English Ministry exerts all its lawful influence to put an end to the horrors of the strife between Russia and Poland. Conservative sympathy with the cause of despotism may perhaps be checked by the reflection that a bloody repression of the revolution broken loose in Poland will not mend matters in the long run. Nor do we ask that England should rush into war for the sake of the Poles, still less that she should condescend to threaten where she knows she cannot strike. It is still the order of the day that Great Britain is always to look on quietly at everything till she herself is touched. The intrinsic glory and value of this policy it is not our business to discuss. In the temper of Englishmen it seems the only policy possible. But at least let us join our counsels to those of France to prevent Prussia's departing from the principle of non-intervention which binds ourselves. The telegraph informs us that on the subject of the proposed step Lord Russell expressed himself ambiguously, as neither in favour of, nor in opposition to, the Russo-Prussian convention. We shall be much surprised if this turns out to be anything else but the invention of M. Reuter's monarchical imagination. Lord Russell, with all his faults, is thoroughly Liberal at heart, and a friend to non-intervention. The diplomatic atmosphere he has of late been breathing can hardly have turned his head so far as to make him depart from his old principles and sanction a flagrant violation of them. When he worships the Magna Charta with so much satisfaction to himself, he does so partly because it is the charter of our liberties, and partly also because it is a

Digitized by Google

piece of parchment. The Vienna Treaty is also a piece of parchment, and, therefore, naturally to be admired; but it seems to be the charter in some instances, not of constitutional liberty, but of Continental tyranny, and of its inevitable result—Continental disorder. If there is to be any foreign action at all in Poland, it should be joint action on the part of the great Powers, not isolated action by a single reactionary member of the old European league. The Powers who shared in the partition of Poland are trustees for Europe; nor has Prussia the lawful right to move in the matter. It may be that old things should be kept up, and that old treaties should not be torn. But, at least, let no European monarchy dare singly to step forward to draw the bonds of 1815 tighter than the course of events has left them.

The French Emperor's destiny has hitherto led him into conflict with the old treaties which Europe adopted, perhaps wisely, but to which she certainly may cling too long. He has been the patron of nationalities hitherto; the time is come when France and the world are looking to see whether he flinches from his *rôle*. The French have had inglorious kings since the French Revolution; but we doubt whether they will tolerate a Napoleon who is untrue to his character. Already the French press has spoken out about Poland. Can Napoleon III. afford to be so active in Mexico, while he remains so silent about the Polish nation? Can he venture, while France is in its present unsettled condition, to squander French blood at Orizaba, while he closes his eyes and ears to the distress of the Poles? Will the French endure to see Prussia move against Polish independence, while a Napoleon pretends to be looking the other way? The French Empire, while it appeals to the vanity and instincts of the nation, is firm and stable. When it ceases to do so, we seem to feel that it may after all be built upon the sand. The Emperor's Transatlantic expedition has already tired the patience of his subjects. Any want of sympathy for Poland will seem a miserable thing indeed to all classes of Frenchmen by the side of the factitious interest about Mexico which the Imperial policy displays. Nor can Louis Napoleon afford to disregard public opinion altogether. Imperialism in France has attained to great power and influence; but the fever is a fitful and uncertain one, and may always be quenched by a foolish step on the part of the Empire. His Imperial Majesty can never reckon on an absolutely certain throne so long as he lives, though comparatively speaking he may calculate on probable stability. His reign must from its very nature be one long crisis. Events like the Polish revolution either shake or confirm his tenure of the crown. The Ides of March for him are long since come. Yes, Cæsar—but not gone.

TRANSPORTATION OF CRIMINALS.

THE question of the disposal of our more heinous and hardened criminals—that class especially which is usually distinguished as "convicts"—continues to excite more anxious attention than any other matter of domestic policy. The people having had ample proof that the constituted authorities cannot safely be intrusted either with the elucidation of the theoretical problem or with the practical administration of the actual law, are still busying themselves with the inquiry as one which comes very close home to their business and bosoms. Nor has the appointment of a Royal Commission to investigate and report upon the matter done much to allay anxiety, to restore confidence, or to check amateur discussion. Nor, indeed, was it in the least degree calculated to produce any such effect; for, in the first place, the delegation to a specially constituted Board of a question which lay within the most defined and ordinary functions of the Executive Government, and in reference to which that Government had already as ample information and as much accumulated experience as a Commission could amass in several years, merely betrayed the incapacity and feebleness of that Home Office to which we officially trust for our protection; and, in the second place, the composition of the Commission was especially disheartening. It was impossible to hope much even from eminent and able men who, however wise, were no longer young and active, and had plenty of other business to attend to. No one who desired a searching investigation and a philosophical report would have assigned the task to two venerable ex-Chancellors, three ex-Secretaries of State, two judges, and the O'Conor Don.

It is not surprising, therefore, that a numerous and intelligent assembly should have met on Tuesday evening at Burlington House to discuss that suggestion of the revival of transportation, which was a short time since so recklessly put forward by some leading journals, and which was suspected to have been listened to even by some members of Government in a few transient moments of perplexity and collapse. The subject was ably handled; and, though nothing new was said, much that has long been known was said well. It was gratifying to see that not a single voice was raised in defence of the revival of transportation as a systematic punishment, and as a conclusive and satisfactory mode of getting rid of our criminals, and solving the difficulty which is besetting us. Every speaker who had any claim to speak at all concurred in condemning the proposal as one which could not for a moment be entertained by any nation which knew what it was doing or had any lingering respect for decency or justice. The only exceptions to the general unanimity were two or three gentlemen connected with Western Australia, who pleaded, with much earnestness and some plausibility, that, whatever decision might be come to with regard to transportation in the abstract, on a great scale, and as a sufficing solution, this country was bound to continue to send to the colony they represented as many convicts as it could conveniently absorb, at all events for some years to come; inasmuch as the Government had deliberately engaged to do so, when, about the year 1850, the mother country was thrown into a state of grievous embarrassment by the refusal of every other colony to receive any more convicts. At that period of perplexity and danger, Western Australia had stepped forward and offered to accept and prepare for a large amount of convict labour, and several gentlemen had involved capital and contracted engagements on the faith of the arrangement then entered into. The plea was a fair one, though beside the general question; and the colonists have a fair ground of claim for damages against the Colonial Office for not having kept faith with them, and may have a still stronger claim if no more convicts are to be sent. But, as these speakers were very properly reminded, the colonists are not willing even now to welcome the special class of convicts whom we are most anxious to get rid of, viz., our most desperate and dangerous villains; and, moreover, it is certain that, whatever might be their wants and feelings *now*, in a very few years they would follow in the steps of every other colony, and would find the presence of the convict population among decent emigrants and in a thriving settlement so utterly demoralizing and unendurable, that they would insist upon being relieved from the consequences of their own rash demand.

The most singular speech of the evening was Lord Alfred Churchill's. Rising to argue in favour of transportation from a colonial point of view, he brought forth the most telling arguments against it from the metropolitan point of view. Transportation now, and transportation to Western Australia, he assured the meeting, was a very different thing from transportation as it had formerly been managed in the older colonies. The convicts were admirably well off there. They were received by the respectable settlers with open arms. They were no longer "white slaves," "assigned" to harsh masters, as used to be the case in New South Wales and Tasmania. They worked for wages like free labourers, and wages were high because labour was in brisk demand. They soon became landholders. They often married the daughters of free emigrants. No one was allowed to call them bad names, or even to reproach them with having left their country for their country's good. Any such want of courtesy or kind feeling was forbidden by an Act of the Colonial Legislature. All was *couleur de rose*. As to wives for them, there would be no difficulty; for even if there were not enough of settlers' daughters for both free and convict claimants, it was proposed to send out considerable numbers of "Irish girls"—those blue-eyed daughters of Erin not having the same prejudice against exiled burglars and garotters as is unfortunately sometimes found to exist among Anglo-Saxon females. This attractive picture was gravely and vividly drawn by the colonial advocate. The natural question in reply was:—"If all this be so, what becomes of transportation as our most severe secondary punishment? Is a home at the Antipodes, compounded of rich and cheap land, high wages, a fine climate, and an Irish wife, so terrible a picture that it can be regarded as the next worst penalty to death? Could any actual or potential criminal who had listened to

Digitized by Google

Lord Alfred Churchill have been deterred from evil courses by the hearing? Would not such a prospect, with the vista of gold fields in the distance, be enough to clench the design of any hesitating and debating ruffian to garotte even Lord Alfred?"

Sir Walter Crofton spoke most admirably, hitting every nail on the head with a strength, brevity, and precision that was strangely refreshing after the verbiage in which some previous speakers had indulged. But the most interesting and valuable remarks made during the evening were probably those of Lord Lyttelton and Mr. Adderley. They both gave emphatic utterance to the feeling which arises in the minds of all persons in the slightest degree acquainted with the subject—a feeling, that is, of the profoundest surprise and scorn that the matter should be once more under discussion. Over and over again it has been explained that every foreign spot to which convicts can be sent must be either a populous colony or a penal settlement; that every such colony has refused to receive one single fresh convict under menace of rebellion, and that no Government would dream of forcing any upon them; that every penal settlement must become a Port Arthur or a Norfolk Island, and no man, who has the faintest idea of what those places were, would ever lay upon his soul the sin of creating or suggesting another. Respecting those penal settlements, things are in evidence which cannot be printed here. Those awful dens of misery and violence and vice had to be guarded by soldiers—and the soldiers sent there, it was found, were virtually punished as severely and were soon demoralised almost as completely as the criminals; and the criminals committed fresh crimes and worse crimes merely that they might go back to Sydney or Hobart Town—and be hanged. Transportation to a colony, in fine, is no punishment, and ought not to be revived, even if it were possible,—which happily it is not. Transportation to a mere penal settlement would be the costliest and the most cruel mode we could adopt for disposing of our convicts, and would be a sin of the deepest dye, even if it were cheap and humane. Lastly, transportation is only brought up again in these days that we may have one chance more of lazily evading a difficulty and shrinking like cowards from a solemn obligation.

PRUSSIAN ALLIANCES.

M. VON BISMARCK has at last discovered a congenial enterprise, by which he may turn the attention of those who dislike his domestic system of *Thorough*, from the deadlock in the Chamber to the spirited policy of the Foreign Office. Poland is once more in arms against her cruel oppressors. In England there is not a friend of liberty, nay, there is not a friend of humanity, whose sympathies are not with the unhappiest of modern nations in her hopeless struggle against unheard-of wrongs. Italy, in the midst of her own half-finished labours, has a thought of kindness for her less fortunate sister; and France feels herself bound to the cause of Poland by ties of religion and historical remembrances which the nephew of Napoleon I. will not dare to disregard. Meanwhile, the Prussian Government welcomes the Cossacks over the frontier, and sends them back refreshed and re-armed. The Russian troops are afforded every facility for transport through the Prussian territory, and measures have been or are being concerted at St. Petersburg for ultimate joint action on the part of the two Powers. The first-fruits of the compact, if report speaks true, are to consist in a kind of fugitive white slave law, according to which the Russian bloodhounds may track their victims on Prussian soil. A preliminary insult has been offered to Prussian Poland by a most offensive proclamation, countersigned by the Commander-in-chief of the province. While her rival is thus actively engaged in the amenities of a Russian offensive alliance, Austria is conciliating that goodwill of free nations, which the subject of an angry note from one of the Czar's diplomatists rarely fails to obtain.

The Prussian Ministry may have considered that a decisive policy against Poland was not certain to be unpopular in Prussia. The deep-seated antipathy between the German and Polish nationalities is, unfortunately, only too well authenticated a fact. The readers of Gustav Freytag's successful novel of "Debit and Credit" may call to mind how much capital the author, himself a very advanced German Liberal, makes out of this feeling. The Polish Deputies in the Berlin Chamber occupy a position not unlike that of the Irish Brigade in the House of Commons, except that the former have real and the latter very shadowy grievances. The interests of their own nationality and religion are, naturally enough, the only care of the Polish members. "What do we care," bitterly exclaimed one of the most eloquent of their body in the late debate on the Address at Berlin; "what do we care for the momentous constitutional struggle in which you tell us you are engaged? Whether you triumph or succumb in it, our nation will remain unhappy and oppressed." But as there is no honest Prussian who does not feel that the partition of Poland is a blot on his country's history, and that Posen is the dimmest gem in his sovereign's "divinely-bestowed" Crown, we cannot believe that a generous and high-souled people will submit to be attached by its rulers to the wheels of the car of despotism as they again pass over unhappy Poland. The *Cologne Gazette* has already expressed what every true man in Prussia must feel; and we can only hope that other papers, whose tendencies are less notoriously Catholic and French, have ere now added their voices to the protest. Some of the Liberal Deputies have already begun to move in the matter.

If the debates at Berlin do not furnish enough scope for M. von Bismarck's mental activity; if he is content to leave Lord Russell to settle the Schleswig-Holstein question, which raises a blush on every Prussian cheek and a pang in every Prussian heart; why does he not devote his superfluous energies to a study of *Vaterländische Geschichte*, which is a part of every German schoolboy's course? There, if he has eyes, he would see that the meaning has long passed away from that usage of Prussian politicians, of always taking the contrary course to that adopted by Austria. This time-honoured tradition enabled Napoleon I. to take the two Powers singly, and singly for the time to annihilate them. The alliance of the peoples, sanctified by the bloody day of Leipzig, soon shrunk into the holy alliance of the sovereigns. It collapsed, and Prussia and Austria returned to their familiar attitude of mutual defiance. M. von Vincke's "white horse of Bronzell" was, it is true, the only Prussian subject who fell a victim to the ancient tradition; but the Czar Nicholas was able to reckon on Prussia at all events lagging ere she took up arms with Austria to repress his revolt against the peace of Europe. Louis Napoleon well knew that before Prussia had made up her mind to march her troops to the defence of her rival, he might tear from the latter a province, and concluded the peace of Villafranca while Frederick William IV. was still engaged in "mobilising" his army. And thus matters continue to the present day. At Frankfort, Prussia's feeble Liberalism is checkmated by Austria, as at Dresden, Manteuffel was worsted by Schwarzenberg. The tariffs of the two nations are irreconcileable. Prussia has been coquetting with the Tempter of the Tuileries and is now concluding military treaties with Russia; while the Double Eagle of Vienna is attempting his first flight in constitutionalism at home, and even showing a desire to extend his wings over the poor Polish fugitives.

A Russian alliance for Prussia is sure to bring along with it the contempt of Europe. Those whom the Czar honours with his friendship must sacrifice their liberty of action on its altar. A French alliance, on the other hand, is an idea which deserved strangling in its birth. Whatever value Louis Napoleon, in imitation of the Czar Nicholas, may attach to his eagerly sought personal interviews, the days are past for Sovereigns or Cabinets to make holy or unholy alliances without their peoples. And the feelings of a people like the Prussians should be the first consideration of its rulers. Prussia is entitled to the rank of a great Power solely in virtue of her army; and her army is her people. A writer in the *Saturday Review* was much mistaken the other day, in stating that the Prussian army is chiefly officered by the nobility. By far the greater number of officers, except in the Guards and the cavalry regiments, are without the *Von;* nor does it at all follow that every *Von* belongs to the arrogant faction of the *Junkers*. The rank and file of the Prussian army are drawn from all classes of the best educated people in Europe. They are the descendants of the soldiers who made their country a great Power by their enthusiastic personal devotion to Frederic the Great; and the sons of the Volunteers who restored Prussia to her place among nations at the call of the king, just fifty years ago. But no alliance which the people abhors, no design of which it is ashamed, will succeed in driving this people's army to slaughter or be slaughtered, like savage Zouaves or fanatical Muscovites.

Digitized by Google

A firm and permanent alliance between Prussia and Austria will not be the work of a day. Both Powers have much to learn and to unlearn. Prussia has to cease from flirting with France, and cringing to the Czar; and has, by honest constitutional government at home, to assure herself of that hegemony over North Germany, at least, to which her power and the wishes of the inhabitants of the smaller states entitle her. But, above all, she has to beware of continuing the policy of weak cunning, which is worse than no policy at all. For this it is necessary that, in the words of sagacious old Knebel, the present holders of power should consent to abdicate *themselves*. When Frederick William III. abdicated his traditions, his policy, and his prejudices, he enabled Stein to raise Prussia from the dust. With regard to a resignation by the present King, the wishes of some of his lieges go somewhat farther; but he will not do ill for his people's honour, if he will resign Count Bismarck and his colleagues, and consent to abandon a policy which is made up of a quarrelsome jealousy of Austria, an unsteady admiration of his neighbour on the Rhine, and an unmanly obsequiousness to the oppressor of suffering Poland.

DISPUTED LIFE POLICIES.

A VERY important decision was pronounced a few days ago, by the Court of Queen's Bench, in the matter of a disputed life policy. The question arose on a policy in the International Life Office, which that company refused to pay; and the point in issue was the nature of the interest which a person must have in the life of another to enable him to effect a valid assurance on the life of that other. The importance of the decision arises from the fact that it will govern a numerous class of existing policies, and will, if acted on by insurance companies generally, affect an important branch of their business. There is no doubt that there are at the present moment hundreds of policies which stand pretty nearly on the same grounds as the one which the International has just successfully disputed. It is equally certain, that most of them were effected with the most perfect honesty and good faith on the part of the persons assured, and in complete ignorance that such policies were not valid in law. All of them are, by the recent decision, placed in a most precarious position, and the persons assured are, in fact, quite at the mercy of the insurance companies. The question touches the interests of so many persons that it is desirable that the facts of this case, and the law relating to policies effected by one person on the life of another, should be brought prominently before the public.

At the first establishment of insurance companies the law placed no restriction whatever on the nature of their business. Any person might effect a policy on the life of any other person or upon any event, whether he had any interest therein or not. No policy was invalid merely because it was a wager or a speculation on the part of the person effecting it, and was not intended to make a provision against some loss or risk. Very early, however, in their history the Legislature conceived that this freedom led to what they called a "mischievous kind of gaming." And accordingly an Act was passed in the reign of George III. which enacted that no insurance should be made on the life of another person wherein the person making it had no interest. The nature of the interest requisite to make the insurance valid was not defined by the Act, but it may be easily gathered from another section, which declares that, even when the insured had an interest, no greater sum should be recovered than the value of that interest. The judges have inferred from this, reasonably enough, that the interest must be a pecuniary one. This being the state of the law, it is evident that a person who proposes to make an assurance upon the life of another should first ascertain whether he has that sort of interest therein which is requisite to make the policy valid. But the public generally are either wholly unaware of the law on this subject, or, if they happen to know that some interest is required, they trust for guidance in the matter to the insurance companies, to whom they make the proposal. These societies deal with hundreds of such cases, and, if they took the trouble of inquiring, could readily ascertain whether the actual interest of the proposed insurer was sufficient. Their ordinary practice is simply to inquire if he has an interest in the proposed life, without asking any particulars. There is a manifest advantage to the Company in this mode of proceeding. If the life happens to fall soon, so that the insurance was an unprofitable one, the Company, having in the meantime received the premiums, has the opportunity of refusing to perform its part of the contract, and of showing before a court of law, as the International has just done, that the policy was invalid from the beginning from the want of a sufficient interest in the insured. It is just to say that the great majority of respectable offices, when they have once granted a policy to any person on the life of another without inquiring specifically into the nature of the interest, or with the knowledge that it was insufficient, consider themselves, as they manifestly are in fact, bound in honour to pay the policy without raising any question.

The facts of the case which has given rise to these remarks, were as follows:—Mr. Hebdon, the plaintiff, who was an old and esteemed clerk in a banking firm, had become indebted to the firm to the amount of nearly £5,000. Having the confidence of the firm, he was engaged in 1855 for a period of seven years at a salary of £650 a year, and he was assured at the same time by one of the partners, named Pedder, that during his life he should not be asked for payment of the debt. Being aware that he should be pressed for payment on the death of Pedder, Hebdon insured Pedder's life for the sum of £5,000 in the "Glasgow" Life Office, and two years afterwards, the debt having in the meantime increased, he made a further insurance on the same life for £2,500 in the "International." Pedder having died some time afterwards, the "Glasgow" Office paid their policy, but the "International" refused to pay on two grounds: first, that Hebdon had not an insurable interest in the life of Pedder; and next, that even if there was any interest, it was more than covered by the payment of the other policy. The effect of the decision was, that there was no insurable interest in respect of the promise of Pedder not to enforce the debt during his life, inasmuch as the promise was not legally binding. With respect to the engagement to employ the plaintiff for a fixed period of seven years, there was an insurable interest; but as more than the amount was paid under the other policy, the plaintiff could not recover anything on the present policy.

It is not our intention to offer any criticism on this decision, but merely to call attention to the unsatisfactory state in which the law now stands. It is manifest that Mr. Hebdon had a real and substantial interest, though it might not be a legal one, in the life of Mr. Pedder. He incurred the risk of being pressed for payment of the debt immediately on Pedder's death, and against this it was the duty of a prudent man to provide. As far as the mere question of prudence goes, the insurance in this instance was as legitimate as the ordinary case of a person insuring his own life for the benefit of his family. Many similar instances could be quoted in which the whole income of an individual depends on the life of another. Nothing can be a more proper case for the application of the principle of insurance; and yet, if this interest happens, as is often the case, to be not legally binding, then, however certain the loss which will fall upon this individual and his family from the death of his patron or employer, the law prevents him from using the best means of making provision against it, by declaring that a policy, effected on the life of the person, on whom he is dependent, shall not be valid. Thus, the effect of the statute of George III., and the decisions upon it, is to place a bar in the way of prudence, and to check a considerable branch of insurance business. This, however, might be endured, if, on the other hand, it prevented any evil practices. But the mischief against which the statute was directed is wholly an imaginary one. Its object was to prevent gaming. But it is obvious that there is a very slight temptation to gaming by means of life policies. The process is too slow. Insurance offices offer poor facilities for gambling compared with the Stock Exchange. Time bargains in stock and shares are far better suited to the restlessness of speculative minds than life policies. In forbidding the latter, while allowing the former, the Legislature is straining at a gnat and swallowing a camel.

The late supporters of the Act have, however, discovered another ground of defence. There would be danger in repealing it. A person might insure another person's life, and then poison him. To give weight to the argument, an instance mentioned in Mr. Justice Talfourd's "Life of Lamb" is generally quoted to show that the danger is not imaginary. So there have been instances in which a person has been poisoned by an expectant heir, but we have

Digitized by Google

never heard that it has been proposed on that account to alter the laws of inheritance. But let us be consistent. Under the Act in question, a person may insure the life of his debtor. That has been held to be an insurable interest. But if the debtor lives long, the creditor may have to pay more than the amount of the debt in premiums, and it is his interest that the debtor should die as soon as possible. The creditor has everything to gain by that event and nothing to lose. The temptation, therefore, to poisoning is much greater in those cases which the law allows than in those which it forbids. In the meantime it is probable that the majority of insurance companies will find it for their own interests not to take advantage of this decision. It is, however, desirable that in a question of such great and general importance, the state of the law should be generally known. Although insurance offices will probably continue to grant policies in such cases, it will at any time be open to an unscrupulous company to resist payment on the ground of an insufficient interest. In the present state of the law care should be taken to select a company on the honourable conduct of which reliance can be placed.

THE CASSANDRA OF ITALY.

THE Marquis of Normanby, like his counterpart in the French Senate, the Marquis de Boissy, claims to be the possessor of the only true information with respect to foreign affairs. The latter has been good enough to make our own country his especial study; while the former keeps a very searching eye on the darkest corners of the Italian peninsula. The Marquis de Boissy has seen, with amazing satisfaction, the development of our Volunteer movement, for the time will soon come when the Volunteers, conscious of their own strength, will inaugurate a revolution which may throw into the shade the horrors and confusion of the French Revolution; and this the Marquis knows, as he told the Senate, because he has lived in England, and thoroughly understands our national character. So, too, Lord Normanby has lived in Italy, and knows the Italians a great deal better than they know themselves. The credulous public, ever choosing falsehood when truth is within their reach, persist in thinking that the new Italian kingdom is the fruit of a great national movement, than which none more unanimous and enthusiastic is recorded in history. And they believe, moreover, that the Italians, far from desiring to retrace their steps, chafe only at the obstacles which hinder them from attaining the goal and consummation of the course they have followed hitherto. But there are more things in Italy than are dreamt of in the philosophy of the public; and Lord Normanby, having lived there, can tell us that the rule of Victor Emmanuel beyond the borders of Piedmont is merely a foreign yoke laid by force and fraud on reluctant populations,—that the princes whom it dispossessed were justly endeared to their subjects,—and that the Neapolitans look wistfully back to the days of Bomba and his son Bombalino. Hard was the lot of Cassandra; but harder is that of Lord Normanby. Where Cassandra asked for faith in her prophecies, Lord Normanby only requires us to accept a true report of what is already under our very noses. He alone sees by the pure, clear light of the day, where a glamour light betrays the vision of others. He has, therefore, a solemn duty to fulfil, and even if he would, he may not be silent: he must cry aloud, and spare not, though his voice should fall on the ears of men as the cry of an owl in the desert.

Lord Russell, in his simplicity, was at a loss to understand "the exact object" which Lord Normanby had in view, when he made his speech on Tuesday night. But Lord Russell ought to have known that his "noble friend" was in reality speaking for the edification of a strange constituency in foreign parts, composed of deposed princes, dispossessed placemen and courtiers, and intriguing ladies, whose aristocratic society he enjoyed in the good old times, and who now undertake to supply him with the only trustworthy information on the state of Italy and the wishes of its inhabitants. Besides, it is well for the King of Italy that, in the hour of his exaltation, some one should be found to discharge for him the functions of the slave in the triumphal car of a Roman conqueror; and while Lord Normanby lives, he will never want a monitor to remind him not only that he is mortal, but also that he is a very sinful and detestable mortal. It must, however, be admitted, that on this last occasion Lord Normanby has been compelled to go rather far a-field in search of a pretext for addressing his constituents from his place in the English Parliament. In one of the recently-published despatches relating to the occupation of Rome, Lord Russell has declared that the acquiescence of the English Government in the French occupation of Rome, when it was first undertaken, "did not imply approbation; still less would approbation then imply approbation now." *Hinc illæ lacrymæ.* Hence flows Lord Normanby's freshest sorrow. He will have it that in 1849 Lord Russell, who was then Prime Minister, and Lord Palmerston, then Foreign Secretary, looked on at the occupation of Rome by French troops, not merely acquiescing therein, but actually approving it. For his proofs he cites the testimony of M. Drouyn de Lhuys, who, however, more candid than Lord Normanby, expressly admitted that "he did not mean to contend that their acquiescence had not been accompanied with expressions of deep regret, or that her Majesty's Government would not have preferred other means to secure the Pope's authority than the employment of force; still less did he desire to quote the policy of her Majesty's Government in those days as binding upon them now." Lord Normanby has gone, moreover, to the great magazine of *argumenta ad hominem*, Hansard's Debates, and carefully armed himself with such extracts as suited his purpose. But, whether it be from want of candour or inattention we know not, he somehow makes no allusion to a discussion in the House of Lords on the 15th of June, 1849, when Lord Aberdeen brought against the Government this very same charge of approving, and not only acquiescing in the occupation of Rome; and when Lord Lansdowne met the charge with an emphatic denial, affirming that the Government had not even assented to French intervention in arms, and that they had done no more than refrain from raising any obstacle to the sailing of the expedition. And a few days after, Lord Palmerston, in the House of Commons, refused to express any opinion for or against those proceedings of a foreign government, to which the British Government had declined altogether to be a party.

The doctrine of non-intervention probably forms no part of Lord Normanby's political creed; and it was not set down in his brief that he should condemn Lord Palmerston and Lord Russell for their supposed approbation of the French occupation. His business for the evening was merely to establish, if he could, that Lord Russell stated what was not true, when he said the other day that the English Government in 1849 acquiesced, and no more, in the French expedition to Rome. But, looking beyond the narrow limits to which the discussion was confined by Lord Normanby, we might naturally wonder at the passive attitude of the English Government in the presence of an expedition which was supremely repugnant to the spirit and traditions of our policy since the Treaties of 1815. The key to the riddle is furnished by the exceptional circumstances of the hour. At that time Louis Napoleon, still insecure in his seat as President of the Republic, was engaged in a desperate contest with the Radical party, led by Ledru Rollin. Failing to carry through the Assembly a bill of impeachment against the President and his Ministers for this very occupation of Rome, they attempted a revolution out of doors, which was, however, suppressed at once by the vigour of General Changarnier. This Radical party, whose programme included the "propaganda of ideas," the cancelling of the Treaties of 1815, and armed intervention in behalf of oppressed nationalities, was the terror of the English Government; and therefore their sympathies were with the President in his struggle against them. The English Ministry avowed that they did not press the French Government on the subject of the occupation of Rome, as they would otherwise have done, for fear of weakening that Government in presence of its internal enemies. And to the latter at that time they could have given no better support than public remonstrances against the occupation of Rome. It must be remembered, too, that if the Pope had not been restored to the Vatican by the French, he would assuredly have been restored by the united arms of Austria, Spain, and Naples. Piedmont could offer no resistance, having been hopelessly crushed at Novara; the cities of Rome and Venice alone held all that was left of Italian independence. The Pope at Gaeta had summoned the Catholic powers to his aid, and Austria had already resolved to march upon Rome, when France stepped in

Digitized by Google

in advance and took to herself the little glory and the long reproach of that occupation which has lasted to the present day. The restoration of the Pope to Rome by force of arms was, therefore, sorrowfully accepted by the English Government as a political necessity. Having only a choice of evils before them, they probably preferred French intervention to Austrian and Neapolitan intervention. Austria and Naples made no secret of their intention to restore the Pope's authority purely and simply, with all its tyranny and abuses; but the French republic was bound by its own origin and nature to respect popular rights, and to press reforms and liberal measures upon the Pope, to whom it gave its moral and material support.

Though Lord Normanby has utterly failed to make out his case—that Lord Palmerston more than acquiesced in the French occupation of Rome,—he quotes from the blue-books more successfully with reference to the Pope's temporal power being the guarantee of his independence. It is written down in black and white; and there can be no doubt that, fourteen years ago, the leading statesmen of either party thought that a certain amount of territorial dominion was necessary to secure the Pope's spiritual independence. Upon this Lord Aberdeen, Lord Brougham, and Lord Palmerston were all agreed. But of late years we have been taught many lessons in foreign politics, and now we know that the temporal power of the Popes has been a heavy shackle on their spiritual power, and that their necessities as temporal rulers have been made the means of wringing from them spiritual concessions. Only by a surrender of temporal dominion, and the acceptance of Cavour's offer of a "free church in a free state," can they recover true spiritual independence. Small, then, was the result of the discussion which Lord Normanby brought on; but wherefore should we grudge him this pastime? The time of the Lords is not valuable, for they complain that they have nothing to do; and Lord Normanby serves, at least, for a living proof of the fairness of an English assembly. They manage these things differently in France. Lord Normanby and Sir G. Bowyer, pleading, night after night, the cause of men and principles the most hateful to the English nation, secure a patient and respectful hearing; when so accomplished an orator as M. Jules Favre, pleading for freedom, justice, and honour, is hooted by the cowardly sycophants who claim to be the representatives of the French people.

THE ARMY AND NAVY ESTIMATES.

THE defeat of the Government candidate at Devonport, and the estimates for the military, but more especially for the naval service of the country, which have just been laid upon the table of the House of Commons, are possibly more closely connected with each other than might at first be supposed. It is generally rumoured that some reduction in expenditure upon our dockyards or some unusual instance of promotion has offended the traditional loyalty of the Devonport voters. There is no more resolute opponent of jobbery and corruption than the Duke who now presides at the Board of Admiralty; and if his appointments and proposed reductions have been made in the spirit which generally actuates him, Government is entitled to claim the Devonport defeat as a triumph and deserves the thanks of the country.

Upon looking at the estimates themselves, Ministers certainly deserve credit for having made very considerable reductions. The decrease in the vote for the army will be £1,000,113, and that for the navy will be £1,058,273; so that, upon the whole, there will be a diminution of more than two millions. In both cases the saving is to be effected in the same manner. In the case of the army, it is due to a reduction in the manufacturing departments; in the case of the navy, it is due to the item of naval stores. The meaning of this is, that the amount of money expended in stores for military buildings, for the construction of ships, for arms and ammunition, is to be considerably diminished. At the same time it is important to observe that no material diminution is to take place in the number of sailors or in the number of soldiers, although there is a slight decrease in the number of ships. In the army the number of men is 147,118 this year, against 150,980 last year, without including the British army in India, which amounts to 72,676 men. In the navy the number of men is 57,000, nearly identical with that of last year.

With respect to the £10,736,032 required for the navy, it is not probable that there will be any very serious discussion. But with respect to the £15,060,237 required for the army, it is not improbable that this vote will provoke criticism. No doubt the chief cause why the amount is so large arises from the fact that the British treasury is obliged to supply our numerous and distant colonies with an army. Late events have proved that those communities profoundly appreciate the advantages of their connection with this country, and are willing to make considerable sacrifices to retain that connection. At the same time it must be obvious to them that the people of this country are quite resolved not to contribute more towards the defence of the outlying parts of the empire than they ought fairly to be called upon to contribute. The people of this country offer no objection to aid our colonists in defending themselves against invaders by land, but they very properly insist that the force sent from this country shall be merely supplementary. The colonists must themselves be responsible primarily for their own security. New Zealand has lately remonstrated against being taxed to pay for the British troops; on the other hand it is said that neither the Governor, Sir George Grey, nor the officer in command of the troops, General Cameron, will consent to remain in that colony unless they are supported by a large additional force. It remains for the colonists to determine how far they are willing to contribute towards supplying this demand. There are undoubtedly some special reasons in favour of the British treasury assisting the colony in the present emergency, for the British Government has in some sort brought matters to the present pass. The discussion of this subject, and of other matters connected with it, will no doubt occupy to some extent the attention of members during the ensuing debates.

Although there will not be much difficulty in obtaining the assent of Parliament to the Navy estimates, there is one point which must be met and discussed in a few days. It is well known that Sir John Hay and Sir James Elphinstone have drawn out a scheme for increasing the efficiency of the navy, which is looked upon with great interest by the officers and men of that service. It is equally well known that the present Government exerted themselves to put a stop to the efforts of Sir John Hay and his friends, and it was only by the determined and laborious exertions of that gallant officer that the evidence was obtained upon which the proposed changes are based. It is notorious that the Navy List is encumbered with a crowd of old officers who are quite unfit for service,—that the pay of captains, commanders, and lieutenants is quite inadequate to meet the necessary expenses to which they are put,—that, in fact, many active and intelligent officers are prevented, by their poverty, from taking the command of a ship, whilst a host of lieutenants pine away their best days upon a miserable pittance without employment, and without the hope of distinguishing themselves. Lastly, it is equally certain that the position of warrant and petty officers is so unsatisfactory, that it is difficult to obtain a supply of the best men for such duties. It may be added, that the position of the masters is scarcely more satisfactory, and that many of these officers, although most accomplished seamen, are denied the promotion to higher ranks which they fairly deserve.

Now the object of Sir John Hay and his friends is to remedy these evils, and to remedy them without ultimately increasing the demands upon the public treasury. It appears that no fewer than 1,200 officers on the active lists of all ranks, and many officers on the reserved and retired lists, have been consulted by Sir John Hay, and his plan is the result arrived at after considering those opinions. The general object of the plan is to secure an active list of efficient and zealous naval officers and a steady flow of promotion, by establishing certain definite rules of promotion and retirement, and by securing a scale of pay which, whilst it is sufficient, is also to be regulated by the amount of past services. In the first place, therefore, a period of compulsory retirement is to be fixed. Every officer in the navy is to be obliged to retire at a certain age, and to have the option of retiring at an earlier age than that fixed. The period of sea service below the rank of captain is to be increased. Instead of the principle of selecting officers for command being general, *one-third* of the promotions in the rank of commander, lieutenant, and sub-lieutenant are to be given to officers according to length of sea-service. This regulation will, no doubt, prevent to some extent meritorious officers who have no friends in high quarters

Digitized by Google

being passed over. The pay is to be increased, in order, as the memorandum says, "to enable officers to serve their country without incurring debt, and to retire with a fair remuneration for their services." Again, there is to be a reduction of the number on the active list, so as to insure the efficiency of the officers by frequent employment. What is the use of sending an admiral to sea who has been engaged for the best part of his life in sitting at his desk or in farming his paternal acres? The active list is therefore to be reduced from 1,754 to 1,313. And now comes perhaps the most important proposal in the whole plan. The entry of cadets is to be regulated according to the vacancies which may have occurred during the preceding year on the active list of lieutenants, and no cadet is to go to sea under sixteen years of age. The result of this will be that the cadets will go better prepared to sea. And whilst the whole number of officers in the navy will be diminished, the present numerous reserved and retired list of officers will be reduced. It is calculated that although there will be a present increase of about £120,000, this increase will be cancelled in seven years, and there will be an ultimate saving of £200,000 a year.

It is unnecessary to discuss the proposition for providing suitable barrack accommodation, or for improving the position of the warrant and petty officers. These are matters the importance of which is admitted. But if the calculations of Sir John Hay are correct, the temporary increase is a matter comparatively trifling. When it is considered that by all admirals and vice-admirals retiring at seventy, and rear-admirals at sixty-five years of age, the present active list would be reduced from one hundred to sixty-three, and that the number of captains and lieutenants would be reduced in similar proportions, it is obvious that some great change is required. Nor are we disposed to quarrel with the concluding paragraph of the memorandum, which asserts that no serious objection can be raised to the temporary increase of expenditure which the adoption of this plan would entail, provided, at least, Sir John Hay and his friends succeed in showing that it will cause a just and permanent settlement of many crying grievances, promote the efficiency of the naval service, and effect, at no distant period, a large reduction in the cost of the navy.

THE ART OF FINANCE.

LAST Friday, the Archimage of Finance exhibited to a bewildered House of Commons a novel mode of assailing the sacred citadel of the Three per Cents. The effect was all the more overwhelming because it was quite unexpected. Without forewarning, and in the absence of details, the House was asked to resolve, and, in fact, did resolve, that it was expedient to effect an act of transformation in a portion of the public funds. It is well known that the great enchanter, or, to call him by the name by which he generally goes amongst mortals, Mr. Gladstone, has a pet scheme, which has now been some little time in operation, for the establishment of Post-office savings-banks. The scheme, though excellent in spirit, is scarcely so simple as it might be; and it was, therefore, little matter of surprise, that Mr. Gladstone should give notice of a resolution as a preliminary to the introduction of a bill relating to these banks. Nor did the first part of his speech contain anything to stimulate the attention of the House. It appeared that the trustees and managers of some of the old savings-banks, established before the introduction of the Post-office banks, were desirous of winding up their affairs, but found it impossible to do so; they were unable to call upon all their depositors to withdraw their deposits, and they had no means of divesting themselves of their responsibilities. This inability arose, in some cases, from the fact that the depositors could not be ascertained, or would not present themselves; in others, from the fact that they were minors, and unable to give a valid receipt for their deposits. Mr. Gladstone has, therefore, proposed to come to the assistance of these savings-banks by introducing a bill to enable the trustees and managers to hand over the funds to the Post-office savings-banks, subject to the claims of the depositors upon them. So far his proposition was extremely simple, and but little open to comment; but at this point a grand transformation effect ensued. We must all of us have seen at one time or another a simple, soft-spoken gentleman, full of candour and artlessness, whose only desire was to explain every difficulty and remove every illusion; but who, after leading us through a few easy passages, has suddenly dazzled our eyes, worn out our attention, and generally stunned our faculties by producing yards of ribbon from his mouth, taking dozens of eggs out of an empty bag, and turning an omelette out of our neighbour's hat. Some such phenomenon was visible on Friday. The Chancellor of the Exchequer proceeded to explain the second part of his bill, and we at once encounter a second pet scheme of his authorship. The establishment of Post-office savings-banks was a good deed, but the reduction of the interest on Consols from 3 to 2¾ per cent. would perhaps be better. An attempt at this reduction was made in 1853, but untoward events, not wholly, according to Mr. Kinglake, beyond Mr. Gladstone's control, prevented its success. What if, in happier hour, the reduction could be begun through the agency of the Post-office savings-banks, and both Post-office banks and a reduction bless a grateful country? The bill is not yet printed, but we will endeavour to explain the *modus operandi*, so far as it can be gathered from the speech of the Chancellor of the Exchequer.

The moneys deposited in the Post-office savings-banks are remitted to the Commissioners for the Reduction of the National Debt, and by them invested in the purchase of Three per Cent. Consolidated Annuities; the Commissioners are liable to the depositors for the sums deposited, and for interest upon them at the rate of 2¼ per cent. per annum, and to provide for this liability they have the funds they have purchased. The amount deposited at the banks is now between £1,000,000 and £1,500,000, and the proposed operation of the Chancellor will be better understood, if we suppose it to be carried out with respect to £1,000,000 Consols held by the Commissioners for Reduction of the National Debt. What he proposes is shortly this: suppose the Commissioners to hold £1,000,000 Three per Cent. Consols, he would change that charge upon the Imperial revenue into £1,000,000 Two-and-a-half per Cent. Perpetual Annuities; and to make up the difference in value between the two funds, he would also grant the Commissioners adequate terminable annuities for twenty or thirty years certain. The process would affect the Exchequer in this way: as long as the terminable annuities last, the annual charge for the National Debt would be increased by the difference between 3 per cent. on £1,000,000 and 2½ per cent. on £1,000,000, plus the terminable annuities; but after the cessation of the terminable annuities, the charge would be diminished by the difference between 3 per cent. and 2½ per cent. on £1,000,000. The ability of the Commissioners of the National Debt to meet their engagements, and consequently the security of depositors, will be unaltered, because the Commissioners will every year re-invest in the funds such parts of the terminable annuities received by them as have not been absorbed in the payment of the interest of depositors.

It may appear that the operation of the scheme, so far as it has been pointed out, must be very limited; but it must be remembered that the deposits in the Post-office savings-banks will probably largely increase, and, again, that the operation may be annually repeated on the available balances of the terminable annuities; and, lastly, we shall presently see that there is no reason why the scheme should not be extended to the moneys in the hands of the Commissioners of the National Debt belonging to the old savings-banks. As it was, however, the speech of Mr. Gladstone seemed to want his accustomed lucidity, and to leave the House in a state of embarrassed ignorance. Sir Stafford Northcote, as becomes a writer on finance and possible Chancellor of the Exchequer, opined that it was an attempt to convert Consols into Two-and-a-half per Cents. Sir Henry Willoughby thought it "extremely inconvenient to be suddenly called upon to pronounce an opinion on a subject so complicated;" but having had all his life a well-grounded jealousy of the interference of Chancellors of the Exchequer with savings-bank balances, distrusted any increase of their power. The inevitable Mr. Ayrton was afraid that the result of Mr. Gladstone's manipulation would be that the funds of the depositors would disappear altogether; and Mr. Henley thought it an odd way of reducing one debt to incur two.

We have said that there is no reason why the proposed scheme, if good, should not be extended to the balances of the old savings-banks in the hands of the National Debt Commissioners. The distinction Mr. Gladstone drew between the cases of the old and the Post-office savings-banks was that the State was directly responsible to every depositor in

Digitized by Google

a Post-office bank for the amount of his deposits and interest, but that it was not responsible to the depositors in an ordinary savings-bank. The distinction is just, but affords no ground for a different action with respect to the balances held by the Commissioners. The Commissioners are, indeed, not responsible to the depositors in old savings-banks; but they are responsible to the trustees and managers of these banks for the balances the trustees and managers have handed over. The balances may not amount to one-half the deposits received; but whatever they may be with respect to these, the Commissioners are under precisely the same liability towards the trustees and managers that they are under towards depositors in Post-office savings-banks; and if it be desirable to convert the funds held by the Commissioners in the one case, it seems equally desirable to do so in the other. Some idea of the extent to which this would increase the operation of the scheme may be gathered from the fact that the average amount of the balances of the old savings-banks has been nearly forty millions.

If we analyze Mr. Gladstone's scheme, we shall find it contains two perfectly separable elements. It is, in fact, a proposal to convert a portion of the Three per Cents. into an equivalent consisting of a like sum of Two-and-a-half per Cents., and of certain terminable annuities. It would be quite possible for Mr. Gladstone to convert the whole of the Three per Cents. on which he proposes to operate, either into terminable annuities or into Two-and-a-half per Cents. of increased nominal capital, but carrying the same annual income; but he has preferred to combine the two operations in one scheme. The advantages of a conversion of stock into terminable annuities are pretty generally allowed, and the only obstacle to such a conversion has been the impossibility of introducing any large amount of terminable annuities into the market. Mr. Gladstone's ingenuity has discovered in the National Debt Commissioners a customer, and it would perhaps have been well if he had contented himself with carrying out this part of his scheme. We know from experience what portion of the funds in the hands of the Commissioners will, in all probability, never be required of them, and to that extent a conversion might have been effected into terminable annuities. If, for example, we assume, as we may safely do, that the balances in the hands of the Commissioners will never go below £30,000,000, we might convert that sum in the Three per Cents. into annuities for twenty or thirty years. Or, if this be too bold a step for the House of Commons, Mr. Gladstone might have confined himself to a creation of terminable annuities within the limits he now proposes, and have suffered the balance to remain in the old form of Three per Cents. instead of effecting a nominal reduction, *i. e.*, instead of changing £100 Three per Cents. into £100 Two-and-a-half per Cents. and a terminable annuity, he might have changed the £100 Three per Cents. into the same annuity and £83⅓ Three per Cents. The Chancellor of the Exchequer is, however, bent on the creation of Two-and-a-half per Cents., and the second part of his scheme is devoted to this end. The policy of a conversion into stocks of a lower denomination, unaccompanied by any real reduction of interest, is, to say the least, doubtful. No one would approve of a change of every £100 Three per Cents. into £120 Two-and-a-half per Cents., but this is the operation, in fact, proposed by Mr. Gladstone. The operation is disguised because there appears to be no increase of the nominal capital of the funds, but the prevention of a decrease is the same as the creation of an increase. Mr. Gladstone, as we have shown, prefers the existence of £100 Two-and-a-half per Cents. to £83⅓ Three per Cents., which is clearly the same as transforming £100 Three per Cents. into £120 Two-and-a-half per Cents. Mr. Gladstone's preference may perhaps be justified as a step towards a *real* reduction of interest on the main body of Consols, but it must be remembered that when two stocks of different denominations are in the market the stock of the higher denomination is always depreciated. A real reduction can only take place through a fall in the current rate of interest below the nominal interest in the funds, and there are not wanting plausible arguments to show that the rate of interest cannot be permanently low for many years to come. If we add to this consideration what we have already stated, that the existence of Two-and-a-half per Cents. must tend to depreciate the price of Consols, the policy of creating Two-and-a-half per Cents. will appear doubtful.

There are several points connected with Mr. Gladstone's scheme which require close scrutiny, and we hope the plan will be jealously watched by the House of Commons. It is important, with reference to the solvency of the National Debt Commissioners, to consider the rate of interest which should be made the basis of the creation of the terminable annuities. It is still more important that the power of the Chancellor of the Exchequer to rig the stock market should be strictly limited. Experience has taught us the danger of investing him with such a power, and on no account should it be increased.

THE ROMANCE OF HISTORY.

If notoriety be any criterion of merit, nothing can be more complete than the success of Mr. Kinglake's "History of the Crimean War." It is on everybody's table, in everybody's hands, in everybody's mouth. All the bad passions which were rife during that evil time have been revived by its appearance. The elders of the Senior United Service Club are corresponding and sending "friends" to each other on all sides; and although we are assured by Mr. Kinglake, in his preface, that he has for some years been in close personal correspondence with our statesmen, our admirals, and our generals on the business of the war, it is most curious to observe how earnestly every English statesman, admiral, and general in society disclaims having had anything to do with the deplorable book before us, condemns its tone, and questions its facts. In our opinion the portion of it which is most reprehensible is that which deals with our allies the French. The prejudices of Mr. Kinglake against Louis Napoleon and his adherents actually appear to deprive that gentleman of his reasoning faculties; when in presence of Frenchmen of the Second Empire, his sense of decency and of justice utterly desert him; he raves; he denounces the miscreants as mere vermin to be decried and destroyed by any and by all means, and towards whom it would be absurd to observe the usages of fair-play or of civilized literary warfare.

The bulk of the English public, however, have already found ample grounds for dissenting from the extreme views of this passionate historian. They at once perceive how ready he is to convict a Frenchman of any crime on any evidence, and often on no evidence at all; they are startled and shocked at the introduction into English literature of the disgusting American process of publicly dissecting the private affairs and characters of public men. It is probable, therefore, that, notwithstanding the brilliant word-painting, and the cold-drawn scoffing sarcasm, with which Mr. Kinglake's book abounds, it will produce a result precisely opposite to that which it is intended to produce; that nobody will think much the worse of the French army, because a sarcastic literary lawyer has thought fit to erect himself into a dictatorial military critic; or much the better of the English army, because Mr. Kinglake has been minded to rhapsodize in exorbitantly tall terms about Lord Raglan, that glorious compound of "Man the Hunter and Man the Savage;" about his horse "Shadrach," a fire-proof animal as results proved, and as might have been prophesied from the animal's Scriptural name; and about "the swooping crest" of Sir Richard Airey; and the "prim" array of the "too majestic Bearskins."

As Mr. Kinglake does not support his statements by reference to the military authorities from which they are derived, and requires us to accept them upon the mere assertion of one "who had good means of knowing the truth"—viz., himself—we have no other mode of testing their accuracy, than by comparing his narrative of the war with the other narratives of the war which have preceded the publication of his book. And in order to enable our readers to do the same, we invite their attention to the account given by five different writers of the share which our allies took in the battle of the Alma; of the manner and spirit in which they did their work; and of the influence which their achievements had upon the fortunes of the day.

The first authority to which we shall have recourse is no less a person than the English Commander-in-Chief himself. Writing to the Minister of War on the 23rd of September, Lord Raglan said:—

"I will not attempt to describe the movements of the French army—that will be done by an abler hand; but it is due to them to say that their operations were eminently successful, and that, under the guidance of their distinguished commander, Marshal St. Arnaud, they manifested the utmost gallantry, the greatest ardour for the attack, and the high military qualities for which they are so famed."

We will next cite a passage from Prince Menschikoff's journal, dated Sept. 20th, 1854:—

"The enemy advanced towards the Alma about noon, and attacked our position with great vigour. His right wing was composed of the

Digitized by Google

French, supported by the Turks, the left wing of the English. Both wings advanced with great steadiness, and deployed in line, having a close chain of skirmishers in front. Our *tirailleurs* received the enemy with a well-directed fire, and thus a hot skirmish soon opened along the entire front. From the very commencement of the action, the enemy's riflemen did great injury with their conical balls. Several of our commanders were the first to fall, and this greatly influenced the future course of events. After the enemy had got possession of the vineyards, he re-formed into column, and crossed the river in that order, notwithstanding the heavy artillery fire we directed upon him. . . . . During the time that this severe contest occurred at our centre and right wing, the left wing, notwithstanding its great distance from the sea, was greatly disturbed by the fire of the allied fleets. Under the protection of this fire, a French column, with Zouaves and African troops at its head, crossed the Alma near the sea, and climbed up the steep slope of the cliffs by a small foot-path. The moment the troops appeared, threatening our flank and almost taking us in rear, Prince Menschikoff ordered the regiments Minsk and Moscow, of the reserve, with some squadrons of hussars, to advance upon them; but ere these troops could arrive, the French had placed on these heights a battery in position, *and by their rapid fire compelled our advancing columns to retreat. The left wing having thus been turned, it became impossible to maintain for any length of time the position of our centre and right wing, where heavy losses had already occurred. The troops, therefore, commenced to retreat towards the Katcha.*"

We will now call Mr. William Russell, of the *Times*, into court. Mr. Russell says:—

"At one o'clock we saw the French columns struggling up the hills, covered by a cloud of skirmishers, whose fire seemed most deadly. Once, at sight of a threatening mass of Russian infantry, in a commanding position above them, who fired rapid volleys amongst them, the French paused; but it was only to collect their skirmishers, for, as soon as they had formed, *they ran up the hill at the pas de charge, and broke up the Russians at once, who fled in disorder, with loss, up the hill. We could see men dropping on both sides, and the wounded rolling down the steep*"—(p. 180, vol. i.)

We have shown in a former article how flatly Colonel Hamley, of the Artillery, contradicts Mr. Kinglake as to the reality of the fight between the Russians and the French at the Telegraph-tower; and we have pointed out that Mr. Kinglake in his history has cited Colonel Hamley as an intelligent and reliable witness. We will therefore conclude our list of authorities by an extract from Colonel Adye's "History of the Crimean War," privately printed in 1859 at Calcutta:—

"It was about noon. The enemy, taken by surprise at an attack on their left, where they had least expected it, and where they had considered the ground impracticable, detached at once several batteries and other troops from their centre to meet it, and Bosquet's artillery became heavily engaged, but not at very close range. St. Arnaud, taking advantage of the success of this manœuvre, and in order to prevent General Bosquet from being overpowered, on the firing of the first gun ordered the columns of General Canrobert and Prince Napoleon to attack in their front. In advancing, they were warmly received at the river by the Russian skirmishers, and *by their infantry on the slopes.* The French artillery was brought into action, the batteries of Prince Napoleon being placed on the right of the village of Bourliowk. The French columns soon forced the passage of the river, and began to swarm up the heights, *the enemy gradually retiring before them, but disputing every inch of ground.* It was about two P.M. when the French gained the crest, and Canrobert then found himself face to face with the left centre of the Russian army, consisting of powerful columns, concentrated near an unfinished telegraph tower. His own artillery had been obliged to make a detour to gain the heights, and had not joined him; that of the enemy, hitherto engaged with Bosquet, now turned and concentrated their fire upon his columns. *The Prince Napoleon, on his left, also met with equal opposition.* St. Arnaud then ordered forward General Forey's two brigades of the reserve. Arriving with their artillery, they gave timely support to General Canrobert and the Prince Napoleon; at the same time Bosquet continued to advance along the heights and threaten the Russian left, which enabled Canrobert to order an attack to the front; *and the enemy were then driven back, retreating with heavy loss.*

"*Thus far the battle in this direction was gained, the French having accomplished a most difficult and gallant advance, for which their activity and dashing qualities were well suited.*"

The officers from whose writings we have made these extracts, were all present at the battle; two of them were in supreme command, four of them were Englishmen. Every one of them contradicts Mr. Kinglake on almost every point on which he has assailed the military character of the French.

Against these five authorities, who speak so distinctly as to the skill and gallantry of our allies, and as to the important share which they bore in the glorious results of the battle, Mr. Kinglake opposes the testimony of but one man—and that man is himself. According to him, the French commanders, paralysed probably by remorse at their conduct in December, 1851, handled their troops without skill, shrunk from close conflict with the enemy, clung to their artillery as frightened children cling to their nurses, perversely hung back when urged on by the British, and mainly occupied themselves in wasting their ammunition on imaginary enemies in order to make Mr. Kinglake and other spectators believe that they were really fighting. Forey, to whose timely support Colonel Adye attributes the successes of Prince Napoleon and Canrobert, is described by Mr. Kinglake as having "marched off to the peaceful sea shore" in company with Bouat and Lourmel, where the guilty trio remained "null in the battle," brooding over their political crimes; and as to Marshal St. Arnaud, we are gravely informed that, beyond committing one or two glaring blunders, Mr. Kinglake has "not been able to perceive that his mind at all touched the battle." "In fact," says Mr. Kinglake, "the Marshal did not place himself in a part of the field from which a general could hope to govern events." And such, no doubt, is Mr. Kinglake's opinion.

We will not do Mr. Kinglake the injustice to suppose that he desires it to be believed that he has found materials for his attacks on the conduct of the French at the battle of the Alma amongst Lord Raglan's papers. It would be painful, indeed, to learn that his lordship—a man so quixotically truthful as to be unwilling to employ a spy or to resort the ordinary *ruses de guerre*—whilst praising in his public despatches the activity and gallantry of his allies, should have stigmatized them in private memoranda, to be made use of after his death, as *fainéants* and poltroons. We are certain that Mr. Kinglake does not mean to imply this; and we suspect that the damning censures which he so unhesitatingly passes on the military tactics and behaviour of the French at the battle of the Alma are worth just as much and no more than Marshal St. Arnaud's and General Bosquet's opinions would be as to the Chancery practice of the English bar.

Entertaining this suspicion, we feel that we have a right to submit our severe military censor to the same sort of ordeal as that to which he has mercilessly subjected so many great reputations, living and dead, and to inquire how far Mr. Kinglake's own antecedents and moral and physical qualities fit him for the office which he has thus arrogated to himself. We offer no apology for the liberty which we are about to take with him—the peculiar circumstances of the case rendering it unnecessary that we should do so. Vivisection, as applied to contemporary history, is, we admit, an entirely new practice, at least, on this side of the Atlantic. It is, at all times and under all circumstances, a dangerous and a painful operation both to the feelings of the patient and for the reputation of the operator; it is, therefore, one to which we certainly should not have had recourse without urgent necessity. As it is, we shall try and handle the dissecting-knife with a gentle firmness, inflicting no unnecessary pain on the feelings of the living, and showing all proper respect for the memory of the dead; and we shall carefully abstain from mangling and mutilating Mr. Kinglake, as he has unnecessarily mangled and mutilated all those who have been subjected to his discursive scalpel.

William Alexander Kinglake, at the breaking out of the Crimean War, was practising as a chancery barrister in London. About twenty years before he had travelled in the East, and about ten years after his return home he had published in one small volume an account of his travels, which, from the playful and sub-sarcastic style in which sacred topics were therein dealt with, and the carefully-elaborated sarcasm in which the book abounded, obtained a marvellous success. Since the publication of that work,—which Mr. Kinglake with dubious scholarship had called Eöthen,—he had retired upon his easily-earned laurels and had remained a silent and apparently an indolent member of society. He was of a shy, silent, studious habit; not addicted either to field-sports or athletic exercises; and remarkably short-sighted. When war was declared, Mr. Kinglake chanced to be spending his summer vacation abroad, and directed his steps to the East with the view of witnessing the operations of the allied armies. He accompanied the expedition to the Crimea, landed at Old Fort, and on the morning of the battle of the Alma rode on to the field of action. He was probably the first man who fell on it. His pony, not being itself much accustomed to the saddle, on discovering, possibly, that its rider was in the same predicament, ran away with him, and deposited him on the ground almost at the feet of Lord Raglan. The kind old soldier, on learning the name of the distinguished writer who had thus singularly introduced himself to his notice, repressed the smiles of his aides-de-camp, rendered him what assistance he could in his calamity, allowed him to accompany his staff throughout the action, and finally invited him to dinner when the battle was won. To judge from Mr. Kinglake's obviously exaggerated account of the dangers to which he was exposed during the fight (see pp. 264 to 266, vol. ii.), he cannot be said to have been in a frame of mind very favourable to calm observation, even if he had not been physically disqualified by his defective eyesight for the task. In saying this we by no means desire to insinuate anything derogatory to Mr. Kinglake's personal courage, which we are convinced is of the

Digitized by Google

very highest order. We wish he was not so ready to impute cowardice to others. We only mean to imply that the obvious personal interest which he appears from his narrative to have taken in the artillery practice of the Russian gunners was not particularly calculated to render him a reliable eye-witness of the general conduct of the battle by which he was surrounded. He himself points out the disadvantage which resulted to the Light Division from the defective sight of its three leaders; and accounts for the shortcomings of Prince Gortschakoff, by "the concussion of a fall" which that general had had from his horse, and which, according to Mr. Kinglake's suggestion, may possibly "have clouded his judgment,"—without seeing that the arguments which he uses to account for the errors of others may with perfect fairness be turned against his own claims to accuracy.

Mr. Kinglake, then, being such a man as we have described him, rode on to the field of the Alma, with the avowedly preconceived notion that every French officer who held high command amongst our allies was a hardened ruffian, ready enough to murder peaceful citizens in the streets of Paris, but, when opposed to the Russians on the ridges of the Crimea, a confused and half-repentant weakling, paralyzed by the recollections of his former crimes. This seeming anomaly he accounts for in the following sentence: "There was a salient point of difference between the boulevards of Paris and the hill-sides of the Alma. The Russians were armed!"

It is scarcely necessary, after what we have here written, to explain any further why we decline to accept Mr. Kinglake's impassioned work as history, or as anything like history; or why we prefer the united testimony of the five authorities, whom we have quoted in this article, to the evidence of the single literary lawyer who has so angrily undertaken to prove them to be in the wrong.

POLITE CRITICISM.

An indignant gentleman, who has probably suffered under the evil of which he complains, has forwarded to us a lamentation and a doleful tale of wrong, in the form of a little pamphlet called "The *Athenæum* Exposed." Its object is to "expose and caution the public against the coarseness and offensiveness of the leading literary journal of England." The attack begins with a series of quotations from various criticisms on works of art, which it must be confessed are rather hard to read, especially as from motives of humanity the names of the victims are all suppressed. After some pages of comment these extracts are followed by others, selected in the same way, from reviews of books. As the author of the pamphlet rightly considers it likely to be rather dull work to read all this evidence without knowing against whom the charge is brought, he considerately skims the cream a second time, and thus presents us with the *crême de la crême* of the criticisms of the *Athenæum* in a neat and compendious form. The effect is certainly amusing enough. This is what our friend says is "the *Athenæum* style for artists":—

"The abominations of colour...the coarseness of her taste...pretentious and false...varnishy and common...inartistic and vulgar...miserably failed...tawdry mass of colour...coarse, heavy, and ugly...feverish without power...less dirty than usual...as ill drawn as ever...a horrid conglomeration...pretentious and meretricious...coarse, dauby, and staring...revolting in theme...Irish rags...a vulgar rule of colour...the world wearies of them...suitable for scrap-books and albums...sacks of potatoes...grimy ruggedness...ugly, mean-faced...wretched...vulgarities to which he is prone...a sanctimonious smirk of the most offensive order...truly dishonest...atrociously 'scamped'...opaque and vulgar...incidents almost brutal...poorly and flashily painted...thin, careless, and even vulgar...coarse in colour...discreditable to his reputation...coarse, blunt, tawdry...workmanship coarse...coarseness and vulgarity of feeling...coarseness of the flesh tints and vulgar tawdriness of colour...vulgar and ill painted...worn-out tricks...as expressionless and empty-headed as ever...stale, and dull, and pallid...weak and washy...horribly murky."

The *Athenæum's* style for authors is thus exemplified:—

"Runnings and dish-washings...rubbish without mitigation...clumsiest sort of botching...a pair of scissors and a paste-brush...execrable illustrations...mawkish, silly...an essential vulgarity in the tone...stupid as well as trashy...diseased imagination and bad taste...the lowest grade of composition...trashy, secondhand sentimentalism...rude ignorance...clumsy and unimpressive...double-distilled nonsense...inane, bombastic, and absurd...foolish, ill-contrived, ill-written...ridiculous...stupid...mass of rubbish...the style is vulgar...jargon...just rubbish...weak, sentimental, sickly...inane and feeble...below mediocrity...a flatter, drearier level of mediocrity...stupid nonsense...a miserable work...very bad and very pretentious...crude and silly...extremely foolish...stilted sentiment...flimsy when not flippant...deplorable...dreary waste of verbiage...vague generalities and commonplaces...platitudes and stupidities...extremely meagre...resembling a file of trade circulars...dry, prosy, and stupid...a curiosity of dryness and dulness...the roughest bit of material...common-place and conceit."

These specimens are followed by bitter complaints of the injury done to the unhappy persons so criticised. The gist of them is summed up in a few lines near the beginning of the pamphlet.

"The *Athenæum* has most unnecessarily wounded the feelings and recklessly injured the reputation and property of hundreds (nay, almost thousands, in its long career), who had given the writers and editors no offence, very many of whom deserved far different treatment; the worst of whom were guilty of no crime but that of having mistaken their own powers, and would have been amply punished by being consigned, unnoticed, to oblivion; and almost all of whom were painstaking, industrious, meritorious persons, labouring honestly in their several spheres for a means of subsistence."

In a word, if you cannot puff us, why not let us alone? The pamphlet concludes with a recommendation that anonymous authorship should be forbidden by law, and also with a recommendation so entirely original and so remarkable in itself that it must be given in the author's own words:—

"In a free country such as ours, with institutions that effectually insure so much real liberty and power for the redress of wrongs, an Inspectorship of the Press could be conceived, that might be of immense service in checking the licence of the Press, without impairing its usefulness. No doubt there would be a tremendous outcry against this; but it is difficult to imagine that any disadvantages connected with it would be at all to be compared to the evils which it could prevent.

"The establishment of 'the Press' as a profession, and the institution of an examination and diploma (not to be compulsory), would, as recently with teachers, do much to elevate the tone of the Press, and raise the characters and accomplishments of its members. Law, Physic, Divinity, Engineering, Life Assurance, Education, the Army and Navy, and the Civil Service, have their examinations and diplomas, and why not the Public Press?"

In order to do justice to this singular little pamphlet, we have given the author the benefit of his own language upon all the points which he presses most strongly. Some of them require no observation at all. The suggestion for an Inspectorship of the Press to protect second-rate artists and fourth-rate authors from being told that their work is "atrociously scamped," and that their books are "runnings and dish-washings," is a curiosity in its way. Imagine for a moment the position of the unhappy Inspector. He would be a veteran critic, sitting in a public office—say in Lincoln's-Inn-Fields—like a judge at chambers. To him would enter a transcendental essayist and an *Athenæum* critic. The essayist would complain that the critic had called his "Soul Harmonies" "runnings and dish-washings," and would apply for an order to amend the review by striking out the offensive words. The critic would reply that they were runnings, and might be properly compared to dish-washings; he would cite authorities as to the use of these metaphors, and might offer to supply the plaintiff with further and better particulars, setting forth in detail the points of resemblance between particular passages of the "Soul Harmonies" and dish-washings. The Inspector might probably make an order that the editor of the *Athenæum* should insert in his next number a notification that, though the book in question might be described as "runnings," the word "dish-washings" was rather too strong. He might force him to repeat the famous apology of the midshipman in "Peter Simple," and to express his sincere regret that he had ever doubted the fitness of the complainant to "carry guts to a bear."

The pamphleteer has, however, undoubtedly got hold of one very curious point. Apart from the special phrases and the practice of the particular journal which moves his bile so deeply, what is to be said of the practice of exposing the baseness of bad books and bad works of art? Can it fairly be said, that very inferior artists and authors are to be looked upon like other weak or sickly labourers in lawful callings, and protected rather than rebuked? If a man writes a very bad book and a critic says in a more or less pungent manner, "This book is very bad," has the author a right to answer, "I never said it was anything else; why should you do me an injury by hurting the sale of my book and spoiling my market for my productions, when I never hurt you?" No doubt, if authorship or art are mere trades by which money is earned, those who carry them on have a right to say this. Suppose a poor old governess made a little money by drawing feeble water-colours, or by translating little French tales for children, it would be in the last degree cruel and unmanly to point out all the faults of the one work or the other; and there are a certain number of books which undoubtedly deserve the same sort of protection. This, however, is not often the case. The number of writers who would be content to place themselves in such a position, and to claim immunity from criticism on such grounds, is small indeed. A certain number might no doubt be found amongst the drudges of booksellers or newspaper proprietors, but they must be very few. Almost every book and every work of art, which

Digitized by Google

rises above the level of a printshop, claims a higher position. By the mere fact of writing the writer says in substance to his readers, "I am your superior and instructor in this particular matter; this work is intended to give you information or to open your eyes to observations on men and on the world in which you live, which were unknown to you before; and I claim, accordingly, to be recognized as a person entitled to such superiority as may be involved in the admission of that claim." As an answer to claims of this kind, it is perfectly fair and relevant to show that a picture is a wretched daub, or that a book is mere runnings and dishwashings. So true is this that the law of the land was thus laid down by Lord Ellenborough, who was certainly not disposed to overrate popular prejudices: in a well-known case upon the subject, he says:—

"One writer in exposing the follies and errors of another may make use of ridicule, however poignant. . . . If the reputation or pecuniary interest of the person ridiculed suffer, it is *damnum absque injuriâ*. Where is the liberty of the press, if an action can be maintained on such principles? Perhaps the plaintiff's *Tour through Scotland* is now unsaleable; but is he to be indemnified by receiving a compensation in damages from the person who may have opened the eyes of the public to the bad taste and inanity of his compositions?"—"Every man who publishes a book commits himself to the judgment of the public, and every one may comment on his performance. The critic does a great service to the public, who writes down any vapid or useless publication, such as ought never to have appeared. He checks the dissemination of bad taste, and prevents people from wasting both their time and money upon trash."

This is as vigorous sense as it is sound law. It really is important that bad books should not be written, and that people should not make a living either by art or literature, unless they do something considerable for their money. The probability is that three-fifths of the books published had much better have never been published at all. They are simply bad and idle, and though it may not be very polite to call them runnings and dish-washings, it is highly desirable to show that they are so if the assertion is true. It may be said the authors in question have done no harm, but this is not the fact. They have done harm, they have occupied attention and spent time uselessly, which might have been well employed. They have, as Lord Ellenborough puts it, led the public to waste both time and money upon trash, and they ought to be made to feel and know it.

One important reason for this is that there is no class of people in the world who are so apt to mistake their true position as authors and artists. When kicked and horsewhipped, they are apt enough to turn softhearted and say, "Why do you injure the prospects of a poor fellow who has a wife and children to support by his pen; can't you let me sell my little wares without telling all your readers that I am an ignorant blockhead?" But this humble mood is only put on under terror. A little prosperity turns their silly heads. They plume themselves on being the substantial masters of the world. Some ten years ago everybody who could write a popular novel or insert an article in a newspaper looked down as from a superior position on the prosaic part of the world, but of late years the tide has turned. The most popular critical papers of the day have been written by men whose sympathies were against the professional literary man, and in favour of the commonplace part of the community. The consequence has been that the light comic writers, novelists, and other small fry of authorship have been beaten with their own weapons and chastised into a very poor-spirited form of humility. Of course, the process was not pleasant for them, but it has been a great gain to the public.

We must not be understood to defend the *Athenæum* in its choice of language or phraseology. In the absence of the names of the persons attainted it is impossible to judge whether or not the criticisms complained of are fair. A savage phrase or two may or may not be backed up by argument and evidence. It is the mere crack of the whip, which is harmless if it does not accompany a strong and well-directed blow, and justifiable if it does. Hard words by themselves break no bones, and, where that word is broken by the hard blow, the hard word does no great harm. "What can it matter to a man to be called Holofernes?" said Dr. Johnson, with considerable truth. *Primâ facie*, and as they stand, the *Athenæum* criticisms certainly look more like blunt and clumsy abuse than anything else. People must know very little of the world if they attach any importance to such language, or suppose that any one else does. Can any one really care whether or not the *Athenæum* calls his picture "as expressionless and empty-headed as ever," or his book a "dreary waste of verbiage"? The influence of criticism lies in its evidence; and so long as a newspaper calls names, the person abused can always say, "You're another," if he thinks it worth while. The public will pay about the same amount of attention to each.

DUTCH NOTES.—No. II.

Holland, which had been so closely connected with our own country during the end of the seventeenth and the earlier part of the eighteenth century, passed gradually from our sight as the years wore on, and we now hardly remember that one of the episodes of our American struggle was a war with the Dutch. Since that period it has only now and then been talked of in England; and although the relations between our merchants and those of Rotterdam and Amsterdam are still very close, we were not surprised to hear recently that a Dutch gentleman in London was asked by a person of some position the name of the existing Stadtholder.

In 1795 the French, under Pichegru, entered Amsterdam. Their advent was hailed by all the enemies of the ruling party as a national deliverance. William V. embarked for England, and the Batavian Republic was proclaimed. The Constitution of 1795 lasted for six years, but was altered in 1801, and re-altered in 1805. In 1806 Louis Bonaparte became King; and in 1810 Holland, "the alluvium of French rivers," was incorporated with the Empire. In 1813, the son of the fugitive Stadtholder returned, and assumed, in March, 1815, the title of King of the United Netherlands. The ill-assorted union with Belgium did not outlast the reign of even one monarch, and the fruitless struggle to retain an uncongenial people under his sovereignty, as well as financial and other embarrassments, troubled the closing years of his rule. In 1840 he abdicated in favour of his son, the Prince of Orange, who was so well known in England, and who distinguished himself in the Peninsula, as well as in the campaign of the Hundred Days. He was at the helm when the storm of 1848 broke over Europe, and had steered his country through the worst of it before he was called away, in 1849, and was succeeded by his son, the present King. The new Dutch Constitution dates from the 3rd of November, 1848. By it, the Upper House ceased to be a mere assembly of peers appointed for life by the Crown, and became pretty much what the Lower House had been formerly—a representation of the provincial assemblies, and thus substantially of the wealthiest and most largely taxed portion of the community, while the lower re-appeared as a true popular assembly, the result of direct election. The same spirit influenced the provincial and communal legislation, and the new constitution of the Church, which already in 1795 had been separated from the State.

The great and peaceful change which took place at this time was owing chiefly to the wisdom and ability of one man; although much credit is due to the behaviour of the royal family, to the serious and somewhat phlegmatic spirit of the people, and to the moderation and good sense of most Dutch politicians. Johann Rudolph Thorbecke was born in the year 1796, at Zwolle, a town which is endeared to Christendom as the dwelling-place of the person who first made widely known, although he certainly did not write, "The Imitation of Christ." He graduated at Leyden in 1820, and then passed two years in Germany, somewhat in the position of a "travelling bachelor." He applied himself to the study of German philosophy, and when he returned to his own country, found that he had been living in an atmosphere so alien to Dutch "practicality" that he frightened his countrymen, and could get no place as a professor. So to Germany he returned, and acted for a time as *privat-docent* at Giessen and at Göttingen. At last he obtained a chair at Ghent, where he lectured on history, statistics, and political economy, till the Belgian revolution drove him over the border. Established as professor at Leyden, he lectured first on Roman and commercial law and then on the constitutional history of the Netherlands and the fundamental law of 1815. The principles which he developed had ready listeners, and he gradually found himself at the head of the advanced Liberal party. In 1840 he entered Parliament, and was the leader of the Reform movement which culminated in 1848. On the 18th March in that year, the King made him president of the commission that elaborated the Constitution, which, as we have seen, was proclaimed on the 3rd November in that year. M. Thorbecke is a tall, thin, austere-looking man, whom Dutch caricaturists love to represent as an infallible pontiff laying down the law with raised fore-finger. His manner of speaking in debate recals the lecture-room. His enemies accuse him of being too much of a *doctrinaire*, too absolute in carrying out his theories, and too regardless of the weaknesses of humanity, as well as of the influence of time and place; but there can be no doubt that if he had a large country at his back, he would be one of the most eminent men in Europe. Imagine England under the guidance of Sir George Lewis or Mr. John Stuart Mill, not hampered by innumerable interests and prejudices which must be conciliated or consulted, but steadily and unflinch-

Digitized by Google

ingly carrying out their opinions in Church and State, and we have—making allowances for the smallness of the stage—a picture of Holland under Thorbecke.

Sometimes, as in the years that immediately followed the revolution, and as at the present moment, subject to his direct guidance, always more or less controlled by his powerful intellect, the Netherlands have advanced under the impulse of a steady and consequent liberalism. They have followed the example of England and got rid of their exclusive navigation laws. The Dutch tariff is one of the freest in the world. In 1851, the *coup d'état* which incited so many Continental monarchs to pursue with ever-increasing boldness a reactionary course, had no such effect in Holland. The King remained loyal to the Constitution, and the people took the example of their neighbours to heart, and eschewed all unnecessary opposition to government and excessive violence in political debate. In 1853, the re-establishment of the Catholic hierarchy in the Netherlands, on the footing which it had occupied before 1702, in which year Holland became a "mission," brought about a storm even more furious than that which raged in England at the time of the so-called "Papal aggression." The proceedings of the Court of Rome, in themselves perfectly in accordance with the constitution of the Netherlands, were put in an invidious light by the inflated and absurd language in which they were announced. The slumbering historical recollections of a nation, which had good cause to loathe the very name of Rome, were roused. Reason was for a time overborne, and M. Thorbecke ceased to rule. The agitation, however, gradually calmed itself, and everything went on smoothly. Great changes in the financial system, terrible inundations, and the maintenance of a strict neutrality, occupied the Dutch during the Russian war. The counsels of the King of Holland were not wanting to his Imperial relative, when there seemed a chance of putting an end to that terrible contest. The great educational debates to which we shall refer in a future paper, were the leading features of 1857; and the completion of the network of railways, the abolition of slavery in their West Indian dependencies, with the ever-interesting questions, "How are we to make the two ends meet?" and "What are we to do in the Eastern Archipelago?" have been since that period the chief anxieties of the Dutch.

At present there may be said to be three political parties: the Liberals, the Liberal-Conservatives, and the "historical-reformed," or high Tory party. The *question brûlante* of the hour, however—that relating to the Colonies—divides the legislature and the country into sections by no means exactly corresponding to these divisions. For some time, nevertheless, they will continue to exist, and we may therefore devote a short space to characterising them. The three parties grew up during the period which intervened between the close of the great war, and the year 1848. The high Tory party answers to the section which was represented in France by the Ministers who signed the *ordonnances* of 1830; in Piedmont by the once famous name of Count Solar della Margherita; in Prussia by Savigny and Eichhorn. They represent, in short, those thinkers who, horrified by the excesses of the French revolution, and detesting even what was good in it, decry the whole movement of the eighteenth century, of which that revolution was only one amongst many results—a convulsive spasm, as it were, occurring in one member of the European body, which threw back those parts of the system in which the cure was proceeding favourably. The Italian *Codini* have, however, ceased to count in their ranks men of thought and culture. The French Legitimists of 1863 number few men of ability; and in Prussia the leadership of the party of the "ancient and historical right" seems to be slipping into the hands of a minister who is willing to adopt what is worst in Imperialism. The Dutch Tories, however, if not so numerous, are still as respectable as they ever were. They owe their position, chiefly, to the high character of several of their leaders, of whom the most celebrated is M. Groen van Prinsterer, eminent alike as an historian and an orator. He, and the party which he leads, are strong Calvinists, and believe that the present condition of the Church of Holland—which is pretty much the same as that of the Church of England would be, if, with the entire sympathy of the bulk of its members, Professor Jowett were installed at Lambeth, Canon Stanley at Fulham, and Bishop Colenso at York—is highly detrimental to the interests of religion and good government. They are content to acquiesce in the Constitution of 1848 as an inevitable dispensation, but they fought hard and long against it. They opposed most fiercely the school legislation of 1857, and would fain overthrow it, if the country could be induced to support them in that wild enterprise. They are deeply attached to the Orange dynasty, and seem, if we may be excused the expression, to consider that there resides in it a sort of sacramental efficacy; and that it is the outward and visible sign of the inward and spiritual grace, which descends to the nation from the days when it stood in the fore-front of the battle against the tyranny of Rome.

The Liberal Conservatives, or Conservative Liberals, have been in power several times under various leaders since 1848; but their typical man is, perhaps, M. van Hall, a sort of Dutch Palmerston, a politician of shifts and expedients, whose ability all acknowledge, but who has not somehow contrived to become surrounded with that halo of respect which, oddly enough, in these last years, has gathered round the head of the English Premier. This section, and that which is at present in power, are the only "possible" ruling parties in the Netherlands; and the function of M. van Hall and his friends would appear to be to clap on the drag whenever the Thorbeckians go too quick for the taste of their sober countrymen.

We have, in describing the character of their chief, sufficiently indicated the aims and wishes of the Dutch Liberals. There are, of course, a few who would wish to give to the Constitution a more democratic character, but they have but little influence; and as there are no real grievances which call for violent remedies, there seems no probability of their ever being able to make themselves formidable in a state, of which it may with perfect justice be said, that it is a republic under monarchical forms.

EPIGRAMS.

The age of wit and epigrams is gone, and that of figures and journalism has succeeded. Persons not yet old can remember the time when the wits were the lords, or, at least, the lions of society; and a satirical poem might ruin an individual and seriously damage a ministry. But the practice of literary amenity has established itself, ministries rest on a broader basis, and the art of epigram, cut off from its most important subjects, has become extinct, with Tories, and duelling, and political corruption. It was perfected in an age when manners were formal and society was an art, when the classics were the staple of education and the models of composition, and when the antithetical poetry of Dryden and Pope had made an epigrammatic style easy and fashionable. We read less of Pope, and do not imitate the classics. Our literature is directed to the useful, and exciting personalities are not tolerated. Party views are not now strongly enough contrasted for the purposes of indignant lampoons, nor are anti-ministerial opinions any longer a disqualification for a public career at the Bar or in the Church. The consequence of all this is, that by a process of natural selection or adaptation, our venom-bags have become absorbed, and we begin to be born without them. Similar causes have made antiquated other forms of epigram, not political. Occasionally, it is true, hybrid specimens appear in *Punch*, or flower in the backward season and classical air of the universities, but they have lost their true flavour, and degenerate into vehicles for jokes and puns. We have even ceased to enter thoroughly into the spirit of the genuine epigrams of our ancestors. They are essentially things of the day which gave birth to them, only to be perfectly appreciated by those who took part in the social and political contests which were their occasion. Their violence seems often excessive, their views of society are coloured with a curious classical conventionality, and their smartness may be better or worse, but is certainly different from ours.

The exact characteristics of an epigram are not very easy to define. It differs from a joke in this, that a joke is wit of words, and cannot therefore generally be translated into another language, whereas an epigram is wit of ideas, and is commonly translateable. Like aphorisms, songs, and sonnets, it is occupied with some single point, small and manageable; but whilst a song conveys a sentiment, a sonnet a poetical, and an aphorism a scientific idea, an epigram expresses a contrast. Its chief requisites are elegance and brevity, easy and adroit versification with an obvious cadence, and a happy ending or sting in its tail. These elements are common to all times, but different nations have manipulated them in different ways. For instance, whilst smartness and a surprise at the end are the great virtues of a modern specimen, Greek epigrammatists aimed only at perfect literary finish and simplicity. They were perfectly satisfied with saying in exquisite language, "Here lies Aristeides, son of Demodocus, who fought for Greece at Marathon," or "Nemo lies here on the beach, after having crossed the Ægæan in safety;" but a modern epigram leads up to an unexpected turn, and leaves the reader *planté là*, too breathless and surprised to consider how he got there or to question the conclusion. A good history or well arranged collection illustrating such

Digitized by Google

differences in various ages would be extremely valuable and interesting. Mr. Booth has published a volume of ancient and modern specimens, which is a mere catacomb of promiscuous pieces good and bad, without any selection or chronological arrangement, but which will furnish specimens of some of the various kinds. The first thing which strikes us on looking into this, as into any other collection, is the great preponderance of pieces which turn on the follies of certain set and customary characters, looked at from certain conventional points of view. Women who paint themselves and women who scold, soporific sermons, lawyers' rapacity, and Death's imprudence in carrying off doctors, are sure to fill more than half the space; partly because they are the natural and obvious commonplace of epigram, and partly because these generalities, appropriate to no one particular age, are longer preserved and understood than political or other squibs, which depend on a momentary attitude of society. The second most striking thing is the enormous advantage which modern epigrammatists possess in rhyme, which far outweighs the superior definiteness and more measured rhythm of the ancient metres. Each couplet in an ancient epigram is more complete in itself, but is less connected with the rest: rhyme, skilfully used, leads the whole by a network of similar sounds up to the point of the conclusion without pause or break. A history of modern epigrams would be chiefly the history of the gradual substitution of contrasts of rhyme for other less literal artifices. The most important of these artifices is surprise; that is, the sudden addition of a new and unexpected application to some seemingly unimportant phrase. An epigram on a fat doctor will serve as a specimen:—

"When Tadloe treads the streets, the paviors cry
'God bless you, Sir!' and lay their rammers by."

So in the following one, point is given to intentionally pointless lines by the check which takes us unawares at the last:—

"What is lighter than a feather?
Dust, my friend, in driest weather.
What's lighter than the dust, I pray?
The wind that wafts it far away.
What is lighter than the wind?
The lightness of a woman's mind.
And what is lighter than the last?
Nay! now, my friend, you have me fast."

The best machinery for surprise is the amœbæic poem, or question and answer, as in the dialogue of the traveller and the clergyman:—

"*C.* I've lost my portmanteau.
T. I pity your grief.
C. All my sermons are in it.
T. I pity the thief;

or in this, which however was not originally amœbæic, and is hardly more than a pun:—

"In Craven-street, Strand, ten attorneys find place,
And ten dark coal-barges are moored at its base;
Fly, honesty, fly, to some safer retreat,
There's craft in the river, and craft in the street.

Why should honesty seek any safer retreat,
From the lawyers, or barges, odd rot 'em?
For the lawyers are just at the top of the street,
And the barges are just at the bottom."

Surely punning epigrams are hardly epigrams at all, but they are the most amusing and the most plentiful. In this kind, at least, the ancients are distanced. The episcopal *jeux d'esprit* on the elective affinities of the Bishop of Durham are probably the best in existence. Three of them we copy from Mr. Booth's book:—

"I.

Apollos was mighty in doctrine, we're told,
When doctrine was sound in the good days of old;
But there's doctrine more mitey in Shaftesbury's sees,
For it's bred by corruption and comes from a cheese.

II.

Says Cheesy to Soapy, 'Your chaplains are Popey,
Who knocks at my door other vouchers must bring.'
Says Soapy to Cheesy, 'Your ethics are easy,
You hold that promotion should come with a ring.'

III.

'Prithee, my Lord, from your new Cheese,
Some scanty parings take,
And our poor pastors' bread therewith
More palatable make.'

Said Villiers, 'Nothing can be spared
For these three pious men:
The Cheese that's with my daughter pair'd,
Must not be pared again.'"

Yet, good as these are, they explain why collections are filled with generalities infinitely inferior to them. To us, who remember the events and the feelings of the time, they are full of sting and happy appropriateness; but to the next generation they will have no value but the jingle of the words, which is not in itself exceptionally striking, but only in its application to present things. They will be outlived by the more general and miscellaneous kind which rests entirely on the completeness of the verbal pun. On this principle, that the permanence of the interest of a social or political epigram depends on the permanence of the custom or idea which gave rise to it, the probable longevity of the next specimen cannot at present be calculated.

"A way to dress
In the mode, I guess,
Picks a husband's bones quite clean,
And poor Mr. Spratt
Must cry 'No fat,'
And his wife will *cri-no-line*."

This artifice of parody in epigrams is entirely a modern invention. It may be a very poor trick, but it doubles the surprise, and therefore the efficiency. We subjoin a few more instances of puns which deserve to be quoted whenever epigrams are in question. The first is Erskine's well-known one:—

"The French have taste in all they do,
Which we are quite without;
For Nature, that to them gave goût,
To us gave only gout."

The next is inspired by Moore. It is extremely neat.

"When Limerick once in idle whim
Moore, as her member, gaily courted,
The boys, for fun's sake, asked of him
To state what party he supported:
When thus to them the answer ran,
'I'm of no party as a man,
But as a poet, *am-a-tory*.'"

Theodore Hook's inimitable improvisation may close this division of epigrams.

"Here comes Mr. Winter, surveyor of taxes,
I advise you to give him whatever he axes;
And that, too, without any nonsense or flummery,
For though his name's Winter his actions are summary."

Next in order of number and excellence to punning epigrams generally come epigrams which turn on names. These have been favourites in all times and a few of them are amusing. Dr. I. Lettsom's principles of medicine deserve to lead the way, for its pith and unpretentious stoicism which does its duty and takes the consequences.

"If any body comes to I,
I physics, bleeds, and sweats 'em;
If, after that, they like to die,
Why, what care I?
I. Lettsom."

In the next there seems to be a reminiscence of the devil and the monk, only with a farther complication.

"Who the dickens 'Boz' could be,
Puzzled many a learned elf:
Till time unveiled the mystery,
And 'Boz' appeared as Dickens' self."

The Latin of Dr. Scott—

"Cum Sapiente Pius nostras juravit in aras:
Impius heu! Sapiens, desipiensque Pius—

is an improvement on the English cited by Mr. Booth:—

"With Pius, Wiseman tries
To lay us under ban:
O Pius, man unwise;
O impious Wise-man!"

Last, and perhaps best, is the philosophical epigram on Charlotte Ness.

"Say what is 'abstract,' what 'concrete?'
Their difference define."
"They both in one fair person meet,
And that, dear maid, is thine."

"How so? The riddle pray undo."
"I thus your wish express;
For while I lovely Charlotte view,
I then view loveli-Ness."

Epigrams, undeserving of the name, which turn merely on rhymes, have grown up in the last few years, apparently modelled on the nursery jingle of the "Old Man of Tobago," but already constitute a literature by themselves. None of these appear in Mr. Booth's book, but he gives a poetical criticism on Moore, which depends on the same principle.

"Lalla-Rookh
Is a naughty book,
By Tommy Moore,
Who has written four;

Digitized by Google

Each warmer
Than the former,
So the most recent
Is the least decent."

We have somewhere heard a similar one on Milton, which is more terse and more questionable.

"If you except Il Penseroso,
The rest of Milton is but so-so."

If these are products of a debased art, epigrams of syllables and letters hold a still lower rank and are still further removed from the true kind. The best of them is Porson's gerundial elegy.

"When Dido mourn'd, Æneas would not come,
She wept in silence and was Di-do-dumb."

Not that this is an historically exact account of Dido or her actions, but then we gain in comprehension what we lose in facts. Two more instances of this sort exhaust the list of tolerable examples.

"A correspondent, something new
Transmitting, sign'd himself X. Q.
The editor his letter read,
And begged he might be X. Q. Z."

"It seems as if Nature had curiously planned
That men's names with their trades should agree;
There's Twining, the Teaman, who lives in the Strand,
Would be whining, if robbed of his T."

We shall conclude with three compositions, which, though not strictly epigrams in our sense of the word, are included by Mr. Booth in his collection. The first two are remarkable for their brevity, the last for its pathos.

I.

"This corpse
Is Tommy Thorpe's. (First idea)."

Revised edition.

"Thorpe's
Corpse."

II.—"*On a Smuggler.*

Here I lies
Killed by the XIS."

III.—"*On a Locomotive.*

"Collisions four
Or five she bore;
The signals were in vain;
Grown old and rusted,
Her biler busted,
And smashed the excursion train."

Thus, *Punch* has taken the place of Callimachus and Pope, and the art of epigram is well-nigh lost. Formal grace gives way to vigorous vulgarity, wit to humour, and the race of fine gentlemen to a prosaic generation, which has neither the skill nor the patience for the laborious trifling with which our grandfathers fatigued themselves and amused one another.

THE HOSPITALS.

The question of a future site for St. Thomas's Hospital is not settled by the offer of a new site for Bethlem, the price of which is to be given to a third institution. A donation of £21,000 to the City of London Hospital would in itself be very well bestowed; none of our hospitals is better managed, or more useful, to the extent of its means. Its enlargement is justified by the wants of a poor and populous district, if it be not preferable to make room in the existing wards, by establishing, in the open country, a branch hospital for so many of the patients as can bear the journey. But since a gentleman wishes to grant, for hospitals, "seventy-three acres of land on the southern slope of one of the finest hills in Surrey," he might either give its price directly to the London Hospital, or give the land for the site of a rural House of Recovery, for such inmates of the London Hospital and St. Thomas's as can be safely and beneficially removed. The medical officers of St. Thomas's have recorded their opinion in favour of a convalescent establishment. This would relieve both the present hospitals of a large number of their patients, if it were designed, not only for the convalescents, but for that class of the sick who can in the first instance be carried without injury eight or ten miles out of town; leaving the 450 beds at St. Thomas's, and about the same number at Whitechapel, to receive the urgent cases.

As a boon, however, in any shape, to the London Hospital, a deserving and not wealthy institution, this gift is very acceptable. But it is a matter for much consideration, whether the interests either of St. Thomas's or of Bethlem are served by an arrangement which displaces the one, to erect the other upon its site.

It cannot be expected that the governors of Bethlem, because in 1807, by a grant from the Corporation of London, they got their present site in St. George's-fields, without money payment, but in exchange for their ancient site in Finsbury, shall now, in mere exchange for a site at Croydon, give up, with no pecuniary consideration, their Southwark estate. They would never, as trustees of the property committed to them, overlook its present commercial value, in their negotiation with St. Thomas's governors. Now, the eleven acres which they possess in Southwark are worth in the market a great deal more than six times that quantity of land among the Surrey hills. It was, indeed, estimated by the valuers for St. Thomas's, last month, that the purchase of the Bethlem site, involving the cost of a new building for Bethlem, would come to £160,000; and at the meeting of St. Thomas's governors, on the 20th of January, Mr. Tite spoke of this objection as fatal to the choice of the Bethlem site. By the arrangement now proposed, the sum of £21,000, to be given to the London Hospital by the Bethlem governors, in consideration of the land at Croydon to be given to them, will not be any deduction from the £160,000 which, according to the estimate taken on behalf of the St. Thomas's governors, would be the cost of the Bethlem site to them; so that the St. Thomas's governors would save not a penny in their bargain, nor would Bethlem gain a penny by it. It is clear, therefore, that if, at their meeting last month, the St. Thomas's governors thought the Bethlem site unattainable on account of its cost, the offer announced by the Secretary of the London Hospital, in his letter of February 3rd, has done nothing to remove that obstacle.

To build St. Thomas's, however, upon the Bethlem site, the present buildings of Bethlem Hospital must be destroyed. They cannot by any ingenuity be adapted for the accommodation of sick and accidental cases. The internal structure of the lunatic hospital, where all the patients sleep in their separate little bedrooms, with the corridors fitted up like saloons for places of recreation and a social promenade, differs essentially from that of an ordinary sick and accident hospital, in which a number of beds are placed together in each of the spacious wards, so that the surgeons and nurses may pass from one bed to another without disturbance.

As for the amount that has actually been laid out upon Bethlem, we learn from the reports of 1815, when the modern hospital in St. George's-fields was opened, that £122,572 was spent on that building alone, for the accommodation of only 200 patients; and there is now accommodation for about 400. Since that time, more than £25,000 has been spent in various improvements and extensions, including £19,000 for the wards of the criminal lunatics, paid for by the Government. These are about to be removed to the new State Asylum at Bagshot Heath, described in the *London Review* some months ago; and the space which their wards have occupied may be converted into new airing and recreation grounds. In the last ten years, the period of Dr. Hood's management, from 1852 to 1862, £8,000 was laid out in building new kitchens and offices, infirmaries, and amusement-rooms; in fitting all the windows with an iron framework for the panes of glass, instead of the prison-like bars; and in making the place altogether suitable for his humane system of treatment, which Dr. Helps, his successor, efficiently continues. Such is Bethlem Hospital at present, and such has been its cost; the St. Thomas's governors would have to knock it down, and they could not do that for nothing; nor could a new Bethlem, as convenient for its purpose, be very cheaply built.

Looking, then, in the first place, to the welfare of St. Thomas's itself, we see that the Bethlem site is not recommended by economy; nor is it, compared with others, the fittest site. Mr. Tite remarked that, for one-fifth of the price of that site, the governors might obtain thirty acres, adjoining the Camberwell New-road, with railways close at hand, and large open roads in every direction. Alderman Lawrence preferred an open plot of twenty-five acres at the back of Newington Church, with a frontage on the Kennington-road; and this nearly adjoins the grounds of Bethlem. But the suggestion of the Chief Commissioner of Works, that St. Thomas's Hospital should be built at Stangate, at the end of Westminster Bridge, upon an elevated terrace overlooking the Thames, along the projected southern embankment opposite the Houses of Parliament, has much to be said for it. As the main drainage works are likely to be completed before the new hospital can be finished for the reception of patients, we may hope that, by that time, our noble river will be freed from poisonous effluvia, while the tracts of noisome mud, now visible at low tide, will have given place to handsome stone quays or

Digitized by Google

terraces on either bank; so that the stream will run strong, fresh, and pure between them. The bone-boiling nuisance is already abated; and no place in London enjoys a freer current of air than sweeps over the broad piece of water between the Lambeth and Millbank shores, while the river fogs can seldom rise above the surface to the height of thirty or forty feet, at which the basement floor of the hospital should be laid. Among the advantages of this site are, its airy openness, its sunny south-westerly aspect, and the cheerful view from the front windows, or from glazed balconies, which might afford to the convalescents many an hour of diversion in watching the boats upon the river or passengers upon the bridge. But its chief advantage is that of easy access by water-carriage for the great number of patients supplied by accidents among the river-side population lower down. A sailor or dock-labourer, for instance, at Blackwall, having got his leg crushed by the fall of a cask or a spar, might easily be placed in a barge fitted up with a suitable litter, and conveyed by the smoothest and quietest road to a little dock beneath the hospital, where the litter, with the man undisturbed upon it, might be hoisted by simple machinery to an upper floor. The new St. Thomas's Hospital, with these features, might not only be made peculiarly useful for a large class of cases, but would form a striking ornament to the metropolis, viewed together with the fine architectural group of the Westminster Palace, the Abbey, and the bridge. To many Londoners, we doubt not, the stately towers of imperial Thames are quite as pleasant and inspiring a sight as the dreary waste of Wandsworth Common or the bleak bare downs of Surrey.

This brings us to the fancied necessity for removing the lunatic patients of Bethlem to a distance from town,—the only remaining plea. It is founded upon nothing but the supposed unhealthiness of town air, which, as an assertion thus broadly stated, both professional and popular experience deny. The medical officers of St. Thomas's lately observed that, if the rate of mortality is usually higher in a town than a rustic population, its causes are, the over-crowding of the poor in close courts and alleys, the dirtiness of their houses, bad drainage, bad water, the unwholesome habits and occupations of some classes of the people. None of these pernicious influences exist in Bethlem Hospital, which, standing far apart from other houses, in the midst of its own spacious grounds, and supplied with the sweetest water from a deep Artesian well, is a perfect oasis of salubrity on the borders of Lambeth and Southwark. The cholera has never been admitted within its gates; and the average mortality of its inmates, about 5½ per cent., is a very low rate for a lunatic asylum. Even this mortality, as one-third of the deaths occur within a month of the patients' admission, is partly owing to their state when admitted, or to their exhaustion from the excitement of acute mania; the average rate in county asylums is 8 per cent. The per-centage of cures in Bethlem, which has ranged as high as 66 per cent., is equalled by few other asylums. The late officer of health for Southwark, Mr. Rendle, reported that one cause tending greatly to the salubrity of his district was the open space about Bethlem and the other large establishments in its neighbourhood, which he spoke of as "the lungs" of that district.

On the other hand, there are some reasons for keeping Bethlem where it is. The patients, in their town mansion, though furnished with all its domestic comforts, ornaments, and means of recreation, with books, pictures, music, ball-rooms, and billiard tables, for in-door pastime, with aviaries, aquariums, and wide open gardens stocked with an abundance of plants and flowers, are not too closely shut up there. They have, besides the gardens comprised in the eleven acres of Bethlem, two acres more, the adjacent gardens of King Edward's School, for healthful out-door employment. They often walk out in small parties, escorted by their attendants, to amuse themselves with what is passing in the streets, to call upon their friends in London, to do their own little shopping, to attend their own places of worship, or to visit such places as the Crystal Palace, the Great Exhibition, or the Cattle Show. Dr. Hood, the late Resident Physician, while stating, in his report for 1860, that more than 150 of them had enjoyed this indulgence, some of them sixty or seventy times in the year, observed that it was very beneficial to them, "by supplying objects of interest to their minds." Now let it be remembered that not one-third, as Mr. James Ellis says in his letter to the *Times*, but five to three of the Bethlem patients are Londoners (582 to 352 in the last five years), or belong at least to the metropolitan district. Will these Londoners, transported to "the slope of one of the finest hills in Surrey," remote from the cheerful sights and sounds of human neighbourhood, find that salutary diversion for the perceptive faculties which London affords them? And will not that sense of utter isolation and banishment, which is one of the most painful experiences of insanity, be enhanced by knowing that they are separated from their families by an actual railway journey, though it be a short one; and that the visits of friends and kindred will be rare? Such visits, we believe, are never discouraged by the authorities of Bethlem, except in some peculiar cases where an access of excitement might ensue; it sometimes even happens that the friends are expressly sent for, to soothe a patient and comfort him in illness. These are the reasons for the patients dwelling within an easy walk of their old homes in London, with the occasional enjoyment of those lively scenes which a city displays, and hearing still the well remembered sounds of St. Paul's and Westminster clocks, or the Sunday morning chimes. There is no difficulty in sending parties of them to stay for two or three weeks by the sea-side, or in the country, during fine weather, for a change of scene; last summer, we believe, some of them went to Brighton; and in future seasons they may have a country-house of their own to go to. Meanwhile, it seems undesirable that the establishment in London should be broken up, that Bethlem should be removed to Croydon, and St. Thomas's fixed in St. George's-fields. We trust that the governors will not be driven by any clamour to a hasty adoption of this plan.

THE PAST WEEK.

On Friday week in the House of Lords Lord Ellenborough presented petitions from Indian officers, complaining of the loss of certain advantages guaranteed to them by Parliament, and, as an act of justice, insisting upon the fulfilment of engagements that had been entered into. One ground of complaint, the greatest, was the formation of a staff corps, which the petitioners thought unjustly interfered with general promotion. The Duke of Argyle did not think there was any cause for the complaint that the guarantees of the Act of Parliament had been violated. Parliament had guaranteed that the condition of the Indian officers should not be made worse, but had not made an engagement that it should be improved. The fears of the petitioners his Grace considered groundless. The Duke of Cambridge believed no Indian officer of the local service had suffered by the recent changes. Mr. Peacocke moved in the House of Commons an address to her Majesty to give directions that no sales to facilitate inclosures be made of Crown lands or Crown forestal rights within fifteen miles of the metropolis. Various instances were adduced where the Crown interests in large portions of land had been disposed of for most inadequate compensation, and he (the hon. gentleman) urged the preservation of some open spaces of ground, considering the increasing population. The motion having been seconded, Mr. F. Peel explained the value of the forestal rights of the Crown, and observed that the sale of those rights would not affect the inclosures. Sir G. Grey and other members having spoken, Mr. Peacocke's motion was put and carried, the Government sustaining a defeat by the division. In committee on the Post-office and other savings' banks, the Chancellor of the Exchequer moved a resolution to authorize the bringing in a bill relating to these banks. The legislative object of the new bill was to enable the old savings' banks to wind up. Another provision was intended to facilitate the transfer of deposits of minors from one savings' bank to another. Agreed to. The Chancellor of the Exchequer next moved resolutions charging a reduced scale of duties of Customs upon the different kinds of manufactured tobacco. One object he had in view was to authorize the conversion of unmanufactured tobacco in bond into cavendish or negro-head, to be subject to a lower rate of duty than such tobacco manufactured and imported. The resolutions were agreed to. Mr. W. Martin and Mr. A. Smith had permission given them to introduce bills—the former to prevent frauds on innkeepers, and the latter to amend the mode of taking votes at municipal elections. Lord Derby on Monday, after commenting on the want of business before the House, condemned the conduct of Mr. Christie in the Brazils, and wanted to know whether it met the approbation of Ministers. Lord Granville said a bill against the pollution of rivers by noxious gases would soon be introduced; and that papers relating to the Brazils would be speedily laid before Parliament. In the Commons the reports on the Post-office savings' banks and on the Customs Acts (tobacco duties) were agreed to. Mr. Cowper moved for leave to introduce a bill to make a new street from Blackfriars to the Mansion House, in connection with the embankment of the Thames on the north side of the river. He pointed out the necessity of forming a new distinct thoroughfare to relieve the amount of traffic in the city from various converging points almost impeding locomotion. The money for what he proposed could be drawn from the Thames Embankment funds, which could be replenished by giving the Board of Works power to borrow money upon the security of the coal duties. The Lord Mayor was of opinion that the Corporation funds were not in a position to bear the expense of the proposed works, and he was averse to placing the business in the hands of the Metropolitan Board of Works. Several members having addressed the House, Lord Palmerston said Mr. Cowper only asked permission to bring in the bill to enable the House to determine whether it was desirable to have the new work performed. The work was entirely for the benefit of London, and it should bear the cost. Leave was given to bring in the bill. The Chancellor of the Ex-

Digitized by Google

chequer obtained leave to bring in a bill relating to malt credits, the object of which was to give increased credit to maltsters when they chose to avail themselves of it. Earl Russell on Tuesday gave explanations drawn forth by Earl Derby's remarks on the previous evening, relating to our dispute with the Brazilians. The Lord Chancellor brought up a message from the Queen on the Royal marriage, asking their lordships to concur in making suitable provision for the Prince of Wales and his bride. An address to the Queen was adopted in reply. The Marquis of Normanby made a speech on the affairs of Rome, which elicited observations from Earl Russell and the Earl of Ellenborough. The South-Eastern Railway bill was rejected on Tuesday, in the House of Commons, on the motion for second reading. Lord Palmerston replied to a question by Mr. Bentinck, touching the blockade of Charleston, and said the Government had no other information than that in the telegrams. He declined to offer an opinion as to whether the blockade had been legally raised. The noble lord also brought up a message from the Queen respecting suitable provision for the Prince of Wales. Notice was given for a motion on the subject for Thursday. Mr. S. Fitzgerald drew attention to the nature of commercial treaties. Government only, he complained, obtained treaties with foreign countries after France had secured them, and then we merely obtained the same conditions as those obtained by France. A discussion ensued on the subject. Mr. Horsfall obtained the appointment of a select committee to inquire into the practicability of consolidating the Boards of Inland Revenue and Customs. Sir George Grey obtained leave to bring in a bill relating to the religious instruction of prisoners in county and borough prisons in England and Scotland.

The House of Lords did not meet on Wednesday.—Mr. Hadfield, in the Commons, moved the second reading of the Qualification for Offices Abolition Bill, which was carried against an amendment by Mr. Newdegate.—The second reading of the Aggravated Assaults on Women and Children Bill was moved by Lord Raynham, who said that all persons would admit that the crimes of which he complained should be suppressed, and he proposed to inflict corporal punishment upon a person when thrice convicted. He was prepared to give up, however, that part of the bill which related to flogging, if the other provisions were adopted. The Attorney-General resisted the introduction of the bill; it was better to adhere to the law, when placed on a satisfactory footing, as it was in 1861. Mr. Bentinck having supported the second reading, a division took place, when the bill was rejected by 153 to 43.

A new amendment has been proposed in the French Corps Législatif, affirming that freedom of election will be impracticable if the Ministers of the Interior persist in requiring from the principal editors of journals secret treaties and blank regulations, which have the effect of placing them at the mercy of the Government. The names of the promoters of the amendment were given,—Jules Favre, Emile Ollivier, Henon, Darimon, and Ernest Picard. M. Picard, in a bold speech, detailed the history of the recent transactions in the office of the *Constitutionnel*, and said such transactions virtually proved that the editing of the papers was carried on in the office of the Minister of the Interior; the debate brought to light the fact that, in sanctioning the appointment of a *gérant* to certain papers, the Minister stipulated for a written but undated resignation of the office to be placed in his hands. When the attitude of a journal displeased, the editor received from the Minister the resignation dated, and found himself dismissed! The Minister replied, no one was obliged to become an editor; and if any one subscribed to the terms he ought not to complain of his dismissal. M. Picard said he complained in the name of free discussion and of public morality. The amendment was negatived by a large majority. The Emperor has received the deputation from the Corps Legislatif charged to present him with the Address in reply to the Speech from the Throne. The Emperor was brief in his reply, and expressed the satisfaction he felt at finding a new proof of the concord existing between the Representative Chamber and the Government; such concord was most opportune at the present moment, considering how much other countries were now agitated.

The Polish insurgents have captured Jarnogrod, and 39 out of 200 Cossacks garrisoning the place have been killed. Hubeszow, evacuated by the Russians, has been taken by the insurgents. A state of siege, if requisite, has been ordered by the Emperor in the provinces of Podolia and Volhynia. The Pope has sent instructions to the Bishops of Gallicia to exert their influence over the people there to respect Austria as a Catholic power. The *Ost Zeitung* of the 14th has the following news:—The insurgents have taken a courier bearing despatches to the Russian ambassadors of Paris and Berlin, respecting the attitude of Prussia and Austria regarding the insurrection. Letters addressed by the Grand Duke Constantine to a foreign princess and the Count d'Aquila, expressing surprise at the outbreak of the Poles, have been taken by the insurgents. The convention referring to the insurrection, between Prussia and Russia, was signed on the 8th instant. A Vienna letter says M. Cievzewski, the editor of a Polish paper published in Lemberg, has been condemned to three years' imprisonment for being guilty of high treason. The preliminary examination of the unhappy editor lasted thirteen months. This is an unwelcome specimen of Austrian law. Wuschock has been retaken by the insurgents, 5,000 of whom were posted on the 13th near Slupze, under the command of Langiewicz. The Russian troops, driven by the insurgents to take refuge upon Prussian territory, have marched from Glenvitz, fully equipped.

In the sitting of the Berlin Chamber of Deputies, Herr von Bismarck Schönhausen, in reply to questions put to him by Polish members, said the aim of the Polish movement was the re-establishment of Poland, as far as possible, to the former extent of the kingdom. The insurrection affected the political interest of Prussia, as, from official information, a similar movement in the Prussian territory was contemplated at a suitable time. The Government trusted to the fidelity of the majority of the Polish subjects of the Crown, and was obliged to protect them against the compulsion which had in Russian Poland been exercised upon the citizens and peasantry by emigrants, the gentry, and a portion of the clergy. The Government was determined to take energetic measures to ensure the public safety whenever it was imperilled. The *Nord Deutsche Zeitung* says an actual invasion of Polish territory was not intended by Prussia. Such a step would call for a convention between Prussia and Russia, which has not been heard of. The inhabitants of Warsaw are forbidden to keep arms or revolutionary writings. Any house is to be pulled down from which the military have been fired upon. A circular of the chief of police of Breslau requests editors of newspapers not to publish any statement in reference to military measures or the transport of troops. The military authorities of Posen have sent forth an arrogant proclamation stating that the penalty of high treason is destined for any one who may give encouragement to the Poles of Russia. It is said that the Prussian Poles look forward with interest to some manifestation in their behalf from the Government of England that may compel the Prussian Cabinet to relinquish its arrangement with Russia.

A meeting has taken place at Genoa to express sympathy with Poland. A speaker counselled the Italians to aid the Poles, when the police ordered the dissolution of the meeting. The speeches generally were moderate. A meeting advertised to take place at Naples in favour of Poland was not held on the 14th. A few persons assembled in the streets, and shouted "Poland for ever!" but they were quickly dispersed. From Spain, it is stated that Marshal Narvaez is organizing a new union of all sections of the moderate Liberals. From Shanghai *vid* Suez news comes of the abandonment of the siege of Nankin, and that the Russian fleet will remain at Manilla. Garibaldi has sent a letter to the Italian papers addressed to the people of England, whom he asks to support Poland; he hopes Englishmen will not allow Poland to perish under the knout—under the lance of the Cossacks. The Poles are fighting, he says, for the independence of their country and for liberty. By proffering their hands to Poland, Englishmen would resuscitate the country. There is but little doubt that the Prussian and Russian Governments have agreed secretly to co-operate in action should the Polish insurrection continue to spread. This belief has produced great surprise. It is said that a free passage is offered to Russian troops across Prussian soil. A remonstrance is said to be in preparation by France to the Prussian Cabinet against such a violation of the principle of non-intervention. The Italian Minister of Finance has laid his financial report before the Turin Chamber, which exhibits a deficit of three hundred millions of francs. An equilibrium is proposed to be established in four years by the sale of crown lands, the consolidated conversion of a large number of mortgaged estates, increased land-tax, a loan of nearly seven hundred millions of francs, and other matters. No opposition was manifested to the proposals, and leave was accorded the Minister to bring in a bill authorising the loan. The semi-official *General Correspondenz* says the leaders of the Venetian revolutionary committee have been tracked by the police, and arrested; a prosecution has been commenced against them.

We have news from New York respecting the progress of events between the Northern and Southern belligerents to the 8th instant. The Federals, at Vicksburg, number 80,000. The journals of the South assert that the British steamer *Spitfire* sunk the Federal steamer *Hatteras* off Galveston. The House of Representatives has passed a bill to arm negroes. No slaves of loyal owners are to be thus employed. The Confederates retreated towards Franklin after the engagement between Generals Corcoran and Pryor near Suffolk. In an interview which Jefferson Davis has had with the governor of North Carolina, the latter insisted upon the recall of a sufficient number of troops to guard the State. A despatch is published from Charleston by the Southern journals stating that the Federal gunboat *P. Smith* surrendered unconditionally to the Confederates at Stone River. The *Richmond Whig* says that the British steamer *Princess Royal*, with a cargo of guns and powder, was captured while attempting to enter Charleston. The bombardment of Galveston by the Federals has commenced, and General Magender has declared Galveston open to the trade of all friendly nations. It is asserted that President Lincoln has offered to General Butler the command at New Orleans, but the General hesitated about accepting the post. Under date February 4, from New York, it is rumoured by the Richmond papers containing Charleston despatches, that two Confederate iron-clad gunboats, attended by three steamers, went from Charleston on the 31st ult., and attacked the blockading squadron. The Confederate gunboats succeeded in sinking the Federal gunboat *Mercedita* and another gunboat, name unknown. The Federal steamer *Quaker City* was disabled, and escaped with the loss of one wheel; four Federal vessels were set on fire by the Confederates. When the Confederate gunboats returned to Charleston, they were received with demonstrations of approval. General Beauregard issued a proclamation that the Confederate fleet had attacked the blockading squadron off Charleston, and he

Digitized by Google

formally declared that the blockade of Charleston by the United States was raised by the superior force of the Confederates from and after January 31st. General Beauregard placed at the disposal of the foreign consuls steamers to see for themselves that no blockade existed, and it is said the British consul went on board the *Petrel* five miles beyond the usual anchorage of the blockaders, but saw nothing of them. Foreign consuls in Charleston, at a meeting, were of opinion that the blockade had been legally raised. From New York, February 5, it is reported that the Confederate Secretary of State has notified to the British and French consuls that he has received official information of the opening of the Charleston blockade, and the *Richmond Dispatch* says the blockade cannot be renewed by the Federals until sixty days' previous notice has been given to the neutral governments. The same paper observes that Earl Russell will not insist on a notification if the Federals restore the blockade without notice. Northern papers consider the Southern accounts of the Charleston affair exaggerated. General Foster's expedition from Beaufort is supposed to number 70,000 men, destined for an attack on Charleston. An attack has been made on Fort Donnelson by the Confederates, who captured one battery, but lost it again: the repulse of the Confederates, with great loss, is reported. General Grant has reached Vicksburg. Washington accounts regard the Charleston encounter as unduly magnified: no interruption of the blockade, it is said, has occurred. A telegram from Fortress Monroe mentions the receipt there of news from Charleston of the 3rd instant, when the port was completely blockaded, the Federal iron-clads lying inside the wooden vessels. The Federal attack upon Charleston was momentarily expected. Details have been published of the conduct of the Confederates in dealing with negroes caught on board Federal vessels on the Cumberland river. Without any trial, they were taken to an open field and shot down. Two negroes got out of sight of their pursuers for a time, being in the water and holding their heads out of water by clinging to the rudder of a vessel. When discovered they were instantly shot.

A rumour is current that Mr. Serjeant Shee is to be elevated to the judicial bench whenever another vacancy occurs. The brig *Sceptre*, lying at single anchor on the Thames, has been run into by the screw steamer *Scotia*. The brig sank, and three of the crew, asleep in the forecastle, went down with her, and were drowned. The route of the Princess Alexandra from the Bricklayer's Arms station, on the 7th proximo, has been officially made known, and will be along the Old Kent-road and the Borough, over London-bridge, down King William-street, past the Mansion House, through St. Paul's-churchyard, Fleet-street, the Strand, Trafalgar-square, along Pall Mall, St. James's-street, and Piccadilly, to Hyde Park-corner, thence through the park to the Marble Arch, along Edgeware-road and the Grand Junction-road, past the Great Western Hotel, to the station. Mr. Windham has again appeared —this time in the Court of Common Pleas—as a defendant in an action brought against him by Mr. Llewellyn with whom he had lodged in Duke-street, St. James's. The amount sued for was over £100, for necessaries supplied and for rent. A question arose as to whether the eccentric Mr. Windham was a yearly or a weekly tenant. The jury were of opinion that defendant was a yearly tenant, and gave a verdict for the plaintiff. Mr. Windham's experience of law is now rather extensive. In the Upper House of Convocation it has been decided, in consequence of a request from the Lower House, to appoint a committee to examine Bishop Colenso's book. The Bishops of London and St. David's were opposed to the request of the Lower House. A rather singular story has been started regarding the Roupell forgeries. A witness, it is said, has been found, who says he saw old Mr. Roupell sign the deed of gift of his estate to William Roupell. This testimony is very different from the voluntary statement of the ex-M.P., who is now under sentence of penal servitude—namely, that he forged the deed of gift. Should the evidence of the witness now found prove correct, the case will be in a singular position as between the mortgagees and the present claimants to the property. Fresh curiosity will be created as to the motives of the convict Roupell. A fire, doing damage to the extent of £30,000, has broken out in premises in Newcastle-on-Tyne. The fire originated in a cluster of leather-dressers' warehouses, and there being a scarcity of water, much valuable property was destroyed. Lord George Manners, brother of the Duke of Rutland, has been elected M.P. for Cambridgeshire, unopposed, in the room of Mr. Ball, resigned. The case of Collingwood against Mr. Henry Berkeley and others, directors of the British Columbia Overland Transit Company, has been tried. The point in dispute was whether defendants had given their consent to act as directors of the company, of which Colonel Sleigh acted as manager. The jury were of opinion that defendants had agreed to act as directors, excepting Mr. Fenner, and awarded £160 to the plaintiff. In all probability, this result will have a salutary effect in preventing members of Parliament and other persons of influence from allowing their names to be used in the prospectuses of certain companies whose stability may be doubtful. A melancholy case of suicide through a love disappointment has taken place at New to a'am. It seems that Miss Jane Herbert formed an attachment her choicer named Jupp, but her father strongly disapproved of chased two "his preyed heavily on the girl's mind, and she purcontaining str[illegible]s of "Butler's Vermin Killer," a composition place soon after[illegible] part of which she swallowed, death taking lying with her arm[illegible] Fuller found the unfortunate deceased of the joints, sympto[illegible] hands clenched, and great rigidity [illegible]cating the effects of strychnine.

At the weekly meeting in Manchester of the Central Executive Relief Committee, Mr. Farnall read his report, from which it appeared that on the 7th instant there was a decrease in the number of persons receiving parochial relief in the twenty-seven unions of the cotton districts, as compared with the number relieved in the previous week, of 5,918. Since December the 6th there has been a decrease of 49,877. The general health of the distressed localities is favourable. The Kidderminster railway station and refreshment rooms have been destroyed by fire. The books and papers of Messrs. Smith & Sons were consumed, and the telegraph wires were rendered worthless, as well as the telegraph office. The surplus talked about in the hands of the Chancellor of the Exchequer is likely to have numerous claimants. The malt duty is asked to be repealed by the farmers. The Central Malt Duty Repeal Association have had a meeting at the Bridge House Hotel, London-bridge. Speeches and resolutions were numerous, urging the necessity of repealing the malt duty. The Navy estimates have been issued, and amount to £10,736,032. Last year the sum asked for was £11,794,305; therefore, the reduction is upwards of a million. The Honourable Society of the Middle Temple, of which the Prince of Wales is Master, intend celebrating the marriage of his Royal Highness on the 10th of March by giving a grand dinner to the members of the Inn in their ancient hall.

A report prevails that a fresh investigation of the circumstances connected with the mysterious murder at Road will shortly begin. Another suicide has taken place from London Bridge. A young woman, apparently about nineteen years of age, was seen loitering on the bridge, and ultimately to mount a parapet. Before any one had time to reach her she had plunged into the river and was drowned. The ladies of Poland have presented Mr. Pope Hennessy with a screen of heavy black velvet, framed in carved oak, bearing the arms of Poland wrought in needlework of silk and gold, with the initials of the hon. member, surmounted by a Polish coronet. Another meeting, under the auspices of the Emancipation Society, has been held in St. James's Hall. The policy of the Federal Government was warmly commended. Mr. Thompson, one of the speakers, dwelt on the recent entertainment at the Mansion House of the author of the Fugitive Slave Law. The denunciations of the South met with a few opponents, who were soon ejected from the audience. The Hon. W. W. Addington has been elected M.P. for Devizes in the room of the late Captain Gladstone. Mr. H. W. Langton has been elected M.P., without opposition, for West Somerset. Serjeant Tozer has issued an address to the electors of Cambridge, announcing his intention of becoming a candidate, as a Liberal, at the next general election.

The *Nord Deutsche Zeitung* states that the negotiations between Prussia and Russia had reference only to the Polish insurrection, and not to any settlement of the Polish question. No negotiations whatever have taken place between Prussia and Austria. The *Patrie* reports that the insurrection is spreading through all parts of the Polish kingdom. The military commanders of the provinces of Lithuania and Volhynia have refused to send the reinforcements demanded from them by the authorities in Poland, seeing that they may soon have to defend their own provinces. Minchow has been set on fire after the insurgents were repulsed in attacking it. A body of insurgents entered Gema in Austrian Poland unresisted, when being pursued by the Russians. 300 insurgents were killed, and the same number wounded in the attack on Minchow. In the Berlin Chamber of Deputies, the Minister has declined to answer the question whether Prussia had concluded a convention with Russia engaging itself to give assistance to that power in suppressing the Polish insurrection. The Liberals in the Chamber have submitted a resolution that the interests of Prussia demand that the Government should not favour any party on the Polish question, and that neither of the contending parties should enter Prussian territory without being disarmed.

Lord Carnarvon, in the House of Lords, gave notice that he should move for a select committee to inquire into the subject of prison discipline. Lord Palmerston eloquently, in the House of Commons, proposed resolutions making a provision for the establishment of the Prince of Wales. Formerly the revenues of the Duchy of Cornwall were added to the available income of the Crown; in the present reign those revenues, with accumulations, had been set apart for the Prince of Wales when he should come of age. After all deductions, the income of the Duchy of Cornwall would probably amount to £60,000 a year. Parliament was asked to grant an additional £40,000 a year out of the Consolidated Fund for the use of the Prince and Princess of Wales, and a separate allowance of £10,000 for the Princess. The noble lord proposed also that a jointure of £30,000 a year be secured to the Princess in the event of her surviving her husband. The resolutions were agreed to. The second reading of the Corrupt Practices at Elections Bill was carried. The Union Relief Aid Act (1862) Continuance Bill was read a second time; as were the Telegraphs Bill and the Malt Duty Bill.

News of much importance has come to hand from America. The Federals have sustained three naval defeats,—one off Fort M'Allister, another in Stone River, and a third on the Blackwater River. Commander Watkins, of the Confederates, has officially reported the engagement at Galveston, with the loss of a Federal ship and schooner of eleven guns, the taking of 100 prisoners, and the defeat of the Federals. In anticipation of an attack on Richmond, the Confederates are forming earthworks. The Confederates have been repulsed in attacking Fort Donnelson, on the

Digitized by Google

3rd, 250 killed and wounded. The gunboat *New Era* has been attacked by the Confederates near Island 10, on the Mississippi, but they were compelled to retire. The Federal cavalry in Tennessee surprised the encamped Confederates at Middletown and Franklin, on the road, and took Major Douglas and his officers prisoners; their camp equipage, horses, waggons, &c., were captured. General Loan, Federal, commanding the central district of Missouri, has ordered that all bush-wackers, guerillas found in irregular warfare against the United States, shall be summarily executed. In the New Jersey legislature on the 4th a series of resolutions was introduced calling on President Lincoln to return to his original policy and to revoke his emancipation proclamation. Commander Bell, of the Federal navy, has issued a counter proclamation to the declaration of General Magruder that the port of Galveston should be open to the commerce of the world, declaring Galveston, Sabine Pass, and the whole coast of Texas, to be under blockade. A rumour is current that General Butler will replace General Halleck. The attack on Charleston and Savannah is said to have commenced.

From Posen it is reported that the Polish insurgents, on the night of the 17th, captured Konin, and that the Russians garrisoning the town were surprised and dispersed. The Chief of the Revolutionary Committee at Warsaw has issued an order forbidding the inhabitants of the city from making demonstrations. When the moment for insurrection in Warsaw arrives, the people will be solemnly exhorted to combine for its success. Intelligence received at New York from Vera Cruz says that General Mejia has defeated General Doblado and taken a large sum of money. There is no confirmation of the reported defeat of the French by the garrison of Puebla. The Mexicans at Tampico and Jalapa are hanging people who had aided the French. A Ministerial crisis in Spain is now no longer apprehended. A telegram from Malta reports Prince Alfred as having left that place in the *St. George*, suffering from fever.

Reviews of Books.

EARTHQUAKES.*

To the ambitious student of nature, eager for fame and the applause of the multitude, nothing can be more discouraging than the present condition of scientific inquiry. The age of Crichtonism and encyclopædic knowledge in these matters has passed away, and each great division of natural science has, by reason of its own rapid advance, been subjected to such infinite subdivisions, that no man can hope to leave behind him the impress of his work, who is not content to restrict his labours to a field so minute and so special, as to the world at large to be almost inappreciable. Thus the book before us, to the great mass of the reading public, ushers in a new science, which claims to rank with mineralogy, lithology, conchology, comparative anatomy, and so forth, as an integral part of the great science of geology, taken in its most comprehensive acceptation. It has also this additional interest, that it introduces us to the successful application of methodical investigation to a class of phenomena, which, to a greater extent than any other, appear to repudiate the ideas of system, law, and order. Eclipses, thunderstorms, and such like, have long ago succumbed; but earthquakes have been hitherto assumed to be unassailable by calculation, and to defy the efforts alike of the mathematician and the inductive philosopher to subject them to the bondage of geometrical and arithmetical laws. This position they no longer occupy, and it is to such careful observers as Mr. Mallet that their subjection to science is attributable. He would appear to be continually on the watch for them. The earthquake which forms the subject of the present volume happened on the 17th of December, and he wrote as early as the 28th of the same month to the President of the Royal Society, offering to devote a month or five weeks of his time to a journey to the shaken regions. The result was a report to the society, presented in May, 1860, containing an account of numerous and careful observations, and illustrated by a great number of photographs of very considerable intrinsic value, and five elaborate and well executed maps. This report has just been published in the volumes now before us, with the liberal aid of £200 from the Society. Most of the photographs are contained in them, and a great many additional diagrams; and conclusions have been arrived at, which, by their definite and exhaustive character, cannot fail to interest and astonish, even where the reasonings by which they are established do not command the full assent which has been accorded them by the energetic and sanguine mind of Mr. Mallet.

That our readers may have some chance of understanding and being interested in this reasoning and these conclusions, we will beg leave to premise a few introductory remarks upon the general theory. The great difficulty is, as we have said, to import something like law and order into our conceptions of phenomena which appear at first sight so hopelessly exceptional and irregular; but let us consider some other and more familiar cases of laws underlying apparent chaos. Nothing can be more suggestive of disorder and confusion than the rolling in of the sea waves upon a shore under a heavy gale, and nothing more unlike the aspect of the same sea during a gentle breeze; and yet the two cases have one feature, and that a most important one, in common, namely, that the waves themselves, however much they may differ in size during calm and rough weather respectively, advance towards the shore with the same velocity in both cases. Again, imagine a calm lake of uniform depth throughout, and let a body of any shape and size, only not too large, be thrown into the lake with any velocity whatever, it will be found that under all circumstances a circular wave will spread from the point of impact, the radius of which increases at an uniform rate, and that quite independent of the shape, size, and impinging velocity of the body. Or to take a somewhat different case: suppose an iron bar, many thousand feet long, to receive a blow at one extremity in the direction of its length, it will be found always to take the same time before a point at any given distance from that extremity becomes affected, an additional interval of one second being occupied in traversing every 11,090 feet of the bar, however great or small the original pull, push, or blow may have been. In fact, the velocity with which a disturbance of any nature whatever spreads throughout a body of given constitution, is independent of the circumstances of the original shock. Nor is this all, but the same invariable law is true of the *direction* in which each disturbed point moves as the shock reaches it. For example, if the shaken substance be ordinary atmospheric air, and the consequent disturbance that which communicates itself to the ear and constitutes sound, in this case it will be found that, however the original shock is produced, not only does it always take the same time to reach a particle of air at the same distance, but the direction in which this particle is disturbed is always in the line in which the shock reaches it, or, in the language of mathematicians, the vibrations are always longitudinal. Again, if a string be stretched and any point disturbed, the consequent displacement of any other particle may be either along the string or at right angles to it, according to the direction of the original disturbance; but in the former case the disturbance travels at one rate and in the latter at another rate, each of these velocities being perfectly determinate, and dependent, in the one case upon the force with which the string is stretched, and in the other upon its elasticity. In all cases of the transmission of such a disturbance through a mass, the particles which at any time are out of their position of rest are said to constitute a *wave;* and this is called longitudinal or transversal, according to the direction of displacement of the particles; and it is beyond all things necessary to observe, that there is no necessary relation whatever between the actual velocity which is impressed upon any disturbed particle and that with which the disturbance or wave moves through the mass; nor again between the *amplitude* of the wave, or the space through which any particle is actually moved, and the *length* of the wave, or the distance measured along its line of propagation between the two particles, of which one is just beginning to move and the other is just returning to rest.

With the help of these rather tedious preliminaries the special treatment of our subject becomes easy. However originating, an earthquake, as its name denotes, is a shock in the earth's mass, and any one point being thus shaken, implies the spread of a disturbance to other points with a velocity dependent only upon the nature of the earth's constitution. To render the subject at all capable of manageable treatment, it is assumed, with what amount of probability we leave our readers to conjecture, that the earth's mass is sufficiently homogeneous, at any rate throughout the portion of it subjected to investigation, to justify us in regarding the rate of propagation as the same in all directions; and the wave consequently, spherical in form, having its centre at the initial point of disturbance, it is further assumed that the transversal vibrations are very small in comparison with the longitudinal vibrations, and that they need not therefore enter into our consideration. Hence it follows, that if we could infer, from indications at any part of the earth's surface, the direction in which that point was first displaced, we need only produce this direction backwards, and we get a line passing through the point of original disturbance, called here the "seismic focus;" two lines thus drawn give us by their intersection the actual position of this focus, or rather they would do so, did the original disturbance really emanate from a single point; but generally this original disturbance occupies a space of some extent, which is estimated in the present instance as a thin cavity some nine miles long and three broad. Again, the position of the seismic focus having been ascertained, and the times of shock at two places also determined, the actual rate of propagation may be easily determined, and the mean of Mr. Mallet's observations would appear to place this at something like 800 feet a second, or ten miles a minute.

In arriving at these conclusions, our author professes to be guided by strict attention to mathematical formulæ and exact reasoning throughout. It is instructive and amusing to observe his vigorous freshness and confidence in his principles and his methods. No task is too difficult for him—no obstacles deter him, but he plunges fearlessly into problems of the most appalling intricacy, and drags his results to light by means of an analysis which appears ludicrously inadequate to the task entrusted to it. Indeed, the great success of the work, and of Mr. Mallet as observer, is, we believe, mainly due to this dashing, reckless A sounder and more accomplished mathematician would daunted by obstacles which present no difficulties ical prepara- Such a man would have wasted his energies on deprived of the tion of his implements, and we should have on and intelligent really valuable compilation of accurate ob These observations deduction which these two volumes c

* Great Neapolitan Earthquake of 1857. The First Principles of Observational Seismology, as developed in the Report to the Royal Society of London of the Expedition made by command of the Society into the Interior of the Kingdom of Naples to investigate the circumstances of the Great Earthquake of December, 1857. By Robert Mallet, C.E., F.R.S., F.G.S., M.R.I.A., &c. &c.

Digitized by Google

consist mainly in the investigation of the appearances presented by the shaken and fractured buildings, the measurement and comparison of the magnitude and direction of their principal fissures, and of the distances and lines of flight of the projected fragments. It would be idle to attempt to give here anything like a detailed account of the different cases which have been worked out by Mr. Mallet, nor do we believe that a mind less sanguine than his would be satisfied with the conclusiveness of the reasoning, except in its most general aspect. Some idea, however, may be derived from a consideration of particular cases. Thus, suppose a man to be standing facing the north, and in this position to experience a shock travelling from east to west—which we will further suppose to be horizontal, although it is clear from geometrical considerations that this can never be accurately true—it is obvious that he will begin to topple over towards his right side, and that he will most probably fall upon this side; it may, however, happen that the recoil, or second half of the shock, takes place in time to give him a rotation towards the west, sufficient to set him upright upon his feet again. Imagine, next, that the man is situated vertically over the seismic focus; in this case the wave emerges in a vertical direction, and the man is lifted up and let down again, standing erect throughout. If we replace the man by a building whose walls face the points of the compass, it is easy to see that something similar will happen to it; but there is this difference, that the walls of the building being fixed to the base, and this again sunk into the ground, it may very readily happen that the building does not topple over bodily towards the east, but that the east wall alone is fissured along its base, or that it draws away the ends of the north and south walls, producing vertical fissures in these near to their eastern extremity, while similar, but, for certain reasons, less marked appearances, occur at the western end through the recoil. Conversely, therefore, from these appearances in a shaken building, we may infer that it was subjected to a wave such as we have supposed, while after vertical emergence hardly any perceptible result is to be observed. For the intermediate and more ordinary cases of shocks oblique to the horizon and to the walls, we shall have intermediate results in the obliquity of the fissures, and the magnitude and shape of the fractured masses. The magnitude of the shock and the total amount of displacement may also be inferred from the work done, as manifested by the width of the fissures and the weight of the masses dislodged. As we have frequently said, it does not appear to us that our author's reasoning and principles are very clear in the working out of many of these cases; and we would especially refer to his investigation of the projected fragments at the beginning of the eighteenth chapter of the first volume. Nevertheless we have considerable confidence in many of his main results, especially in his determination of the position of the focus of disturbance. This he places, from the mean of sixteen observations, about 5¾ miles vertically under Caggiano, a village 60 miles south-east of Naples. One pencil of waves traced by him is very interesting. It appears to have proceeded in an unbroken line for a distance of nearly forty miles to the north-west, where it impinged upon the range of Monte St. Angelo. Here it was refracted and reflected, and after another course of some fifteen miles to the south-west, it again proceeded nearly due north across the Bay of Naples, inflicting a very subdued shock upon that city.

After this we have many speculations, of great interest as stimulating thought and investigation on most important matters, but so extremely uncertain, in spite of the imposing formulæ in which they are involved, that they can only be regarded as vague and indefinite conjectures. Such are the temperature of the focal cavity, estimated from an almost random guess at the temperature of the "foyer" of Vesuvius to be something like 2000° Fahrenheit, the pressure of steam in such a cavity, and the consequent work done by the first disturbance, whence the maximum displacement at the earth's surface is calculated. Both from this calculation and independent observation, the extent of this displacement appears to have been very much smaller than is generally supposed, and not to have exceeded a few inches; whence Mr. Mallet concludes that the idea which regards earthquakes as instruments of elevation is erroneous, however true it may be that they occur along with, and as part of a train of circumstances, which do produce such elevation; as, for instance, in the great earthquake in India, in the district of Cutch, in the year 1829, when a tract of country, more than fifty miles long and sixteen broad, was suddenly raised ten feet above its former level, with innumerable other cases of the same kind. Such investigations have necessarily a large element of uncertainty, and need to be received with a judicious scepticism; Mr. Mallet seems to us occasionally, as we have hinted, somewhat too courageous, but his volume may be recommended as, in the main, dependible, and we are sure that no person interested in questions of geology or physical geography can fail to derive much interest and instruction from its perusal.

ST. BERNARD.*

THE so-called *Dark Ages* of former days should no longer continue to receive that appellation. Their importance in the sally of the best portion of the human race is now univer- and thoroughly acknowledged. Much has been done to illustrate them, [illegible]idation which they have received at the hands of modern writers has been of the greatest historical importance. They belong, indeed, to a period rather of development than of growth. It was their character to be of a provisional nature. Many institutions of essential use in a state of transition and preparation may have afterwards lost their value and significance, but were not the less needed as organs in the obscure and gradual progress of change, which led through various stages from the rudiments of European civilization to an advanced condition of social maturity. Chief among these were the monastic orders and the Papal power—the one securing the special education of the clergy; while the temporary sovereignty of the Popes protected their independence among the secular dominions by which they were surrounded. The writer the least prejudiced by any religious convictions has done the amplest justice to the supreme importance of the mission of Catholicism in the Middle Ages. It is Auguste Comte who has indicated the Church as the cradle of modern civilized life; who has shown how favourable its principles were to human development; and who has acknowledged with gratitude that the source of social science is to be found in the remote ages of history to which the designation of "dark" has been so constantly but so inappropriately applied.

One of the greatest, if not the greatest, figure in those ages of extraordinary ecclesiastic domination and activity was that of St. Bernard—the great Apostle of the West—the maker of popes—the champion of orthodoxy—the preacher of crusades—the latest Father of the Church—the monk, *par excellence*, of whom Luther could say "he was the best monk, whom I love above all the rest"—the mighty disciplinarian of the monasteries—the general arbiter of disputes—the enemy of all evil and corruption—the simple Abbot of Clairvaux, yet far above the popes and emperors whom he moved at his will. His was one of those striking personal characters which seem most effectually to refute the notion that the events of history have been evolved under the pressure of some supposed force of circumstances, and have not in great measure depended on the individual direction of powerful minds, and on the energetic agencies of the wisest and strongest of their time and country. He was the soul of the Church during a considerable part of the twelfth century, and the Church was itself then the soul of history.

In selecting the life and times of St. Bernard as his subject, Mr. Morison has undertaken no ordinary theme. If he has not always risen to the heights, or sounded the depths to which he might have been led by it—if he has not added much of novelty to what is already written and easily accessible in the works of others on the same period, he deserves commendation for the selection of such a topic, and for the industry with which original authorities have been collected together, and placed before the English reader. Every man who now writes a serious book on a subject requiring thought, and in such a way as to make it interesting, and to suggest earnest inquiry, does a service worthy of praise. It is not given to all to treat ecclesiastical annals with the fascinating powers of a Milman or a Stanley; but there is room for the labours of all, and the lore of many a monkish chronicler still remains to be reproduced and circulated under the auspices of the modern subscription library.

St. Bernard is said to have worked more miracles in his life than are recorded in the whole of Scripture. In some of these the grotesque humour of the age is curiously exemplified:—

"When he came to the dedication of the Church of Foigny, it happened that an incredible multitude of flies filled the place, and their noise and flying about became an intolerable nuisance to those who entered. As no remedy seemed at hand, the Saint said, 'I excommunicate them;' and in the morning they were all found dead. They covered the whole pavement, and were shovelled out with spades, and so the church was rid of them. This miracle was so known and celebrated, that among the neighbours—a large concourse of whom had been present at the dedication—the cursing of the Foigny flies passed into a proverb."

On another occasion, Beelzebub himself—the lord of flies—was made to cut a very ridiculous figure:—

"In the spring of the year 1137, Bernard, accompanied by his brother Gerard, set out for Italy. The devil, we are told, had a particular objection to this journey. He foresaw and hated what was to come of it. Therefore, when Bernard was passing along the Alps, the demon broke the wheel of the carriage in which the abbot travelled, in order to hinder him as much as possible, or even pitch him over a precipice. The saint took a saintly and yet a fearful vengeance on his enemy. Careless and contemptuous of the intended injury, he ordered Satan himself to become a wheel, and replace the broken one. The fallen angel obeyed the words of the holy man; the carriage moved on as before; and the worsted and rotatory fiend, amid scorn and laughter, carried Bernard in safety to his destination."

In order to give full effect to Bernard's position, it is necessary to show by what elements of secular life he was encompassed, and this part of Mr. Morison's task has been well executed. The baronial wars, the sieges, the murders and cruelties of the time, are described with much life and vigour. It was among the actors in such scenes that the work of civilization had to be carried on, and no adequate justice can be done to the labours of the clergy, without always keeping in view the condition and manners of the people from whom they were taken and among whom they lived.

In a life of St. Bernard, it was natural that prominence should be given to Abelard, in that character at least of arch-heretic in which he came into destructive collision with the great champion of the Catholic faith. But it was hardly necessary to present us with a

* The Life and [illegible] James Cotter Morison, M.A. 1863. Pp. 498. St. Bernard, Abbot of Clairvaux, A.D. 1091—1153. By [illegible] Lincoln College, Oxford. London: Chapman & Hall.

Digitized by Google

detailed life so long as to occupy a tenth of the whole volume. The old story, however, it must be admitted, is forcibly told, and for the hundredth time we have been interested in the persons and in the events with which all are so familiar. In one matter, indeed, Mr. Morison attempts novelty, and endeavours to discredit general tradition and the language of the latest historians, by expressing doubts on the supposed great beauty of Heloise. Perhaps the words of Dean Milman, that she "was no less distinguished for her *surpassing* beauty than for her wonderful talents and knowledge," may not be justified by the passage of Abelard, which must be taken as the best evidence on the subject. But the passage is obviously intended rather to exalt her intellectual accomplishments, than to disparage her personal attractions; and it is clear that Heloise must have had charms of no common order, or she would never have been the heroine of the strange and disgraceful romance by means of which her name has acquired so questionable a celebrity.

Bernard and Abelard met at the Council of Sens. The heresies of the great dialectician were submitted to the Council, but he abruptly refused to abide by their adjudication, and at once appealed to Rome. His friends circulated their own version of what followed after his departure.

"After dinner Peter's book was brought in, and somebody was told to read it in a loud voice. The fellow, full of hatred to Peter, watered by the vine—not of Him who said 'I am the true vine,' but of that which cast the patriarch naked on the ground—bellowed out louder than he was asked to do. Presently you saw the pontiffs insult him (*i.e.* Peter), applaud with their feet, laugh, and play the fool, so that anyone might see they were paying their vows not to Christ, but to Bacchus. Then the cups were saluted, the goblets filled, the wine praised, the episcopal throats moistened. Horace's recommendation,—

'Nunc est bibendum, nunc pede libero
Pulsanda tellus,'—

was executed from memory. But their potations of the sleepy fluid had already drowned the hearts of the pontiffs. When, during the reading, anything subtle or divine, but unusual to pontifical ears, was heard, they were all of them cut to the heart, and gnashed their teeth at Peter; and these moles, judging a philosopher, exclaimed, 'Shall we suffer this wretch to live?' Wagging their heads, as did the Jews, they said, 'Ah! behold him who destroyeth the temple of God.' So did the blind judge words of light; so did drunkards condemn a sober man; so did eloquent wine-cups attack the organ of the Trinity. . . . These great philosophers had filled with wine their barrels of throats. The fumes of it had so invaded their brains, that the eyes of all were drooping from sleep. Still the reader droned on; the assembly snored.

"One rested on his elbow, another procured a cushion, a third took his nap with his head upon his knees. So when the reader came upon some thorn-bush in Peter's field, he exclaimed to the deaf ears of the bishops, 'Damnatis, do you damn this?' Hardly awake at the last syllable, in a drowsy voice, and with hanging heads, they muttered 'Damnamus.' Others, however, roused by the noise of the damners, decapitated the word, and said . . . 'namus.'"

Ample specimens are given by Mr. Morison of the writings of St. Bernard. The funeral sermon on the death of his brother Gerard may be specially mentioned as full of sad and tender beauty. The power he exercised over the minds of his hearers when addressing them, is well described in a passage relating to a later period of Bernard's life, when he appeared at Vezelai at Easter in 1146 to preach the second Crusade:—

"Easter came, and multitudes flocked to Vezelai at the united bidding of the Pope and king. The town could not contain the ever-gathering throng. On the declivity of the hill which overlooks the plain of Vezelai, the people were assembled. The king and his knights were there, the beautiful and haughty Eleanor was there, the crowd of poor hard-worked peasants were there, each grade by its dress and bearing showing to what class of society it belonged. But now, nobles and courtiers, even the young king and his queen, have ceased to be the centre to which all eyes were turned, for Bernard of Clairvaux has come. Pale and attenuated to a degree which seemed almost supernatural, his contemporaries discovered something in the mere glance of his eyes which filled them with wonder and awe. That he was kept alive at all appeared to them a perpetual miracle; but when the light from that thin calm face fell upon them, when the voice flew from those firm lips, and words of love, aspiration, and sublime self-sacrifice reached their ears, they were no longer masters of themselves or their feelings. This occurred whenever Bernard preached to great numbers, and the meeting at Vezelai was not an exception. At the top of the hill a machine of wood had been erected, and on this platform Bernard, attended by the king, appeared. Raised thus high above the crowd, he could be seen, if not heard, from all parts of the vast concourse. He spoke; the mere sound of his voice was grateful to the loving admiration which surrounded him. Presently rose a murmur from the sea of faces, which rapidly swelled into a shout of 'crosses, crosses;' and Bernard began to scatter broadcast among the people, the large sheaf of them which had been brought for that purpose. They were soon exhausted. He was obliged to tear up his monk's cowl to satisfy the demand. He did nothing else but make crosses as long as he remained in the town."

Vigorous as was Bernard's zeal for the Church, stern as was his denunciation of heresy, he rose above the common spirit of religious persecution. Working what Mr. Morison rightly terms "a miracle of Christian love and fortitude," he interfered with true charity in favour of the degraded and down-trodden race against whom every man's hand was lifted during the frantic enthusiasm of the Crusades. He came forward to defend the Jews from the cruelties which it was considered a virtue to exercise upon them. A Jewish contemporary writes, "Had not the tender mercy of the Lord sent that priest (Bernard), none would have survived."

Of the deep humility of character which existed in the man who had so many claims to greatness, a convincing anecdote is given:—

"A certain regular clerk one day came to Clairvaux, and asked with some importunity to be admitted as a monk. The abbot exhorted him to return to his church, and refused to receive him. 'Why then,' said the clerk, 'have you in your books given such praises to a perfect life, if you refuse your help to one who wishes to lead it?' and, working himself up to a great passion, he continued:—'If I had those books here, I would tear them in pieces.' Bernard quietly answered, 'I do not think you will find it anywhere asserted in my writings that you could not be perfect in your own cloister. If I remember rightly, I have everywhere in my books advised a change of manners, not a change of abode.' Upon this the clerk rushed at him, and hit him a violent blow on the cheek, causing a severe bruise. Those present were ready to seize the culprit with some degree of violence. But Bernard restrained them, and forbade any one to touch him. He merely gave orders that he should be safely and carefully led out, and that no hurt should be done him. The poor wretch, overcome by Bernard's gentleness, was taken away trembling with horror and amazement."

Mr. Morison has exhibited the character and actions of St. Bernard with faithfulness and affection. He betrays no spirit of partiality; but has executed his task most conscientiously, and with abundant reference to original authorities. Indeed we should have been glad to have had more of Mr. Morison's own work, and less of the unwrought materials which, although carefully prepared and arranged, are perhaps somewhat more copious than general readers will find either necessary or convenient.

HOMER'S ODYSSEY.*

A MAN who undertakes the translation of a great author undertakes a very serious and noble work. He ought not to attempt such a task without being fully aware of the responsibility which he incurs. If by an ignorant and careless travesty he degrades and misrepresents the book which he is professing to reproduce, he deserves the indignation of those who feel bound to vindicate the honour of any writer who has earned a high place in their love and gratitude. Fortunately, however, translation is a task of such acknowledged difficulty, and requires so much care and patience, that men do not often take it up lightly or inconsiderately. Making full allowance for the arduous labour which must be spent on such a task, critics are usually inclined to receive a new translation with leniency and even with favour. It is almost inevitable that every translation should be, when strictly judged, more or less of a failure. For this every candid critic will make full allowance; but at the same time we have a right to expect that every new translator should, in *some* points at any rate, prove himself superior to those who have preceded him in his immediate task. If he has not done this, his translation is wholly useless.

Chapman, Pope, Cowper, and most other translators of Homer, have prefaced their labours by some observations of great dignity and beauty; and they have evidently been anxious to show how much they felt the importance and difficulty of the task they had undertaken. We regret to find that in this, as well as in many other respects, Mr. Norgate differs from them. In a meagre, flippant, and poorly-written preface, he tells us that he mainly aimed at "closeness and freedom;" that he determined "to sacrifice rhyme to reason," in order "*to hover the more closely to* the wit and sense of Homer, as they appeared to him;" and that he thinks rhyme well-adapted for "short compositions, such as ballads, sonnets, *or ingenious advertisements for puffing the sale of wares, &c.*," but "intolerably wearisome in a long poem." At the end of the book, we therefore find that "the translator, *in* laying down his pen, *here* indulgeth *in* a puff, not from weariness, but in accordance with the custom of the age." We are not going to quote this "puff," except to agree with the elegant remark,—

"Ah, might the old bard but see thee as Here (*sic*),
Sure would he be clean frighted!"

In one respect, however, this "puff" is valuable, as throwing some light on Mr. Norgate's views in coming forward as a translator; for he says:—

"Yet may'st thou ease a schoolboy's pains,
And prove to Him (*sic*) a treasure,
For ready change of Homer's coin,
Valued at English measure."

The last two lines we do not profess to understand, any more than we understand what is meant when Mr. Norgate tells us of his page, that—

"*He'll* serve, e'en as *he* is able,
And tell in English tongue the *tale*
Of Homer's wondrous *fable*."

This, we presume, is intended for wit; but if Mr. Norgate really had no higher object in view than to provide schoolboys with "crib" to the "Odyssey," we think that he has failed conspicuously, and that he cannot for one moment contend with the ordinary Mr. translator of Bohn's classical series. Be that as it may, and Norgate wishes any scholar to take the trouble of

F. S. Norgate.

* Homer's Odyssey, reproduced in Dramatic Blank V-

Digitized by Google

criticizing his version, we recommend him to re-write his preface, and, out of respect for Homer, if not from regard to his own interests, to expunge this intolerable doggrel, as well as the eight lines of nonsense which he substitutes for the one word "Errata." They only serve to prejudice the reader against his labours, unless, indeed, they were meant to illustrate the merciful deliverance we have had in being spared a translation in Mr. Norgate's rhyme.

We fear that the vagaries which we have noticed display a sort of vulgarity which goes far to prove that Mr. Norgate is not qualified to take his place among the honourable ranks of great Homeric translators. It is true that he has been engaged, he tells us, upon this work since February, 1858. But if this fact is mentioned in order to prove that he has taken an extraordinary amount of pains, Mr. Norgate under-estimates the nature of his duties. Pope's translation of the "Iliad" occupied the unremitting labour of at least seven years (1713—1720), and his "Odyssey," although confessedly a hasty and poor performance, of which Browne and Fenton wrote twelve books, yet required three years for its completion. Cowper's translation also took up "many thousand hours" during a period of seven or eight years; and though both Pope and Cowper may be ultimately superseded, yet Mr. Norgate, so far from equalling the least of their merits, does not in any respect approach them; he is not even "proximus longo intervallo." Archdeacon Hare may be right in saying that "neither the epigrams of Pope, nor the anti-Homeric Miltonism of Cowper," at all reproduce the force, the freshness, the simple passionate truthfulness of Homer; but they succeed, at any rate, as Chapman also succeeds, in presenting their readers with poems which have sufficient fire and beauty to create something of the same kind of impression which Homer himself may have been supposed to create in the minds of his countrymen. If their matter is sometimes inaccurate, they compensate for it by their beauty of form; they are translations of a true poet by true poets, and they never degrade Homer if they never equal him. And of these Cowper is certainly as accurate as Mr. Norgate,—we suspect that he was a far better scholar,—while he is incomparably more beautiful and readable.—His Miltonic stiffness may fail to represent Homer's youthful vigour and vernal grace, but it is far preferable to the jerky and uncouth gambols of Mr. Norgate, and to the ricketty, knock-kneed lines which he complacently designates "dramatic blank verse." Most of our readers may be supposed to know the commencement of the "Odyssey":—

"'Ανδρα μοι ἔννεπε, Μοῦσα, πολύτροπον," κ.τ.λ.

How do they like this version of it?

"The *travelled* man of *many a turn*,—driven *far*,
Far wandering when he had sacked Troy's sacred town;
Tell me, O Muse, his tale; how *too* he *conned*
The manners of *mankind*," &c., &c.

As this is certainly not poetry, we should greatly have preferred honest prose to so hybrid a measure. For Mr. Norgate, little as he seems capable of appreciating Homer, or entering into his grandeur and sweetness, at least tries to be accurate. He even attempts to reproduce, though not very happily, the play on the name Odysseus, in the sixty-second line of the first book, which most translators overlook. After having tested his translation by a few of the most difficult passages in the "Odyssey," we find that he has fairly given the general sense of the original. Perhaps, if he had discarded his dramatic blank verse, he might have produced a prose translation which would serve as a tolerable guide to "the schoolboy" whom he has had in view.

But we must give a few more specimens of Mr. Norgate, in order that our readers may judge of his value for themselves. All who have written on the translation of Homer have insisted upon the necessity of *harmony* and *energy* in the version; but our readers will, we fear, agree with us that Mr. Norgate is rarely energetic, and never by any chance harmonious. Let us take a few passages at random. Here, for instance, is the grand description of Athene arming herself:—

"So saying, she *forthwith* bound upon her feet
Her *comely* sandals, golden, *all* ambrosial,
Wonted to bear her swift as gale of wind,
Whether upon the boundless land or sea.
Then seized her spear, made sharp with brazen point,
Of *weighty size and solid strength*: wherewith
This daughter of a mighty sire subdues
Ranks of *bold* chiefs with whom *she's haply* wroth."

Compare this with Cowper's (in the Iliad):—

"and her spear
Seized, ponderous, huge, wherewith the goddess sprung
From an almighty father levels ranks
Of heroes against whom her anger burns."

Again, compare Mr. Norgate's translation of the passage about Hercules,—

"On every side about him was there screaming
Of the fear-bewildered dead, e'en as of birds;
And he the while, as black as midnight, grimly
Looking about, with uncased bow in hand,
And arrow upon the string, *seemed ever aiming*;"

with Cowper's:—

"Around him, clamorous as birds, the dead
Swarmed turbulent: he, gloomy-browed as night,
With uncased bow and arrow on the string,
Peer'd terrible from side to side, as one
Ever in act to shoot."

The latter is in every case at least as accurate as the former, and there can be no question which is the truer and finer in taste. Nor is the case much improved if we place Mr. Norgate side by side with some translator who has chosen the heroic couplet as his metre. Does the reader, for instance, prefer Mr. Norgate's,—

"*Indeed now* praise *not death, not death*, to me:
Much rather would I be upon the glebe,
A hireling labourer to some needy swain,—
Whose *means of livelihood* were *not abundant*,
Than to be lord over all the dead deceased;"

to Broome's translation of the same passage, free as it is,—

"Talk not of ruling in this dolorous gloom,
Nor think vain words (he cried) can ease my doom.
Rather I choose laboriously to bear
A weight of woes, and breathe the vital air,
A slave to some poor hind that toils for bread,
Than reign the sceptred monarch of the dead"?

It will, we think, be seen from these specimens, that Mr. Norgate also lacks that nobility of style which is another most indispensable qualification for any one who wishes to render Homer into English. Few passages in the whole range of ancient and modern literature are more overwhelmingly magnificent than the opening of the twenty-second book of the "Odyssey," where Odysseus, bared of his rags, bounds upon the vast threshold, and empties the quiverful of swift arrows before his feet, and pierces the throat of Antinous as he lifts the goblet to his lips. So vivid is the passage, that Plato asks whether, in reading it, a man is in his senses or beside himself! Here, if ever, the most creeping translator would at least *try* to soar, yet Mr. Norgate can find us no better expressions than that "Odusseus, *ever ready*," aimed his arrow "*right* at Antinous," who was *fingering* a goblet.

"At him, *howe'er*, Odusseus
Aimed, and with arrow *hit him in the gullet*,
And the point *went right clean* through his tender throat,
* * * * * * *
Sharp then he struck *with foot*, and kicked away
His table from him, scattering *all* the viands
To the floor. And bread, and roast, *and all* were smutched."

Mr. Norgate may fancy that this is literal, but it does not convey the faintest conception of Homer's awfulness and vigour, and so fails in the chief essential of a faithful reproduction. It is an ungracious task to find fault, and we have no desire to do so. If we had such a desire, a little more detail in criticism would have obliged us to modify very considerably the praise of accuracy which we have bestowed on this version; for some of the renderings which we have observed prove that Mr. Norgate's scholarship is not of the highest kind. We have, however, said enough to show that it is an unsuccessful effort, and will only add that it is peculiarly unfortunate in appearing at the same time as the exquisitely melodious and poetical translation of Mr. Philip Worsley.

THE CAPITAL OF THE TYCOON.*

Upon the same day that papers on affairs relating to Japan were laid before Parliament, Sir Rutherford Alcock, at present her Majesty's Minister to the Court of the Tycoon, laid his book upon the same country before the public. It will save people a great deal of trouble. A blue book is a thing unattainable practically to the general reader. He must feel specially interested in a subject before he makes the effort necessary to procure the unwieldy volume, and wade through the dry and formal correspondence which conceals here and there a plum. Every Member of Parliament either can, or should be able to, show piles of blue books stacked in presses, each of which as it came out he glanced wearily through, and hastily forming an opinion on its contents, satisfied his conscience, and voted confidently ever after. As it is the habit of the Foreign Office to extract from blue books those more secret and important items of information which usually form the key to a policy, but which are very properly kept back from the public, it happens that our Member almost invariably arrives at wrong conclusions, and that blue books are for the most part little more than gigantic snares forced from an unwilling government, by a public who prefer rather to be entrapped than not to trespass at all. The Japanese blue book, however, is probably an exception to this rule. Our relations with his Majesty the Tycoon require no concealment, and Sir Rutherford Alcock has done us the favour to gild the pill, and to dress up the contents of the official papers in two interesting volumes, which actually in these days of high-pressure literature we might designate as a record of "sensation diplomacy." The daily events of life in the British Legation at Japan are quite as thrilling as those which usually mark the careers of heroes in novels, and to judge from a picture facing the title-page, called "the village beauty," our diplomatic heroes are not necessarily deprived of heroines.

To give the reader an epitome of the various exciting incidents with which these pages abound would be as unfair upon the author

* The Capital of the Tycoon: a Narrative of Three Years' Residence in Japan. Longman.

Digitized by Google

as to condense the plot of a novel, a process at once easy and damaging. To tell him that his interest will be sustained at concert pitch throughout, would be no less unfair upon the reader, who must make up his mind either to study and digest sundry weighty questions incidental to our relations in those distant regions which must needs be dry, or to skip them. If he be in either House of Parliament, we trust he will adopt the former course. Some important questions, affecting the conditions under which our future intercourse with Japan is to be conducted, will probably come before Parliament at an early date, and if the information possessed by honourable members is limited to their knowledge of the fact, that the population bathe naked in the streets, they are not so likely to judge correctly on the proper course to be pursued, as if they make themselves acquainted with those interesting particulars bearing upon the administrative system of Japan which Sir Rutherford has been the first to give us. We would recommend them to form some definite idea as to what a "Daimio" is. It is not a curious old specimen from Yedo, for sale at Christie & Manson's, nor is it to be found in the Zoological Gardens, though the animal is peculiar to Japan. Then a "Yaconin" is a creature of singular habits, and in the work before us we are furnished with illustrations of his instincts and propensities, important in a natural history point of view.

We quite sympathize in the difficulties which any Member so laudably industrious will experience in his endeavour to remember the native names of the various political forces at work: and the fact that some of these are European introductions does not facilitate the matter. The word "Tycoon" itself, for instance, was not known to the Japanese before the foreigner visited his empire. The Americans assert that they were the first to introduce it; but we doubt that they would go to China for a word, when they have such a rich vocabulary of their own to draw upon. The Japanese call the Tycoon by two or three different terms among themselves, but never by that of Tycoon. Our author gives us a curious account of the ceremonials attending his interview with his temporal Majesty, how he was obliged to count the number of mats he traversed between each bow, and how the attendant courtiers crawled about in the imperial presence on their hands and knees; but he throws no light upon the mysterious being who theoretically lives in celestial regions, but who is stated by the Japanese to reside at Miako, whose functions, while he is in this sublunary sphere, seem to be nearly allied to those of a spirit medium, but who, for all we know of a certainty, may not exist at all, but be a mere "Mrs. Harris" under spirit influence, useful only as a reference to the Mrs. Gamp whose bodily presence is known to us at Yedo in the form of the Tycoon.

Like the celebrated legal firm in which the invisible partner always thwarted the amicable weaknesses of his good-natured colleague, the Tycoon throws all the odium of his obstructive policy upon the spiritual shoulders of the Mikado. Thus, upon one occasion Sir Rutherford, in the course of a most interesting overland journey from Nagasaki to Yedo, arrives at a point about thirty miles from Miaco, and at last looks forward to gaining some information with reference to its mysterious inhabitants; but his hopes are cruelly nipped in the bud: a deputation arrives from the Government at Yedo to put a veto on his further progress, though, according to treaty, he had a perfect right to visit the city. As usual, the Mikado was the stumbling-block:—

"The information had reference to some negotiations going on for the marriage of the Tycoon with a daughter of the Mikado, and the healing of some differences which had disturbed the councils of the empire; for something of rivalry and antagonism still exists, it would appear, between the sovereign *de jure* and the Tycoon, who governs *de facto*. It was difficult to avoid some suspicion that the whole thing was merely a get up—seeing the impossibility of turning us back, by menace of personal risk, in the hope that serious danger to the Government, and political considerations would furnish an argument of greater cogency. Nor, if these were their tactics, were they far wrong, as under all the circumstances neither Mr. De Wit nor I felt justified in taking it for granted that the whole history of the relations of the Tycoon or Mikado was a mere invention to serve the end; or, assuming the reality of such complications, to disregard wholly the representations of the Government to which we were accredited. We consented, therefore, to avoid Miaco in our route to Yedo, the point on which the council had evidently felt most anxious."

So Sir Rutherford has had to leave Japan at the end of three years, not much wiser so far as the spiritual emperor is concerned than when he went there; not that even a visit to the sacred capital would have done much to enlighten him. Those Dutch who have passed through it like squirrels in a cage have told us little we did not know before, and we trust that our author may yet have the satisfaction of being the first to throw some light on this interesting subject.

But it is not merely the politician who will derive benefit from the perusal of the work before us; it is varied enough in its contents for all classes. There are chapters of amusing exploratory travel; notes on the flora and fauna for naturalists; statistics of trade for merchants; and plenty of minute life-painting. All the varied incidents, political, tragical, and social, which befel the Mission during three years are recorded at length,—scarcely a week is unaccounted for, and yet there is no monotony.

But, like many a work of fiction which we read with interest, we may follow the fortunes of the hero on paper with amusement, while we do not envy him the trials he underwent; it seems hard to be engaged all day in a diplomatic struggle with the most deceitful and obstructive ministry in the world, only to vary the excitement by a hand-to-hand fight with a band of assassins at night; to outmanœuvre in the one case, and escape with life in the other, only to be abused by all your countrymen on the spot, in whose behalf the trouble and risks are incurred. To bear an exile under these circumstances with unruffled temper, it would be necessary to share with the Mikado some of his spiritual nature. Sir Rutherford has grievances both against the naval authorities on the station and the lawyers at Hong Kong; and as one of the merits of his book is the candour and absence of official reserve displayed throughout, he takes us into his confidence, and claims our sympathy in these as in his other trials. After so long a period of isolation and banishment, an occasional indulgence in personal garrulity may be easily forgiven; and if the author himself comes out in somewhat strong relief, we must make allowances for the effect likely to be produced upon the mind by a position necessarily in some degree antagonistic to the influences which surround it, and in which the faculties are subjected to a tension so unnatural and sustained.

PROTESTANTISM IN FRANCE.*

THE author of "Lower Brittany and the Bible There," says that if the Bible does not occupy the whole of his book, the fault is not his; for, unfortunately, it occupies as yet but a small space in Brittany. When Mr. George Borrow wrote his "Bible in Spain," full of romantic personal adventures and picturesque scenes of gipsy life, the manliness and cleverness of his story at once gained favour with the world, but the patrons of the Bible Society thought it was rather too boisterous a work for one of their accredited agents to produce. Mr. Bromfield, though not a philological and pugilistic genius like Mr. Borrow, has a fair share of that enterprising and inquiring spirit, which the business of distributing Bibles among a priest-ridden foreign population demands. He was not, indeed, an itinerant agent of the Bible Society, but resided for some years with his wife and family in a chateau which he had hired near Morlaix, and occupied himself with agriculture and sporting, as well as with the affairs of the "Society for the General Interests of Protestantism in Lower Brittany," of which he was an active member. The opportunities which he had of becoming acquainted with local society were greater than a wandering missionary could have enjoyed. His pages bristle with opinions which, though sometimes rudely and arrogantly expressed, are generally in accordance with those of most Protestant Englishmen who have closely watched the social effects of the political and religious institutions across the Channel.

It was but natural that Mr. Bromfield's attention should especially be directed to the vexatious conduct of the administration with regard to the liberty of worship, the liberty of teaching, and the liberty of printing, in the case of persons whose doctrines are obnoxious to the Roman Catholic priesthood. Many instances are related in which the local authorities have stretched the law most unjustifiably for the purpose of annoying or suppressing the evangelical congregations, and of preventing the sale of Protestant versions of the Scriptures, or other religious books. The préfet of Finisterre, thus, forbade at one time the publication of the *Bulletin Evangélique*, edited by M. Le Fourdrey, the pastor at Brest; and when, by virtue of a clause in the new press law, which limited the Préfet's power to political journals, the *Bulletin* had been started, it was visited with a penal warning for extracting, in its second number, a paragraph from the *Record*, stating that five persons at Edinburgh had "abjured the errors of Catholicism;" this notice being regarded by the préfet as "showing a tendency to attack the religion of the majority" in France, and as likely to provoke a "dangerous controversy." Again, one of the *colporteurs*, with a regular licence, employed in selling copies of the Bible at Quimperlé, was stopped by the gendarmes, deprived of his papers, and ordered to cease from his avocation; but the Minister at Paris, having been appealed to, decided that he might continue to sell the Scriptures if he chose.

In the same intolerant spirit, the meetings for Protestant worship in a schoolroom at Fresnoy le Grand, in the department of the Aisne, were prohibited as "likely to affect the public peace;" in justification of this decree, it was alleged that there were no Protestants in the commune; and when, upon an inquiry before the juge de paix, no less than forty-one heads of families, representing two hundred persons, declared themselves Protestants, the préfet refused to forward to Paris the petition which they had signed, alleging that he did not believe they were "animated by any sincere religious sentiments," and calumniating them *en masse* as "persons of bad reputation and men without morality or conduct." In that case, however, the result at length was, that the opening of the chapel has since been allowed. At Estissac, where there were about seven hundred professed Protestants, the mayor one day entered their place, with his gendarmes, while divine service was going on, turned the preacher and congregation out of doors, and M. Recordon, the minister, was prosecuted before the tribunal at Troyes, and punished with a fine and costs, for having presided over an unauthorized religious assembly. At Trouville, near Havre, more than a hundred and fifty Protestants being found among the frequenters of that watering-place in the summer, a chapel was built by M. Grelley for their use, and before it was ready for opening, an official notice from the mayor was stuck upon its doors,

forbidding anybody to worship there. The préfet of Calvados, who was applied to for redress, told the congregation that they might worship anywhere else if they pleased, but not in that building, because its proprietor had been pointed out to the police as a man of dangerous character; the sole offence of poor M. Grelley, as it seems, being that he had sold Bibles and Testaments. Another case mentioned by Mr. Bromfield, whose complaints are by no means confined to those provinces where he has himself resided, is the forcible dissolution of a school at St. Maurice, by order of a colonel of lancers, while the department of the Yonne was under military command.

The most offensive instances, however, are these. At Cugaud, in La Vendée, the friends of a Protestant gentleman who had died there having wished him to be buried there by the pastor of Nantes, the mayor gave order that his corpse should be laid in a corner of the cemetery allotted to criminals and suicides, but that the coffin should be carried in through a breach in the cemetery wall, instead of through the gate, and that the Protestant minister should not accompany the procession. The person whose sepulture was thus to be inhumanly degraded had been one of the most respectable inhabitants of the commune, had himself filled the office of mayor for five or six years, had made gifts and benefactions to the local charities, even to the Roman Catholic church at Cugaud, and had entertained the bishop, with several priests, at his table. On this occasion, the Government overruled the petty tyranny of the local authorities, and directed that the funeral might take place honourably; but then ecclesiastical powers, in default of the civil, were exerted to trouble the repose of the grave. A sort of excommunication being laid upon the place, the grand mass was forbidden to be said in the church of that parish, or any further burials to be performed; and the fanaticism of the peasantry was so much excited, that it was requisite to station a body of soldiers there to prevent them from burning the dead man's house, or tearing his body from the tomb. An order was even obtained, by urgent solicitation, for digging up the coffin, but its execution having been delayed, the matter was finally allowed to rest.

Several instances of a somewhat similar character are narrated in this volume. It certainly appears, from the very text of the official documents which Mr. Bromfield presents to us, that the French provincial administration, from the prefectures downwards, is guilty of the most arbitrary and insolent treatment of French Protestants. The common trick, in order to cover with a pretext of legality the prohibition of Protestant worship, is to deny the existence of any Protestants in the commune; but when their existence cannot be denied, they are slandered, as in the department of the Var, where the opening of a school at Cannes was refused, on the ground that "the means employed for propagating the Protestant religion have been and always are immoral."

Now, there are about two million Protestants actually in France at this time, and although it is often falsely alleged, as one ground for the suppression of their religious meetings, that they are held to conspire against the Government, the Emperor cannot quite shut his eyes to the impolicy of permitting these freaks of intolerance, in the subordinate official potentates, to rouse a spirit of disaffection in so numerous a body of citizens. Mr. Bromfield assures us, indeed, that Napoleon III. sympathizes with Protestants on many points; though, says our author, "I fear he does not care much for the religious value of either Romanism or Protestantism, for he is not a religious man." We recollect, however, that the progress of his court though Brittany, three or four years ago, assumed the air of a devout pilgrimage when he approached the notable shrines of popular enthusiasm in that believing province. This may indeed have been a stroke of State policy not much more inexcusable than the visits of King Victor Emmanuel to the Holy House at Loretto and St. Januarius at Naples; and since the jovial Henri Quatre, whose historic popularity Louis Napoleon would fain eclipse, remarked in his day that *Paris vaut bien une messe*, we must not scrutinize too closely the traditional practice, by French rulers, of an official species of piety. The anecdote here told of the visit of Louis Napoleon to Nismes, while he was Prince President, when he met a deputation of eighty-three pastors from one Department, and after having publicly replied to them, that he would maintain religious liberty, next day put off laying the first stone of a Catholic Church, on purpose that he might have time for a long private interview with the President of the Protestant Consistory, is still dwelt upon by Mr. Bromfield with satisfaction, though after ten years' such experience of his government as we have seen.

Mr. Bromfield is very much disposed throughout to make great allowances for the difficulties with which the Emperor has to contend, in governing such a nation as the French, who, in Mr. Bromfield's opinion, are not fit at present for self-government; and therefore, while he has a thorough contempt for the farce of universal suffrage, and an Englishman's dislike of the system of gagging political discussion, Mr. Bromfield would be content to tolerate the Imperial *régime* if the Bible had fair play in France. We have said enough of his book to show the general purport and nature of its contents. The discursive reflections in which he has indulged concerning French politics, society, and manners, though neither original nor profound, are worthy of being received as the natural impressions left upon an ordinary English mind after some observation of native life in Brittany; while his descriptions of a few places, such as Brest, where the convict-prison especially attracted his notice, may be glanced at for the little information which they contain.

SHORT NOTICES.

Mr. Hughes, while conducting one of the evening classes at King's College, for the study of English history and geography, found the want of such a book* as he has since compiled. Historical geography, as that term is here applied by him to this branch of knowledge, includes not only a description of the situation, the climate, the natural features and products, the minerals, plants, and animals of a country, but an account of its races of people, and of the process by which they have been moulded into a distinct nation. Beyond this he does not, in the present volume, attempt to narrate the events of the social and political history of England, but only to furnish a geographical, or rather a topographical commentary upon those incidents, as for instance the battles, which are associated with the particular places where they occurred. In addition to these local notices, he gives much information of a kind which belongs to the statics of history, such as the distribution of the population, their condition and industrial employments, the amount of wealth and trade in the country, and other matters forming the substratum of those passing interests and agencies, chiefly personal, by which political history is made up. This plan of a schoolbook on the subject of England, or indeed the whole British empire, treating its geography, in the widest sense, as the ground upon which its history is to stand, appears likely to aid much in the improvement of the old system of instruction, by which those two sciences, being unnaturally disjoined from each other, became less attractive and less valuable than they are when combined.

The sound and very serviceable series† of rudimentary treatises on the useful arts, long published under the name of "Weale's," has lately been extended by adding to it several new manuals of important practical subjects, with regard to which it is enough for us to observe, that we may rely upon a certain degree of special knowledge, guaranteed by the previous reputations of their authors. Mr. Robert Scott Burn, as a writer upon agriculture, is commended by several of his former works. In this first part of his "Outlines of Modern Farming," he treats of soils, manures, and crops; his second part is occupied with the breeding, rearing, and fattening of cattle, horses, and sheep; the third canto of his prosaic, but not less useful Georgics, will sing of the management of the dairy, poultry, and pigs. The "Rudimentary Treatise on Architectural Design," by Mr. E. L. Garbett, may prove of much service to pupils of his own profession, leaving to more accomplished connoisseurs the discussion of his theories of taste, in relation to that noble art.

As we should not advise a sick patient or his friends to rely upon their own reading of a Manual of Domestic Medicine for the treatment of a serious disease, we certainly should not encourage any man threatened with litigation to save his attorney's fees by consulting a "Handy-book of the Principles of Law and Equity,"‡ when a writ or a summons may overtake him at any hour. Professional counsels are not to be safely dispensed with, in any case where the inroads of those mischiefs, which lawyers and physicians alone understand, have actually begun, or menace an instant attack upon our bodies or estates. Yet as the perusal of a book of sanitary admonitions may teach the unlearned, with common care and prudence, to avoid the causes of disease, the volume before us, if it be correct in points of detail, which we have not leisure here to test, may instruct him how to perform, in a strictly legal manner, the every-day transactions of life, such as contracts and agreements of every kind, buying and selling different species of property, leasing and hiring, the duties of a testator, a trustee, a partner, a juryman, a prosecutor, a churchwarden, or any other public officer; and, by a general acquaintance with the rights and wrongs of persons and of property, to avoid the fines, costs, and penalties of the law, which no man wishes to have for his foe.

The danger of buying a horse, without knowing, at sight, a good one from a bad one, is a stock joke, as old and quite as well-founded as the jocular proverb, that "the man who wish to be his own lawyer must have a fool for his client." Mr. Peter Howden's little book§ on "Horse Warranty" may find, therefore, no less justification in the real need which it is meant to supply, than either of the technical treatises we have just noticed. It is compactly arranged, in brief pithy paragraphs, under distinct headings, to which there is a convenient index; and a vein of humour pervading the sententious utterance of its practical advice to horse-buyers, who are so liable themselves to be "horribly sold," even makes it somewhat amusing to other readers, as well as useful to these.

A very diminutive volume,‖ containing the precise definitions of a great many big words, is the Vest-Pocket Lexicon, which Mr. Jabez Jenkins first composed in America, and which Mr. Bromley has re-edited, adapting it, as he says, for popular use on this side of the Atlantic. This, we presume, he has done by the omission of a multitude of phrases which bear, in the English of the western hemisphere, a peculiar signification unknown to ourselves. Yet there will always remain, besides those scientific and technical terms, whose obvious derivation from the Greek or Latin

reveals their meaning at once to every classical scholar, a great number which, having been formed by the usages of a trade or a "craft," are a "mystery" to the uninitiated reader. This tiny book is a key to all such curious and useful verbal knowledge.

MUSIC.

ROYAL ENGLISH OPERA.—MR. BALFE'S "ARMOURER OF NANTES."

IT is now some eight and twenty years since Mr. Balfe started into sudden popularity by the production (at Drury Lane Theatre) of the "Siege of Rochelle;" an opera which, as the work of a young man, gave promise of a composer who might do much to raise English dramatic music from the unimportance into which it had fallen. With his Italian training, it was not surprising that Mr. Balfe's early works were a reflection of that school in which he had chiefly studied; any distinct nationality or individuality of style could only be expected from the further development of his powers, and under those influences of language and temperament from which he had been for some time estranged. During the interval between the "Siege of Rochelle" and the "Armourer of Nantes," some twenty operas, more or less, have been produced by Mr. Balfe; some of which were not only popular here, but also achieved success in France, Italy, and Germany; but, so far as nationality or individuality of style are concerned, Mr. Balfe is no more an English composer now than he was eight and twenty years since. The chief modifications to which he has been subject were alternations between the styles of Rossini and Auber, with an occasional incorporation of the two; and, later (as in his present opera), an imitation of Meyerbeer and of Verdi. Every young author or artist must commence by imitation. As Sir Joshua Reynolds says, "Invention, strictly speaking, is little more than a new combination of those images which have been previously gathered and deposited in the memory." In other words, invention is development rather than creation. The greatest men, whether in poetry, painting, or music, have always reflected, in their early works, the models on which they have founded their style. But the individuality of genius soon becomes apparent, and manifests itself by some "new combination" which displays its principal attribute, originality. The disciple developes into the master, and from the scholar becomes the teacher. Thus Spohr and Beethoven both show, in their first productions, that Mozart was the models of their early choice; while in their matured style, they became the most dissimilar of composers. Andreas Romberg, again, also commenced by imitating Mozart; but, as he remained to the last a mere imitator, without any individuality of style, neither his name nor his works are often heard in association with those of the great composers, although he has produced compositions of considerable merit in nearly every form of the art. The instances mentioned, however, are those of a consistent imitation of one pure model. In Meyerbeer we see the result of a restless vacillation between various and opposite styles. At first an imitator of Rossini, afterwards inclining to his own national school, the German, with an admixture of the French style, Meyerbeer's mature works present a triple compound, resulting in a species of musical eclecticism which, however admirable as the music of theatrical effect, will never found a distinct school or afford a safe model for imitation. Verdi again—originally imitating the sparkling brilliancy of Rossini and the sensuous melody of Bellini—strove to create an original style by violent effects and crude attempts at German profundity, which occasionally render his music spasmodic and incoherent, notwithstanding the flashes of real genius which frequently shine forth. Meyerbeer and Verdi therefore—neither of them possessing what may be called a pure style, or belonging to a distinct school—are perhaps the most unsafe models for imitation that could be named; and as Mr. Balfe's latest influences seem to have been derived from these sources, we presume we must renounce the hope formerly entertained of his attaining an individual style, or infusing anything like nationality into the music of the English stage. The composer and his work therefore remain to be considered irrespective of country or language; and the general merits of Mr. Balfe may be said to consist in considerable knowledge of stage effect, and power in working his concerted music up to points of climax—admirable vocal writing by which each individual voice is displayed in its best aspect—a thorough command of orchestral effect, especially in the brilliant styles of Rossini and Auber, and great skill in those minute and fanciful details in the accompaniments by which variety and contrast are obtained. Neither the composer nor the author (Mr. Bridgeman), can be congratulated on their choice of Victor Hugo's "Marie Tudor," as the subject of their libretto. Those intense melodramatic effects in which M. Hugo so delights, are well enough when passing in rapid action and clothed in the brilliant dialogue of the French dramatist. But when turned into English rhyme, occasionally varied by colloquial prose, and constantly halting, as such incidents must do, for the requirements of recitative, air, or concerted piece; the dramatic illusion is almost destroyed, and we cannot help feeling, as a witty Frenchman once remarked, that "the opera is a concert for which the drama is merely a pretext." An opera book cannot be too simple and intelligible in its action; the mere theatrical success of the work depending much more on the drama than on the music. Those who are startled by this proposition we would remind that Mozart's "Zauberflöte" never did, as it never will, keep the stage; some of its composer's finest music being killed, theatrically, by the stupid absurdity of the drama. From a similar cause, Weber's "Euryanthe" is but seldom represented, although, musically, quite worthy of the composer of "Der Freyschütz." The book of the same composer's "Oberon," although written with poetic grace and elegance, from its want of stage interest keeps out of the theatre some of Weber's most imaginative music. In the case of the "Armourer of Nantes," the fault is not in deficiency of stage interest, but in a complication of melodramatic incident, which is unfitted for, and evaporates in, musical treatment. Mr. Bridgeman has transferred the scene of the drama from England to France, and changed the British Queen Mary into the Duchess of Brittany, whose love for an unworthy court favourite, Count Fabiani, with the wrongs inflicted by the latter on Raoul, the Armourer of Nantes, and his betrothed, the orphan Marie, the punishment of Fabiani, and triumph of Raoul and of Marie, who proves to be the lost heiress of a wealthy noble. These incidents, including political plots and the murder of a Jew who refuses to give up to the count the papers which prove Marie's birthright, form the basis of the drama on which Mr. Balfe has wrought. Although some exception might be urged against the liberties taken with Victor Hugo's play, Mr. Bridgeman's task is otherwise fairly well executed. The text is mostly in verse, but in one or two instances drops into colloquial prose, which, being given as spoken dialogue, has a very disjointed and rude effect in the midst of a work mainly consisting of continuous music in the shape of airs, concerted pieces, and accompanied recitative.

The opera has no overture, but is preceded by a very few bars of instrumental prelude, in which the brass instruments are freely used, *à la* Meyerbeer. We are now so accustomed to expect an overture, that a feeling of abruptness is experienced when an opera commences with a mere flourish of instruments instead of that elaborate preparation which we look for in a work of any pretension. As it has been well said of books, "a work with a poor preface, like a person who comes with an indifferent recommendation, must display uncommon merit to master our prejudices and to please, as it were, in spite of ourselves." The long concerted introduction contains much bold and effective choral writing, with some characteristic contrasts between the music of the nobles and that of the people, several phrases reminding us strongly of Meyerbeer; while the employment of the chorus in unison at the passage "Yes, we'll help you," is entirely in Verdi's manner.

One of the best pieces in the first act is Marie's cavatina, "Oh, would that my heart," a very graceful and expressive melody, well suited to Miss Louisa Pyne's refined vocalization, and sung by her with exquisite finish of style. Raoul's ballad, "Jaded, parched, athirst, and drooping," is evidently written with a view to Mr. Harrison's energetic delivery, and intended to be one of the "hits" of the opera. Although an agreeable and flowing melody, it is not sufficiently striking to win that popularity which so many of Mr. Balfe's tunes have obtained. The duet between Raoul and Marie, "Were all the earth's vast treasure," is founded on a tune in waltz time which would suffice for dance purposes, but is quite beneath the dramatic situation. Fabiani's barcarolle, sung by Mr. Santley behind the scenes to a harp accompaniment, possesses little novelty of character, unless being in a minor key be so considered. The hunting chorus, which opens the second act, is of much too boisterous and rollicking a character for the situation, and would be more suitable for fox-hunters of the last century than for nobles and courtiers of any century. A duet of no special character, a rather graceful ballad for the Duchess (Miss Anna Hiles), and an aria for the same, lead to Marie's ballad "There's one who rear'd me," much of the effect produced by which must be ascribed to Miss Pyne's exquisite singing, since there is little novelty of phrase to distinguish this among a multitude of ballads. It certainly, however, was one of the chief successes of the opera. Fabiani's ballad "What joy to listen" is a *suave* melody in the true Italian style, and written with that consummate knowledge of vocalization which lends a grace to Mr. Balfe's music even in its weakest portions. The strong situation of the drama occurs at the close of the second act, and gives occasion for the most elaborate concerted piece of the opera, a long *finale* in which contending passions and various emotions have to be expressed, with the contrasted effects of solos and chorus. As a piece of dramatic composition, this is by far the best portion of Mr. Balfe's work. He deals with the manifold materials of orchestra, chorus, and solo singers, with the skill of a practised musician; and carries the musical interest to a point of excitement that forms a strong and effective climax. The third act is a prison scene, in which we are introduced to a genial gaoler, somewhat after the pattern of Rocco in "Fidelio." This personage, represented by Mr. Aynsley Cook, has a characteristic song, which is followed by a sentimental ballad for Raoul, "O love, thou'rt like a reed," a flowing and agreeable melody, but not destined to come down to the barrel organ,—that ultimate test of popularity. The invocation, "O heavenly power," sung by Miss Pyne, is very delicately accompanied by stringed instruments, *pizzicato*, contrasted with the sustained sounds of wind instruments. A long and elaborate duet, "Once more my heart," between Raoul and Marie, contains much passionate and dramatic expression, although ultra-Italian in the employment of the voices in unison at the close. The *finale* to the whole opera contains some effective writing, but is not equal in musical interest to the *finale* to the second act. There is some incidental ballet music in the course of the opera, which is vivacious and brilliant, but of no special character. It is impossible to avoid feeling that Mr. Balfe is more in his element in works of the *opéra-comique* kind, to which his light and brilliant style is so peculiarly suited, than in the grand opera which deals with the tragic, the romantic,

Digitized by Google

and the picturesque; characteristics requiring the genius at least of a Meyerbeer for their musical illustration.

The production of the "Armourer of Nantes," on Thursday week, was in every respect remarkable as a first performance of so elaborate a work. The readiness and efficiency of all concerned speaks highly in favour of individual artists and the superintending direction. To Miss Pyne must be awarded the chief praise for her exquisitely finished singing, which was worthy of any musical stage in Europe. Mr. Weiss, as De Villefranche, the French envoy, was dignified and impressive, both in his bearing and his singing—indeed, the cast of the opera was greatly strengthened by including two such excellent artists as Mr. Weiss and Mr. Santley, the best of English basses and barytones. Mr. Harrison sang his ballads with that distinctness of utterance for which he is celebrated, and by which every note and syllable has its emphasis. The small parts of the Jew and the Gaoler were carefully acted and sung by Mr. H. Corrie and Mr. Aynsley Cook; the still smaller part of Dame Bertha being adequately filled by Mrs. Aynsley Cook. The chorus had evidently been well and thoroughly trained; and the orchestra, under its energetic and careful conductor, Mr. Mellon, was certain in execution and bright and resonant in quality. On the first night there were numerous encores and calls for composer, author, singers, and conductor; prolonging the performance to a duration of some four hours and a half. With the compression and closeness which naturally follow with repetition, the opera will materially gain in effect. Still, with all the practised skill and ambitious labour which Mr. Balfe has unquestionably manifested, we should prefer to see his really great talent bestowed on a higher subject than that of the "Armourer of Nantes."

CONTEMPORARY SCIENCE.

In the Friday evening course of the Royal Institution, Mr. Glaisher, F.R.S., has delivered a very able lecture "On Scientific Ballooning," before a very large audience. In his concluding remarks he expressed a hope to have the honour on a future occasion of laying before the Institution the results of a second series of observations.

Last week Dr. Frankland lectured on "Artificial Illumination." Ten years ago he gave a sketch of this subject as it was at that time; since then there had been important advances—as, for instance, in the electric light—in the various kinds of light used for domestic purposes, and now, indeed, there had been obtained a new agent, which was likely to produce a revolution in artificial illumination, almost equal to the introduction of gas itself—paraffin oil. In the electric light, increased steadiness had been obtained by better methods of manufacturing the carbon points, and the mechanical means of adjustment for keeping them at the requisite distance apart. Various methods had been devised for obtaining the required electricity; and thirty years ago, Faraday, in his experiments with the permanent magnet, had given forth the germ of the latest and most important method of "grinding out" the electricity by means of the rotation of magnets on a wheel against a soft iron armature. In this way, the combustion of coal gave rise to mechanical power; which, in its turn, gave way to the development of electricity. The electric light maintained by this process had been on trial for two years at the South Foreland lighthouse, and must be regarded as completely successful. For ordinary purposes the cost was too great, but for lighthouse work, where the value of the light was of the utmost consequence, the cost was but a secondary consideration. Dr. Way's method of completing the circuit of ordinary galvanic batteries by a thin stream of mercury, was experimentally exhibited. In this method the heat of the current raises the mercury of the falling stream into vapour, and the circuit being thus broken, the electric current leaps across the interval, which is but momentary, as contact is rapidly re-made by the stream, again to be momentarily broken in the same way; so that this light presents but a brilliant flickering, and has not yet been made steady enough for any practical purposes. The light, too, is much less intense than that obtainable from carbon points.

Gas, as a light-giving material, is undoubtedly unequalled in the qualities of cleanliness, utility, and ease of application. The sulphur compounds, however, which ten years ago had been a source of annoyance, still remained in the gas supplied for commercial purposes, but recently the Rev. Bowditch, of Wakefield, had shown experimentally that bisulphide of carbon and the sulphur-organic compounds, which, in the burning of ordinary gas, by generating sulphurous acid, were a source of discomfort, although they could not be got rid off in the ordinary processes for purifying coal-gas, became, nevertheless, amenable to those processes after the heating of the gas with hydrate of lime to the extent of 400° Fah. Ordinary gas contained from 10 to 20 up to 40 grains per 100 cubic feet of those sulphur compounds which the Bowditch process reduced at most to two or three grains per thousand. It remained, however, to be seen if the process could be applied practically. During the decade which had passed since his previous lecture a new compound had been discovered in coal-gas by the French chemist, Berthelot—acetylene, and for the production of which, unlike all other hydrocarbons, an intense heat was requisite. Dr. Odling had made important observations on this substance. The object hitherto had been to produce coal gas at a low temperature, but now the question was how far the production of this acetylene on a large scale could be carried on. The question was still in embryo, but if successful results were obtained the influence on the future manufacture of gas must be great.

Dr. Frankland then exhibited the light of the new gas produced by adding to acetylide of copper dilute hydrochloric acid, and, although only the smallest of jets, its intense brilliancy was decisively apparent. This substance was also not devoid of interest in the ordinary manufacture of gas as one of the causes of explosion in gas-metres, pipes, &c. When copper had been employed it was generated spontaneously, and by accidental friction, heat, or percussion there was no doubt it had been a source of some of those mysterious explosions which had been occasionally recorded.

In respect to the ordinary illuminative vegetable and animal oils little or no improvements had been made, but there had been in the manufacture and more general use of paraffin and paraffin oil manufactured from bituminous minerals. The rock-oil lately introduced was exerting much influence in the matter of artificial illumination. Already, in spite of the disfavour created by accidents arising in the earliest stages of its trials from imperfect purification from the lighter oils and ethers associated with the burning fluid, it was acquiring a great sale, and was being introduced in the manufacture of gas. From Canada alone, 180,000,000 gallons had been exported and rock-oil has now taken its place as one of the staples of America. For economy, brilliancy, and intensity of light, and the least deteriorating amount of heat and carbonic acid, the paraffin and rock-oils take the first place, as will be seen from the following tables exhibited by Dr. Frankland:—

I. Illuminating Equivalents.—Paraffin oil, 1 gallon; American rock oil, 1·26; Paraffin candles, 18·6 lbs.; Sperm candles, 22·9; Wax candles, 27·6; Composite, 29·5; Tallow, 39·0.

II. Comparative Cost of Light equal to 20 Sperm candles, each burning for 10 hours, at the rate of 120 grains per hour.—Wax, 7s. 2½d.; Spermacetti, 6s. 8d.; Tallow, 2s. 8d.; Sperm oil, 1s. 10d.; Coal gas, 4½d.; Cannel gas, 3d.; Paraffin candles, 3s. 10d.; Paraffin oil, 6d.; Rock oil, 7½d.

III. Carbonic Acid and Heat generated per hour by various illuminating agents, each giving the light of 20 Sperm candles:—

	Carbonic Acid.		Heat.
Tallow	10·1	Cubic feet	100
Wax and Spermacetti	8·3	,,	82
Paraffin Candles	6·7	,,	66
Coal Gas	5·0	,,	47
Cannel Gas	4·0	,,	32
Paraffin Oil or Rock Oil	3·0	,,	29

The heating of bodies to incandescence was essential for the production of light, and gases and vapours required more intense heat than liquids or solids to bring them to this condition. Indeed, it was to carbon, or other solid particles in the flame, that the intensity of the light was mainly due. High pressure of the atmosphere, therefore, by producing more of these particles in flame, was a source of increased luminosity. Thus, for example, when the barometer fell from 30 inches to 29, every source of light was reduced in intensity; and so on, at the rate of 5 per cent. for every inch. Some loss of light also occurred in the ordinary methods of burning oil and gas, by the loss of heat on the contact of the cold atmosphere with the flame. Dr. Frankland exhibited his modification of the ordinary burners—namely, the application of an outside cylinder in which the air became heated, and in turn heated the pipe conveying the oil or gas so that the atmosphere and burning-fluid or gas met at comparatively high temperatures. A great saving in the consumption of material, and a greater amount of light, were thus obtained. This difference in the lamp used was thus shown:—the light being equal to thirteen sperm candles, the gas consumed was, with cold air, 3·3, with heated air 2·2; thus giving the same amount of light with a saving of one-third of gas; or, from the same amount of gas, obtaining 62 per cent. more light. This adaptation was some time since made known by Dr. Frankland, but we are not aware of its public application.

Dr. Frankland then pointed out the essential constitution of a good artificial light, and showed experimentally, by the electric and other familiar lights, that it must contain all the spectral coloured rays. The electric light was even more perfect than sun-light, and showed a continuous spectrum; whereas the solar spectrum was interrupted by numerous breaks or dark lines, the cause of which has been fully explained in our previous articles on the recent discoveries of Kirchoff, Dr. Miller, and others. On this point Dr. Frankland introduced some novel and pleasing experiments. Stripes of coloured paper, illuminated by gas-light or electric light, showed all the prismatic colours distinctly; but the same stripes showed *only* the *yellow* band when illuminated by a sodium flame. Again, when the spectrum of the electric light was thrown on the screen, a sheet of red paper held in the red space glowed with those beams; but when it was passed into the yellow, blue, or green spaces it reflected no light, but appeared intensely black. If, therefore, an artificial light did not contain all the spectral rays, some colours would be invisible by it; and so with respect to sun-light there were some colours it could not exhibit. If, for example, we had a pigment of the exact hue of the double sodium line shown in the spectrum of sodium, such a colour could not be seen by sunlight at all.

The light of the sun was superior to all artificial lights in the small amount of heat it contained. Heat in any light was of no advantage whatever in respect to vision. On the contrary, it had to be absorbed by the humours of the eye, and was one source of the fatigue of the eye experienced in viewing objects by artificial illumination. In the modern magneto-electric light by the intermediate transferences of one kind of force into another, there was a great loss of power; amounting to nine-tenths, indeed, of the original force. Thermo-electricity led to the hope that a direct transference of the heat of coal into electricity and light might some day be effected. The men of science placed their experiments on record; but it was the duty of the men of the world, to seize those truths and to apply them practically.

The Archæological Congress will be held this year at Rochester, under the presidency of Marquis Camden, K.G. The Sections of History, Architecture, and Mediæval Antiquities, will be presided over respectively by the Very Reverend Dean Hook, F.R.S., Professor Willis, president of the British Association for the Advancement of Science, and Lord Talbot de Malahide. The Meeting will commence on the last Tuesday in July.

LIST OF MEETINGS OF LEARNED SOCIETIES FOR NEXT WEEK.

MONDAY, 23RD FEBRUARY.

ARCHITECTS—At 8 P.M. "On Artificial Stone, and the Principles of its Production." By Mr. R. Kerr.

GEOGRAPHICAL—At 8½ P.M. 1. "On the Discharge of Water from the Interior of Greenland, through Springs Underneath the Ice." By Dr. H. Rink, of Greenland. 2. "On Rupert Land." By Captain H. Synge, R.E.

ACTUARIES—At 7 P.M.

MEDICAL—At 8½ P.M. "On the Diseases of the Osseous System, and on Tumours, &c." By Mr. Thomas Bryant.

TUESDAY, 24TH FEBRUARY.

CIVIL ENGINEERS—At 8 P.M. 1. "On American Timber Bridges." By J. R. Morse, C.E. 2. "On the Reconstruction of the Dinting and Mottram Viaducts." By W. Fairbairn, C.E.

ROYAL INSTITUTION—At 3 P.M. Professor Marshall, "On Animal Mechanics."

ANTHROPOLOGICAL—At 7½ P.M. Inaugural Address, "On the Study of Anthropology." By the President, Dr. James Hunt.

MEDICAL AND CHIRURGICAL—At 8½ P.M. 1. "On Two Cases of Kelis." By Deputy-Inspector-General Langmore. 2. "On the Extent to which Human Life has been Prolonged or Abridged by Ovariotomy." By Dr. Robert Lee.

ZOOLOGICAL—At 9 P.M. 1. "On a New Musk Rat from British Columbia." By Mr. Lord. 2. "On a New American Bat." By Mr. R. T. Tomes. 3. "On Hatching and Rearing Salmon and Trout by Artificial Means." By Mr. Frank Buckland.

WEDNESDAY, 25TH FEBRUARY.

ARCHÆOLOGICAL ASSOCIATION—At 8½ P.M. 1. "On the Recent Discovery of Ancient British Remains in the Isle of Wight." By Rev. E. Kell. 2. "On Ancient Nielli." By Mr. Syer Cuming.

ROYAL LITERATURE—At 4½ P.M.

LONDON INSTITUTION—At 7 P.M. "Warm-Blooded Vertebrata." By C. Carter Blake, Esq.

SOCIETY OF ARTS—At 8 P.M. "On the Best Means for Promoting the Growth and Improving the Quality of Cotton." By Mr. John Cheetham.

THURSDAY, 26TH FEBRUARY.

ROYAL SOCIETY—At 8½ P.M. 1. "On the Effect of Temperature on the Secretion of Urea." By Dr. Becher. 2. "On Clinant Geometry." By Mr. A. J. Ellis. 3. "On the Spectra of the Stars." By Mr. Huggins and Dr. Miller.

ANTIQUARIES—At 8½ P.M.

ROYAL INSTITUTION—At 3 P.M. Dr. Frankland, "On Chemical Affinity."

ARTISTS AND AMATEURS—At 8 P.M.

FRIDAY, 27TH FEBRUARY.

ROYAL INSTITUTION—At 8 P.M. "On the Ancient Lake Habitations of Switzerland." By John Lubbock, Esq., F.R.S.

LONDON INSTITUTION—At 7 P.M. "Non-Metallic Elements." By Professor Field.

SATURDAY, 28TH FEBRUARY.

BOTANIC—At 3½ P.M.

ROYAL INSTITUTION—At 3 P.M. Prof. Max Müller, "On Languages."

LIST OF NEW PUBLICATIONS FOR THE WEEK.

A'Beckett's (Sir W.) The Earl's Choice, and other poems. Fcap., cloth, 5s.

RUSSELL *v.* ADAMS.

A PUBLIC MEETING will be held at the FREEMASONS' TAVERN, on TUESDAY NEXT, the 24th instant, at 4 p.m., to consider this case. Members of the learned Professions, and all others desirous of punishing attempts to extort money by making false charges, are invited to attend.

BEN RHYDDING, ILKLEY, YORKSHIRE.
A WINTER AND SPRING RESIDENCE.
PHYSICIAN.—Dr. MACLEOD, F.R.C.P.E., F.A.S. Scot.
SURGEON.—THOMAS SCOTT, M.D., Edin., M.R.C.S.E.

Ben Rhydding is one of the most complete and most comfortable establishments in England for the reception of patients and visitors. While the method of treatment pursued at Ben Rhydding proceeds on Hydrotherapeutics as to its main principle, it is by no means confined to that, but includes the systematic application of the Art of Cure in its whole range, and with all its resources.

HYDE ABBEY SCHOOL, Winchester.—Head Master, the Rev. EDWARD FIRMSTONE, M.A. (Oxon), assisted by resident graduates from the Universities of Cambridge, London, and Paris. Sons of gentlemen are prepared for the public schools and the universities, also for Sandhurst, Woolwich, and the naval, military, and civil services.—Terms, references, and list of pupils who have recently passed examinations from this school will be forwarded on application to the Head Master.

THE ANTHROPOLOGICAL SOCIETY of LONDON.—Founded for the study of Man and Mankind, and for the publication of a Quarterly Journal, Original Memoirs, and a series of Translations.—A Prospectus and other particulars will be forwarded on application to C. CARTER BLAKE, Esq., Honorary Secretary, 4, St. Martin's-place.

LONDON LIBRARY, 12, St. James's-square, London, S.W.
PRESIDENT.—The Earl of CLARENDON.

The following are the terms of admission to this Library, which contains 80,000 Volumes of Ancient and Modern Literature, in various Languages:—Subscription, £3 a year, or £2 a year with entrance-fee of £6; Life Membership, £26.

Fifteen Volumes are allowed to Country, and Ten to Town Members.

Reading-room open from Ten to Six. Prospectus on application.

ROBERT HARRISON, Secretary and Librarian.

PUBLISHERS AND THE BOOK TRADE

TO LET in PATERNOSTER-ROW, newly built PREMISES.—Enquire of JOHN KNIGHT & SONS, Soap Works, Old Gravel-lane, St. Georges' East.

SHEFFIELD SCHOOL of PRACTICAL SCIENCE and METALLURGY.

PRESIDENT.
His Grace the Duke of Devonshire, K.G., F.R.S., D.C.L., Chancellor of the University of Cambridge.

VICE-PRESIDENTS.
The Mayor of Sheffield, John Brown, Esq.
The Master Cutler.
The Right Hon. Lord Wharncliffe.
Sir David Brewster, K.H., D.C.L., F.R.S.L. & E., M.R.I.A.
Sir Roderic Murchison, F.R.S., Director of the Royal School of Mines.
John Percy, Esq., M.D., F.R.S., Professor of Metallurgy in the Royal School of Mines.
William Fairbairn, Esq., C.E., F.R.S.
Robert Hunt, Esq., F.R.S., F.S.S., Keeper of Mining Records.
Warrington W. Smyth, Esq., M.A., F.R.S., Professor of Mining and Mineralogy in the Royal School of Mines.

DIRECTOR.
The Rev. G. B. Atkinson, M.A., Principal of the Collegiate School, late Fellow and Assistant Tutor of Trinity Hall, Cambridge.

PROFESSORS.
Chemistry, Metallurgy, and Geology.—James Allen, Ph.D. F.C.S., of the Universities of Giessen and Berlin.
Engineering and Mining.—J. Thompson, C.E.
Mathematics, Natural Philosophy, and Applied Mechanics.—Rev. G. B. Atkinson, M.A.

The Sheffield School of Practical Science and Metallurgy will afford a complete scientific and practical education to students who are destined to become civil, mechanical, or mining engineers, or manufacturers of any kind. Its object is thoroughly to discipline the students in the principles of those Sciences upon which the operations of the Engineer, Metallurgist, or Manufacturer depend.

The education will be given by means of systematic Courses of Lectures, by Catechetical Class Instruction, by Practical Teaching in the Laboratory and Drawing-room, and occasionally by Field excursions.

The School of Practical Science and Metallurgy will be conducted in the buildings of the Sheffield Collegiate School. The two Institutions, although both under the superintendence of the Rev. G. B. Atkinson, Principal of the Collegiate School, are, however, entirely distinct.

A detailed Prospectus, containing Syllabuses of all the Courses of Lectures, and all other information, arrangements for boarding, &c., may be obtained by application to the Director.

THE SCHOOL WILL OPEN IN THE FIRST WEEK IN FEBRUARY, 1863.

ACCIDENTS BY ROAD, RIVER, OR RAILWAY.

ACCIDENTS IN THE FIELD, THE STREETS, OR AT HOME,
May be provided against by taking a Policy of the
RAILWAY PASSENGERS ASSURANCE COMPANY,
64, CORNHILL, LONDON.
£140,000 has been already Paid as COMPENSATION
FOR ACCIDENTS OF ALL KINDS,
In 75 Fatal Cases, and 6,880 Cases of Personal Injury.
Rates and further particulars may be obtained at the Railway Stations, of the Local Agents, or of the
HEAD OFFICE, 64, CORNHILL, LONDON, E.C.
WILLIAM J. VIAN, Secretary.

Railway Passengers Assurance Company,
Empowered by special Act of Parliament, 1849.

THE GREAT EASTERN RAILWAY COMPANY.

FOUR-AND-A-HALF PER CENT. PREFERENCE STOCK.

The GREAT EASTERN RAILWAY COMPANY is prepared to receive applications for sums of £100, or upwards, of the above Stock, bearing a fixed Preferential Interest of 4½ per cent. per annum.

Interest commences from the date of payment.

Applications to be made, either personally or by letter, to the undersigned.

Bishopsgate Terminus, February, 1863. J. B. OWEN, Secretary.

ESTABLISHED A.D. 1844.

GREAT BRITAIN MUTUAL LIFE ASSURANCE SOCIETY.

Empowered by Special Act of Parliament, 25 & 26 Vict. cap. 74.

WILLIAM HENRY DICKSON, Esq., Chancellor House, Tunbridge Wells, Chairman.

THOMAS E. DAVISON, Esq., 2, Royal Exchange-buildings, Deputy Chairman.

This Society is established on the tried and approved principle of Mutual Assurance. The funds are accumulated for the exclusive benefit of the members, under their own immediate superintendence and control. The profits are divided annually.

Amateurs' Lathes, Turning Apparatus and Tools, Planing Machines, Wheel Cutting and Dividing Engines.

Estimates given for Work in any of the above branches, and for the Erection of Observatories.

31, SOUTHAMPTON-STREET, STRAND, W.C.

THE PERFECT SUBSTITUTE FOR SILVER.

The REAL NICKEL SILVER, introduced more than 30 years ago by WILLIAM S. BURTON, when Plated by the patent process of Messrs. Elkington & Co., is beyond all comparison the very best article next to sterling silver that can be employed as such, either usefully or ornamentally, as by no possible test can it be distinguished from real silver.

A small useful set, guaranteed of first quality for finish and durability, as follows:—

	Fiddle or Old Silver Pattern.	Thread or Brunswick Pattern.	Lily Pattern.	King's or Military, &c.

IMPORTANT ANNOUNCEMENT.

JOSEPH GILLOTT,

METALLIC PEN MAKER TO THE QUEEN,

BEGS to inform the Commercial World, Scholastic Institutions, and the Public generally, that, by a novel application of his unrivalled Machinery for making Steel Pens, he has introduced a NEW SERIES of his useful productions which, for EXCELLENCE of TEMPER, QUALITY of MATERIAL, and above all, CHEAPNESS in PRICE, must insure universal approbation, and defy competition.

Each Pen bears the impress of his name as a guarantee of quality; they are put up in Boxes containing one gross each, with label outside, and a fac-simile of his signature.

At the request of numerous persons engaged in tuition, J. G. has introduced his WARRANTED SCHOOL and PUBLIC PENS, which are especially adapted to their use, being of different degrees of flexibility, and with fine, medium, and broad points, suitable for the various kinds of Writing taught in Schools.

Sold Retail by all Stationers and Booksellers. Merchants and Wholesale Dealers can be supplied at the Works, Graham-street, Birmingham; at 91, John-street, New York; and at 37, Gracechurch-street, London.

DR. DE JONGH'S

(Knight of the Order of Leopold of Belgium)

LIGHT-BROWN COD LIVER OIL, prescribed by the most eminent Medical Men as the safest, speediest, and most effectual remedy for

CONSUMPTION, CHRONIC BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GENERAL DEBILITY, DISEASES OF THE SKIN, RICKETS, INFANTILE WASTING, AND ALL SCROFULOUS AFFECTIONS,

Is incomparably superior to every other kind.

SELECT MEDICAL OPINIONS.

Sir HENRY MARSH, Bart, M.D., Physician in Ordinary to the Queen in Ireland.

"I consider Dr. De Jongh's Light-Brown Cod Liver Oil to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

Dr. LANKESTER, F.R.S., Scientific Superintendent, South Kensington Museum.

"I consider the Cod Liver Oil sold under Dr. De Jongh's guarantee to be preferable to any other kind as regards genuineness and medicinal efficacy."

Dr. GRANVILLE, F.R.S., Author of the "Spas of Germany."

"Dr. Granville has found that Dr. De Jongh's Light-Brown Cod Liver Oil produces the desired effect in a shorter time than other kinds, and that it does not cause the nausea and indigestion too often consequent on the administration of the Pale Oil."

Dr. LAWRANCE, Physician to H.R.H. the Duke of Saxe-Coburg and Gotha.

I invariably prescribe Dr. De Jongh's Cod Liver Oil in preference to any other, feeling assured that I am recommending a genuine article, AND NOT A MANUFACTURED COMPOUND IN WHICH THE EFFICACY OF THIS INVALUABLE MEDICINE IS DESTROYED."

DR. DE JONGH'S LIGHT-BROWN COD LIVER OIL is sold only in IMPERIAL Half-pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.; capsuled, and labelled with his stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable Chemists and Druggists.

SOLE CONSIGNEES:

ARTHUR, COOPER, & CO.,
11, Jermyn-street, St. James's, S.W.
ESTABLISHED 1826.

KEATING'S NEWFOUNDLAND COD LIVER OIL is distinguished by Testimonials from eminent Physicians, among whom are the following:—Professor TAYLOR, M.D., &c. &c.; Dr. SCOTT, M.D., L.R.C.P., F.L.S., &c.; Dr. EDWIN PAYNE, M.D., L.R.C.P., M.R.C.S. This Oil, being purely of *hepatic* origin, is pronounced to be of the greatest *therapeutic* value, in which the prescriber and patient may have the utmost confidence.

Sold in half-pint bottles, 1s. 6d., pints, 2s. 6d., quarts, 4s. 6d., and five-pint bottles, 10s. 6d., imperial measure, by THOMAS KEATING, Pharmaceutical Chemist, 79, St. Paul's Churchyard.

DINNEFORD'S PURE FLUID MAGNESIA has been during twenty-five years emphatically sanctioned by the Medical Profession, and universally accepted by the Public as the best remedy for Acidity of the Stomach, Heartburn, Headache, Gout, and Indigestion, and as a mild Aperient for delicate constitutions, more especially for Ladies and Children. It is prepared, in a state of perfect purity and of uniform strength, by DINNEFORD and CO., 172 New Bond street, London; and sold by all respectable Chemists throughout the world.

BLAIR'S GOUT AND RHEUMATIC PILLS.

Price 1s. 1½d. and 2s. 9d. per box.

THIS preparation is one of the benefits which the science of modern chemistry has conferred upon mankind; for during the first twenty years of the present century to speak of a cure for the Gout was considered a romance; but now the efficacy and safety of this medicine is so fully demonstrated, by unsolicited testimonials from persons in every rank of life, that public opinion proclaims this as one of the most important discoveries of the present age.

These Pills require no restraint of diet or confinement during their use, and are certain to prevent the disease attacking any vital part.

Sold by all medicine vendors.

THE NEW STUDIO EASEL,

(Originally established A.D. 1667.)

CAUTION.—The extraordinary success attending the use of Dr. J. COLLIS BROWNE'S CHLORODYNE has induced certain unprincipled persons to vend spurious compounds under this name. This wonderful remedy allays pain, soothes the system, and invigorates nervous debility. It effectually cures, as will be seen by medical testimony, CONSUMPTION, COUGHS, ASTHMA, BRONCHITIS, NEURALGIA, RHEUMATISM, &c. Never be tempted to buy Chlorodyne except in sealed bottles, having the Government Stamp, with the words "Dr. J. Collis Browne's Chlorodyne" engraved thereon. A sheet full of medical testimonials accompanies each bottle. Sole Manufacturer, J. T. DAVENPORT, 33, Great Russell-street, Bloomsbury, London. Sold in Bottles, 2s. 9d. and 4s. 6d.; sent carriage free on receipt of Stamps or Post-office Order.

POEMS, DESCRIPTIVE AND LYRICAL.

Illustrations of the Beauties of Tropical Scenery and Sketches of Objects of Interest.

With NOTES, Historical and Explanatory,

By the Author of "The Nuptials of Barcelona."

"This is a volume of word-pictures, in which the author gives several graceful poetic descriptions of the scenery in the tropics, and of various objects interesting to himself, and to a large portion of the public generally. The natural splendour of the islands of the Western Archipelago, and the richness of their productions certainly afford abundant sources of inspiration to the poet, and we very fairly congratulate the author upon the successful manner in which he has treated the various subjects that he has selected for the outpourings of his graceful muse."—*Observer*.

London: ROBERT HARDWICKE, 192, Piccadilly.

NEW AND CHEAPER EDITION.

Now ready, in Post 8vo., price 2s. 6d. cloth,

MUDIE'S SELECT LIBRARY.

A MILLION VOLUMES.

The whole Collection of modern Books in Circulation and on Sale at MUDIE'S Library is now by Many Thousand Volumes the Largest in the World; and, as the New Works added from time to time continue to exceed in value the whole amount of the Current Subscriptions, it is probable that the stock available for the use of Subscribers, deducting the number of copies sold or worn out while in circulation, will shortly exceed One Million Volumes.

The purpose for which the Library was originally established—to create a more general taste for the higher literature, and to meet the increased demand which has thus arisen—is still kept steadily in view, and great care continues to be taken that every Work of merit and general interest shall be introduced as soon as published.

A Revised List of the principal Works in Circulation is now ready, and will be forwarded postage-free on application.

CHARLES EDWARD MUDIE,
NEW OXFORD-STREET, LONDON.

CITY OFFICE: 4, KING-STREET, CHEAPSIDE.

Branch Establishments: Cross-street, Manchester; and New-street, Birmingham.

Just Published, in Two Vols., Crown 8vo., price 10s. 6d.,

MODERN PANTHEISM: Essay on Religious Philosophy. By M. EMILE SAISSET, Professor of the History of Philosophy in the Faculty of Letters in Paris. Translated from the French, with Marginal Analysis, Notes, Critical Essay, and Philosophical Appendix.

"As a handbook to the theological side of modern speculation it is a most valuable addition to philosophical literature. The translation is clear, and at the same time idiomatic: it is English in its language, French in the transparency of its expression."—*Saturday Review*.

"M. Saisset is as honest and impartial as a critic can be."—Rev. F. D. MAURICE.

Edinburgh: T. & T. CLARK. London: HAMILTON, ADAMS, & CO.

With Maps and Plans, Demy 8vo., 15s. cloth.

WATERLOO: The DOWNFALL of the FIRST NAPOLEON. A History of the Campaign of 1815. By GEORGE HOOPER, Author of "The Italian Campaigns of General Bonaparte."

TIMES.

"We agree with the author of this useful volume, that 'an English account of the Campaign of 1815, at once full, well-arranged, and accurate,' has hitherto been a literary desideratum. . . . This is Mr. Hooper's object in his work, and he has worked it out with much judgment, and in a singularly impartial spirit. For the general reader it is the best account that has yet appeared in the English language of the Zama of the modern Hannibal."

WESTMINSTER REVIEW.

"This war tragedy is told with a sense of proportion, a perspicuity, and an order which are not common. The style is correspondingly excellent; it is clear, vigorous, and graphic when necessary, without being fine."

SATURDAY REVIEW.

"It seems to us that Mr. Hooper has, with great felicity, succeeded in producing the most intelligible and the most readable history of the Campaign. The language is well chosen, the style is admirable; there is a complete absence of affectation, and a very sparing use of technical terms. . . . . 'Waterloo' may be justly regarded as a work honest in purpose and able in execution, and a most valuable contribution to English historical literature."

SPECTATOR.

"Of Mr. Hooper's narrative of the campaign we can hardly speak too highly. . . . As a narrative of Waterloo it seems to us to stand unsurpassed."

EXAMINER.

"This is not an ephemeral volume, but a standard work."

SMITH, ELDER, & CO., 65, Cornhill.

MRS. GASKELL'S NEW NOVEL.

DRIFTING.

FOUL weather seems to be gathering in the Continental sky. The French nation gives signs of awakened interest in the tragedy which is passing in Poland. A panic has fallen on the Bourse; for, from the various Parisian journals of the day, the loud but well-known roll of the war-drum is beginning to be heard. M. de La Guerronière mutters about the mission of France and the autonomy of Poland in a tone that reminds us of his ill-boding cry four years ago when the mission of France and the autonomy of Lombardy were in question. Nor can we wonder at the stir. A gallant, excitable, and overbearing people might have brought themselves to hold their breath so long as it was merely a matter of Russian absolutism in Poland. It has been reserved for a senseless Prussian Ministry to revive before the eyes of eager France the hateful recollections of a Holy Alliance, and to kindle her indignation with the sight of a monarchy, ridiculous at home, trampling on the prostrate Polish race abroad. The name of Prussia is a name which awakens no pleasant or friendly feelings in the hearts of the French masses. In stretching her arms towards the Rhine, the French Empire would at any time have gratified not merely an acquisitive instinct, but a national and deep-seated animosity. The friendship between England and Prussia has been till lately an insuperable obstacle to a move in that direction. The Prussian Premier has at last succeeded in placing his country in the one position where she can hope for no self-restraint on the part of the French nation, and no sympathy on the part of England.

Europe at this moment—the symptoms are unmistakable—is drifting towards a desperate political complication. The resignation of M. Bismarck Schönhausen may mitigate, but it cannot altogether undo the harm that that feeble and inefficient statesman has done. By this time a note has doubtless been despatched to St. Petersburg, which, whatever its courtesy and frankness, still must wear, to a jealous northern eye, the semblance, if not of a menace, at least of an intervention. What will be the result, it is impossible to say. But there can be little doubt that the French Empire is acting wisely in heading the movement of indignation that agitates the whole of the liberals of the Continent. To tear still further the treaties of 1815—to complete the restoration of oppressed nationalities which he has begun—to distract the minds of the revolutionists of Europe from the Roman question—to make France forget Mexico—to unite compactly around him the Catholic and the Liberal sections of the French people, and with all this to gratify French vanity with the wild hope of some happy windfall on the frontier of the Rhine,—is an opportunity which falls to few but the Napoleons. Were the Emperor ten years younger, he would probably not hesitate a week. But hearts grow less chivalrous as hairs grow grey. To push once more into the maze of Europeon revolution requires a cool brain and a confident hand. Ten years ago there might have been something to gain. To-day the Empire seems to be so secure that there is nothing left for it to win. Yet those who know France best, know that the Empire must preserve an Imperial attitude if it wishes to be entirely secure. It will be difficult for Louis Napoleon to pretend to be indifferent to the dying groans of Poland. Besides all this, there is another reason why Louis Napoleon is less likely than most men of his years and station to shut his ears against that sound. It is that with all his cold reserve, with all his saturnine and ironical silence, with all his diplomatic and Imperial airs of mystery, the French Emperor is at times a generous man and an enthusiast.

It is curious and instructive to observe how, upon the mass of contemporary history, the like causes produce the like effects. A political position, which is caused by a permanent evil, reproduces and repeats itself. A little cycle of summers passes by, and we have once more the same groups of figures in the same attitude and in the same inextricable difficulty. Only the actors change, or, rather, they do not change—they merely change places. Russia to-day stands where Austria stood yesterday; and Austria crosses over to her rival's place. It is the same problem, but those who have to work it out are different. The Polish nation of 1863 excites the same admiration and sympathy as the Italy of 1858 and 1859. Prussia and Russia in Warsaw and in Posen are what Austria was at Milan and upon the Po. France again assumes the dazzling form of an avenging angel, destined, perhaps, to set the weary free from their oppressor. Nor is the position of this country dissimilar to its position at that time. England is perfectly aware of the injustice of many of the arrangements made at the great Congress, and the chronic dangers to which it gives rise in Europe. Yet she has a material interest in seeing that France does not swamp altogether the Conservative Powers of the Continent. It is true that the Poles have a moral right to their independence: but it is also true that France ought not to have the Rhine. Great Britain, therefore, seems likely to return with some annoyance to the perplexing and anxious attitude of universal dissatisfaction, which it fell to her lot to occupy during the campaign of Lombardy. If next month the French eagles cross the Prussian frontier to assist Poland, what is Great Britain to do? Every generous instinct will be on the side of the Poles and France. Yet prudence, the regard for treaties, and our constitutional habit of distrusting the French empire, will perhaps tend to paralyze our mind. We do not wish once again to play the

Digitized by Google

part that was played in the last war. It was an undignified, unhappy, unquiet part. It was the part played by Austria in the Crimean war, the part played by Prussia in the Italian. Now that it is over, and that we breathe again, we may confess that it was not the part Englishmen love to play. Let us hope that it is not coming back to us. Every English statesman of character will feel that the first thing he has to do is to preserve us from so painful a necessity.

We drifted into the Crimean conflict; and we allowed Austria and Sardinia to drift into the Italian. Our fault in both cases was the same: we were not resolute betimes: nor did we see the worst that was before us. Sincerely is it to be hoped that we are not drifting again for a third time. A quiet retrospect of the beginning of the contest between Austria and Italy, now that excitement and pride are dead, will show us that our political course was one of blunder and mistake. Lord Malmesbury was at the helm. Mr. Disraeli inspired the crew. The spirit of Lord Normanby perhaps reigned supreme over the tactics of the vessel. Yet the passage and the character of the vessel itself were not such that they should have been committed at such a time to such keeping. England at the immediate moment of contact betweeen the contending interests was neither Conservative nor Liberal. She paused and hoped, and feared and doubted, blaming both parties and influencing neither. Vigorous action either in one direction or the other would have stopped the war, or else prevented it from becoming glorious to France alone. Had this country joined the French Emperor at first, Austria would perhaps have given in, and certainly Savoy would never have been annexed. This time we should be careful to profit by the lesson. It will be, as usual, disastrous to the influence of this country and to the balance of power in Europe, should France be left alone to prosecute a missionary war, and to raise the Fiery Cross of Polish liberty and independence. If she is to act, England and Austria must act with her. The interests of European peace demand that on so serious an emergency there should be no want of unity on the part of all these Governments. We regard the state of Poland as a calamity and a danger to the civilized world. We do not want to go to war with Russia, far less with Prussia. It would be a terrible misfortune to be driven into it. Let us, therefore, be wise in time, and deal with the Polish question as befits a generous and powerful country, which is not insensible to the voice of Polish distress, which will not allow a Berlin autocrat to plunge Europe into war, and which is equally sensible to the great blessings of peace, and to the demands of national honour.

To the generosity of the Russian Emperor we look for a solution of the difficulty into which Europe has been brought. At Berlin it is idle to expect more than has been extorted from the King by fear of France. A monarch who has not shrunk from attempting to play the absolutist with Europe, as he might have played it with his facile and long-suffering subjects, is not likely to contribute much to the final settlement of the problem. The air of St. Petersburg, monarchical as it is, is less stifling just at present than the air of Berlin. The lips that have bestowed freedom on the serf should be capable at least of granting reforms, and, if necessary, independence to Poland. Nor is the attitude of Austria without promise. Is it impossible that the Great Powers should seize this crisis for undoing in a friendly spirit the knots which it will take years of bloodshed and misery to cut by the sword? To keep Poland and Italy as they are, is but to defer an evil day. Material interests are at stake, and regal, no less than national prejudices, have to be consulted. The vanity of more than one great Power forbids us to speak of tearing the old documents which are the title-deeds of absolutism; yet the state of Europe requires undoubtedly that they should be reformed.

THE PRINCESS ALEXANDRA.

THE loving worship of nature, as the world once knew it, is dead and gone, without the hope of resurrection. That bright stream, fresh from the heart of man, has long been dried at its source. It was a joyous, unexacting faith that satisfied the gay and careless youth of mankind; but the world is now too old and sad, too conscious of its guilt and misery, not to crave for stronger meat than the milk that supported babes. Knowledge and care, ever marching hand in hand, have rubbed and worn away the fine edge of that magic sympathy, by which men once could find feelings and passions akin to their own in everything upon the face of the earth, in the heaven above the earth, and in the sea under the earth. If we could think again, with the simple men of early times, that the sun looks down with varied emotions, as he visits the nations in turn, entering into their joy and sorrow, turning away in horror from sights of sin and shame, and gladdened by all that is good and happy here below,—we might, then, fondly hope that the ruler of the day would be tempted to linger over "this blessed plot, this earth, this realm, this England." As he travels from East to West, from the Old to the New World, each in turn receives him with the grim and ghastly spectacle of desperate warfare. While in America thousands are perishing for they know not what cause,—while the Poles fall, one by one, fighting with no weapons save what are supplied by the terrible armoury of despair,—and while the King of Prussia is fast filling the cup of his wicked follies,—we here in England, catching merely the distant echoes of wars and rumours of wars, are thinking only of how we best may welcome the gracious presence of a young girl amongst us. With but little learning we can easily imagine the things that would have been sung, said, and done on such an occasion in the bygone times. Courtly poets would have elaborated courtly odes, promising the immediate presence of Venus and Cupid and all the hierarchy of heaven. The courtly painters would have vied with the poets, and have put forth all their skill in picturing the passage of the barque that bore the royal bride across the seas, with Neptune calming the billows before her, Æolus filling the silken sails, and the Tritons playing around in the highest spirits; and then, its one great service over, the happy vessel might have been translated to the skies, to be a constellation for evermore. But such sentiments as these no one now, except a schoolboy writing Latin verses, could express on paper or canvas with a grave face. They belong to habits of thought and feeling with which we, in this nineteenth century, have but little in common; and so we can do no more than hope very fervently, in our dull, prosaic way, that youth, and care, and medical skill may very quickly banish the cold from which the Princess Alexandra has been suffering, and that she may have two fine days for her passage across the Channel and her tedious progress through London.

Whatever may be wanting in fancy and poetry to our welcome of the Princess, nothing, we may be sure, will be wanting in hearty enthusiasm and loyal affection. Though we no longer believe in the divine right of kings, and have ceased to talk the language of courtiers, we are not a whit less loyal than our forefathers were; and the strong, silent heart of the English people is powerfully stirred in its secret depths by such events as the coming of the Princess and her marriage with our future King. These move both old and young, both men and women. They give to all alike a common ground of interest; and, by awakening common desires and hopes, they bring home to every unit of many millions that sense of a distinct national existence, which, with the love of the native earth we tread, makes the broad, secure foundation-stone of patriotism. Too rare, indeed, are the public events which draw to themselves the thoughts and feelings of women equally with those of men. Most Englishwomen care no more for foreign politics than for the politics of the moon; and it is the hearts of Englishmen, far more than Englishwomen, which now bleed for the cruel wrongs and sufferings of the Poles. And whatever interest women may take in home politics attaches itself to men, and very rarely to measures or principles. They do not much care for the principles of the Constitution, and their loyalty is altogether a personal feeling. For them the glitter and the pomp of Royalty have charms; but that on which their loyalty seeks to fasten is the purely human and common side of the lives of kings and queens. Both men and women, but especially women, cherish the thought that the old simple feelings of human nature are the same in the palace and the cottage. They cherish the thought that the mutual love of youthful man and woman, which lends a transient grace to the rudest peasant, goes gaily down the old, familiar path, even when the lovers are princes and princesses. If this belief is dear to men and women everywhere, especially dear is it to English men and women; and it is to those deep domestic instincts, which we possess beyond all other nations, that the Princess Alexandra makes an irresistible appeal. We have been told on the

Digitized by Google

highest authority that this is purely a love-marriage, and nothing more is wanted to stir the wildest enthusiasm; for our people honestly believe that love-marriages are the Palladium of our national virtues and greatness.

Assuredly the English people have excellent reasons for wishing to see the throne shared only by those whom a true love has joined together. Not only does the national heart recoil from the worse than Mezentian torture of forcibly binding in the closest and most indissoluble of earthly ties two reluctant human beings, with their awful capacities for joy and grief, for pain and pleasure; but in these matters we are not without a salutary warning and a bright example, both bequeathed to us by the recent history of our own country. The shame and humiliation of one Royal marriage are still fresh in the memory of living men; and we are still reaping the priceless fruits of another Royal marriage. No one who has ever read the Diaries and Correspondence of the first Earl of Malmesbury can have forgotten the account of his mission to demand the hand of the Princess Caroline of Brunswick for the then Prince of Wales; and, read by the light of subsequent events, a melancholy record it is. There, by the hand of the English nobleman who came in an evil hour to take her from her father's house, is drawn a minute picture of the ill-fated Princess, then a good-tempered, happy, ignorant, gossiping girl, elated at the brilliant prospect before her, but disquieted by stories of the Prince's amours, and yet hoping to wean him from them, and to induce him to go to church on a Sunday. There, too, are recorded Lord Malmesbury's own solemnly grotesque admonitions,—his rebukes of the Princess's free manners and her uncleanly habits, her dirty stockings and her dirty petticoats,—and his startling threats of the extreme penalty with which the English law visited the guilty loves of queens and princesses. And there, lastly, are described, by the single eye-witness of the scene, the bitter disappointment and the cruel insult she suffered at her first meeting with the bridegroom, than whose nature no baser ever defiled the English throne. More than forty years after this ill-omened meeting there was another wedding of the highest lady in the land; and this time it was the bridegroom that came a stranger to our shore. He brought neither wealth nor dominion, nor even much dynastic influence abroad; and to the great position which he came to fill he had no claims except what were given him by a handsome person, a powerful mind, a pure heart, and the love of a young Queen which he had won by these rare and gracious gifts. This, then, was a love-marriage. Death came too soon to sever the earthly bond; but, while the union endured, it fulfilled, in a degree never surpassed, every good and blessed purpose for which the marriage of man and woman was instituted. And now the English people, having watched the experiment of a real love-marriage in the loftiest place, are abundantly well pleased with its results.

In reply to a question from that sombre pillar of the Protestant religion, Mr. Newdegate, the Prime Minister has declared that, when the time came for seeking a wife for the Prince of Wales, it was deemed essential, "first of all, that she should be young; next, that she should be handsome; further, that she should be agreeable, and that she should be amiable in her disposition; that she should be well brought up; and lastly, that she should be a Protestant." This rare and precious combination of natural and acquired qualities has been found in the Princess Alexandra; and she is, moreover, the daughter of a brave, seafaring race of men, in whom there is much that is akin to our own race. Great dynastic alliances we do not want, for we are strong enough to do without them; but what we desire our future Queen to bring are those gifts of body, heart, and soul, which shall keep a husband's love constant and unchanging till the end, and make her household the best and purest in the realm. To the Queen and the late Prince Consort we owe a heavy debt of gratitude for that never-failing constitutional spirit in which they performed their public duties; but even more, perhaps, we owe to them for the blameless way in which they ruled the daily tenour of their private life. All we ask and hope of the Prince and Princess is that they, in their turn, should hand down to later generations the same bright and wholesome example. When the Princess comes to be the foremost lady of the English Court, may she, like our Queen, keep her assemblies undisgraced by golden sandals and bare feet, by fancy dresses made convenient for the display of much that native modesty should veil, and by the spirit of female levity, of which such devices are the outward and visible sign! If she will do this excellent service for us and our children, her throne will be set in the warm heart of the British race, and neither time nor chance shall prevail against it. Her hopes and fears, her joys and sorrows, her subjects will, as far as may be, love to share; her least desires they will seek to anticipate; and her wrongs (*quod absit omen*) they will be quick and stern to resent, making her quarrel all their own. Let her but fulfil the promise of her young, honest, innocent face, and they shall never cease to bless the auspicious day when first they greeted her as a daughter of England.

THE NEW CHAMPION OF ORTHODOXY.

THERE is no fact which the history of religious opinion more clearly establishes than this, that a certain amount of unwise and intolerant opposition is essentially necessary for the successful propagation of a new creed. So familiar to us is this idea, that we consider the strongest claim to our respect and affection possessed by our own Church, lies in the fact that it has been sealed by the blood of martyrs. We cling with reverence to opinions for which men have fought and died, and the corner-stone of that faith which has taken the strongest hold upon the heart of civilized humanity was laid when its great founder fell a victim to the violence of Jewish persecution. And when the purity and simplicity of his teaching had become degraded, by a designing priesthood, to a political system calculated to impose upon the ignorant masses, and to fetter the intellects of the educated classes, it needed yet another struggle on the part of some heroic men—the fathers of the Reformation—who fell, beating down the barriers erected against freedom of thought, and who allowed once more that flood-light of a pure Christianity to pour in upon the world, which has shed more particularly upon our own country its reviving influence. Humanly speaking, then, it has been to persecutions by the Jews in the one instance, and by Roman Catholics in another, that we owe the inestimable gift of a true and reformed religion; but unfortunately, if we have had reason to bless a bigotry which has been so beneficial in educing and confirming pure and comforting doctrines, other nations have had cause to curse the power of this mighty engine for proselytism. It matters not whether the dogmas sought to be promulgated be true or false, they cannot become popular unless salted by persecution. Had Mahomet not been hunted to the death, his followers would never have bled for his creed, and the Mormons would be deprived of the proudest monument to their faith had Joe Smith never been murdered at Nauvoo.

We should be sorry for it to be supposed that we mean to compare the Bishop of Natal to the Prophet of Arabia, or Professor Jowett to the great Latter-day Saint; if we place them in one category, it is only because we dissent in opinion widely from all, and because, with the experience of the effects of persecution in the cases we have cited before our eyes, we are too sincerely interested in the cause of real evangelical religion to stand by and see it imperilled by the injudicious and puerile procedure of the director-general of Miss Sellon's Devonport sisterhood. If we wish to preserve amongst us in all their simple purity those doctrines which have afforded hope and consolation to mankind, we must not merely profit by the evidence of history, but of our common sense. If persecution has, in darker ages, failed to extinguish thought even when erroneous, it most assuredly cannot succeed in this more enlightened time, when the tortures of the rack are represented by the Vice-Chancellor's Court at Oxford. The manifest effect of any combination to attack heterodoxy will be an organization to defend it, and to the lovers of, and believers in, the simple truths of Christianity will belong the honour of creating an opposition most dangerous to its best interests. There is an old proverb about giving a dog rope enough. If we have confidence in the truths of the religion we profess, they will hold their own without Dr. Pusey's protection. Indeed, the only redeeming feature in this prosecution of Professor Jowett is, that it should have been taken up by a man who represents an extreme and not very popular party in the Church, and who is likely to bring ridicule and discredit upon any cause he adopts. As he is not in a position to espouse the cause of orthodoxy, we consider him simply as the representative of religious intolerance in this country, and we may be permitted to hope that the small band of bigots who follow him may never have a more dangerous leader.

Digitized by Google

In order to show that we are not actuated by any hostile feeling towards Dr. Pusey himself, and are not writing at random, we shall take the liberty of quoting a few passages from a small work opportunely published by Miss Margaret Goodman on the Sisterhoods of England. As this lady was under the spiritual directorship of Dr. Pusey, it may be presumed that the illustrations with which she favours us of the mode in which he is in the habit of exercising his spiritual authority, and enforcing his religious opinions, are authentic. He does not hesitate to insist, for instance, that young women are bound to refuse obedience to their parents when he enjoins rebellion, and on one occasion—

"A young lady had left Miss Sellon's at the wish of her relatives; but Dr. Pusey, her confessor, wrote to urge her to return, declaring that if she failed to do so, he could no longer remain her spiritual director,—a threat which involved his refusal again to grant her absolution. This so weighed upon her mind that she eventually returned, but not until some time after a day which Miss Sellon had fixed as the utmost limits of her visit home. For this act of disobedience to her spiritual mother she was, on her return, desired to take the lowest place in the Devonport household, where the position of the inmates, unless lost by misconduct, goes by seniority; the culprit was forbidden any intercourse with the other novices, and during her penance, which lasted more than twelve months, she passed the time allowed for recreation each day alone in a small room; and as there is to be silence in the house, except during recreation, she was thus reduced to almost perpetual silence. . . . The punishment seemed greater than the mind of poor A. was able to bear. She was weeping nearly all day, and, I may add, nearly all night; for her sleeping-place at this time was only divided from mine by a curtain, and whenever I was awake I could hear her half-repressed sobs."

Dr. Pusey's discipline ultimately induced this girl to endeavour to starve herself to death during Lent. "She did not distinguish the difference between starving herself to death because this life was wretched, and starving herself to death during Lent to obtain the favour of a heavenly Father."

That the teaching of the Doctor among these trembling women was rather severe and terrible, perhaps the following anecdote, taken from one of his private discourses to them, will testify. He was teaching that they must feel assured that, even if their eternal salvation were not forfeited by a sin, the sin must inevitably bring upon them expiatory fires. "I was," says the reverend Doctor, "passing down a somewhat crowded street in Oxford, when I was surprised to perceive at my elbow a man whom I believed at the time unable to leave his bed. He said, 'Dr. Pusey, I have been in hell the last hour for that lie I told you.' (Dr. Pusey's listeners understood of the lie, that it had been told at the confessional, which would of course add to the enormity of the sin.) I turned round," the Doctor went on to say, "to ask an explanation; but the people pressed upon me, and I lost sight of the figure of the man who accosted me. In great surprise I hastened to his residence, and learnt at the door that he had been dead about an hour."

It seems to have been part of Dr. Pusey's system to prepare his auditory for the terrifying effect of such simple illustrations of the pains to come, by keeping them on as low a diet as possible. "To show," says Miss Goodman, "how minute was the Doctor's oversight, I may mention that, on one occasion, in making a tour of the house, he even stopped to remove the lid of a saucepan in which some potatoes were boiling, saying gravely, 'These potatoes are too large; not according to holy poverty.'" Unless Dr. Pusey has prepared Professor Jowett for the terrors of the Vice Chancellor's Court by a course of small potatoes, we doubt whether he will succeed as easily in frightening that learned divine as the novices in Miss Sellon's establishment; but the above quotations afford us some idea of the nature of the persecution which those poor young ladies underwent at his hands, and which he would willingly extend to all persons differing with him on religious subjects. We give him credit for perfect sincerity, and will do him the justice to say that the character of his mind would fit him admirably for the office of Inquisitor; but it certainly does not qualify him to be considered the champion of orthodoxy in the Church.

We have already expressed our profound regret that the deplorable publication of unsound and agitating speculations on the part of a section of the clergy of the Church of England should have rendered any such championship necessary; but it is just because we believe the Bible to be true, that we deprecate a course so damaging to the best and holiest cause. Its first and immediate result has been to fill the columns of our daily contemporaries with bitter letters, signed by clergymen, who discuss for the most part not points of doctrine, but of character. It is impossible to suppose that the scandal which is already being caused can be compensated for even by the expulsion of Professor Jowett from his chair at the University. Such a result would be the severest blow that could be inflicted on the Church, for it would enlist the sympathies of that large class who are influenced not so much by theological opinions as by hatred of persecution. The fair way of dealing with Mr. Jowett and those who agree with him, if it be impossible to leave them alone, is by the humble but fearless expression of our honest convictions. It is only when believers in the authenticity and inspiration of the Bible are animated by personal and unworthy feelings, that we tremble for the consequences. So long as those interested in the maintenance of a pure religion defend it in the spirit of its great founder, they will have no need to seek the countenance or support of any court established by man.

SIR JOHN HAY AND THE ADMIRALTY.

THE defeat of the Government at Devonport has already borne fruit. It is well known that Sir F. Grey, the first Sea Lord, was pressed to give his sanction to the scheme of retirement and promotion advocated in Sir John Hay's letter to the Duke of Somerset, and that having refused to do so, the naval electors of Devonport refused to vote for him. This victory has been followed up by another attack in Parliament, and Lord Palmerston, in order to avoid a second defeat, has consented to the appointment of a select committee to consider the present system of promotion and retirement in the Royal Navy. The Duke of Somerset, in his memorandum of the 13th of February last, declared that "combinations amongst officers (in order to obtain an increase of pay), who, from their social position, can exercise great influence in the British Parliament, may be justly blamed as open to grave constitutional objections, and tending to establish a precedent injurious to the public service." And the Prime Minister repeated the same thing from the Treasury Bench. There is, no doubt, much truth in this observation, but, unfortunately, it is not the first time that such combinations amongst the servants of the Crown have succeeded in compelling the Government to grant their demands. Only the other day the Civil servants combined to compel the Treasury to grant them additional advantages in the way of superannuation. Nor is it improbable that, if the Government continue to yield, these combinations will increase to an alarming extent. There is only one mode of putting a stop to such proceedings. The Government should either prove the demand to be unjust, and stake their existence upon the correctness of their opinion, or admit the grievances complained of, and devise the proper remedy.

It is somewhat unfortunate that the Secretary of the Admiralty should carry so little weight in the House of Commons and among the officers of the navy. Excellent as he is in debate, it must be admitted that he indulges in a laxity of assertion which tends to excite considerable suspicion of his general accuracy. Considering the history of the struggles of the naval officers to get their grievances attended to, it is amusing to hear Lord Clarence Paget tell his brother officers that they have only to come to the Admiralty and to represent their alleged wrongs in order to have them attended to. Indeed, he seemed almost to complain that the naval officers had never thought fit to make their grievances known at head-quarters. But how stand the facts? In 1859 a petition was presented to the First Lord of the Admiralty signed by 500 lieutenants. No notice was taken of this publicly, though privately a polite answer was returned to the memorialists. In 1860 a petition was presented to the Admiralty, signed by 64 lieutenants of the Channel Fleet, and approved by the captains of the ships, by the junior admirals, and by Sir Charles Fremantle. No notice was taken of this except by a Circular, which pointed out that any combination of officers to bring about a change in the regulations of the navy was forbidden, as contrary to usage and subversive of discipline. At length, the member for Portsmouth obtained the appointment of a Committee to inquire into the grievances; but this Committee, after being forced upon the Government, was got rid of by a side-wind. This, in fact, is the Committee which is now about to sit again; and it is to be hoped that it will be selected with more regard to impartiality than it was two years ago. It is idle, therefore, to contend that the naval officers have not attempted

Digitized by Google

to obtain a hearing for their complaints, and it is equally idle to contend that the Government have not done what lay in their power to stifle these complaints. No officer, either in the army or in the navy, willingly sets himself up against his superior; and the very fact that 1,200 officers on the active list have aided Sir John Hay in drawing up his scheme, proves conclusively that their representations deserve a patient hearing. Unfortunately, the officers of the Navy have learnt from the history of the naval surgeons, that the Admiralty only act by compulsion; and as the surgeons were successful, the other naval officers hope to achieve the same result. It is to be hoped, however, that the 1,200 officers who have assisted Sir John Hay will not refuse to come before the Committee which is about to assemble. For the officers of the Navy may rely upon the fact, that, whilst the public are quite ready to do them justice, there must be ample evidence to justify any increase in the estimates.

We stated last week the principal features of the plan propounded by Sir John Hay and his twelve hundred friends. Its chief object is to facilitate retirement, to quicken promotion, and to increase the pay in the naval service. It is not our purpose at present to discuss the details of this plan. They must be reserved for a future occasion when the Committee have made their report. But it must be admitted that even according to the Duke of Somerset there are many questions connected with the pay and position of officers in the Navy deserving further consideration, and Lord Palmerston himself admits that the pay of a naval officer is lower than that of a military officer in a corresponding rank. It is true that military officers in our service must purchase their promotion, and therefore part of their pay must be looked upon as interest for the capital they have expended. If all naval officers are supposed to possess private means, no doubt their pay ought to be lower than that of their military comrades. But, on the other hand, if the Navy is to be open to all—whether rich or poor,—it is obvious that the possession of private fortune ought to have no influence in determining the amount of the pay in that service. But the cardinal point to which the Committee, which is about to be selected, ought to direct its attention, is connected with the question whether the pay in the Navy is sufficient to attract the best men. It is undoubtedly true that the demand for naval cadetships is very large. But the boys who thus enter are only thirteen years and a half old. They probably have little choice in the matter. At all events opinions formed at so early an age are not to be depended upon. On the other hand, it is admitted by the Duke of Somerset that the number of lieutenants during the last six years has been steadily decreasing. How is this? Lord Clarence Paget declares that "the whole navy is governed by the lieutenants; they are as it were the pivot of the system, and in my opinion we should have a thousand of them." Nevertheless, it appears that there were only 807 on the active list. The entries of cadets are numerous enough—the lieutenants are insufficient. What becomes of the young officers between the time they enter the navy and the time they reach the rank of lieutenant? The explanation is simple enough—they leave the profession. Here, then, is a grave difficulty. The pivot of the whole Navy is in danger of giving way. The matter is serious and deserves the careful attention of the Admiralty and the House of Commons.

MEDIATION IN AMERICA.

THE French Emperor's offer to mediate between the rival Federations in America has been refused by the North. In reply to the note of M. Drouyn de l'Huys, dated January the 9th, Mr. Seward declines to entertain the propositions of any foreign Power with regard to the conduct of American domestic affairs. The opinion which we expressed two months ago, that our own Government had behaved discreetly in holding itself aloof from the attempted mediation, is confirmed by this event. England has at least been spared an abrupt and mortifying rejection of her friendly counsels. It has, ever since the unhappy conflict broke out, been the unanimous resolve of this country to do no act that even American jealousy might have misconstrued, as though it were meant to embarrass the Federal policy. Warned, by much endurance, of the unfair and hostile interpretations which the journals and leading politicians of America are always sure to put upon our conduct, we have held our peace even from good, lest our good should be taken for evil; and we have suggested no steps towards a pacification, that we might not be accused of favouring Secession as a fact accomplished. For any mediation between the North and South, involving the recognition of Southern independence, must have prejudiced the imperial claims of Mr. Lincoln, who treats the South as a rebellious province to be subdued.

As no such formal mediation could be accepted by the Government of Washington, without a virtual abandonment of the former Union, it was suggested by France, as an alternative, that Northern and Southern Commissioners should have a conference upon neutral ground, to discuss the means of a reconciliation. But if a conference of this sort had been held under the auspices of a foreign Power, it would have amounted to making that Power the arbitrator of their dispute. The dignity of that impartial office requires that it should be tendered spontaneously by the parties concerned, and not solicited too anxiously by the one who is to be appointed. His arbitration would have less chance of being efficacious, if the eagerness with which he volunteered to preside over their agreement should expose him to the imputation of leaning towards whichever party showed the most readiness to confer that distinguished mark of confidence upon him. In such cases, an attitude of watchful reserve is the best preparation for assisting, when the proper time shall arrive, in the amicable settlement of their quarrel.

Again, the subject-matter of the deliberations, as well as the form in which they would have to be instituted, would, in the present state of the military operations, be presumed to imply an abandonment of Northern claims. In a war like this, for dominion and territory, the ground of any plausible overtures towards restoring peace must be the actual results which have been attained at the time. Friendly and disinterested parties can recommend no settlement of such a contest, except upon something like the basis of *uti possidetis*; for it is obvious that either of the belligerents would naturally resent the proposal, from a third party, that it should give up the substantial acquisitions which its arms have gained, or the possessions of which its enemy has failed to deprive it. If, therefore, the time had arrived when England and France could jointly offer their mediation between the two Federal Governments of North America, as between two Powers alike independent, the outline of any plan which might have been recommended by their good advice must have been determined by the stations of the hostile armies, or by the strategical advantages probably within their immediate reach.

Since we can scarcely believe that any man still dreams of the forcible subjugation of the South, the time is approaching when, if the war be carried on any longer, its avowed object will not be the restoration of the Union as it was, but only to secure a convenient frontier, and to restrain the future extension of the Slave State Confederacy over the western territories. But that time has not yet arrived. So long as the ostensible design of Mr. Lincoln's Cabinet is to compel the Southern States to return to their former allegiance, the Federal Secretary must refuse, "while engaged," as he says, "in suppressing an armed insurrection, with the purpose of maintaining the constitutional national authority, to enter into diplomatic discussion upon the question whether that authority shall not be renounced." These airs of imperial sovereignty must be abated, before any European peacemaker can have a chance of success.

Whenever the pretensions of the Government at Washington shall have been so moderated by the ill-success of its mad enterprise of conquest, that it shall renounce the despotic claim to an indefeasible empire, and seek only to obtain guarantees for the safety of that which remains of the Union, with as large share as it can secure of the unoccupied portions of America, it may become expedient for the European Powers to have a voice in the final arrangements for peace. It would be for their interest, despite the Monroe doctrine, as well in the Western as in the Eastern hemisphere, to guard betimes against the dangerous aggrandizement of a new Power that might some day be troublesome to the general welfare. It would, for example, be a fair occasion for the use of their diplomatic influence, if there were any likelihood of the rise of a Southern Power so formidable as to threaten any of their West Indian possessions; or to command the transit between the Mexican Gulf and the Pacific Ocean; or even to close, at its pleasure, the entrance of that great highway of the Mis-

Digitized by Google

sissippi which gives access to vast and fertile regions, destined to be the abode of a hundred millions of our race and a granary for all the world. It would perhaps be advisable that, in recognizing the Southern States as an independent Confederacy, and in promoting the establishment of pacific relations between them and their Northern neighbours, specific treaty obligations, with a view to prevent a revival of the African slave trade, should, as the price of our favourable countenance, be laid upon them.

But the prospect of our taking part in negotiations for peace, which might give us an opportunity of thus providing for the general interests and our own, so far as they are concerned in the political reconstruction of America, is still remote. It is probable, indeed, that no mediation of France, England, or Russia may be required. The overthrow of President Lincoln's Government by the growing strength of the Democratic party, by the wide dissatisfaction of the Western States, by the ruin of Federal finance and collapse of the monetary system, by the exposure of administrative corruption and incompetence, by the humiliating defeat of successive armies and the impossibility of creating them anew, may very soon dispose the North to some terms of accommodation. In the meantime, we read once more the haughty style in which a people who have, with as much right and as much spirit as those insurgents by whom the Union was founded, made good their separate national existence, are denounced by Mr. Seward as mere rebels, to be crushed without a word of parley. And we find in this tyrannical language a fresh proof of the true character of the Federal policy, combining the most rigid theories of imperial despotism with the mingled profligacy and fanaticism of the French Republican Directory, and with a cynical contempt for "human life, liberty, and happiness," the protection of which is pronounced by the very declaration of American independence to be the true object of all government whatever.

THE ROUPELL FORGERIES.

WE have not heard the last of Mr. William Roupell and his forgeries. The trial at Guildford directly involved only one of the estates which belonged to the late Richard Palmer Roupell,—but a small part of the property which, during that gentleman's later years and after his death, was the subject of his son William's operations. It could hardly have been expected that every capitalist who had given his money to William Roupell should be satisfied with the result of the trial; and statements, widely circulated of late, have made it known that, as regards one of the principal estates dealt with by him, his brother's claims are seriously disputed. It is alleged by the opposing parties that William Roupell, in accusing himself of forging a deed of gift to the Roupell Park estate, has done himself an injustice that he might do his brother a benefit; and that in mortgaging that estate he did but deal lawfully with a property of which he was the owner. By a respectable contemporary the evidence upon which this allegation rests has been characterized as "an idle tale;" but this appears to be a hasty decision upon a matter the time for judgment upon which has certainly not arrived. For ourselves, it will not in any degree surprise us to find a man who stands confessed of both perjury and forgery, proved to have done a little more of the one and a little less of the other than it would at present suit him to acknowledge. Be it remembered that according to his description of himself, given at the Central Criminal Court, William Roupell is "a living paradox." There can be no certainty that in his anxiety to make restitution—at the expense of others—to his brother, he has not in some measure exceeded the line of justice.

In the proceedings now pending large interests are involved. At the Guildford trial William Roupell stated the present value of the Roupell Park estate to be £200,000, and the amount of the mortgages which he contracted upon it to be £135,000. The mortgages were contracted by means of a deed of gift purporting to be granted by old Mr. Roupell, with concurrence of his wife (necessary we presume in respect of her dower), to his son William, dated in 1853. Armed with this document, William had raised £70,000 upon the estate before his father's death in 1856. When, at the trial, he declared the deed of gift a forgery, and the mortgages obtained upon it fraudulent, he offered a plausible explanation of the fact that for the last three years of his father's life he had dealt with the property as his own. In 1853, he said, he had led his father to believe that he had become a trustee of the Unity Fire Insurance Company, in respect of a sum of £50,000 set aside for building investments. He had shown his father a deed (forged of course) constituting him a trustee of the company, and had, as on behalf of the company, taken a lease of the Roupell Park estate from his father, at a rent of £2,750 a year. So, while dealing with capitalists as proprietor of the estate, he dealt with his father as tenant on behalf of the company. The will which he suppressed did not leave Roupell Park to him, and to cover his fraudulent operations upon this and other estates, he was driven, so he said, to forge a will. There is nothing very improbable in this story; if an invention it is indeed a creditable exercise of ingenuity; and while it stood alone it was perfectly natural that it should be accepted as true. But now the mortgagees (or their representatives) bring testimony to contradict it, to show that the deed of gift said to be forged is authentic—the evidence, namely, of an attesting witness; and this is corroborated to some extent by that of the surviving grantor of the deed, the widow of the late Mr. Roupell.

The attesting witness adduced to support the deed—by name Alfred Douglas Harwood—was, in 1853, a clerk in the office of Mr. Rees, old Mr. Roupell's solicitor. William Roupell was then an articled clerk in the same office. Harwood has sworn before an examiner in Chancery that, in the long vacation of 1853, William Roupell asked him to recommend him to a conveyancer; that he named Mr. Emly, the conveyancer usually employed by Mr. Rees, adding, however, that he had better go to another, as if he went to Mr. Emly, Mr. Rees might hear of it; and that Roupell said that he did not mind, or that he would rather like, that Mr. Rees should know of it. That some time after he went with William Roupell to his father's house in Cross-street, Blackfriars, to witness old Mr. Roupell's signature to a deed; that he saw Mr. Roupell sign the deed, after spending some time in examining it; and that he also at the same time saw Mrs. Roupell sign it. The deed was handed over to Harwood, who took it home with him, and who, on examining it next morning, found it to be a deed of gift of the Roupell Park estate to William Roupell. He had delivered it forthwith to William Roupell; and he identified the deed of gift produced in this case as the document of which he had witnessed the signature. A lengthened and searching cross-examination failed utterly in shaking Harwood's testimony (which was given with much detail), while several facts were proved in corroboration of it. Thus, it was shown that when William Roupell was first a candidate for Lambeth, Harwood had told a friend of his, an elector of Lambeth—who was doubtful about voting for Roupell because he thought he had no property—exactly what he has now sworn as to the deed of gift of Roupell Park. He was at Guildford during the trial, and identified Mrs. Roupell in Court as the lady who signed the deed in 1853, he having never seen her previously, according to his statement, except on the occasion of the signature. Mrs. Roupell, however, does not dispute her signature. She has stated that she signed the deed of gift towards the end of 1853, in presence of Harwood; and that in October, 1853, she acknowledged it before a Judge—a fact otherwise proved by the Judge's certificate. It need scarcely be said that it is the duty of the Judge, when a married woman thus acknowledges a deed before him, to make her perfectly aware what she is doing; and, therefore, it is absolutely beyond doubt that Mrs. Roupell knew that her son, by gift from his father and herself—supposing the deed a sound one—became proprietor of Roupell Park in October, 1853. She cannot have failed to see that if her consent and signature were necessary to the deed, still more were her husband's. Here, however, comes the most extraordinary part of this new Roupell case. Mrs. Roupell makes the statement that her husband never signed that deed. She is thus at issue with Harwood upon the vital fact of the case. Which to believe—the detailed statement of Harwood, or the bare negation of Mrs. Roupell? That is a matter not for us at present, but for a court of law, to pronounce upon; but, plainly, Harwood's statement cannot be pooh-poohed as a mere "idle tale;" and, plainly, Mrs. Roupell's evidence, on the other side, is not free from serious perplexities.

That Harwood was not brought forward at the Guildford trial was, no doubt, greatly—perhaps entirely—owing to the

Digitized by Google

fact that his evidence had no direct bearing upon the case of the Kingston estate, the matter then under litigation. Of course it would have been most important for the defendant in that trial to have been able to contradict William Roupell upon any considerable point of his self-accusations, for doubt would thus have been cast upon every part of them. But, on the other hand, Roupell's evidence had obviously made a strong impression upon the jury—an impression almost too strong to be hopefully struggled against, even supposing that Harwood's evidence was available for the defendant in that action. Without attempting to appreciate this evidence we may remark that Harwood's previous statement about the deed—proved before the examiner in Chancery to have been made—is a strong proof of his good faith in the matter. It may be added that Mrs. Roupell's evidence, in the vital matter where it conflicts so seriously with that of Harwood, is capable, so far as words go, of being resolved in two ways. When she went before the Judge in 1853, either she believed that the signature attached to the deed of gift, purporting to be her husband's, was really his—in which case she must now believe that she was then imposed upon; or she then knew that the signature was not her husband's. We have no right whatever to entertain any supposition injurious to Mrs. Roupell, and, indeed, it is not credible that she made her statement in a sense which would represent her as the partner of her son in a fraud upon her husband. But the reading of her evidence which is the more favourable to her, is, obviously, not the more favourable to the maintenance of her son Richard's title to Roupell Park. If her denial that her husband signed the deed show nothing but her present belief, that in some way or other there was something wrong about the signature, can that denial go for very much?

THE DUCHY OF CORNWALL.

THE necessity of making a parliamentary provision for the Prince of Wales has involved a discussion on the Duchy of Cornwall, and has revealed the existence of great ignorance of its affairs. The subject is confessedly somewhat complicated, and we may, perhaps, pardon even such authorities as Mr. Gladstone, the *Times*, and Sir John Trelawny, when we find them all imperfectly informed upon it; no one, indeed, would venture to dogmatize on a subject on which neither the financial knowledge of the first, the omniscience of the second, nor the local opportunities of the third authority sufficed to prevent mistakes.

The Earldom of Cornwall, which preceded the Duchy, may be said to be coeval with the Conquest. Earl Robert of Mortaigne, the half-brother of the King, is returned in Domesday Book as the holder of nearly all the county, the Church lands and a few manors held by the King himself excepted. The rapacious Earl had even stolen some of the Church lands (*hanc terram abstulit comes ecclesiæ S. Michaelis*, says the record). The Earldom was always in the hands of the King, or of some prince of the blood, down to the time of the creation of the Duchy by Edward III., but its possessions were squandered by the profuse grants of successive holders. In the reign of Henry III., however, the revenue of the Earldom was so large, as to prove formidable to English liberties; in the struggles between the King and De Montfort, the King's brother Richard, the King of the Romans, devoted his wealth to the pay of German mercenaries, and there are manors in Cornwall whose names still show that they were once held by the free-lances who fought at the battles of Lewes and Evesham. Edward III., as is well known, created the Duchy of Cornwall in the person of his son the Black Prince, and upon the true interpretation of the words of the gift, "Eidem Duci et ipsius et hæredum suorum regum Angliæ filiis primogenitis et dicti loci ducibus in regno Angliæ hereditarie successuris," depends the controversy between Mr. Gladstone, Mr. A. Smith, and Sir John Trelawny. Luckily we are not called upon to interpret the limitation anew, as its meaning has been settled by several precedents. The first question upon it arose upon the death of the Black Prince in the lifetime of his father, leaving a son, afterwards Richard II., and it was decided that Richard did not succeed to the Duchy because he was not the first-born son of a King of England. This precedent would be perhaps out of date, had it not been followed upon the death of Frederick, Prince of Wales, in the lifetime of George II., when an Act of Parliament (33 Geo. II., c. 10) was passed, which declared the King to be Duke of Cornwall, and gave him a power of leasing the possessions of the Duchy. Mr. Augustus Smith was, therefore, quite right last week when he said that on the death of a Prince of Wales leaving a son, the Duchy reverted to the Crown; and although Mr. Gladstone's statement in reply was correct in its facts, it had no bearing on the argument. Mr. Gladstone's facts were an answer to the second question—whether on the death of a Prince of Wales without issue, but leaving a second brother, the Dukedom would pass to that brother; and it is clear that in such a case it would. The second son fulfils the condition of being a King's son, which the son of the Prince would not be; and although it might be thought that he was not *primogenitus*, yet it has been settled that this word is not restricted to the son actually first-born, but includes the first-born surviving son. This was decided upon the death of Arthur, the eldest brother of Henry VIII., and upon the death of Henry, the eldest brother of Charles I., and was acted upon in the case of the deaths of the infant children of Henry VIII., and the infant eldest brother of Charles II. Coke, indeed, reports differently in the Prince's case; but his report on this point was declared by the Lord Chancellor Ellesmere, who presided at the trial of the case, to be erroneous, and it was disapproved of in the last century by Lord Hardwicke. Sir John Trelawny was, therefore, wrong in denying that a second son of the King would succeed to the Duchy of Cornwall upon the death, in the lifetime of the father, of the first son without issue, and we may perhaps correctly and succinctly describe the qualifications of the Duke of Cornwall, when we say he must be the son and heir-apparent of the reigning Sovereign; and if there be no such person, the Duchy is, *pro tempore*, merged in the Crown.

Upon the accession of her Majesty the management of the estates of the Duchy had, perhaps, reached its worst condition. Burke had fifty years before denounced the system, which provided "the apparatus of a kingdom for the government of a private estate—the formality and charge of the Exchequer of Great Britain for collecting the rents of a country squire;" but things had become, in the interim, worse instead of better. The expenses of management were enormous, and yet the property was so neglected that rents were lost, encroachments were suffered, and adverse claims were permitted to mature into rights. In the names in the rent-book, indeed, might be still seen not only the manors granted by Edward III., but the timely additions to the property of the Duchy made upon the dissolution of the monasteries and upon the attainder of the Marquis of Exeter; but the rents of these were reduced to a trifling sum through the improvident system of granting leases upon fines. The most profitable source of income was open to the grave objection that it was derived through an exceptional tax on an important branch of industry. The feudal Earls of Cornwall claimed and exercised a right of pre-emption over all the tin raised within the Stannaries, which had, however, been long ago commuted into a uniform duty. The Cornish tinners were compelled to bring their produce to a few "coinage" towns within the Duchy, for the purpose of assessment and payment. The income from this source, which, in the reign of Elizabeth, in 1574, had been returned as £1,600, and in 1688 had grown to £6,218, had, on an average of ten years preceding her Majesty's accession, amounted to £16,216. This tax was so objectionable that in the first year of the reign it was abolished; and to compensate the Duchy for the loss, an annual sum of £16,216 was granted to it, payable out of the Consolidated Fund. This was a first step in the reform of the affairs of the Duchy, and it is probable that amelioration would have been in any case gradually effected in its management. But whatever might have been otherwise effected, the rapid and enormous change in the condition of the affairs of the Duchy is unquestionably due to the influence of the Prince Consort. It is only necessary to point to the comparatively stagnant condition of the Duchy Palatine of Lancaster to show the difference attributable to the care and attention of his Royal Highness. The Council of the Duchy, in their recent Report to her Majesty, have expressed in fitting words their sense of their obligations to him: "To his just mind and clear judgment, his quick perception of what was right, his singular discretion, his remarkable aptitude for the conduct of affairs, we never looked in vain for guidance and advice on any occasion of difficulty. The soundness of his opinions in all our deliberations was rendered more apparent

Digitized by Google

by the toleration with which he listened and was always ready to defer to those of others. He never lost sight of the improvement of the condition of the tenant and the labourer, whilst anxiously seeking to restore the property of the Duchy to a state of prosperity; and to him, we may truly say, it is mainly due that the Prince of Wales will now enter into possession of an estate greatly increased in value, and free from nearly all the disputes with neighbouring proprietors and others, which at one time prevailed." It is not often that the language of royal panegyric is couched in words which may be unreservedly accepted by those who are possessed of a thorough acquaintance with the facts of history; but no one who is at all aware of the change in condition of the Duchy of Cornwall will hesitate to endorse the language of the retiring Council. Figures, indeed, speak for themselves and cannot be twisted into flattery. An accumulation of half a million is only one item of the prosperity which awaits the Prince of Wales: the income of the Duchy has been raised from £25,000 to upwards of £60,000 per annum, and, indeed, will shortly be more than £65,000, whilst the expenses of management have been diminished from £11,000 to something less than £[illegible]000. Outlying portions of the Duchy have been sold, and the proceeds have been invested in the purchase of property contiguous to the principal estates of the Duke. The vexed question of foreshores, which Mr. Smith did his best to make notorious, has been settled in almost every case of importance; whilst upwards of £40,000 has been spent in the erection and improvement of farm-houses and buildings, drainage, planting, and other expenses incident to a great estate. These are not the only circumstances in the management of the Duchy which deserve approbation; the Prince Consort and the Council of the Duke felt that the Heir to the Crown was something more than a large landed proprietor: they initiated or lent their aid to the support of several Acts of Parliament, designed for the welfare of the inhabitants of the Duchy. They carried, for example, a Bill for the Abolition of the Deanery of St. Burian, which, dear to antiquarians as a monument of the energy of Athelstan in reducing the Land's End to the Saxon sway, had degenerated into a fearful abuse. A more important measure was the Act for Improving the Procedure in the Stannaries Court. So far from the jurisdiction of this court being abolished, as stated by a writer in the *Times*, it has been confirmed and extended. In many cases its jurisdiction is exclusive, and the plaints arising from causes within the Stannaries, which come before the Courts at Westminster, are remarkably few. The Vice-Warden holds regular sittings, and disposes of a considerable amount of business—and indeed his Court and the Palatine Court of Lancaster are examples of the itinerant Courts of Equity, which are perhaps the improvement most needed in our administration of justice. There are indeed two blots in the administration of the affairs of the Duchy, to which an economist may point, but which English feeling will be slow to condemn. If any one will take the trouble to walk from the gate of Lambeth Palace to Vauxhall-bridge, he will perhaps see a dreary row of buildings, whose blistered fronts bear awful witness to the noxious vapours of that insalubrious neighbourhood. They were erected at the expense of the Duchy, and form, it need scarcely be said, a very unprofitable part of its possessions: an expenditure of £16,000 is repaid with an income of barely £300. The other instance is of a similar character: when some large mines in Cornwall were about to be abandoned as worthless, the Council worked them for two or three years at a considerable loss, for the sake of giving employment to the miners engaged upon them. Both instances attest the Prince Consort's care for the condition of the labourer, to which the Council of the Duchy bear witness.

It must not be concealed that the ameliorated condition of the Duchy of Cornwall may hereafter be a source of anxiety. The proposal to charge the jointure of the Princess Alexandra upon its revenues, to the principle of which the Chancellor of the Exchequer half assented, could not, it is plain, be entertained without an infringement not only of the private rights of the Queen, but of those of the possible future dukes, the younger brethren of the Prince. On the other hand, an accumulation, under present circumstances, of the revenues of the Duchy during a minority co-existent with that of the Prince of Wales, would produce two millions of money, and render the heir to the Crown virtually independent of Parliament. The danger may be to us imaginary, but it remains possible, and its existence should be remembered.

L'ENTENTE CORDIALE.

About a year ago, we chanced to see, at one of the minor theatres in Paris, a piece called *La Prise de Pekin*. Its author, indulging in an unusual dramatic licence, had introduced the present editor of the *Times* upon the stage. That well-known gentleman was represented as accompanying the French army to China, in order to supply the journal which he so ably directs with reliable information concerning the progress of the allied arms. He appeared as a tall, lithe, fair-haired, good-looking man, wearing the long drooping whiskers familiarly known as "Piccadilly weepers;" clad in a neat suit of Nicoll's dust-coloured alpaca, with a low-crowned straw hat on his head, a green veil over his face, a tax-gatherer's ink-horn at his button-hole, and a camp-stool and a blotting-book slung across his shoulders. He lived chiefly with the *sous officiers* of a Zouave regiment, with whom he seemed to be very popular; and whenever their corps went into action, the editor of the *Times* accompanied them. The affection they bore him induced them on more than one trying occasion to press him to withdraw from the front; but his national pride and his strong sense of duty invariably prompted him to resist their friendly importunities; and wherever the enemy's fire waxed hottest, there did the editor of the *Times* pitch his camp-stool, observing, with an atrocious Fleet-street accent, "Nong, je ne voo pas me rétirer; il fo que je fasse mon correspondance pour mon journal." When a fragment of a shell carried off the crown of his straw hat, he philosophically observed, "Hooroosement il ne fait pas froid;" and when a rifle-bullet twitched his pen from betwixt his fingers, he quietly said, "C'est egal, j'ai un autre dans mon poche," and, producing it, concluded his letter in time for the home mail.

The audience, composed entirely of the middle and lower classes, were charmed with the English editor's coolness and pluck. When, after his capture by the Chinese, he persisted, in the intervals of torture, in explaining at considerable length to his tormentors that "L'Angleterre était la première pays du monde," the *bravos* were deafening; and when, towards the end of the fifth act, he paused, on his way to execution, to sing with a manly voice a couple of stanzas of "God Save the Queen," the admiration of the house broke out in thunders of applause, such as we never before heard in any theatre.

It was very pleasant for English eyes to see and for English ears to hear all this; the fun the Parisians made of us was so fair and so good-natured, and the praise they awarded to our slow but steadfast courage was so hearty and unreserved. Recalling to mind the stupid, brutal, boozy "Goddams," the stage Englishmen of the Boulevards in former days, and comparing them with the brave, intelligent, well-favoured gentleman who, in 1861, represented our nation on the French stage in their stead, we fondly imagined that France and England were at length beginning to appreciate and understand one another; that the *entente cordiale* was becoming something more than an ironical phrase; and that the best blood of the two nations had not been commingled in vain on the stony ridges of the Crimea, and in the muddy waters of the Peiho.

We need not, therefore, attempt to describe the amount of surprise and pain with which we have beheld the stage Frenchman whom Mr. Kinglake, with a dramatic licence far bolder than that indulged in by the author of the *Prise de Pekin*, gravely proposes that history should accept as a faithful delineation of the soldier and the statesman of the Second Empire. The character he draws is not, indeed, new to us. We have seen it in trashy caricatures published some sixty years ago, representing "Bony" as "the Corsican monster," a sallow, shivering suppliant on his knees to the chivalrous and burly King of England; we have read of it in the ignoble libels with which hired literary hacks used to assail the First Napoleon and his Marshals. The wild pamphlets of Red Republicans and the spiteful gossip of exiled Orleanists have, we all know, done their best to reproduce and adapt to the present Emperor of the French and his adherents the same forms of ridicule and calumny; and it is not suprising that they should employ their forced leisure in doing so; but we must confess that we are sincerely grieved to find that such a man as Mr. Kinglake should have been so simple as to permit himself to be made their cat's-paw on this occasion.

History tells us that successful revolutions have seldom been planned in the open face of day, and that they are as seldom con-

summated *à l'eau de rose*; a certain amount of double dealing, and pledge breaking, and bloodshed, is usually inevitable during their progress, and the vanquished invariably denounce their victors—as soon as they can do so from a safe harbour of refuge—as conspirators, traitors, and murderers, of the deepest dye. As the Orleanist *salons* in Paris are said by Mr. Kinglake to have privily spoken of "Monsieur de Morny's Lawgiver" and of "his henchman, Achille St. Arnaud, more properly Jacques Le Roy," when Lord Raglan visited Paris in April, 1854; so spake of their enemies, seventy years before, the French nobles who fled to England from the great revolution of 1789; so spake the Carlists of the House of Orleans in 1830; so have the defeated party ever spoken of those by whom they have been worsted, in every revolution in which "the divine right of kings" has been in any degree shaken or damaged. The *cafés* and *estaminets* of Paris were crowded during the cold winter of 1861-2 with black-bearded, bright-eyed men, muffled up in cloaks and *caches-nez*, refugee Neapolitan nobles, who had loyally fled with their king from Garibaldi and the eleven followers with whom that adventurer invaded Naples; and their song was precisely the same as that which Mr. Kinglake tells us (pp. 22—24, Vol. II.) was the song of the Orleanist *frondeurs* of the Faubourg in 1854. Garibaldi, according to them, was "*une canaille*," to whom they denied even the vulgar attribute of courage, affirming that had not their statesmen and generals been previously corrupted, and had not their troops run away, Garibaldi would never have dared to attack them. His followers they denounced as low-born ruffians, with whom no person "in society" would willingly associate; and they abounded in horrible details of murders, robberies, rapes, and sacrileges—very much like Mr. Kinglake's edition of the Parisian terrific register of 1851—perpetrated by the cowardly felons before whom they, the best blood of the South, abandoning their king and their country, had fled without striking a blow. As for Victor Emmanuel and his creature Cavour, no invective was too strong for them; the only consolation of these exiled railers appeared to be that their Holy Father at the Vatican would take good care that that precious pair should have no luck in this world, and in the world to come, a remarkably warm corner.

It is, we repeat, with unfeigned pain that we have seen Mr. Kinglake trepanned—as he evidently has been—by the Orleanist party in France and by the aristocratic party in England. His first volume is devoted to the indirect service of the one; his second volume to the rehabilitation of the other. He finds it judicious to admit from time to time that there may be somewhere in France, truthful gentlemen and brave soldiers—though not so many as he believes there are in England and in Austria,—but he explains that they are just now in a torpid and comatose state—chloroformed, as it were, by the wiles of Napoleon III., and that it is in vain to look for such men amongst the fillibusters with whom we are just now unhappily allied; by whose side we have had the misfortune to fight and to conquer in the Crimea and in China.

And Lord Raglan, according to Mr. Kinglake, appears to have entirely coincided with his historian. The public has hitherto been given to understand, in general terms, that the maintenance of the *entente cordiale* with our allies was entirely due to the tact and temper of the English General; but the revelations which Mr. Kinglake now makes clearly show that if we did keep on good terms with the French at that time, the fact was entirely due to St. Arnaud's good sense and good humour under very trying circumstances. Lord Raglan, looking upon the officer with whom he was directed to co-operate as a base-born, bragging, shifty, and unprincipled adventurer, is stated by Mr. Kinglake to have dealt with him as haughtily as *un vrai gentilhomme Anglais* ought to deal with such an unworthy ally. With the powerful aid of Lord Stratford, he is said to have snubbed him on every occasion; whatever St. Arnaud proposed Lord Raglan systematically opposed; on all the French Marshal's words and deeds the English nobleman invariably put the very worst construction; he would discuss no plans of operations with him; he would intrust him with no knowledge of the probable movements of the English; he invariably "dismissed him from his presence" "cowed and pressed down," shrinking "under the majesty of the great Elchi's Canning brow and tight, merciless lips," and under the "stern reproofs" which the English General considered it advisable to administer, from time to time, to his ally, a Marshal of France, commanding 30,000 men. Nay, a reference to pages 241 and 251 of Mr. Kinglake's second volume will show that up to the middle of the day on which the battle of the Alma was fought, Lord Raglan, "thinking it to be a clear gain to be able to avoid entrusting the Marshal with a knowledge of what our army would be likely to undertake," had deliberately withheld from St. Arnaud the part which he intended the English should play in the opening action!

In reading all this we are indeed struck with wonder—not at Lord Raglan's dexterity in preserving the alliance—for he seems to have done all that man could do to imperil it—but at the marvellous sense and temper with which the French Marshal appears to have borne the caprices and insults of his English colleague. Although we have far too high an opinion of Mr. Kinglake's integrity to suppose that he does not sincerely believe every word that he has written, we can believe but little of it. We clearly perceive that, although the words are indubitably the brilliant words of the accomplished author of "Eothen," the sentiments are not his; they are the sentiments of one or two spiteful *salons* of the Faubourg, and of that incapable gang of relatives and intimate personal friends with whom it pleased Lord Raglan to surround himself in the Crimea—whose acquaintance we made at the Chelsea Inquiry—pleasant fellows, no doubt, and skilful riders to hounds, but no more capable of aiding their chief in ministering to the wants of an army in difficulties than would have been Allan Macdonough or Jem Mason. When Mr. Kinglake affirms that the reputation of the French had fallen below zero after the battle of the Alma with the English army, he probably only intends to say that the young staff officers and Guardsmen with whom he lived so pleasantly at the British Head Quarters in the Crimea, knowing little of and caring nothing for their profession, and soured at having been entrapped into a serious and severe campaign when they believed they were merely joining in a brief, brilliant, and bloodless *promenade militaire*, were in the habit of adopting over their cigars that disparaging and insulting tone towards our allies, which the historian has somewhat innocently incorporated as the opinion of the whole British army, into the two thick volumes now offered to the world as the first instalment of "the only correct card" of the Crimean war.

THE PERILS OF THE FACULTY.

When Mr. Pickwick learned the conclusion to which a British jury had come as to his relations with the Widow Bardell, we do not learn that his behaviour was characterized by the submission or equanimity which might have been expected in so eminent a philosopher. On the contrary, there is reason to believe that that great man's mind was very considerably thrown off its balance; and his boldly announced resolution to spend the rest of his existence in prison sooner than comply with the requisition of justice, bespoke just the degree of irritation which an innocent and well-intentioned gentleman is likely to experience when he has been worried with a tedious trial, badgered by hostile counsel, closeted with attorneys, stared at by the crowd, criticized in the papers, and at last rewarded by a verdict that is at once an outrage upon common sense, and the gravest possible injury to his reputation. Mr. Adams, whose ill-fortune recently placed him a few few weeks ago in a somewhat similar predicament before the Chief Baron of the Exchequer, had nearly equal reason to complain of the decision arrived at, but he has adopted a far more efficacious remedy than his great prototype's attitude of passive resistance. There were not, indeed, in his case, any damages to pay; but the stupidity, inattention, or want of principle of some member or members of the jury, resulted in a verdict which every one who heard the trial, or who carefully examined the evidence, must have felt to fall infinitely short of what Mr. Adams had a right to expect. Mr. Lush, in his subsequent letter to his client, merely echoed the general opinion in telling him that "he was the victim of a foul conspiracy." Two Irish adventuresses, old hands apparently at this infamous trade, had contrived to build up an ingeniously wicked fabrication, by which the good-natured and charitable services of a doctor to a young woman were tortured into supporting a pretended expression of personal attachment and promise of marriage. Notwithstanding the hardihood of the principal witness, and the practised cleverness with which she defended the weak points of her position, the structure was too utterly weak and baseless to stand a critical examination, and collapsed disgracefully before a few searching questions. At an early stage of the proceedings, all candid lookers-on and the rational portion of the jury were completely satisfied that they had to do with an impudent imposture, a blameless defendant, and a plaintiff, unprincipled, ready, and ingenious beyond the ordinary level of feminine wickedness or ability. The mental or moral obliquity, however, of certain members of the jury necessitated a protracted examination, and qualified the verdict in favour of Mr. Adams with such a disagreeable suggestion of uncertainty, that he and his friends very wisely determined on securing some more decisive, complete, and respectable affirmation of his innocence. A meeting was summoned at the Freemasons' Hall, and a number of gentlemen, principally of course belonging to Mr. Adams' own

Digitized by Google

profession, assembled to make common cause with him in his misfortune, to express their thorough-going conviction of his uprightness, and to deliberate as to the most effectual measures by which not only doctors, but clergymen, artists, and lawyers, may protect themselves from similar accusations. Nobody would be inclined to question the high-flown encomium which Dr. Lankester pronounced upon doctors in general, as "the pioneers of science," or upon Mr. Adams in particular, as a philanthropist, a writer, and a man. "All classes of society," so ran the abstract resolution which formed the leading principle of the occasion, "are interested in supporting those who incur great trouble, annoyance, and expense, by resisting and exposing any attempt to injure their character by false charges." It is far more doubtful, however, whether anything could be made of the proposal which followed, namely, for an association "which should have for its object the defence of those who might unhappily have charges made against them, and who might not have sufficient moral courage to repel any such attacks." These are precisely the sort of occasions when a little intrepidity and manliness are imperatively necessary, as the best evidence of an innocent purpose and honest character. It is a real misfortune, doubtless, for any one to have such a charge brought against him; but it is a misfortune which a man must be courageous enough to bear for himself, and which is reduced to a minimum by being boldly and at once confronted. No association could possibly under such circumstances supply the place of "moral courage" on the part of the accused, or convince a jury or the public at large that a man who was nervous enough to shrink from inquiry had not something discreditable in the background. With this and every other false charge the only safe policy is a resolute and a high-handed determination to drag the whole matter to the light, and to bring the culprit within reach of the law. An association is the wrong machinery for this, though it might be of use at a subsequent stage of the proceedings. In the present case, for example, if it be the fact, as Mr. Lush affirms and as even the Chief Baron seems obscurely to imply, that the defendant has "been the victim of a foul conspiracy," any association that would undertake the expense of setting a prosecution for conspiracy on foot, and of collecting the evidence necessary for the indictment, would be of real service both to the defendant and to the public at large, and might serve, at any rate, to warn medical practitioners against similar impositions for the future.

The numbers who attended the meeting, and the general enthusiasm displayed, seem to show that the profession in general are alive to the danger, and feel it to be a real and formidable one to themselves. The ministrations of a doctor, like those of a clergyman, are, of course, peculiarly liable to uncharitable misconstruction. It is necessary to be interested in the patient, to be tender in inquiries, ready with sympathy and consolation, watchful in alleviating pain, or devising enjoyment. The patient, circumscribed in thought to the range of a sick room, and awaiting the doctor's verdict from day to day with watchful trepidation, often comes naturally enough to regard him with something like affection. He seems almost to hold the issues of life and death, and recovery always involves a debt of gratitude to the man by whom it is brought about. On his side, pity is akin to love; and if it is human nature to hate those whom one has injured, it is equally natural to regard the objects of one's benevolence with a solicitude which may easily ripen into some more interesting and less legitimate sentiment. The opportunities for familiar and unrestricted intercourse are frequent, and the man must be either more or less than mortal, on whom some interesting invalid, sunk in

> "Becoming woe,
> Wrapped in a gown for sickness or for show,"

has not, at some moment or other, left the impression of her romantic affection. Nor are other professions altogether exempt. The readers of "Orley Farm" will recollect the perilous admiration with which Mr. Furnival regarded his client, the necessary but half-illicit interviews at Lincoln's Inn, and the domestic disturbances which resulted thereupon. Clergymen are still more dangerously situated. Fair aspirants to saintship beset them with pretty difficulties, or invite their decision upon the nicely-poised claims of sentimental casuistry. Some lovely enthusiast, wearied of worldly pleasure, places her soul in his keeping, and begs him to direct her path, criticise her motive, and rebuke her shortcoming. Eloise, no doubt, consulted Abelard as to her state of mind, and when picturesque penitents lay bare their woes, "Devotion's self will steal a thought from heaven," and the curate forgets his official horror of the sin in his personal admiration for the sinner. To one and all, however, the same caution may be addressed, and the same method of defence prescribed,—caution in the first instance, courage when the moment of danger has announced itself, a sedulous abstinence from that equivocal politeness upon which foolish or malicious persons can place a wrong interpretation, and prompt recourse to a public tribunal whenever the first symptom of impending intimidation makes itself apparent. We must be prepared for occasional cases of imposture as long as there are shameless and unprincipled women at large in society, resolved to make a livelihood by their wits. But no harm is done, when, as in Mr. Adams' case, not a single indiscretion or impropriety can be proved against the defendant, and a story, incoherently improbable in the first instance, is demonstrated, by a few pertinent inquiries, to have no other origin than the fertile imagination of an Hibernian "campaigner," prompted at once by the most pressing of maternal necessities, a husband for her daughter, and a livelihood for herself.

THE NEW SCHOOL OF METALLURGY.

ANOTHER advance has just been made in that excellent direction, the first step in which was taken when the School of Mines, in Jermyn-street, was founded. The establishment of the new "School of Practical Science and Metallurgy," in Sheffield, supplies an old and crying want—a want, indeed, so long confessed, so importunate in its need, that it is surprising it should not have been satisfied long ago. The dingy "metropolis of steel" has plenty of schools, colleges, and literary and philosophical institutes of all kinds, save, until now, just the very one which is required to teach the youth and manhood of the towns what, in a worldly sense, it most concerns them to know—the science of that craft by which they win their daily bread, and which has made Sheffield rich and famous. The absence of such an institution is the greater wonder, when we consider the money value of the interest at stake. From the early days when the tin of Cornwall tempted the Romans to bring their arts and culture to our barbarous shores, the mineral deposits of Britain have constituted one of the chief elements in her prosperity. To them we can trace the origin of our commerce, the beginning of our civilization, the source of our wealth. There is no other country so fortunately endowed in this respect. It is not only that we possess more or less of almost every mineral, but that they are presented to us in so convenient a form for our use. Norway, for instance, has finer iron, but then she has no coal. France has iron as good as we have, and coal too, but then they are situated at a distance from each other. In England alone do we find iron, lime, and coal in close contiguity; so that the ore, the flux, and the fuel can be worked side by side. The total annual value of our minerals and coals is estimated at nearly £27,000,000, and the value of our metals (derived from the minerals) and coals at £37,000,000. And every year this enormous revenue is being augmented by the increasing demand for metal, especially iron, to the application of which there seems to be no limit in this iron age.

Yet, with all our abundance of material, we have allowed other nations, less favourably circumstanced, to distance us in various branches of metallurgy. Certain French and Belgian firms are able to bring rolled bars and girders, manufactured out of English iron, into our markets on terms at which our producers cannot compete with them. Sheffield still maintains her pre-eminence in cutlery; but Mr. Roebuck's prediction that his constituency would look "exceedingly small" by the side of some of the Continental exhibitors in the Exhibition of 1862, proved true in regard to heavy castings and large masses of steel. None of the Sheffield houses had anything to show which could match, or even approach in dimensions, Kruppe's 21-ton ingot. This result is naturally mortifying to our national pride. But how has it been brought about? It is very much like the race between the hare and the tortoise over again. Confiding in our immense natural resources, and in the rapidity and cheapness of production which we have been enabled to attain, we have fallen asleep over our work. All the while, however, the slow, patient German has been plodding away with his experiments, till at length his shout of exultation over the success of his labours has roused us from slumber to a sense of defeat. In some degree, our backwardness is owing to that sacrifice of quality to cheapness which is the besetting sin of English industry. But in a greater degree it has been due to our disregard of scientific method.

At the meeting held in Sheffield last year to start this school, the Mayor declared that, in the case of his own firm, they "experienced some serious disadvantage or suffered some serious loss almost every day from the ignorance of men to whom they were compelled to entrust work requiring a knowledge of metallurgy. In truth," he added, "the rule of thumb is too much adopted." That is the real secret of our failure. We have been walking in the dark.

Digitized by Google

We have been trusting to empirical routine under circumstances vastly different from those by which the routine was built up, and to which only it could be applied. Some new use is continually being found for iron, and some new or modified process required to bring the metal into the proper condition. The rule of thumb is, of course, worse than useless in such a case, yet any rule of another kind not only the workmen but even the foremen in our forges appear, generally speaking, to be incapable of applying. The interest which is taken in the development of the steel manufacture is evinced by the fact that 127 patents on the subject have been sealed during the last ten years. But the same figures equally prove the incompetency of the experimentalists, for only one of the patents has been turned to any practical account. In the mines, too, matters are even worse in this respect. Dr. Percy complains bitterly of the barbarous manner in which the South Staffordshire coal-bed has been treated by incompetent managers. The pits, he tells us, have generally been worked by contractors, called "butties," under the superintendence of viewers, called "ground bailiffs." In consequence of the ignorance, combined with the rascality of many of these men, an enormous amount of coal has been lost to the country. Even at the present time, he says, the South Staffordshire colliery viewers are frequently very imperfectly educated for their responsible duties, and the system of colliery mismanagement which prevails in this part of the country is a "disgrace to the age." These are strong words, but they are only too true.

The proper remedy for this defect is, of course, scientific education, to supply comprehensive principles instead of loose scraps of narrow experience, knowledge instead of guessing, and system instead of rule of thumb. And this education the new School of Metallurgy undertakes, and, as there is every reason to believe, will be able to supply. It will afford a complete scientific and practical education to students who are destined to become civil, mechanical, or mining engineers, or manufacturers in any branch of metallurgy, and will discipline them thoroughly in the principles of those sciences upon which their professional operations will depend. The school starts under the best auspices. It has arisen from an avowed sense of deficiency on the part of the manufacturers themselves. It has the success of the Jermyn-street institution to encourage and its experience to guide it. Its chairs are understood to be well filled, and the names of the Duke of Devonshire, Lord Wharncliffe, Sir D. Brewster, Sir R. Murchison, Dr. Percy, Mr. W. Fairbairn, and Mr. Robert Hunt, give distinction to its presidency. An important mission is before it, which we hope it will achieve.

A PIGMY WEDDING.

"Married, February 10, at Grace Church, New York, by the Rev. Dr. Willey, of Bridgeport, Connecticut, assisted by the Rev. Dr. Taylor, Mr. Charles S. Stratton, of Bridgeport, to Miss Lavinia Warren. European papers please copy. No cards."

Let us suppose that we had found, in our last-arrived copy of the *New York World*, this simple announcement. What should we have made of it? It would have been quite enough to provoke, in the minds of feminine readers, some fond inquiries, in reply to which our best information is at their service. They will probably have remarked, at the beginning, that Charles and Lavinia are both romantic names; and secondly, that Lavinia Stratton is a prettier name than Lavinia Warren,—at least, it does not sound so common. While harping on her name, we may assure them that this lovely young Lavinia, unlike her forlorn namesake who "once had friends," has daily or weekly thousands of admiring visitors, and one friend, certainly, to whom she has been worth, perhaps, her weight in gold. The husband of her choice, we are glad to say, is worthy of her in every respect. A glance at them will show, in this case, that events have brought about a perfectly suitable match. Behold this handsome youthful pair. "He has a fair complexion, light hair, rosy cheeks, dark eyes, and expressive face, and wears a pretty little moustache. She has abundant dark hair, braided back from her face in very becoming style; her complexion is good, her forehead rather broad than high; her smile is sweet and expressive, and a pair of bright dark eyes light up her countenance, especially in conversation." Such are the portraits of this happily assorted couple. The lady is twenty-one last birthday, and the gentleman is twenty-five. The fair reader's imagination must furnish the bridal attire, with the aid of plenty of dollars and the most fashionable taste. The nearest bridesmaid is Miss Minnie Warren, sister to the bride; the bridegroom is accompanied by his gallant friend, Commodore Nutt. They have been staying at the Metropolitan Hotel, to which they are to return after the nuptial ceremony, to receive visits of congratulation for two hours. It is understood that they will leave town, on Thursday, for the residence of Mr. Stratton's family, and they will shortly embark for Europe. "She has a great desire to see all the treasures of art and taste which the Old World can display; and, his fortune being ample, he can afford to gratify her desires in this respect."

Here, then, we surely find all the desirable outward conditions of a marriage *comme il faut*. There is but one thing about it that disturbs our usual notions of the interesting scene where two persons solemnly enter the holy state of matrimony. It is the very diminutive stature of the bride and bridegroom, as well as of the bridesmaid and groomsman; the tallest of the four being only thirty-two inches in height. As they ascend a little platform, erected for them in front of "the hymeneal altar," they are placed in full view of a large congregation of spectators, who have come to Grace Church, as to a show, that they may see Tom Thumb's marriage. Mr. Charles Stratton, in fact, is no other than the renowned little General, who came, was seen, and conquered, a few years ago, throughout the Old World, as he did before in America, though latterly, we believe, he has led a comparatively quiet life. Miss Lavinia Warren, just an inch taller than himself, has been for some time past exhibited in Barnum's Museum.

The marriage of these two small persons, if we may believe the account given by the *New York World*, has been their own deliberate act. Mr. Barnum, it seems, though he had taken care to spread a report that the miniature lady in his museum was destined to become the wife of General Tom Thumb, never expected or intended that their union should really take place. The wily showman had calculated that this rumour would greatly enhance the interest that was felt in the little woman by those who crowded her levées, but not that he should really be obliged to give her up to the custody of a husband. We are glad, however, to hear that Tom Thumb has a manly spirit of his own, and was not to be so trifled with. He had a mind to be married in earnest. There is, in an anti-Malthusian country like America, a certain odium of selfishness attached to the bachelor state, against which the great heart of Tom, brooding over the duties of his calling as a man and a citizen, rose up indignant. Whatever be his political party, he at least does not despair of the future of the Great Republic, and will contribute his part by setting an example of those domestic virtues which go to perpetuate its race and institutions. We are even informed that, before he was introduced to Miss Warren, "he had paid his addresses to several young ladies in need of a protector, but rather from a sense of duty than because his heart was interested." It is, indeed, satisfactory to learn that, if he has more than once already felt the mortification of a refusal, the wound has been but skin-deep; his affections have not been fatally compromised; there has been no disappointment of that peculiar kind which leaves a Blighted Being, a monument of female cruelty, to wail in despairing sonnets the rejection of his suit. Tom Thumb has been spared that experience of unhappy lovers, since he has never, till now, sincerely entertained the tender passion. He has indeed, for reasons of state, or upon the grounds of a general human obligation, been disposed to confer his hand and fortune upon one or another of the large and not unlovely women of his acquaintance; but they were too much for him, and his obvious destiny—if that incomparable she could be found—was to marry one of his own size. It is, therefore, not surprising that when Mr. Barnum had taken the liberty of advertising Miss Lavinia Warren, an inmate of his Museum, as the affianced bride of General Tom Thumb, the General, finding her a charming little person, should have viewed this project seriously, and that, since the lady's coming of age, he should have insisted upon its being carried out. He would, indeed, have been less than man if he had suffered their intriguing patron, the proprietor of the Museum, to use the announcement of their betrothal as a mere bait for vulgar curiosity, and to forbid its consummation after all. Miss Warren herself, on the other hand, seems to have had a will of her own in the matter. She is described as a clever little woman, with "a Yankee quickness of comprehension and expression, which makes her good at repartee." One would like to know whether Mr. Barnum has been favoured with the scolding that he has deserved for attempting to mock her with a mere rumour of marriage, and designing to keep her in the cheerless state of old maidenhood so long as his Museum continues to pay. Not that she has been in any way dependent upon him; on the contrary, before he engaged her presence at the Museum she held levées on her own account at the St. Nicholas Hotel, and was preparing a visit to Europe when Mr. Barnum succeeded, by much persuasion and a large pecuniary offer, in gaining her for his house of wonders. It was then, or soon afterwards, that he hit upon the notion of announcing her intended

Digitized by Google

marriage with General Tom Thumb, who no longer belongs to the exhibition, but whose personal notoriety, being as great as ever, might be most profitably associated with the lady actually upon view. The story is that Mr. Barnum, as we have said, when he first spoke of this match in a half-jocular tone, did not think either of the little creatures would take it up as a serious proposal; but that he has been out-manœuvred by the General, who now carries off his bride, leaving the Museum at New York bereft of its smallest object and greatest attraction. It is possible, however, that the place now made vacant by Mrs. Stratton's departure may be occupied by her sister, Miss Minnie Warren, who is the tiniest of the whole party, being, at sixteen years of age, probably full-grown, and but twenty-five inches high; her weight is said to be only nineteen pounds. Commodore Nutt, a lively, talkative little fellow, is also shorter than either Mr. or Mrs. Stratton, who may thus, if they please, retire into private life upon the ample fortune they have earned, leaving another pair of still rarer dimensions to succeed them in popular esteem.

The description of this whimsical affair given by the *New Yoxk World* is a curiosity of literature in itself. It combines a half-ironical magniloquence, of the tallest American style, with the usual American prolixity of details. We have an inventory of the furniture of a suite of apartments, fitted up at the Metropolitan Hotel expressly for the use of the bridal pair,—even to "an elegant little velvet cushioned stool," by the aid of which they are to climb up into bed. The proceedings at breakfast are minutely related. It appears that the happy couple partook of broiled ham, chicken, toast, coffee, sweetmeats, and pullets' eggs. They enjoyed themselves amazingly, and Miss Warren, handling a specially small tea-service of exquisite porcelain, did the honours of the table in a very dignified manner. The finest part, however, is the account of the popular excitement out of doors on the auspicious morning. As might have been expected on such an occasion, there was a great crowd gathering about the church, as well as about the hotel, and in that part of Broadway through which the carriage, with the four dwarfs in it, was to pass. By way of leading up to the mention of this circumstance, we are told that "the pavements began to feel the tread of an unusual multitude at half-past nine o'clock." It is to be inferred from this report, on the best local authority, that New York affords an exception to the proverbial insensibility of stones. The strain of narrative rises to a higher pitch in describing how "the densely-packed thousands" waited in Broadway till past noon. Not merely upon those oppressed and unhappy pavements, which were mercilessly thronged, but upon seats piled amphitheatrically in the windows of Stewart's great haberdashery shore, and at the windows or upon the roofs of all the neighbouring houses, as well as on the tops of omnibuses, or other carriages, and the backs of frightened horses in the streets, "a hydra host looked southward, with handkerchiefs in hand and a great cheer ready on its tongue." The horses might well be frightened. A stranger from Europe, suddenly dropped into that scene, would have been puzzled to know for what the hydra host was looking southward, and preparing such demonstrations of welcome. He might have thought it was for a triumphal return of the army of the Potomac after its latest defeat. It could not have been for the return of sober good sense to the American public mind. The crowd, however, was thickest, as we are told, about the church door. When the carriage drove up, hundreds of policemen tried to clear the way, or rather, to quote this report, "essayed to regulate the pressure." They "essayed a miracle," and failed of course. The jam got worse; and whereas, a moment before, "the murmur of the throng was Memnonian," it is now compared to the hubbub of Babel,—an acoustic effect of extreme pressure upon the chests and throats of the multitude. The deplorable confusion that ensued is thus forcibly brought before us:—

"The whole vast host, overcoming the terrors of officers' batons, and horses' hoofs, or driven by a resistless rearward pressure, plunged madly toward the church entrance. For several minutes this human ocean, above which tossed a vari-coloured surf of crying babies, dilapidated hats and bonnets, and lost handkerchiefs, filled the area of the thoroughfares hundreds of yards around. The shouts of the men were not louder than the shrieks of the women. Against the latter, the blue-coats exerted themselves for some time in vain. Amazonian arms were around their necks, fingers vengeful as Miranda's clutched at their shirt-collars. The crackling of hoops, and the ripping of dresses, were instigators of an ire that transformed the gentler portion of the crowd into belligerents."

It is a pity that policemen should get their faces scratched by interfering more than is necessary with the emancipated sex, in such a "law-abiding and orderly community" as that of New York. The ladies inside the church, comfortably enclosed in the pews, wore their evening dress, as in boxes at the opera, and enjoyed, without molestation or "belligerent" exploits, a convenient view of the wedding ceremony. After its performance, during which all the dwarfs behaved with strict propriety, and the bride, like "a self-possessed little lady" as she was, uttered the irrevocable vows in a firm and musical voice (let us hope without mental reserves), they went back to the Metropolitan Hotel. It certainly does seem that everything had so far gone on in the ordinary course, and the parties had sufficient intelligence to know what they were about. The barbarous rule, however, of their commercial existence, as articles for show, interfered with the tender sanctities of that moment which immediately follows the fastening of the nuptial knot. Mr. and Mrs. Stratton were compelled, from one till three o'clock, to stand upon a platform, surrounded by the articles of the bridal *trousseau* and a quantity of wedding gifts displayed in glass cases, and there to shake hands with many hundreds of distinguished people, including "merchants, doctors, lawyers, artists, authors, actors, and actresses," the most brilliant members of New York society, who hastened to pay them a visit. As each of these deposited a small pecuniary offering at the shrine of Hymen as he passed the door, it is probable that the ordeal so undergone by the newly-wedded pair was attended with large compensations. It is also to be remembered that they had eaten the wedding breakfast before they went to church. Still, we cannot wonder at his impatience if, when the clock struck three, the little General, while handing down his bride from the platform, was heard to exclaim, "Here! I've had had enough of this; I want my dinner!" We hope that he enjoyed the repast so fairly earned; and, with our best compliments to Mr. and Mrs. Stratton, in their private and domestic relations, we wish them a long enjoyment of connubial prosperity, and, if possible, a family of children somewhat nearer to the ordinary stature of mankind. The race of Tom Thumb need not be transmitted with his littleness to the next generation. It would be a pity if anybody's posterity in America should run on to eternal Lilliputians. But we have our fears, when we see how the vast nation which whips creation musters so many dwarfs. "Un peuple de nains nous efface," would be a sorry lament for a country whose ambitions are so big.

"THE WINNING SUIT."

THE production of a new play in blank verse was an experiment auguring something like hardihood both in author and manager. Nothing less hopeful could well be proposed for the amusement of a generation which has recognized in the writers of burlesques and sensation dramas its favourite caterers, and which prefers to the master-pieces of Shakespere the "Colleen Bawn," with Mr. Boucicault's "tremendous header," or the "Peep o' Day," in which Mrs. J. D. Power runs about screaming in a gravel-pit, followed by Mr. Selby, flourishing a pickaxe, till she is rescued by Mr. Hermann Vezin, who takes a "tremendous heeler" into the pit on the bough of a tree. Little probability was there of a drama succeeding which depended for its attraction on the development of thought and feeling, when the only use to which recent playwrights have been able to turn these qualities, has been to ridicule whatever is noble in the one or pathetic in the other. When Shakespere was no longer tolerable on the stage except in the form of a travestie; when the boards on which the greatest actors in the greatest dramas had delighted our fathers were given up to military spectacles and Beni-Zoug-Zoug Arabs; and when London was going mad after the exhibition of a fop in a miserable farce, courageous must the author have been who could think of giving up his time to write a play of literary merit in the hope of finding a manager venturous enough to risk the fortunes of his theatre on its production. But the experiment has been made, and, what is stranger still, has succeeded. Without the aid of any fashionable monstrosity, without aiming at striking situations, or even at legitimate effects of plot or any strong development of passion, Mr. Lewis Filmore's "Winning Suit" has passed muster. It owes nothing to scenery, not much even to acting. With the exception of a single scene, nothing could be more unfavourable than the setting of his play. With the exception of Miss Sedgwick's performance, there was little to remind one of the palmy days of the drama. But in spite of these disadvantages from within and the difficulty of a demoralized taste from without, the play has made an impression upon the public mind; has proved that there are yet playgoers who can relish what is chaste in expression and natural in emotion.

The story is of a Princess Orelia, niece to the King of Castile, who rejects the suit of the King of Arragon because she is determined that her hand shall not be made a commodity of political merchandise, but shall be given only to a husband to whom she can also give her heart. This self-willed lady has, however, a

Digitized by Google

cousin Roderic who is resolved upon the marriage, and who, as the first step towards its accomplishment, compromises her by appearing masqued behind the arras of her chamber. She is thrown into a dungeon, from which he effects her escape on condition that she shall fly in disguise to a village inn in the kingdom of Arragon. Here, resenting an attempt of two soldier guests to kiss her in the dark, she throws a bottle of wine at their heads and allows them to decamp without paying for their supper. The incensed landlady is only appeased by a gold chain which her barmaid takes from her neck and hands to her in lieu of the unpaid reckoning, but which is restored to her by Pedro, a goldsmith, who enters in time to put an end to the *imbroglio* by paying the unsettled score himself. He prevails on the Princess, who, in her disguise of barmaid, passes by the name of Lauretta, to depart with him, on his promise to place her in a convent. But on their way thither they are stopped by Sebastian, an officer of the King of Castile, who has authority, countersigned by the King of Arragon, to search for the missing princess within his territory. From this dilemma Pedro rescues her by pretending that she is not the princess, but a peasant whom he is about to espouse. To further his device, he persuades Lauretta to consent to a mock marriage. The church is at hand, the peal of the organ is heard, bridemaids in wedding attire issue from the porch, and Lauretta, veiled as a bride, enters the church, from which presently she comes forth to be told that the marriage is a real marriage, and that she is truly the goldsmith's wife. For a time she resents the deceit practised upon her; but, touched by Pedro's love for the apparent barmaid, and by his promise to conduct her to the convent and then set her free by taking back the wedding-ring, she confesses that he is worthy of her heart, and resolves to abide by her contract. Thus closes the third act, as the play was first represented; but now the second, in consequence of the judicious curtailment and amalgamation of the original first and second acts. To the fourth is left the discovery that Pedro, the goldsmith, and the King of Arragon are one and the same person; and that Cousin Roderic is the contriver who, conspiring with his Majesty of Arragon, has enabled Orelia to find in the possessor of a crown all the virtues to which she had vowed her heart.

There is a great deal of improbability in all this, even beyond the license of the playwright's craft; and the story is so slight that one wonders for a time what it is that interests us. There are defects, too, in the preservation of Orelia's character, which denote an imperfect conception. As the barmaid in the village inn, every trace of the princess is lost. She serves the soldiers with wine, makes up the landlady's reckoning, wipes down the table, and enters into the specialities of her position with a perfect familiarity, as if to the manner born. Again, it is anything but natural that she should consent to leave the inn where she has found refuge, and accompany a stranger whom she has but just seen, on no better assurance of his honour than that he has spoken kindly to her, and ransomed her gold chain by paying a few crowns for her. Probability is still more severely taxed in the scene which follows, when, without surprise or suspicion, she sees the procession of bridemaids issue from the church, and accompanies them to the altar, as she believes, for a mock ceremony. More unnatural yet is the facility with which she accepts the goldsmith for her husband when she is told that the marriage is real. The revulsion of feeling on this discovery is feebly traced, and far too suddenly abandoned. What could be made out of a similar situation Sir Bulwer Lytton has shown in his "Lady of Lyons;" and perhaps it was the fear of venturing upon ground already so ably occupied which turned Mr. Filmore aside from his opportunity. It was possible, however, to have made much more of it without hazarding a dangerous comparison. As it is, the sentiment of the situation is only touched; gracefully, indeed, but so slightly as to indicate timidity of handling if not an absence of power. The same remark applies to Orelia's final discovery that the husband she loves as the goldsmith is indeed the king. The opportunity is admirable. Her uncle of Castile finds her married, as he believes, to Pedro the goldsmith, and determines to annul the marriage, even at the cost of depriving Pedro of his head, which he demands from the King of Arragon as one of those slight favours which one monarch ought not to deny to another. Orelia refuses to give up her wedded lord, and says she will appeal to the King, who on this day has chosen to hold his court in the goldsmith's house. It would have been easy to heighten her anxiety by making her believe that his Majesty had consented to her uncle's request, and was coming to dissolve the marriage and to consign Pedro to annihilation. But even the simple expedient of announcing the King's approach, and giving some show of surprise to the discovery that he is Pedro, is missed. He is walking about among the guests. Orelia addresses him as the goldsmith. They tell her he is the King of Arragon; and the mystery is tamely at an end.

With all these defects, however, the play interests, because a genuine feeling pervades it. We are pleased at the sight of a princess who is, above all, a woman, who will marry only where she loves, and who, even under the most unlikely cirumstances, gives her heart to the right man. It is much in his favour that Mr. Filmore has been able to surmount the defects of his play by the prominence he has given to this leading trait of his heroine; and it may be that the very defects we speak of, have been occasioned by the unpopularity of his experiment, which may have withheld him from working thoroughly out the sentiment of his play, fearful, possibly, that the public, accustomed to trivialities and to a rapid succession of incident, would not patiently follow an elaboration of feeling. If this was a mistake in one sense, he has gained by it in variety. Since the condensation and union of the first and second acts, the action no longer flags, and the characters he has grouped around the Princess and the King lighten the serious interest of the play with considerable liveliness. The hostess puzzled over her accounts, the rogueries of her son Josef, the alarm of the Polish nobleman for the safety of his head, and Francesca's scorn for the Goldsmith, and shrewish love of Sebastian, indicate a vein of pleasant comedy. Of the writing we can speak with all praise. The blank verse, in which we failed to trace the pseudo-Elizabethanism which some of our contemporaries have discovered, is chaste and unstrained; and the prose with which the play is interspersed, is fit—an unworthy clap-trap about the popularity of the Princess's Theatre excepted—to keep company with its poetic sister.

Much of the play's success is due to Miss Sedgwick's acting. The race of actors and actresses who can speak blank verse has almost died out. Miss Sedgwick possesses this power, and displays it with effect in the part of Orelia. More at home in the arch-smartness of the barmaid, she still fully maintained the devotion of the Princess, and infused into the character a true womanly heart which won and held the sympathies of the audience throughout. Such a personation would give us hope for the revival of the intellectual drama, if the system of starring could be put an end to, and if authors could be sure when they created a character of importance, that there would be an actress at hand to embody it. Mr. Lindus, the manager of the Princess's, would do well to consider this. For the rest of the acting a few words will suffice. Mr. H. Marston, as the goldsmith, was courtly, polite, and passionless. Miss Murray filled the sketch of Francesca with point and life. No one could tell from Mr. Hermann Vezin's acting that he was engaged in a playful conspiracy. The impression he conveyed was rather that he had some deep and villanous design on foot. This fault apart, he played well. But how Mr. W. H. Stephens came to be cast for the King of Castile passes our comprehension. Had his part been that of a goldsmith, or rather a blacksmith, in the disguise of a king, he might have been in character. To his utter incapacity to fill his *rôle* must be attributed much of the tameness of the final *éclaircissement*. Mr. Belmore, as Josef, was an excellent clown.

THE PAST WEEK.

Lord Ellenborough, in the House of Lords, has asked for papers from the Consul-General of Warsaw relating to the immediate origin of the Polish insurrection, and for communications from the Prussian and Russian Governments. From the spirit of conciliation recently exhibited by Russia, he had hoped that a good feeling had sprung up towards Poland, but the conduct of the Russian police had destroyed his expectations. The people whose political opinions were distasteful to Russia had been seized ruthlessly in their homes on the 21st of January, and pressed into military servitude. That was the cause of the outbreak; and he hoped Her Majesty's Government would notify to the Russian Government that such was their opinion. He strongly denounced the conduct of Prussia in the arrangement she had entered into with Russia for ending the insurrection. He had a hope that a constitutional Government would yet be formed in Poland. Earl Russell could not give what was asked for, nor did he agree with Lord Ellenborough that the outbreak was entirely unexpected. There were three sections of Polish society,—the landed aristocracy, the middle classes, and the peasants, differing from each other in their wishes and aims. The aristocracy had asked for a constitutional government, and the middle classes, taking a despairing view from the past, had formed secret societies. Instead of conciliation on the part of the Emperor of Russia, he had recourse to a conscription, which might well displease an unhappy people. He had told the Russian Minister it was an unjust step to take. From

Digitized by Google

the Prussian Ambassador he learnt that Prussian soldiers would be allowed to pursue Polish insurgents within the Prussian frontier, and he had stated that Prussia thereby had made herself responsible for the conscriptive measures adopted. Mr. Griffith has asked, in the Commons, whether her Majesty's Government would support Ismail Pasha in his attempt to abolish forced labour in Egypt. Lord Palmerston said that as far as possible the Government would express a belief that the Pasha's intentions were humane and proper. Sir L. Palk called attention to the distress in the manufacturing districts; he blamed the Government for not having promoted cotton culture not only in India but in Queensland, Jamaica, and other British dependencies; and should move an address to her Majesty praying that a Royal Commission may be issued to consider the best mode of obtaining a plentiful supply of cotton. The motion, after remarks from Mr. Milner Gibson, was withdrawn. Mr. Lewis called attention to the number of railway schemes affecting the metropolis introduced during the present session, and asked what protection was afforded to the public interests thereby. Mr. Massey agreed that the interests of the public should be protected, but did not see how the Government could interfere. Sir G. Grey thought the suggestion that the Metropolitan Board of Works should be allowed to appear before the committees on behalf of the public was deserving of consideration. Copies of reports on the subject were ordered. Leave was given to bring in a bill for further continuing and appropriating the London coal and wine duties. The debate on the second reading of the Great Eastern Railway (New Metropolitan Station and Branches) Bill, has been postponed in the House of Lords for a fortnight. Previous to the adjournment of the debate, the propriety of insuring the convenience and ornamentation of London through the various railway projects was strongly urged. In the Commons Lord C. Paget replied to a charge made against him by Lord R. Montagu, of unconstitutional proceedings, with a view of influencing the Chatham electors. Sir H. Willoughby, on the order for the second reading of the Prince and Princess of Wales Annuities Bill, again objected to the House being asked to agree to a resolution on the annuities, prior to the papers relating to the Duchy of Cornwall being produced; yet he deemed the proposition for the Prince's establishment a reasonable one. A question arose as to whether, on the death of a Duke of Cornwall, the revenues of the duchy reverted to the Crown, and as to the application and amount of the estates during the minority of the Prince of Wales, Lord Palmerston stated that the amount was £540,000. The bill went through a second reading. Mr. Buxton drew attention to the purchase and deportation from Egypt of a negro regiment by the French Emperor. Lord Palmerston observed that the transaction was an irregular one on the part of the Egyptian Government, and he thought the French Government would feel that the act was as cruel as that which had occurred at Warsaw. Mr. Bentinck adverted to the proposed reduction in the naval estimates, and expressed an opinion that, in the event of a panic, Government would be compelled to spend five times more money than the sum requisite to maintain the navy in proper efficiency. He pointed to what was going forward in the French dockyards, where vessels were in course of construction that could only be intended to be used in an invasion of England. The House having gone into committee on the navy estimates, Lord C. Paget observed that the naval force was in an efficient state. The money vote proposed for 1863-64 was £10,736,032, which was £1,058,273 less than the previous vote. The number of armour-clad vessels under construction or at sea was 21. Ten of that number, including one small vessel, were at sea, or would be ready at the end of the year. The number of seamen and marines was, as last year, 76,000, and after reading an account of the strength of the naval force and its distribution, he moved the first vote of the number of men above named. Sir J. Pakington spoke approvingly of the proposition of Lord C. Paget, and Mr. Baxter, after complaining of Mr. Bentinck's remarks about invasion, said he thought the Government was earnest in adopting the principle of retrenchment. Mr. Cobden was in favour of an efficient navy; but efficiency did not depend upon a certain number of men, but upon science and skill. He objected to employing 76,000 men, because he defied the Government to employ them in the ships they had so as to be of use to the country. The whole expenditure of the navy he was opposed to, for the conduct of the Government in shipbuilding had been insane. Could the country afford to plunge into all those novelties on a grand scale of iron-clad broadsides? Were we sure that they might not in a few years become like the sailing line-of-battle ships? He called on the Admiralty to suspend the construction of monster broadsides until the plan of Captain Cowper Coles had been tried. The vote, with a few others, was agreed to. The Chancellor of the Exchequer, in moving the second reading of the Tobacco Duties Bill, was met by an amendment from Mr. Ayrton, that a select committee be appointed to inquire into the expediency of altering the laws for raising a revenue on tobacco. The motion was rejected, but the debate was adjourned. The English Church Service in Wales Bill has been read a second time in the House of Lords. The object of the bill is to permit services to be given in English in places in Wales where they are now given in Welsh. Mr. Layard has stated in the House of Commons that no convention has been entered into with the Italian Government for the extradition of persons charged with having committed offences in Italy and resident in Malta. It had been agreed that an ordinance should be issued by the Maltese authorities for the extradition of Italian offenders, but not to apply to political refugees. Sir J. Hay moved that in the opinion of the House the position of the officers of the navy in respect of promotion and retirement was unsatisfactory and ought to be improved; and that with a view of improving naval efficiency and meeting the fair expectations of officers with respect to promotion, it was expedient to adopt the principle of retirement by age; and that the pay of officers ought to be adjusted so as to enable them to maintain consistently the rank they hold. Lord Palmerston objected to the course taken by Sir J. Hay in wishing to convert officers of the service into deliberative committees, whose motive was to raise discontent against the rules of the service; such conduct was dangerous to discipline and opposed to the principles on which armies and navies were governed. It was doubtful whether the House should entertain the motion brought forward, for it was an attempt to place the administration of the details of a branch of the service, for a time, in the hands of the House. As an amendment, he moved that a select committee be appointed to investigate the present system of promotion and retirement in the navy. The observations of Lord Palmerston drew forth remarks from several members of the Opposition—Mr. B. Cochrane, Sir J. Pakington, and the newly-elected member for Devonport, Mr. Ferrand. Sir J. Pakington felt bound to defend Sir J. Hay from Lord Palmerston's strictures, and then to state that when he was at the Admiralty he found the navy in a state quite unsatisfactory, that he had prepared a plan of promotion similar to that now proposed. Mr. Ferrand wanted to know what naval officers were to do if they were debarred from naming their grievances. Fresh from a naval borough, he had witnessed the cowed spirit of the naval officers, and even the men in the dockyards, under the influence of the Admiralty. Lord Palmerston's amendment was agreed to. Mr. Adderley obtained leave to bring in a bill, the object of which is a good one — to extend corporal punishment to certain felonious offenders. Lord Palmerston stated that it was made a condition of the marriage treaty of the Prince of Wales that the Princess Alexandra should be a Protestant.

Resolutions have been introduced in the Illinois Legislature declaring President Lincoln's policy unconstitutional, and denouncing the taxation of States for the purchase of negroes. The President is accused by the same body of having "pandered" to New England in not using the means at his disposal to open the Mississippi; the Morrill Tariff is denounced by which the East is enriched at the expense of the West; and a convention is recommended at Louisville to obtain an armistice and the cessation of hostilities. In many counties of Illinois much disaffection towards the Government exists. Details have been brought of the Confederate attack on the Federal fleet off Charleston which show there was no ground for the assumption by the Confederates that the Charleston blockade was ever raised by the departure of the Federal fleet. Two vessels only out of eight or ten were disabled. The *Australasian* from New York has brought news to the 11th of February. The military news is not of very much importance. Two Confederate iron-clads are reported to have come out of Charleston on the 31st ult., and made an attack on the blockading squadron. The steamer *Mercedita* was disabled, and the captain surrendered. The Confederates also attacked the steamer *Keystone State*, and inflicted much damage upon her, but she was ultimately towed off by three Federal vessels who went to her assistance. General Foster's expedition has arrived at Port Royal, and was expected to leave Charleston immediately. A Federal regiment of coloured volunteers have made several expeditions from Beaufort into Georgia, Florida, and up St. Mary's River, and were successful in several encounters with the Confederates. A reconnaissance has been made upon the right wing of the army of the Potomac; and an attack on Port Hudson was contemplated at New Orleans. A mutinous spirit has been manifested among the troops at Ship Island, owing to the entrance there of a coloured regiment; an Illinois regiment has been put under arrest for refusing to fight under the emancipation proclamation. Despatches from Charleston of the 3rd, say that a great formidable land and naval expedition was about to attack Charleston. The Federal gunboat *Morning Light* has been destroyed by the Confederates, and the capture of Sabine Pass has been confirmed. General Butler is shortly to head an expedition against Texas. Lebanon, Tennessee, has been entered by the Federals, who took 600 men prisoners. The ram, *Queen of the West*, belonging to the Federals, has gone down the Mississippi, destroying everything on her way. In the Senate, Mr. Sumner has introduced a bill to enrol 300,000 negro soldiers. The steamer *Ella Warley* has been sunk by collision off Sandy Hook. By the *City of Manchester*, Inman steamer, news from New York of the 13th and 14th inst. has been received. Mr. Seward has denied in Congress that he ever communicated with the Confederate authorities at Richmond through the French Ministry concerning an offer of mediation, and the French proposal that the Northern and Southern Commissioners should meet on neutral ground for discussion without the cessation of hostilities. Mr. Seward is averse to entertaining any proposition from any foreign power concerning American domestic affairs. Richmond papers affirm that the results of the naval engagements off Charleston were not so substantial as supposed. At Charleston an impression is general that Savannah will be first attacked. Pecuniary aid has been granted by the Senate to Missouri for the emancipation of slaves. 35,000 men detached from the Potomac army, to be commanded by General Burnside, are to proceed to Suffolk, Virginia, by way of Fortress Monroe. The *Queen of the West* has returned from her Mississippi expedition, and ran under the Confederate batteries at Port Hudson, drawing their fire without sustaining harm. She destroyed three Confederate provision steamers, and took fifty-six

Digitized by Google

prisoners. Reinforcements are being hurried to Vicksburg by the Confederates. The Federals have cut the levees on the Mississippi side of the Mississippi river below Helena, and on the Louisiana side opposite Lake Providence, for the purpose of flooding the country and opening a communication for steamboats to a point in the rear of Vicksburg, and to reach the Yazoo river. The Federal victory recently at Fort Donnelson was a close one, for when the gunboats arrived the Federals had fired their last round of ammunition. In the New Jersey Legislature a resolution has been introduced to send Commissioners to Richmond to ascertain if the South will consent to adhere to the Union again; if not, under what terms amicable relations can be brought about under one Government. By an order of the Senate, bank circulation is to be taxed 1 per cent. for two years, and afterwards 2 per cent.

The French Government is said to be contemplating interfering in favour of Poland diplomatically. This rumour has gained currency in the *Opinion Nationale* "under reserve." The *Constitutionnel* has reprobated the conduct of the Prussian Government in respect to the Polish insurrection. Europe, it says, disapproves of it, and the convention with Russia has been productive of disquietude. It may be doubted, adds the same paper, whether Europe may not be reminded of the old name of Poland, "and, instead of an insurrection of subjects against their Government, see a reclaiming of nationality." In Paris it is asserted that the Minister of Foreign Affairs has been ordered to pen a despatch to the French ambassador at Berlin for transmission to the Prussian Government, that the Emperor was dissatisfied with the convention Prussia had entered into with Russia, as it is a violation of the principle of non-intervention. From Berne, a rumour has come forth that a part of the Polish refugees, reckoning on the re-establishment of a throne in Poland, have determined to offer it to Count Walewski. The Count is of Polish origin, and through his wife is related to the family of the last King of Poland. Doubts are entertained whether the Poles, having the opportunity of selecting a king, would look to the French Minister. The Prussian Ministry treat the House of Representatives with what may be called supreme contempt. A meeting has been convened by the Committee of the Chamber to discuss the Polish affairs, but there was an absence of Ministers and Royal Commissioners. The Liberals carried a proposition repudiating any intervention in Polish affairs on the part of Russia. The *Patrie* reports that a despatch has been forwarded by the French Government to the Duc de Talleyrand Perigord, French Ambassador at Berlin, pointing out that Prussia, by trying to crush the Polish insurrection, would be likely to arouse the aspirations of other populations of Polish origin who might make common cause with the insurgents. *La France* believes that Austria is disposed to join the policy of France and England regarding Poland. The *Constitutionnel* of the 23rd inst. says the French Government has not done anything beyond entering into communication with the Cabinet of London as to what steps should be taken. *La France* has an article observing that an enslaved Poland would not only be a violation of moral right, but would also be opposed to the understanding and all the conditions upon which the political existence of all great states is based. The same organ does not consider that a general war will arise from the Polish question, unless the absolute independence of Poland should be insisted on. M. Emile de Girardin calls upon the Emperor of Russia, in an article in the *Presse*, to fulfil the promises made by Alexander I., and to re-establish Poland. The *Constitutionnel* hopes the convention between Prussia and Russia will be abandoned. The *Opinion Nationale*, "with all reserve," states that a rumour had gained currency on the Bourse that the Prussian Cabinet had declined positively to yield to the representations offered by the French Ambassador. M. Saint Marc Girardin has presented a petition, bearing 2,000 signatures, in favour of Poland.

Count Bismarck, President of the Berlin Council, has resigned, because Eulenberg and Mühler declared in a Cabinet Council against the Russian convention and the attitude of Prussia in Polish affairs. The Prussian Government is said to be desirous of negotiating a loan on a scale that leads to the supposition that it is intended for war expenses. This is affirmed by a French paper, and may perhaps be unfounded. The *Moniteur* has made a significant announcement, in commenting on the obstinacy of the struggle in Poland, which it declares to be established by reliable accounts. The French Government is disinclined to accept the official accounts from Warsaw of the insurrection, which is represented as all but quelled. The *Moniteur* alludes to the condemnation of Prussia by Austria, and publishes reports of the savagery of the Russian soldiers in the rebellious Polish districts. The dread of a European war is sought to be calmed by the *Constitutionnel*, in an article setting forth that peace is guaranteed by the triple alliance of England, France, and Austria. The Princess Alexandra has left Copenhagen, accompanied by her father and a numerous suite.

The news from Poland continues to show unabated activity on the part of the insurgents. English interest seems to increase daily in their favour, but fears exist that ultimately the movement will be crushed, and that the Poles will endure a severer rule than they are seeking to destroy. Two bands of the insurgents, we learn from Warsaw on the 20th, were defeated near Budka, on the Bug; 400 were killed, and a quantity of correspondence taken. The railway communication between Warsaw and Cracow has been interrupted. Langiewicz is said to have cut off the retreat, near Stobnica, of the Russians, and to be hurrying towards the Austrian frontier. The prevalence of a report that the insurgents would arrive at the Russian frontier town of Dobrzn, opposite the Prussian frontier town of Gollub, caused the Prussian artillery to occupy it for eight hours. In official quarters in Warsaw it is said that Mieroslawski has been defeated, that he is a fugitive, and that his correspondence has been seized. Numerous Polish families driven before the Russian troops have arrived at Kaltowitz. Kuroski, one of the insurgent chiefs, has committed suicide. Fifteen hundred well-armed insurgents are posted near Opoczno. From Berlin we learn that the police of the city has seized 300 hand grenades in the possession of Polish inhabitants; the people who had them have been arrested, and the public prosecutor has been instructed to begin a judicial inquiry. On the Warsaw railway some bridges have been destroyed by the insurgents, and they are said to have inflicted defeat on the Russians near Dubienka, taking from them two cannon. The intelligence, however, during the week of the proceedings of the insurgents has been scanty, the telegrams being very brief. There can be no doubt about the cruelty of the Russians at Tomaszow and Miechow. The fire which was consuming the town the Russians would not allow to be extinguished, and the consequence was, that the whole place nearly was reduced to ashes. The insurgents having retired, murder and pillage began, the burgomaster was killed, and women and children were lying about barbarously slaughtered. The cause of this atrocious cruelty was said to be the fact of certain houses having been opened to the insurgents, and that soldiers had been shot from them; this is contradicted, for it is alleged that the insurgents did not enter one of the buildings. In other parts sickening outrages have been perpetrated, the knowledge of which can only excite wider sympathy for Poland and intenser hatred of Russian tyranny. Forty wounded men who were being conveyed from Miechow to Cracow were savagely murdered by the Russians.

Intelligence received at Kattowitz speaks of an engagement near Kutno, between the Russians and the insurgents, lasting eight hours, in which the former sustained a defeat, and took refuge on Prussian territory.

At Lisbon, two new commercial banks, under English supervision and partly supported by English capital, are about to be established. More than £550 was collected for the Lancashire operatives. The Lisbon merchants promoted the movement actively. The law of entail is shortly to undergo modification. The *Allgemeine Zeitung* says it is asserted that the Bavarian Minister for Foreign Affairs has sent forth a circular note inviting the other States of the Zollverein, in the event of that union being dissolved, to form a special Zollverein, in which Austria should be included. The Turks are said to be alarmed at a projected expedition fostered by Prince Scanderbeg into Albania. The expedition is to consist of 6,000 men, to be led by the Prince, and M. Alexandre Dumas is to be its historiographer. No secrecy in making preparations is observed, and the middle of March has been fixed upon as the time to give force to the movement. From Copenhagen, we learn that the Princess Alexandra is suffering from a severe cold; her Royal Highness has been presented by the King of Denmark with a wedding gift specially purchased by his Majesty. There is an end to the Provisional Government of Athens, owing to a demonstration assisted by a part of the garrison. President Moraitini has been invested by the Assembly with executive powers for a time. A new form of Government is being discussed by the Assembly. An imperial hatt has been published at Constantinople, where the new Viceroy of Egypt has arrived, announcing that the Sultan will in future surrender 20 per cent. of the revenues allotted for the civil list, ordering the reduction of official salaries and the dismissal of all superfluous *employés*.

Liverpool has held a large meeting, at which the policy of the Northern States of America was warmly advocated. Bishop Colenso has been repudiated by the Society for the Propagation of the Gospel in Foreign Parts. A formal resolution has been passed that his name should be omitted as one of the vice-presidents of the society. This amounts to a vote of censure. Mr. John Abel Smith, Liberal, has been elected M.P. for Chichester without opposition. A severe contest has taken place for a seat in Parliament at Lisburn. There were two candidates, Mr. Verner, Conservative, and Mr. Barbour, Liberal. The Liberal was elected by a majority of six votes only. The Conservatives have lost a seat in the House of Commons by this result. Another coal-pit catastrophe has occurred at Wednesbury, by which three men have lost their lives. Suddenly a pit, called Steer's Meadow Pit, was flooded by a brook which runs near the workings, and in which were three men and a boy. The flow of the water into the pit, after great exertion, was impeded, and search was made for the missing colliers, who were found dead; the boy luckily survived. Henry Houlton, a saddler, of Bagshot, has been found drowned in the Basingstoke Canal, at Aldershot, under circumstances that lead to the supposition that he has been murdered. The bridesmaids to the Princess Alexandra have been chosen and are, Lady Victoria Scott, Lady Elma Bruce, daughter of Lord Elgin; Lady Victoria Hare, sister of Lord Listowel; Lady Georgiana Susan Hamilton, daughter of the Marquis of Abercorn; Lady Agneta Yorke, daughter of Lord Hardwicke; Lady Constance Villiers, daughter of Lord Clarendon; Lady Victoria Campbell, Lady Theodora Grosvenor, Lady Ernestine Mount-Edgcumbe, and Lady F. Wellesley. The Board of Trade returns for December have been issued. The total declared value of our exportations was £10,807,033, or nearly 11 per cent. in excess of those of the corresponding month of 1861; compared with December, there has been a falling off of rather more

Digitized by Google

than 11 per cent. The total exportations of 1862 amounted to £124,137,812, being the same within about ¾ per cent. as those of 1861, and £11,753,415, or 8½ per cent. less than those of 1860. An intimation has been given that any country Volunteers will be permitted to assemble with the metropolitan Volunteers in Hyde Park on the 7th proximo, the day of the Princess Alexandra's entry into London. Applications are to be made to the Secretary at War through the lords lieutenant of counties. A meeting has been held at York in favour of negro emancipation. English aid for the Confederates was warmly objected to, and a belief expressed that the Southerners were desirous of forming a great slave-holding Confederacy. The North in its labours to stem slavery was commended, and the relief given by the North for the Lancashire operatives was gratefully acknowledged in a resolution. An adjourned meeting of the Galway Harbour Board has been held for the purpose of conferring with Lord Dunkellin and Mr. Gregory, M.P., on the packet station. Lord Dunkellin stated that he believed in the success of the company, and he hoped to be able when he next met the Galway people, to congratulate them on their success in securing a loan for forming the necessary works. The Crown Princess of Prussia is now at Windsor Castle, having arrived there on Monday. Her Royal Highness disembarked at Gravesend from the royal yacht *Osborne*, and appeared in excellent health. She led her youthful son along the pier to the royal carriages, and was greeted with the cheers of the spectators. The usual weekly meeting of the General Central Relief Committee at Manchester has been held, when Mr. Farnall reported that since the 6th of December the number of applicants for relief had decreased 53,617. The sum of money received for distribution in the previous week was £22,303. 11s. 9d. The total balance in the bank was £432,095. 17s. 8d. A terrible explosion of a boiler at Hanley, the property of Earl Granville, has taken place. Eight dead persons were picked up from the *débris*, and over thirty were discovered mutilated in a fearful manner. The boiler, when it exploded, shot a great height in the air, and fell about 200 yards from where it rose. A young man, at Hudddersfield, named Armitage, who was to have been married on Saturday, was taken out of the New Bridge mill-dam dead. The young woman to whom deceased was to be wedded became uneasy at his non-appearance, and her search and inquiries led to the painful sequel. An idea of the smoking and drinking propensities of the country may be formed from parliamentary returns just issued. The tobacco duties last year produced £5,714,448, only £157,708 being paid on manufactured tobacco and snuff. The duty on spirits for the same period amounted to £6,201,243; and the wine duty to £1,123,605. Independent of the excise duty on malt, or the licences for the sale of beer, we have a total of £13,039,296 of taxation from smoking and drinking. The money derived from drinking may almost dishearten the teetotallers in their labours. A banquet in commemoration of the birthday of George Washington has been held in St. James's Hall. Many persons of influence attended, and his Excellency the American Minister, the Hon. C. F. Adams, responded to the toast of "The Union." The Union, he observed, was as much the work of Washington as of any other single person. For years he had worked to bring about the result, and when it came he crowned it by accepting the duty of organizing the Government that gave completeness to the work. Those who affirmed that Washington, were he living, would take part with the rebels, had no true conception of his character; he would not oppose the authority he had ever prized. The motive that stimulated the rebel movement was to extend slavery. The South had abandoned all the glorious associations of the Revolution; they had opened to themselves a new career—whether for glory or shame posterity would determine. The past was a pledge for the extension of freedom, the future of the South was a pledge for the extension of slavery. Prince Alfred, we are happy to record, has recovered from his recent attack of fever. Mr. D. W. Harvey, formerly M.P. for Colchester, and afterwards for Southwark, has just died, aged eighty years. The Associated Chambers of Commerce have had meetings at the Westminster Palace Hotel. A resolution was passed suggesting some alteration in the Patent laws. The Bankruptcy Act of 1861 was deemed capable of amendment; a resolution was passed condemning the expense of legislation by private bill. In the Court of Queen's Bench a rather curious case has been heard. Dr. G. N. Epps sued for the sum of £127 from Mr. Morris for attending Mrs. Morris medically. The defence was a startling one—that the lady was not Mrs. Morris. When Mr. Morris was married to the lady in 1846 she had a husband living. The first husband hearing of her re-marriage, obtained a divorce *a mensâ et thoro*, but the House of Lords had not been solicited to sever the nuptial knot. The verdict was given against the plaintiff.

His Royal Highness the Prince of Wales has been staying with Earl Spencer of Althorp Park, Northamptonshire. On two occasions the Prince accompanied the Pytchley pack of hounds, and the meet on the second day was such as has not before been witnessed in the county. The people of Northampton on the Prince passing through the town testified their loyalty by loudly cheering; the houses were decorated with flags, evergreens, and various mottoes, and the warmest respect for His Royal Highness was evinced by the whole of the inhabitants. His Royal Highness has held a levee at St. James's Palace, which was most numerously and brilliantly attended. It was the first that has been held for a long time, and more than ordinary interest attached to it as being the first occasion on which His Royal Highness has assumed the honours of the Court. A meeting has been held at the Whittington Club to compliment Mr. George Thompson, and to present him with an address for his past labours in the cause of human progress; Lord Teynham occupied the chair. Another female impostor, the counterpart of the notorious Alice Grey, has fallen into trouble at Wolverhampton. The custom of the woman was to travel from town to town by railway, and to be found lying on the bottom of a carriage, (an empty one always being chosen), in an apparently insensible state. She had, it seems, some partiality for restoratives, and when consciousness dawned upon her she told a sad tale to her attendants of having been drugged and robbed. From benevolent persons she extracted cash for pity. Wolverhampton has proved an unlucky town for the impostor, where she was recognised; and the magistrates have sent her to prison for three months.

Earl Russell, on Thursday, in reply to Lord Normanby, said the despatches omitted from the Italian correspondence would be produced if moved for. It was untrue, as stated in German newspapers, that Mr. Odo Russell had been ordered to again offer the Pope an asylum. In the Commons the Prince and Princess of Wales' Annuities Bill was read a third time and passed. Mr. H. J. Baillie moved a resolution, the effect of which was that the terms of the Royal proclamation of November 1, 1858, to the princes and people of India, should be fulfilled, and the treaties properly observed. The motion was rejected on a division. The consideration of the Navy Estimates was then proceeded with, and various votes were agreed to. After an explanation by the Chancellor of the Exchequer of the scope of the Post-office Savings Bank Bill, it was read a second time. Mr. Reed, chief constructor of the navy, has been ordered to attend at the bar of the House, he having written a letter to Sir F. Smith, charging him with having in his place in Parliament made a false and libellous statement against him.

A contradiction is given from Warsaw to the report that General Mierolawski had taken flight across the frontier. Langiewicz has crossed the Vistula and is operating in the vicinity of Lublin. A band of insurgents hastening to join General Mierolawski has been dispersed, 100 having been killed and 82 taken prisoners. From Cracow of the 26th instant, two engagements are said to have occurred between the Russians and insurgents; in one near Kutno the Russians were defeated. A telegram of the 26th says that though rumours of a Ministerial crisis in Berlin were rife, they had not been confirmed. Marshal O'Donnell and all the other Ministers at Madrid have resigned, as we learn by telegram; and the reason assigned is that the Queen refused her signature to the decree for dissolving the Cortes. A rumour prevails in Paris that the Emperor of Russia has written to the Emperor Napoleon, offering the Polish question to his arbitration. This may prove merely a Bourse rumour. Mr. Bernard, Conservative, has been returned M.P. for Bandon. Two cases in the law courts have commenced, of some interest, but were not concluded on Thursday; one an action by Dr. Campbell, for libel, against the *Saturday Review*, for imputing to him a desire to obtain money on false pretences, and the other the case of Mr. Serjeant Glover against M. Persigny and M. Billault, for not paying him the hire of his paper, the *Morning Chronicle*. The trial had been postponed until the defendants had been examined in Paris by commission. The convict Roupell's forgeries have been again the subject of scrutiny. The Master of the Rolls has had the case taken before him. The trustees of Lord Manvers are desirous to foreclose a mortgage held on the Roupell estate for money advanced, and they maintain the genuine character of the deed of gift from old Mr. Roupell, which the notorious convict declared he had forged. The veracity of the convict's confession will now be thoroughly investigated. The Volunteers of the City of London, to whom authority has been given to be under arms on the 7th proximo, are to be at the stations assigned to them at one o'clock precisely. The order of formation for each corps will be named hereafter to its commanding officer.

Reviews of Books.

SIR MORTON PETO ON TAXATION.*

Sir S. Morton Peto presses close on the heels of Sir Stafford Northcote. The "Financial Policy" of the Devonshire baronet is followed by this "Inquiry into our Financial Policy" by the member for Finsbury; and, as if to provoke comparison between the two volumes, the second makes its appearance with the same toned paper and antique type which made the former look like a gift-book. The contents of the two volumes differ, however, materially. Beyond the lament over our increased expenditure and recurring deficits which must be the burden of all contemporary writers on finance, they have little in common. The member for Stamford took a survey of the financial history of the past twenty years, and traced our wanderings from that course of economical reform which Sir Robert Peel introduced; Sir S. Morton Peto is content, for the most part, with a review of our present position; he examines the sources of our income and the distribution of our expenditure, and complains of waste in collecting, and waste and folly in spending, the national revenue. "Taxation," wrote

* Taxation; its Levy and Expenditure. Being an Enquiry into our Financial Policy. By Sir S. Morton Peto, Bart., M.P. for Finsbury. London: Chapman & Hall. 1863.

Digitized by Google

Hamilton, in the *Federalist*, "tasks the highest powers of the statesman;" and the thoughtful amongst his countrymen must daily grow more and more impressed with the truth of the dictum. If Sir Stafford Northcote's work failed to impress us with the belief that he was master of finance, Sir S. Morton Peto's volume must place him in a still lower position; indeed, it is difficult to see why he published it at all. It is a handsome volume, and its contents show some diligence; a small part is perhaps of real value, but, properly speaking, it is not a book at all; it is a huge swollen newspaper-article, abounding in commonplace remarks, sometimes just, sometimes erroneous, and sometimes requiring qualification by considerations which do not seem to have occurred to the writer. The only portions with respect to which we feel that a reader would find instruction by their perusal, are those dedicated to such subjects as the management of our dockyards, in which the writer is possessed of special information. These parts are too trifling to allow us to suppose that Sir S. Morton Peto felt the burden laid on himself of publishing them to the world; and this sudden freak of authorship on the part of the honourable baronet remains a mystery. It is, however, fair to add, that if a reader were utterly ignorant of our financial system, he would be able to obtain from this volume a tolerably accurate notion of the sources and magnitude of our national revenue, and of the objects on which it is spent; and though the same information might perhaps be derived from the sixpenny Statistical Abstract, it is there presented in too indigestible a form for ordinary readers.

It is so commonly admitted that our present expenditure is excessive, that the Government has prudently determined to reduce it. The decreased expenditure will, of course, leave us a surplus which will probably be absorbed by a corresponding reduction of taxation. Such a course is by no means necessary: a wise impatience of expenditure need not be accompanied by an ignorant impatience of taxation, although it may be doubted whether many would feel concern at our wasteful expenses were they not called upon to contribute their quota towards them. It is to be hoped that Mr. Gladstone will endeavour to save some portion of the probable surplus, and that such members as Sir S. Morton Peto will have the fortitude to support him, however unpopular such a cause may be with constituents clamouring for the remission of taxes. The experience of the last four years should have taught us the danger of providing too narrow a margin over our ascertained expenditure. A Chancellor of the Exchequer occupies no dignified position when he has to excuse a deficiency in the past year on the ground that some unforeseen cause of expenditure has arisen; and his plea provokes the obvious remark that in the affairs of a nation like our own, some unexpected drain will almost always occur. No prudent housekeeper would arrange his expenditure so as to leave no balance to provide for casualties. We have other reasons for hoping that taxes will not be remitted to an extent commensurate with the probable reduction of expenditure. Unsatisfactory as the annual balance-sheets have been of late, they have only attained a semblance of decency by the expedient of renewing obligations which should have been met and discharged; instead of paying our bills when they became due, we have in some cases renewed them, and in others converted them into permanent mortgages. It would seem that no solemnity of engagement can bind Parliament to the performance of its promises: the opposition, whether Whig or Tory, is always ready to join with the "popular" members in a loot upon the Treasury.

As we are to have a reduction of taxation it becomes important to inquire in what direction the remission should take place. Sir S. Morton Peto will give us but little assistance in this inquiry; though he reviews, as we have said, every source of income, and points out the disadvantages incident to each, we find no comparison made between them. The conclusion at which a reader would arrive is, that all taxation is injurious; but as it is unfortunately an inevitable evil, we should have been more thankful had we been told which impost deserved to be stigmatized as the worst. It is obvious that a necessary preliminary is the determination of the degree in which the present system of taxation presses on the different classes of the community, and a statistician who would solve this problem with tolerable accuracy would confer a service on his country. We believe it would be found, on an analysis of the ordinary expenditure of the several ranks of society, that the proportion of income absorbed by taxation, and *à fortiori* the proportion of means, gradually increases but within slight limits as we descend the social scale. If this result be, as we think, well-founded, it would follow that any alleviation of taxation should be effected on those taxes which press on the poor as well as the rich; as far as *remission* is concerned, the customs and excise duties have more claims on our attention than the income-tax, the stamp duties, and the assessed taxes. Such articles as tea, sugar, beer, and tobacco, absorb a larger proportion of the income of the poor man than of the income of the rich, and the reduction of the duty to which any one of them is subject would, therefore, tend to redress the present inequality of taxation; and such a reduction is further recommended to the financier by the consideration that the use of these articles amongst the poor is repressed by their cost; the increased consumption which would follow on a diminished price would speedily cause a recovery of the revenue lost. As an example of this recovery, we may remind the reader that, whilst the duty on tea was 2s. 2½d. per lb. in 1850, and was only 1s. 5d. per lb. in 1860, the amount of duty received at the Custom House was almost the same. The quantity of tea consumed in the United Kingdom was increased more than one-half, and the average consumption of it by each individual of the population rose from 1 lb. 14 oz. per annum to 2 lb. 10 oz. per annum. Such considerations as these, coupled with the fact that the gradual reduction of the tea duty to one shilling per pound formed for some time part of our financial programme, may probably induce Mr. Gladstone to prepare some revision of the duty on tea; and there are cogent reasons why some alteration should be made in the sugar duties, even though no remission of them be contemplated. The principle of imposing rates of duty, varying with the quality of the article imported, does, indeed, seem fair to the consumer of the inferior qualities; but it involves considerable trouble and expense, and the apparent injustice of imposing a uniform rate of duty disappears when we consider the impost as part of our financial system. A uniform duty on tea has been adopted for many years with universal approval, and there can be little doubt but that we must shortly equalize the sugar duties. A duty which depends on the colour of sugar, "white-clayed, yellow, or brown," seems to carry with it its own condemnation. A colour-blind officer or a foggy day in Lower Thames-street may change the rate of duty. "The Commissioners of Customs," writes Sir S. Morton Peto, "state in their reports that they have taken great pains to provide at the Custom House a room for the examination of sugars, so peculiarly well lighted that there can be no error in taking the sugar duties, in consequence of difference of colour arising from defects of the light in the apartment in which the examination is made. But it seems to me that the very necessity of making such special provision proves the difficulty of levying the duty under this system. The Commissioners may provide the best lighted apartment in Thames-street, but they cannot provide in this climate against the effects of atmosphere. The very direction of the wind will occasion over or under value, as it does or does not drive the smoke of London towards the Custom House." There is another and fatal objection to the differential duties. The principal effect of them is to cause the greater part of the sugars imported to be of the lowest quality, and to protect the sugar-refiners at home. The system, which, on the face of it, appears designed, in a spirit of justice, to the consumer, is, in fact, a mere protective system in favour of a peculiar body of manufacturers.

Next to the customs and excise duties there are two sources of revenue which must occupy the attention of the Chancellor of the Exchequer. Mr. Gladstone will probably not forget that he was in a minority last year on the question of reducing the duty on fire insurance, and though the proposed reduction was defeated at a subsequent stage, yet a compact body of M.P.'s from all sides of the house have pledged themselves to endeavour to procure a diminution or abolition of the duty. The fact that nearly two hundred members have united on such a question will probably furnish a more powerful argument than could be derived from any consideration of the objections to the tax. Those objections are, however, very weighty: a tax on the performance of a common duty could scarcely in any case be defended, but to this consideration we must add the fact that the fire insurance duty is really one of the most onerous taxes which brings money into the exchequer. A fallacious attempt was made some time since to prove the contrary by comparing the rate of the tax with the value of the property insured. Such a test is, however, inadmissible; in comparing with one another taxes on acts or enjoyments, the true test is not to be found in the means of the tax-payer, but in the degree in which the expense of the act or enjoyment is heightened by the imposition of the tax: the burden of the tax on wine is measured by the ratio of the expense of drinking an untaxed and a taxed bottle; and, if we apply this test to the duties on fire insurance, we find that the cost of ordinary insurance is trebled by their imposition. The second source of revenue which must occasion Mr. Gladstone some anxiety is the income-tax. The excessive unpopularity of that impost may lead him to propose a return to the rate of seven-pence in the pound, and it may not be improbable that he still retains the hope he once possessed that it may some day be altogether repealed. It is undoubtedly possible that the expenditure of the country may be so reduced that we should be able to dispense with this source of income, but it must be obvious on very slight consideration that its removal would introduce great injustice in our fiscal system. The impropriety of the present tax cannot be too severely denounced, but a revenue raised principally from the customs and excise would be still more unjust. Some direct tax must be preserved as an element of our finance to counterbalance the unequal pressure on the lower classes of the duties on tea, sugar, beer, and tobacco. Sir S. Morton Peto's chapter on the income-tax is remarkable for its simplicity: his reading on the subject seems to have extended no further than to the blue-book of Mr. Hume's committee; he altogether ignores the report of Mr. Hubbard's committee, and treats the capitalization scheme of the actuaries as if it had never been the subject of attack and defence. Though we believe him right in his conclusions, he appears to have no knowledge of the specious arguments by which they have been assailed, or of the difficulty of carrying them out.

At no time for many years has there been a better occasion for the return of our Government to the path of economy and prudence. We may reasonably hope that such a step will have some influence on other nations than our own. Wherever the financier turns he is now met by cries of distress over annually recurring deficits. Neither M. Fould's logic nor his financial sleight-of-hand has succeeded in keeping the French expenditure within its income. If we look from Russia to Italy, from Italy to Austria, from Austria to Turkey, we pass from one state of embarrassment to another in still worse condition. The position of the States is too peculiar to be judged by the rules of ordinary years; but our own colonies seem without sufficient reason to be incurring debt and

Digitized by Google

accumulating burdens on their successors. The provinces of North America already feel the difficulties of indebtedness, but the Australian colonies gaily pass from one year's deficit to another, and take no thought of the future. The spectacle of the statesmen of the mother-country turning to a serious consideration of their financial position may induce the leaders of opinion in some of these young communities to follow their example.

FERGUSSON'S MODERN ARCHITECTURE.*

Mr. Fergusson is the most eminent living critic of architecture. He has studied with unwearied patience, he loves his art, and he writes a vigorous style; but, like another great critic, rather of art than of architecture, he is convinced that the whole world is in grievous error, and that it is his duty to proclaim this truth.

In two previous volumes Mr. Fergusson discussed the styles of architecture anterior to the Reformation, as well those that then ended as those that still continue beyond the reach of the baneful influence of modern civilization, where the Chinese rejoice in inverted curves and the Indians caricature the noble art of the Arabs. He has, after some delay, brought himself to the less grateful task of recording the intricate history of the modern styles, and we can sympathize with the historian who leaves the pleasant paths of antiquity, where everything is as regular, though not quite as precise, as in Plato's Paradise, for the crooked ways of the moderns, where all is unexpected and much is wrong. The two great schools are distinguished as the True Styles, and the Copying, or Imitative, Styles. We should have preferred "original" to "true," and "derived" to "copying." Mr. Fergusson finds great fault with Pugin for his perpetual harping on truth in art; and we are accordingly disposed to smile when so severe a critic says of the restoration of architecture "to the position of a truthful and real art," that it is a matter "so important that it is childish to despair, and wicked not to do what can be done to bring about an object in every respect so desirable."

In the former volumes the object was simply history; in the present it is not merely history, but its practical application; and this second motive is evidently that for which the work was written. The author strives to prove all contemporary architects, at least of England, to be wrong in principle and practice; and this idea is in his mind while he describes the steps which led up or down to the present state of the art.

In an interesting introductory essay the origin of modern architecture is skilfully traced. The forces that led to its production are said to have been the tastes originated by the newly-recovered classical literature; the injury to ecclesiastical art caused by the Reformation; the influence that palatial and other domestic architecture thenceforward exercised on religious architecture, to its manifest detriment; and the greater importance of internal over external architecture in Christian places of worship. In pointing out "the difference between an imitative and a true style," he thus lays down the principles of the latter. "The architect had only to consider, first, how he could contrive the most convenient and appropriate building; secondly, how he could arrange this so as to be most ornamental, with the least possible sacrifice of convenience; and thirdly, how he could accentuate and ornament his construction so as to be most obvious and most elegant" (pp. 9, 10). He shows that the Italians of the Renaissance sinned against these canons by the importance they gave to painting in the adornment of interiors, so as to make a church sometimes little more than a receptacle for pictorial decoration. But when he regrets that they did not employ sculpture for external ornament he does not seem to perceive that to do so is to violate the excellent but strict principles he had laid down. We are aware that in saying this we lay ourselves open to the terrible charge of finding fault with the Greeks, and we will frankly confess that we think Greek architecture suffered by the temples being the shrines of great statues and the receptacles for beautiful bas-reliefs, though having been formed before the development of sculpture it did not suffer to the same extent as the Italian. In working out the problem of the origin of Italian art, Mr. Fergusson startles us with some assertions, as where he denies to the middle ages "any literature of their own;" and, having just mentioned Dante, adds, "but neither in poetry nor in prose, in science nor in literature, had the dark ages produced anything that could for one moment stand in comparison with the glorious literary productions of Greek and Roman civilization" (p. 5). Dante, we admit, was influenced by classical reading, yet his was essentially a pure mediæval genius; indeed, Mr. Fergusson admits as much, and contemporary architecture shows that the classical rage had in his time not yet begun. And when we read of the enthusiasm the Italians, and especially the Romans, felt for their ancient monuments in the age of the revival of letters, we remember how Petrarch laments the indifference of the people of Rome to the wonders amid which they lived. Excepting Rienzi and John Colonna, he himself was better acquainted with the antiquities of the City than its nobles or people. "For who to-day," he says, "are more ignorant of the affairs of Rome than the Roman citizens? Unwillingly I say, nowhere is Rome less known than at Rome." Times gradually improved, yet long after the beginning of modern art the ancient buildings of Rome were used as quarries for each new palace.

The causes we have endeavoured to state are judged by Mr. Fergusson to be sufficient to account for the formal changes that were introduced in architecture at the Reformation. "The real and essential change" he looks for deeper, and endeavours to explain in a philosophical manner. Dividing arts into technic and phonetic, or, we would say, practical and fine, a terminology which if less accurate is not open to the charge of affectation, he attempts to show that architecture, which was of old "nothing more than the æsthetic form of the purely technic art of building," came to be cultivated after the Reformation "on the principles which belong only to one of the phonetic class." Instead of being a practical work, which was added to or altered as time and necessity required, on a fixed principle of utility, an edifice became, like a poem or a sculpture, the expression of one mind never to be afterwards touched. In support of this idea, he observes that we know the names of all modern architects, so that the most interesting history of their architecture would be a record of their lives, just as we know the names of all the writers of poems; but "we do not know, or care to know, the name of a single Egyptian or Indian architect" (p. 20). This is not strictly correct even as to Egypt; but how will Mr. Fergusson reconcile with this sweeping assertion the fact that we know the names of many of the great Greek architects, though the sculptor always is the principal person in the history of the building; Phidias is remembered but Ictinus is not forgotten. In Gothic art the names of architects are often lost, in Arab art, sometimes. Another cause of the decline of modern architecture is, we are told, that it has fallen into the hands of professional men, as if nearly all the great works of ancient and modern times, material or mental, had not been achieved by men working for their bread (pp. 22, 23, 29, seqq.). It is strange, after reading this complaint, to find an objection to the learned precision of the present architects, who are defined to be either archæologists or scholars, according as they follow Gothic or Greek rules, and who are directed to witness the success in other countries of untutored and unfettered practical genius (pp. 29–35, ix.).

We have been unable fully to state Mr. Fergusson's argument, but we believe we have omitted no important point. To us it seems unsatisfactory in its philosophical part, where we think he has refined away and missed the true explanation. In former times each nation or race had its own art: it neither knew nor cared for that of aliens; zealously devoted to the furtherance of its native taste, that taste it applied to its fullest capability. Since the great discoveries that have made travel easy, and opened new regions of the globe to the commerce of the old nations, essential differences have been gradually obliterated, nationalities gradually merged, arts gradually assimilated, knowledge equally spread. Hence an enormous acquisition of materials and a consequent embarrassment of the student. The architect like the sculptor is weakened by the array of examples before him. He knows more and can do less. This is the inevitable result of civilization, and we are disposed to think a really original style no longer possible.

Mr. Fergusson passes in review, with much skill and his constant acuteness, the principal modern edifices of Italy, Spain and Portugal, France, England, Germany, North-western Europe, Russia, Colonial India, Turkey, and the American colonies. At the close of the book devoted to England are two chapters on the Classical and the Gothic revivals, which will doubtless be read with much relish by those they immediately concern. These chapters we take to express the general practical conclusion of the whole examination. He distinguishes the two revivals from the Renaissance as having the purpose of absolute imitation, not adaptation. St. Peter's and St. Paul's are not Roman, the Madeleine is absolutely Classical, and a dozen Gothic churches in London are pure copies of old models. The edifices of the Classical revival are discriminately and tenderly criticised, though it must be observed that they are made to include Barry's Italian works, which, though acknowledged not to be properly of the class, yet seem to save it from the charge of being unpractical. The Gothic revival is treated in a very different tone. In much we agree. We admit the wildness of the Mediævalists, and the injury to art of blindly copying any style, however good; but we do not see the logic that makes imitation forgery. Pugin never intended to deceive; all he intended was a complete copy. A forgery is a copy with intent to deceive. In denouncing the Gothicists, Mr. Fergusson injures his cause by indulging in invective that is contradicted elsewhere in this volume. How much justice is done to the Gothic revival may be understood when the only works criticized are St. Luke's, Chelsea, not pure Gothic, as acknowledged; Windsor Castle, an adaptation; the Houses of Parliament, Tudor; and the new Museum at Oxford, by no means a favourable specimen of the school; whereas the Classical Revival is illustrated by criticism of New St. Pancras Church, the Bank, University College, the National Gallery, the British Museum, the Fitzwilliam Museum, St. George's Hall, Grange House, the Edinburgh Royal Institution, and the new High School, not to speak of Barry's Italian edifices.

No doubt an equal review of the Gothic school would not be possible without largely criticising living architects, whose works, be it remembered, occupy the same position in time, with reference to the commencement of their revival, that is held by the chief buildings of their classical rivals previously examined. They have to a great degree ceased to copy, and in London alone we can point to a multitude of works showing appreciation rather than imitation. The two best, we think, are the younger Barry's Schools in St. Giles's, and Wild's Schools in Castle-street, a little to the south-east, hidden

in an alley and injured by the glazing, after completion, of the open playground in the upper storey. But there are many churches, especially some of the most recent, that are as well adapted to modern Protestant worship as Gothic art ever can be. We prefer Byzantine or Lombard, and for plan know nothing better than Mr. Cockerell's Hanover Chapel in Regent-street; but, architecturally, we deny that all our Gothic churches are mere imitations.

Mr. Fergusson shows with some force the failings of both styles for modern requirements; but when he proposes as a substitute "a style which, for want of a better name, is sometimes called the Italian, but should be called the common-sense style," and tells us that his "one hope lies in the knowledge" of this third resource, we confess that after all the monstrosities that his whole book undertakes to prove, and proves, to have come out of the Pandora's Box of Italian architecture, we have little confidence in the hope he has discovered lying in the bottom. It must be recollected that he has condemned for defects of design "every building erected from Palladio's time to our own day" (p. 29). Gothic art has this great advantage over Italian that it was once great and pure, and was never utterly perverted; this advantage over classical that we do not really know what classical architecture was, how, for instance, the Greek temples were roofed. If our architects cease to copy but rather study how their predecessors used the materials in their hands in different climates and for different purposes, we may hope for a more congruous school of architecture; a great and original school it is to be feared our civilization will never produce.

In an appendix on "Ethnology from an Architectural Point of View" Mr. Fergusson has given the reins to his love of grand generalizations, and unstripped even Renan in the race. He divides mankind into four great stocks: the Turanian, the Semitic, the Celtic, and the Aryan; and under the head of each discusses its religion, government, morals, literature, arts, and sciences. We wish that he had read this very curious essay at the Ethnological Society, before printing it here. He would then, perhaps, have doubted whether Turanian meant anything more than neither Semitic nor Aryan, and learnt that in this class are included races far more distinct than the Celts and the Shemites, almost infinitely more than the Shemites and the Aryans. To put these four races upon the same ethnological footing is contrary to received ethnology. But leaving Mr. Fergusson's theories, we must notice his facts:—"The Semitic races never erected a building worthy of the name" (p. 512). We thought that there was such a thing as Arab art, for which we refer the reader to Mr. Fergusson's former volumes, an independent and intensely original style, not so much an outgrowth of the Byzantine as was the Gothic. "No Turanian race ever rose to the idea of a God external to the world. All their gods were men who had lived with them on the face of the earth" (p. 502). Yet the Egyptians, Mr. Fergusson's "typical Turanians" of the old world (p. 501), worshipped no ancestor, excepting possibly in a very low position of their system. All the great gods were cosmic or else connected with the powers of the universe; and the only ones which show any traces of ancestral origin, traces unknown to the Egyptians, were derived from the Shemites. The "great and distinguishing tenet [of the Shemites] is and always was the unity of God, and his not being born of man" (p. 509). How does he explain the monstrous polytheism of the Arabs before Mohammad, of the Phœnicians, of the Assyrians? But here we trace M. Renan, and it is needless to argue with any one caught in the meshes of his enticing rhetoric.

We close Mr. Fergusson's work with great admiration for his care in collecting materials, and his acuteness in criticizing them, with great regret for the animus with which he has discussed questions of taste, and with an earnest hope that he will let ethnology alone, or study it as he has studied architecture, before he finally allies himself to the prophets of generalization.

HYMN-BOOKS.*

Hymns have an office among Protestants not unlike that of pictures and images in Roman Catholic countries. The intellectual as well as the material symbol serves to present and recommend to the imagination, by the aid of a popular artistic treatment, the facts and doctrines of Christianity. Both are addressed to the majority, and must be judged, in the first place, by their power of affecting the majority. It would almost seem at present as if, in painting and sculpture, this requirement were inconsistent with any artistic excellence at all. But this is probably only a result of the corruption, or rather changed direction, of taste in our day. The masses, all over Europe, are either indifferent to art, or take pleasure in mere delusive imitations of the highest style. This is seen, for example, in the sickly sentiment and false finish of the religious engravings and statuettes with which Bavaria supplies the whole Roman Catholic world. It is easy to say, and perhaps natural to feel, that people had better not care about art at all, than learn to love its Brummagem or Regensburg counterfeit, but this is only half true. A great artist, who could address the people in their own language, would find an audience such as no other has had since Holbein and Dürer.

In the case of hymns, meantime, though we keep the same primary requirement in view, we may congratulate ourselves that the conditions do not seem to exclude a high degree of poetical merit. The easy metre, simple language, and rigorous adherence to one thought, which mark a good hymn, attract rather than repel the poetical student. Familiarity will enable him to feel the intensity which speaks through the unaffected and often uncultivated utterance of the writers, and that reflective delicacy which nothing but an overpowering moral motive can fully supply. The poetry of the Bible itself will acquire a new meaning when recast by the imagination of a Lutheran or Puritan believer. No meaner subject could inspire an ignorant cobbler with so vigorous and noble a strain as this:—

"Though nature's strength decay,
And earth and hell withstand,
To Canaan's bounds I urge my way
At his command;
The watery deep I pass
With Jesus in my view,
And through the howling wilderness
My way pursue.

"The goodly land I see,
With peace and plenty blest,
A land of sacred liberty
And endless rest;
There milk and honey flow
And oil and wine abound,
And trees of life for ever grow,
With mercy crown'd."

The fervent imagination has here fused the image and the reality together, and produced a result quite inimitable by more conscious art.

It must be admitted, however, that the study which is rewarded by these occasional pleasures needs all the encouragement than can be derived from them to reconcile us to its intermediate dulness. The number of bad hymns in the world is truly appalling. Extremes appear to meet in the works of the same writer oftener here than in other departments of literature. The great object seems to be to keep up a steady flow of verse, and the beauties and deformities have alike an accidental and unpremeditated air. This is especially the case with Watts, whom we may regard as the typical English hymn-writer, both from his great fertility and popularity, and from his unfailing adherence to the proper conditions of the hymn. No writer has left behind him a greater number of bald and unmeaning verses, and yet none has reached so fully the utmost dignity and grace of which the material is susceptible. His great hymn,—

"When I survey the wondrous Cross," &c.

is generally known and admired, but there are many others—buried hitherto in uninviting "Collections"—of equal if not superior merit.

To rescue these and other similar works from bad company and damaging associations, and to introduce them to the general world of readers in an acceptable form, was an object as worthy of one of the Queen's Ministers as to vindicate the fair fame of Helen, or the application of Zulu criticism to Manetho. These are the relaxations of Sir Roundell Palmer's colleagues; while, on the other hand, the Premier may yet, we trust, live to give a permanent form to his speculations on original sin, and Lord Westbury complete the unhappily still fragmentary religious autobiography of Sir R. Bethell.

The Solicitor-General has chosen a less controversial path. Even a religious newspaper would seek in vain there for the elements of strife. On the contrary, there is an atmosphere of concord and a prospect of ultimate unity which might reduce to peaceable behaviour a much worse man than the religious partizan generally is. It is truly wonderful that this should be almost the first attempt to make a collection of hymns with any other than a partizan or sectarian object. The meaner passions of mankind, which seem to choose religion as a field in which to display themselves, have left abundant traces of their workings here. Hymn-writers themselves have been too apt to present Christianity in a sanguinary and distorted aspect, and to accompany the words of universal charity with an undertone of selfish security and triumph. These faults cannot however be justly charged to their account, any more than the improbability or brutality of a legend to that of the wood-engraver or sculptor who represents it. They are a part of what we may call without offence popular religion—the cheap and handy compendium of infinite truths. The cruelty which they seem to express is practically consistent, not only with indulgent judgment, but with charitable hope for individuals. Watts, a man of the tenderest nature, could write *for children*:—

"There is a dreadful hell
And everlasting pains,
Where sinners shall with devils dwell
In darkness, fire, and chains."

And this, again, to be sung by a small congregation of Dissenters:—

"We are a garden walled around,
Chosen and made peculiar ground;
A little spot, enclosed by grace,
Out of the world's wide wilderness."

Apart from these grosser faults of sentiment, there are many besetting sins common to hymn-writers. Simplicity may be

allowed to take a homely air, but it must not become the excuse for meanness or vulgarity. As in Watts :—

"Lord, what a feeble piece
Is this our mortal frame;
Our life, how poor a trifle 'tis,
And scarce deserves the name!"

And again :—

"My heart, how dreadful hard it is!
How heavy here it lies;
Heavy and cold within my breast,
Just like a rock of ice!"

A more offensive fault than this is that almost amorous familiarity with which the second person of the Trinity is sometimes addressed. This belongs chiefly to the Moravian and Lutheran hymnology; but, strangely enough, the same tendency is prominent in the prose meditations of Roman Catholic mystics. The comparatively sober tone of English character subdues even our fanaticism, and makes faults like these exceedingly rare, even in books of the darkest shade of doctrine.

Sir Roundell Palmer has succeeded in producing a collection of hymns which will probably attract the attention of a wider circle of readers than any which have gone before. It is probable that many lovers of the poetry and devotion of the Caroline epoch may be disappointed at their scanty representation in the book. But a moment's consideration of the special nature and requirements of a hymn, as distinguished from a religious or devotional poem, will justify the editor. The merits and defects of the great writers of that time alike unfit them for such a collection. Irregular metres, crabbed rhythm, a parade of learned and secular allusions, and a philosophical turn of thought—these are all faults for the collector's purpose, however indulgently or even fondly an individual student may regard them. We cannot but regret very much, however, the absence of a hymn of Donne's, beginning "Canst Thou forgive?" in which all these foibles are conspicuous by their absence. It is given in Walton's Life, and any one who will read it there will, we think, agree with us that it approaches as nearly to the perfect ideal of such compositions as any other in the language.

Throughout the whole collection there is evidence of very great care in arrangement. It is admirably worked out. If there be any fault, we should say it was over-arrangement; but this must be a matter which use alone can decide. In the important mattter of texts, Sir Roundell Palmer goes on the unexceptionable principle of restoring the original words of the author, or, in the event of any variation being maintained, indicating the source of it. In one instance, a little laxity might have been used with advantage. Toplady appears to have written in the last stanza of the well-known "Rock of Ages,"—

"When my eyestrings break in death;"

the generally-received variation is,—

"When my eyelids close in death,"

and we regret that this was not retained.

The book is prettily printed and bound, in the "Golden Treasury" style, and is adorned with a powerful drawing by Mr. Woolner, representing David with his harp.

A much less successful collection is contained in a very pretentious, but empty little book, entitled, "Hymns for the Church of England." In an anonymous preface we are told that the best efforts have been used to make this book of hymns agree with the reverent and grave tone of Holy Scripture and the Book of Common Prayer. The editor appears to be one of that too numerous class who think that "reverence," "gravity," the Prayer-book, the Bible, and the Church, are opposed to taste and imagination. We submit that even a Nonconformist poet deserves better treatment than the unfortunate Watts receives at the hands of this anonymous Procrustes.

Watts writes :—

"See from His head, His hands, His feet,
Sorrow and love flow mingled down."

His improver substitutes, out of regard for reverence, gravity, and the Book of Common Prayer :—

"Behold His head, His hands, His feet;
See love and sorrow flowing down."

The same fatality pursues him in the changes which his principles demanded in other hymns.

"The English Chorale Book," was noticed weeks ago in these columns as a collection of tunes, but it is still more remarkable as a hymn-book. It contains 200 German hymns translated by Miss Winkworth, whose previous translations, published under the name of "Lyra Germanica," are widely known. If they were published as original hymns they would immediately take a high rank; but the fact of their being translations rather enhances than diminishes their merits. Miss Winkworth's English is excellent, and she knows how to give it modifications suited to the date and character of each original. This, from Luther's "Ein' feste Burg," is as nervous and gnarled as the original :—

And were the world with devils fill'd,
All eager to devour us,
Our souls to fear should little yield,
They cannot overpower us.
Their dreaded Prince no more
Harms us as of yore;
Look grim as he may,
Doom'd is his ancient sway,
A word can overthrow him.

Even hymn-writing is not exempted from the peculiar dangers of the time. We are perhaps getting too self-conscious to deal successfully with so simple and frank a form of expression. The delicacy and warmth of Herbert are revived in Keble; but the popular element is wanting. Perhaps the higher gifts exclude the lower, and we must be content to exchange artless beauty and strength for a less powerful but more varied and subtle style. Yet the immense popularity of "revival" hymn-books among the classes for whose religious education hymns chiefly exist, is a fact which should encourage literary artists of a superior order to study how they may, in this species of poetry, appeal to the devotional feelings of the many, without offending the taste and judgment of the educated few.

KNIGHT'S POPULAR HISTORY OF ENGLAND.*

After seven years' labour, Mr. Knight has at length completed the great work of his literary life. The object he set to himself in the beginning, was to write a book worthy to be put into the hands of "a young man of eighteen who asks for a history of England," and he has reason to believe, he tells us with justifiable pride, that he has been successful. Not only has the History been received with a large measure of public favour, but so competent a judge as Mr. Kingsley recommended it as a text book in lectures delivered to a class of which the Prince of Wales was a member. It has thus received an official as well as a popular sanction.

The concluding volume is perhaps even more valuable than its predecessors, for it deals with a period hitherto almost untouched by historians. In England, as elsewhere, recent events are those which men know the least about. They are too near for distinct vision. Like the words on a printed page held close to the eye, they always seem blotted and confused. A narrative of them comes with the force of a surprise even upon those who acted a part in them. Moreover, it is not easy to write such a narrative. The materials are not readily accessible, and if they are attained, they are mostly used only in accordance with the bias of the writer. This is the defect which disfigures the pages of Miss Martineau and Sir A. Alison, so that not until now have we had a continuous history of the momentous events of the long peace, free alike from sectarian and party prejudice. Mr. Knight, though he writes throughout from a liberal point of view, has, in a spirit of wise self-denial, determined to impart knowledge without battling for opinions. He tells the truth, and the whole truth, but leaves the inference to be drawn by the reader.

It would be impossible even to indicate the variety of subjects treated of by Mr. Knight, but they have one notable characteristic in common. With the exception of the opening chapters, which are devoted to the American War of 1812 and to the Hundred Days, the book relates almost exclusively to domestic events. After the fall of Bonaparte, Englishmen lost their interest for a while in the affairs of other nations, and confined their attention chiefly to their own. The great political and social problems, the solution of which had been interrupted by the war, monopolized the public mind. Foreign affairs sunk into the second place, and few, outside Downing-street, knew or cared much about them. They did not regulate the fate of ministries. They scarcely ever furnished the materials of a Parliamentary debate. The prevailing temper was well represented in a humorous letter addressed by Sydney Smith to the Countess Grey :—

"For God's sake," he writes in 1823, "do not drag me into another war! I was worn down and worn out with crusading and defending Europe and protecting mankind. I must think a little of myself. I am sorry for the Spaniards; I am sorry for the Greeks; I deplore the fate of the Jews; the people of the Sandwich islands are groaning under the most detestable tyranny; Bagdad is oppressed; I do not like the present state of the Delta; Thibet is not comfortable. Am I to fight for all these people? The world is bursting with sin and sorrow. Am I to be the champion of the Decalogue, and to be eternally raising fleets and armies to make all men good and happy? We have just done saving Europe, and I am afraid the consequence will be that we shall cut each other's throats. No war, dear Lady Grey! No eloquence, but apathy, selfishness, common-sense, arithmetic. I beseech you, secure Lord Grey's sword and pistols, as the housekeeper did Don Quixote's armour. If there is another war, life will not be worth having."

And there was no alteration in this phase of feeling until the year 1848. Then a reaction set in. The bursting of the Chartist bubble proved the stability of our institutions, and the success of the efforts by which they had been built up.

At peace among ourselves, with our principal subjects of controversy settled once and for ever, we could afford to rest upon our oars, and enjoy the luxury of watching the tempests which were shaking every throne in Europe, but from which our own foresight and wisdom had saved us. The current of popular sympathy and interest began once more to flow outwards, and has continued in the same channel from that time to this. But not only have the stirring episodes of the Russian and Italian wars, the Indian Mutiny, and the American Rebellion so absorbed men's

Digitized by Google

thoughts as to render our history at home a blank; they have also gone far to extinguish the memory of the great measures of the peace. Yet no period since the Revolution has been so fraught with blessings for England. The chronicle of almost unbroken prosperity may appear tame to readers nourished on the sensation literature which wars produce. While the ear is filled with the sound of the conflict of armed hosts, it may be difficult to appreciate the import of debates on finance or representative institutions. But when the English historian comes to arrange the events of the past half century—as far as they affect his country—in their order of magnitude, he will assuredly assign the place of precedence to the epoch in which the bloodless but decisive battles for Catholic Emancipation, Parliamentary Reform, and Free-trade were fought and won.

Breathing the calm political atmosphere of 1863, we are able to laugh at the panic caused by each of these measures in its turn, especially by the Reform Bill. Yet there was good excuse at the time for what Lord Sidmouth called "the regrets of the good, the fears of the wise." The French Revolution of 1830 had given new audacity to the violent reformers, and signs were not wanting that a similar catastrophe was quite possible in England. Of course the Government were not responsible for the excess of the dregs of their supporters, but it must be admitted that there was some truth in the charge brought against them by Sir Robert Peel, that "they had, like the giant enemy of the Philistines, lighted three hundred brands and scattered through the country discord and dismay." Their language was sometimes rather inflammatory, and on one occasion, even so cautious a leader as Lord John Russell hinted that the "whisper of a faction" might be effectually stifled by suspending the payment of taxes. Still they are not chargeable in any way with the acts of violence perpetrated in every corner of the kingdom. These were the results of the frenzied appeals of fanatics like "Orator Hunt." At Derby the city gaol was broken open. The castle at Nottingham was burnt to the ground by an infuriated mob. Bristol suffered even more severely: for two whole days a crowd of blackguards and pitmen shouting for "drink or blood" held the lives of the citizens at their mercy. Agricultural labourers took to rick-burning and manufacturing operatives to smashing machinery. Besides all this, the terrible shadow of advancing cholera roused the fears of the superstitious. No wonder that the prophets of evil were plentiful. Sir Robert Inglis was "quite sure" that in ten years the House of Lords would be clean swept away. Lord Eldon declared that the sun of England had set for ever. The Chief Justice of the Queen's Bench solemnly washed his hands of any share in his country's impending ruin. Nor were these gloomy forebodings confined to the Tories only. They prevailed among men of all parties, and were shared by the most liberal thinkers. Dr. Arnold—a man not prone to idle fears—was deeply anxious as to the future of his country. Yet the dreaded Reformed Parliaments have done nothing revolutionary, and the course of improvement has been steady but gradual. Thus, the results of the Bill have falsified the fears of the ultra Tories, and at the same time disappointed the hopes of the ultra Liberals. The latter find their favourite schemes as far from realization as ever, and accordingly revenge themselves by denouncing the Bill as a constitutional hoax and its authors as selfish impostors. One of their most brilliant writers declares it to have been a sham in schedule A, a greater sham in schedule B, while the aggregate representation of the people remained as delusive as in the days of Walpole. Reasonable people, however, will be well satisfied with the progress that has been made, and will feel thankful that the crude ideas of some of the more ardent members of the Parliament of 1833 have never found their way beyond the order-book of the House of Commons. A new municipal system, sweeping away exclusive and corrupting privileges; a poor-law under which the pauper, though well cared for, is no longer petted and pampered; increased liberty of action for the colonies; the abolition of slavery in the West Indies, bought with a heavier price than thick and thin abolitionists will acknowledge; a civil code stripped of the absurdities which, until lately, formed part of the system extolled as the perfection of human reason; criminal jurisprudence purified from barbarities disgraceful to humanity; and, greatest perhaps of all, the firm establishment of Free-trade,—these are some of the chief triumphs of a reforming era.

But if we would measure all that has been done, we must look beyond the statute-book, and follow Mr. Knight's interesting chapters on our social improvement. We could have no better guide, for he has himself had an honourable share in the changes which have been wrought. The chasm is wide that separates the England of 1815 from the England of to-day. Old things have indeed passed away. Our modes of living, travelling, thinking, have all been revolutionized. The sanitary reformers have been at work, rooting out the lurking-places of pestilence and crime which disgrace great cities. Their success is as yet but partial: "guilt gardens" still exist, and still pour forth their miserable army of beggars and robbers seeking prey. New Oxford-street has swept away the "Rookery" and "Holy Land;" but the network of fever-stricken alleys of St. Giles remain. Yet much has been done, as the Bills of Mortality can testify. Public baths, new parks, improved lodging-houses, have brought cleanliness and health within the reach of the poorest. The labours of the engineer have been more remarkable. George Stephenson has been the father of a great race of energetic men, who have woven an iron web round the world. A generation has hardly elapsed since the Liverpool and Manchester Railway was opened, yet what stupendous results have been already achieved! Last, but not least in importance, "the schoolmaster has been abroad." England has relieved herself from the stigma of being the worst educated country in Europe. For twenty years after the peace, no legislative progress on the subject was made; but the efforts of Lord Brougham were gradually undermining the old opinion that a "little learning was a dangerous thing." The success of the Society for the Diffusion of Useful Knowledge, of the London University, and of Mechanics' Institutes, at length convinced people that a little learning was a great deal better than none at all. The cause of education became and has continued popular. No one speaks coldly of it now. If it suffers at all, it is from the rival theories of friends, and not from the attacks of enemies. Some idea of the changed temper of the public may be formed from the education estimates. In 1838, they amounted to £30,000, and even this sum was not voted without a hard struggle; in 1862, £915,000 were given almost without discussion. Even more significant is the vast increase in periodical literature, which Mr. Knight rightly regards as a true measure of the increase of the popular appetite for knowledge.

Altogether we have good reason to be proud of the period of the peace. Its commencement dawned on a nation torn with internal disputes, class prejudices, and class animosities. All these are happily removed, and so calm and contented is the immediate present, that we are wont to say that there are no longer any great questions. But, though we may be at rest for a moment, it would be absurd to suppose that we have entered on a national millennium. The sky is bright overhead, but clouds, no bigger than a man's hand, may any day blacken it with storms. It may be our destiny to have to weather them. Meantime, there can be no better preparation for the task than the study of dangers and difficulties already overcome. "The harvest gathered in the fields of the past," says Dr. Arnold, "is to be brought home for the use of the present." We should take advantage of the sunshine we enjoy to gather the harvest in, and then, strengthened by the lessons it teaches, we shall be better able to meet the conflicts of the future.

THE STORY OF A SIBERIAN EXILE.*

M. Pietrowski's narrative is as interesting as a romance, yet it seems to be entirely authentic. Without any apparent exaggeration or malice, he tells the story of his sufferings, and of his flight from that land whence very few travellers return. Many an exile has attempted to make his escape, but "the many fail, the one succeeds." The chances against success are great indeed. Perils of all sorts must be incurred, terrible and protracted hardships have to be endured, before the poor and friendless fugitive can hope to traverse the endless plains and cross the mountain-ranges which lie between him and freedom. Alone he is fighting with a mighty government, and if he is overcome in the struggle, a fearful punishment awaits him. In the year 1837, an extensive conspiracy was organized among the exiles. A simultaneous rising was planned; the fortresses were to be seized, and a stand made against the imperial troops, while, in case of a reverse, the conspirators were to retire towards Bokhara, and so make their way to British India. But on the eve of the appointed day the plot was discovered. The ringleader was an Abbé Sierocinski, who had been the superior of a convent of St. Basil, in Volhynia, and he was condemned, together with five of his associates, to receive "seven thousand lashes without mercy." None of them lived to undergo the whole number of lashes.

"The Abbé Sierocinski had been purposely reserved to the last, in order that he might witness the sufferings of all his friends. When his turn came, the signal was given, the fatal march began"—for the sentence was executed by soldiers, between whose ranks the victim was forced to walk slowly—"and the old superior of the Basilian convent chanted in a loud, clear voice, 'Miserere mei, Deus, secundum magnam misericordiam tuam!' General Galafeiev called to those who struck, 'Harder! harder!' and for several minutes the priest's chant rose above the whistling of the rods and the cries of the commanding officer. Sierocinski had only passed once through the ranks, that is to say, he had only received one thousand blows, when he fell upon the snow bathed in his own blood, and senseless. In vain they attempted to place him on his feet. He was then laid on a tumbril prepared beforehand for the purpose, and fastened to a support in such a way as to let the blows fall on his back and shoulders, and thus a second time he passed along. When this second passage was gone through, his groans and screams were still audible; but they gradually got weaker, though he did not expire till after the fourth turn; the last three thousand lashes were laid upon a corpse."

Such is the sickening story which M. Pietrowski tells of the termination of this abortive enterprise. Had he himself been captured during his flight, his own fate might have added another sad chapter to the history of Russian cruelty which remains to be written. It is to be hoped that he has profited by experience, and that he will not again expose himself to dangers from which he has so narrowly escaped.

Early in the year 1843, M. Pietrowski left Paris for Poland, at the command of the secret society to which he belonged. By the aid of an American friend, he obtained an English passport, describing him as a native of Malta; and, fortified with this veracious document, he boldly set out on his journey. Kaminieç, a town of Podolia, was the spot in which he was instructed to locate himself, and there, accordingly, he settled as a teacher of

languages, remaining undisturbed by the authorities for the greater part of a year. Professing to be utterly unacquainted with the Russian and Polish languages, he was obliged to keep a constant guard on himself, lest he should be betrayed into the utterance of his own familiar tongue. Even in sleep he was not secure, and had to stipulate for a private bed-room whenever he spent a night away from home. From his Russian friends he constantly heard very trying remarks about his country, and among his own people he became "the involuntary and helpless confidant of the relations, even of the secrets, of families, who thought that they concealed them perfectly by speaking together in Polish." Very few persons were entrusted with his secret, and it was religiously preserved by them, but at length the suspicions of the Government were aroused, and on the last day of the year he was arrested. For a while he maintained his assumed character before his judges, but when he found the evidence against him was too strong to be overcome, he gave in, and allowed himself the luxury of talking once more in his native tongue. "I took a childish and feverish pleasure," he says, "in making use of a freedom which had been so long denied me. It was as if I wished to make amends to myself by the liberty of a few hours for having had to abstain from it during an entire year."

From Kaminieç he was taken to Kiev. At first, he was treated with courtesy, but afterwards he underwent much ill-usage, and was put in irons, which were not taken off until their removal was ordered by Prince Bibikov, the Governor-General. He spent some time in a cell at Kiev, where he suffered greatly, being specially annoyed by the constant surveillance to which he was subjected, for "No one can imagine," he says, "what an indescribable torture it is to a man to see and to know that a watch is kept upon every movement. That strange eye which meets yours at every moment becomes to you a sort of infernal providence; and I abandon the task of making any one understand what it is that the prisoner feels who from the instant that he wakes in the morning sees from his bed those two eyes pointed towards him like two stilettos."

Towards the end of July, 1844, he received his sentence, which was one of penal servitude in Siberia for life. He was forced to make the journey in fetters, but he was allowed a carriage, a privilege due to his noble birth. In some cases the Emperor compels even members of the highest families to travel on foot, and thus adds greatly to the severity of the sentence, for the journey to Tobolsk in that case occupies a year, and to the mines of Nerchinsk more than two years. The convicts suffer terribly from cold, hunger, and fatigue, and not a few out of the ten thousand who are said to be deported every year die on the road, though the officers in charge, "far from making a cruel use of their dictatorship, often show themselves full of care and compassion for the unhappy beings whom they are obliged to conduct." M. Pietrowski found his guards unfeeling, but not brutal. He had some difficulty in inducing them to alter the irons, which were giving him great pain, but they did not add to his sufferings, though they kept a strict watch over him, being continually haunted by the fear of his dying or committing suicide. The people with whom he was brought into contact behaved with the greatest kindness. Travellers would press money on him; young girls gazed after him with tearful eyes. The post-master never failed to offer tea or brandy; while his family and the neighbours hastened to present him with cakes, dried fish, and fruits. Three weeks were thus passed upon the road, and then he arrived at Omsk, whence he was transferred to the spot in which he was sentenced to pass the rest of his life, the village of Ekaterinski-Zavod.

At first he was employed as a common labourer, having to sweep the courtyards, carry wood, and draw water; worst of all was stacking fagots, a miserable employment in the open air, exposed during the winter months to the cold of a Siberian climate. His companions, with a few exceptions, were ordinary malefactors; but they treated him with respect, and were careful not to add to the wretchedness of his position. At the end of a year he was transferred from out-door work to employment within the Government distillery, and his life became far more endurable. There he received wages to the extent of ten francs a month, and not only was free from manual labour, but was enabled to gain an accurate acquaintance with the country, derived from the conversation of the merchants and other travellers with whom he transacted business. He obtained leave to live out of the barracks in which the convicts resided, and shared a cottage with three of his friends. Thus, by the beginning of the year 1846, he had improved his position so much that he could almost have forgotten that he was a convict, and might have fancied he was "merely a recruit of the omnipotent bureaucracy of Russia, sadly banished to these distant realms beneath an inhospitable sky." But his resolve to attempt a flight remained unshaken, and was strengthened by an order which was issued about this time by the Emperor Nicholas, to increase the severity of discipline among the Siberian exiles. He got together all the information he could obtain, and all the money he could amass. After hesitating for some time as to the route which he should take, he determined to cross the Oural mountains, and so to make his way to Archangel, where he hoped to find a French ship which would take him on board. He contrived to forge a passport and an ordinary pass, obtaining a copy of the imperial seal from a coiner of his acquaintance among the felons, and describing himself as a native of Siberia on a sheet of the stamped paper to which his official position in the factory gave him access. His funds amounted to about 200 francs, and with these and a sketch map of his route, he determined to make a bold stroke for liberty. After two unsuccessful attempts, he managed to get away on the 8th of February, 1846, leaving the village at eventide, and crossing the river Irtiche on the ice. A passing traveller took him on his sledge to the nearest town, where he obtained post-horses. Unfortunately a snow-storm came on, and detained him for some hours, and, what was far worse, after he had travelled some little distance, and just as his hopes were highest, he was robbed at a village inn, not only of some money, but of his map and his passport. Still he would not despair, and, pushing boldly on, soon afterwards struck into the high road to Irbite, which he found crowded with travellers. All over the vast plain, to the left of which the wooded slopes of the Oural chain began to be defined, swarmed an innumerable mass of sledges, either going to or returning from the great annual fair. His spirits rose at the sight, he greeted every passenger as an involuntary auxiliary in his flight, and mingled his voice with the cries of the drivers. All went well, and on the third day he arrived, "late in the evening, at the gates of Irbite, 4,000 kilometres distant from Ekaterinski-Zavod. 'Stop, and show your passport!' called the sentry; luckily, he added immediately, 'give me twenty kopeks, and through with you.'" By this time his funds were reduced to about eighty francs, and he was therefore unable to proceed otherwise than on foot. With a little bread and salt in his bag, he walked out of the town, commencing what he justly calls the life of a savage, and one which he was forced to lead for two months. The hardships which he underwent were terrible, but his resolution was never shaken. When he was hungry he ate a piece of frozen bread; when thirsty he sought a hole in one of the frozen ponds, or was forced to content himself with letting snow dissolve in his mouth. His heavy dress greatly impeded him, but yet he did not dare to part with it. When night fell he sought the heart of the forest, and either scooped out a hole in the snow, or occupied the cavities in the drifts around the stems of the great trees. Half-frozen and all but starving as he was, he seldom dared to enter a cottage, though he was often tried almost beyond endurance by the sight of the firelight shining through the crevices, and the thought of the warmth and food within. At length he reached the summit of the Oural, crossing the pass on a fine night, when "the moon illuminated with its full splendour a glorious but fantastic scene, where the gnarled shadows of the trees, and of gigantic masses of rocks, were flung far upon the immense expanse of snow. A silence so solemn as to be almost religious in its unbroken stillness reigned around, except when at times a dry, metallic sound struck upon the ear as the stones cracked and split from the intensity of the frost." Descending the great western slopes of the vast mountain barrier, he reached another apparently endless plain, and at last, after two long months of suffering, he arrived at Veliki-Oustiong.

Hitherto he had travelled as a workman in search of employment. He now changed his character, and professed to be a pilgrim bound for the shrine of Solovetsk, on the White Sea. In this capacity he obtained a free passage down the Dvina to Archangel, and a gratuity of about fifteen shillings in consideration of his services on board the boat, a sum which represented his expenditure during the two preceding months. The voyage occupied a fortnight, at the end of which he at last saw the sea and the flags of the ships, on one of which he hoped to find a refuge. But he was doomed to disappointment; for he was unable to get access to the shipping, and after spending some time in unavailing efforts, he was obliged to give up the attempt, and once more to resume his wanderings. At Vytiegra he was offered a passage to St. Petersburg, and thither accordingly he went. Fortune still befriended him, and he was able to discover a cheap lodging, where the landlady received him without requiring the permission of the police. A few days passed, and he found a vessel on the point of sailing for Riga, and was lucky enough to get on board without his passport being demanded. From Riga he traversed Courland and Lithuania, and at length arrived at the Russian frontier. Watching his opportunity, he crossed it without being stopped, though he was perceived and fired at. At last he was out of the Czar's dominions, but not secure from his grasp, the Prussians being obliged by treaty to restore Russian fugitives, as he found to his cost. For having reached Königsberg in safety, he was there arrested on suspicion, and so, after months of wandering and hardship, he found himself once more in prison. The consternation of the officers before whom he was brought was great when he told them his story. They were bound to give him up, but they could not bring themselves to do so. At last they compromised the matter by conniving at his escape, and the friends whom he had made in the interval facilitated his journey so much that by the end of September, 1846, he found himself again in Paris. There he is still, filling the post of Professor in the Polish College at Batignolles. Of his former companions in misfortune, he says that he can learn but little. "Some have already succumbed under their sorrows; others still groan in Siberia, in the Caucasus, or in the penal companies of Orenburg. May God have mercy upon the living, and upon the dead!"

THE BRITISH INSTITUTION.

This exhibition, which opened for the present season on the 7th instant, has for years past been at a low ebb, as regards both the professional *status* of the artists who contribute to it, and the intrinsic merits of the contributions. It started as a sort of "chapel of ease" to the Royal Academy, the members of which and other magnates

Digitized by Google

of the profession found themselves as much at home here as within the academician walls; while the distinguished social position of the governors of the institution, the superiority to clique interests, and the encouragement held out to historic art, lent a halo of substantial dignity to the body which almost availed to rank its secondary position on a par with the primary one of the Academy. This state of things is so entirely past that, among persons who do not remember it within their own experience or as matter of record, none would now find any trace of it save in the list of Directors appended to the catalogues, and in the exhibition of old masters which succeeds, in the summer, to that of living painters in the spring. We cannot say that the one just opened is any better than the recent exhibition; yet we observe that of the few things which are good, most are by young men still feeling their way to a position, and belong to the style of the present day, whose influences and opportunities we may hope to see turned to account in this gallery henceforward more than has of late been the case.

Mr. Hayllar, Mr. Gale, and the sister-painters, Mrs. Bodichon and Miss Leigh Smith, may be credited with having produced the three figure-pictures which stand foremost, on account either of scale combined with merit, or of merit alone. Mr. Hayllar has selected a very racy subject, manifestly tempting to a painter of character, but dangerous as betraying him into farce, with *dramatis personæ* of whom one at least belongs to the stateliest tragedy. This danger has not been wholly avoided by Mr. Hayllar, especially in the figure of the chaplain, Jeremiah White. The subject is from the (apocryphal?) story that this divine was making desperate love to one of Cromwell's daughters; when, finding himself surprised by the Lord Protector, he averted the impending storm by the pretext that he had been pleading to the mistress his passion for one of her maids—which damsel Cromwell produced on the spot, and turned the fictitious wooing into a very matter-of-fact marriage. This finale to an opera-buffa with historic characters is rendered with much finesse and expression by Mr. Hayllar, though tending, as we have implied, rather to the burlesque than the historic phase of the subject. Cromwell, who need scarcely have looked so old unless to maintain the aspect of the theatrical father, cannot be called caricaturish, as the chaplain is, but still less can he be called Cromwellian. The picture, however, is really a clever one; and, especially in the simple, broad handling, and silvery pleasantness of colour, it much surpasses the manner into which Mr. Hayllar had of late been lapsing. Mr. Gale, in most of his contributions, is by no means superior to the timid and rather petty nicety which characterizes him; but one of them is a great advance, and indicates capacities which might place him upon a much higher level altogether. This is entitled "Entrance to the Church of the Holy Sepulchre, Jerusalem; Greek Pilgrim, Easter, 1862; But Mary stood without at the Sepulchre, weeping." Small as it is in size, this picture has a remarkable degree of grave dignity and subdued pathos. The painter has evidently intended that the spectator's thoughts should be carried, from the actual modern female pilgrim before him at the Church of the Sepulchre, back to the Mary (rather the Mother than the Magdalen) at the very tomb of Jesus; and his art is equal to effecting the transition without strained symbolism or pietistic grimacing. The figure may be highly commended for its wan, tender sorrowfulness, and self-forgetful simplicity of pose. The execution, also, unites much more than the usual solidity and fulness to Mr. Gale's minute finish. The work by Mrs. Bodichon and Miss Leigh Smith is "An Algerian Burial-ground," painted on a large scale, and with a good number of figures; these being executed, as we conceive, by the latter lady, the landscape by the former. To the landscape, accurately and impressively painted, pertains the chief positive merit of the work; yet the figures, although wanting in mobility and in ease of distribution, are also done seriously, steadily, and modestly, in such wise as to be satisfactory where they succeed, harmless where they fail, and clearly preparatory to completer success hereafter.

Mr. Clark, like Mr. Gale, makes an advance in his picture of "Auld Lang Syne,"

> "We twa hae run amang the braes,
> And pu'd the gowans fine."

There is more in it of impulse and of painter-like conception than in any of his previous works, though its execution, faint and neutral, is not different from that of his average productions, and is inferior to his best. The subject is two children out on the hills; the elder boy crooning a song, open-mouthed; the younger (whether boy or girl we are not certain) sorting some wild-flowers. "Passing into the Shade," by Mr. Boughton, represents with skill, in the French manner, and with some quiet depth of feeling, two aged Frenchwomen entering a dim wood. "The Village Pump," by Mr. Burr, is a study of a young damsel by the pump-side, executed with sketchy breadth, and not wanting in fine character. Mr. Eddis sends a "Study from Nature" of a handsome, gentle girl of fourteen, with antelope-like eyes, and long, dark-brown hair falling over the shoulders; the best head he has exhibited this long while, stronger than usual in style. Mr. G. D. Leslie is still at that stage of art where everything that he does looks as if a very little more would make it a great deal better than it actually is: "The Lost Carkanet," a fifteenth-century subject of a lady and a serving-boy, has facility, nature, and prettiness, and yet disappoints the liking which it seems on the verge of satisfying. Mr. Walter Field has chosen an ambitious and strong subject, and has so far succeeded as at least to show a mental appreciation of its opportunities. It represents three Royalist officers under the Commonwealth, who, being capitally convicted, were allowed to have lots drawn by a child for one of them only to suffer death. The suspense and emotion of the moment, though not exactly realized, are indicated with a degree of point and reserve which augurs favourably for Mr. Field's future efforts. As minor works of some substance, we may name "Well Matched," by Mr. Ridley,—an indifferent married couple, not unlike one of Mr. Keene's woodcuts in colour; "The Bravo," by Mr. Yeames, lurking behind a pillar with drawn sword for the victim whose hand even now draws the curtain aside; "Chased, dead Beat," and "Rest from Labour," by W. F. Weekes, both diminutive, but not petty in feeling and style; "The Gamblers," by Mr. Payton, a very creditable imitation of Meissonnier, though too directly imitative; "Baby's Toes," by Mr. Houghton, a quaint, infantine garden-group; and "Traubenlust," by Miss Turck, an accurate and nicely painted study of a peasant-girl, the Teutonic type of whose face almost approximates to the Mongolian.

In the landscapes, as in the figure-subjects, there is a trio of superior quality. The most beautiful of these is the "Winter" of Mr. Mignot—a gentleman whose name is new to us. This is a really exquisite picture, combining a quasi-English purity of colour with French solidity of impasto and fusion of masses. The snow, though subtle enough in tint to be felt as truly a white object, is blue under the reflections of the closing day; the sky has a tinge of greenish yellow, its horizon barred with tawny red and whiteish lemon-colour; the plashy water of the foreground, green from the sky-tints, is settling its level surface into ice. From Mr. E. Hargitt we have a picture of grand scale and subject, and adequate power of execution—"The Sea-birds' Revel." The realization of the storm-boding sea is impressive, solid, and industriously worked, its breakers, grey and bottle-green, capped with yellowish churning foam; the sky slaty-purple with a forked flash of lightning; the gathering, restlessly winging, or grimly expectant cormorants and gulls, agitated with strange instincts of exultation, and well disposed for the pictorial effect. Solidly handled as the picture is, we must admit that the touch is to some extent mechanical, but its general effectiveness avails to pass this off as a minor blemish. "Morning on Cartmel Sands," by Mr. Oakes, gives a difficult and peculiar aspect of nature, with something of poetic character. The sun flashes central in the heavens, casting a blaze of liquid white light along the washy sands, broken with wide ruts of standing water. The mounted figures are skilfully fused in the light; nearer, and more distinct, is a boat, with some ducks beside it. The colour is a little rank in the solid portions of the picture, and opaque in the sky; but the picture, taken as a whole, realizes a vivid theme vividly.

After these conspicuous works, the most meritorious are "A Sunny Day in Autumn," by Mr. Robb, a pretty bit of Præ-Raffaelism, green in the sun; "The Wreck of the barque *Padre* at Mullion, Cornwall," by Mr. Whittaker, disadvantageously hung, but seeming to have some original quality in the artist's feeling and handling; "Tintagel Castle, Cornwall," by Mr. Naish, more intense than harmonious in its tremendous purpled-green sea flowing amid the hollows of the green slopes of cliff; "Home Again," by Mr. Lionel Smythe, remarkable for its giant thistle; the "Old Mill and Salmon-trap on the Dee" of Mr. Huggins, the first bit of topographic landscape we remember from his hand, and something between Mr. Davis and Mr. Gosling in style; "Evening Mists, Lake of Como," by Mr. Bridell, an interesting, bright sketch, though wanting refinement of hand; and "From the High Ground, Woodend, Bute," by Mr. George Sant, a study not deficient in picture-like quality, with sweet, soft, winter brushwood, and a brace of goats.

In one of the only two noticeable animal-pictures, goats are again the life of the scene. "Catching Wild Goats on Moel Siabod, North Wales," is about the best painting that Mr. Sidney Cooper has ever produced; exhibiting a great advance in motion, pictorial point of view, and arrangement of broad, deep-toned masses. Mr. Cooper seems to have felt that the old respectable jog-trot will not quite do now-a-days, and to have found in himself energies equal to the occasion, when he made an honest endeavour to elicit them. Still better is "Counting the Lambs—October Evening," by Mr. H. Moore; a picture which is equally landscape and animal-subject, and which has a genuinely "distinguished" character, such as would befit historic landscape-work on a large scale. The colour, as in several of Mr. Moore's later works, has a neutral tendency, not very greatly transcending grisaille as a representation of actual facts of colour; yet it is sound and good according to its limitations, and in no way mars, though it narrows, the value of a really fine work.

MUSIC.

At the last Monday Popular Concert, Spohr's Nonetto was repeated; Herr Molique taking Mons. Sainton's place as violinist—the other executants being the same as on the first performance of the work at these concerts a month since. Herr Molique's style of playing having so much analogy with that of Spohr, he is peculiarly fitted for the interpretation of Spohr's violin music; the difficulties of which are as much those of manner as of mechanism. Herr Molique's appearances have, of late, been very unfrequent; and his playing on Monday night consequently lacked somewhat of

Digitized by Google

that freedom and certainty which are scarcely to be maintained without constant public exercise. Herr Molique, however, has other and higher merits than those of a mere executant. As a thorough master of theory and composition he will always command esteem and respect. The novelty at the concert referred to was Beethoven's Sonata in D for piano and violoncello, the second of the set of two, op. 102. This sonata, with its companion, has generally been included among what many have been pleased to call the "unintelligible" works of Beethoven—that is, works which, instead of the clearly-cut outline and symmetrical proportions of the Haydn and Mozart styles, are abstract and shadowy in spirit, and subject to no external structural laws; moulding themselves into a shape of their own, and not to be judged by reference to any standard. Some critics have sought to show that Beethoven's latter works are crude and unintelligible, because the composer, from the deafness which afflicted his declining years, was unable to hear what he was writing. This notion is based on an entire misconception of the purely intellectual nature of composition. A small *dilettante* may pick out certain notes on the pianoforte, and, jotting them down or getting them jotted down for him, may flatter himself that he is composing; but this is not the process by which the great masters of the art exercised the high gift of composition. As well might a poem be written entirely by the aid of a rhyming dictionary. True, a musical composition, written down from intellectual conception, may be slightly modified in some small details on after-hearing; but so may a written poem on after-recital. The conception, however, of any work deserving the name of composition, must be intellectual and independent of external aids. That Beethoven's deafness modified his style is true, inasmuch as his mind was thereby further removed from external influences, and the increased solitude of thought and habit of self-communing imparted a more abstract and subjective tone to his imagination. To this very influence we owe some of his grandest and most sublime inspirations, among others the Mass in D—a colossal piece of spiritual music, which could only have proceeded from the profound depths of a mind excluded from the outer world and given up entirely to lofty contemplation.

The sonata which has led to these remarks belongs to the same phase of Beethoven's genius that produced the great solo sonata in B flat. In both works, although in unequal degrees, there is that indefinite impression of vastness which, like the "dim religious light" of a Gothic cathedral, calls up far deeper emotions than can be raised by mere symmetry of proportion and clearness of outline. The slow movement of the sonata in D is a reverie full of the deepest thought and the profoundest sentiment; while the finale, in the intricacies of fugal imitation and the learned contrivances of counterpoint, almost rivals the last movement of the B flat sonata previously referred to. To Signor Piatti, who was the violoncellist, and to Mr. Charles Hallé, the pianist, must be accorded equal praise for their admirable execution of this most difficult work. Mr. Hallé also won golden opinions by his chaste and finished playing of Mozart's sonata in A minor, one of its composer's most perfect solo pieces. The remaining instrumental performances consisted of two of Molique's romances for the violin, played by himself and accompanied by Mr. Benedict; and one of Haydn's pianoforte trios. The vocalists were Mr. Winn and Madlle. Florence Lancia; the latter of whom sang Schubert's "Le Berger sur la Montagne"—not one of his most characteristic songs, but rendered peculiarly effective on this occasion by the obligato clarionet accompaniment of Mr. Lazarus, whose performance was of the highest refinement and finish. At the concert of Monday next, Madame Arabella Goddard is to play Weber's solo sonata in E minor, one of the finest specimens of the romantic school of pianoforte music.

Mr. Henry Phillips' farewell concert took place at St. James's Hall on Wednesday evening; when this veteran singer bade adieu to the public, to whom, at the same time, he introduced his two daughters—the one a soprano, the other a contralto. The concert, which was of a very miscellaneous and popular character, was chiefly interesting on account of the last appearance of him who was, for many years, one of our favourite singers, both on the stage and in the concert-room. Mr. Phillips' singing, if not remarkable for power or dramatic expression, was always distinguished by a suavity of vocalization which rendered him especially successful in the ballad style. On Wednesday, Mr. Phillips sang several of the songs in which he was accustomed to please the audiences of some twenty or thirty years since; and, among other things, with Mr. Sims Reeves, Braham's duet "All's well"—not a very recondite composition; but one which, no doubt, awoke many recollections and sympathies among the sexagenarian portion of the audience. Mr. Phillips' singing betrayed but little evidence of the many years which have elapsed since he was the favourite English barytone—there was the same smooth vocalization as formerly, with, of course, somewhat less power. The two debutantes have yet much to learn before they can take rank as public vocalists; but, being young and intelligent, there is no reason why they should not achieve a position as concert-singers. It is to be regretted that Mr. Phillips should have published the memoir of himself which was prefixed to the book of words, containing, as it does, the following passage: "The operas which Mr. Phillips has rendered celebrated are: 'Der Freyschütz,' 'Der Vampyr,' 'Hofer,' 'The Maid of Artois,' 'Siege of Rochelle,' 'Cosi fan tutte,' 'Mountain Sylph,' 'Fair Rosamond,' 'Maritana,' 'Amilie,' &c., &c." It is true the memoir is quoted from a literary journal, but good taste should have withheld Mr. Phillips from circulating a statement that the celebrity of such operas as "Der Freyschütz" and "Cosi fan tutte" (to say nothing of the others) is attributable to his singing.

At the Hanover-square Rooms, also on Wednesday evening, there was a trial, by the Musical Society of London, of new orchestral compositions, including symphonies by Messrs. E. Perry and E. Silas, a violin concerto composed and performed by Mr. E. W. Thomas, and overtures by Messrs. Oberthür, Schloesser, and Schröder. As the performance was not public, criticism is uncalled for; but mention of the fact is due in proof of the meritorious exertions of this society in affording, at great cost to themselves, an opportunity to aspiring composers of hearing the effect of their works for a full orchestra. If, therefore, we possess amongst us a "mute inglorious" Mozart or Beethoven, there is now no excuse for his hiding his talents under a bushel, and retiring on the heretofore favourite grievance of there being "no encouragement for native talent."

CONTEMPORARY SCIENCE.

The Rev. G. Williams, Senior Fellow of King's College, Cambridge, lectured at the Royal Institution, "On the Recent Discoveries at Jerusalem." These discoveries were those of the Count de Vogüé and Signor Pierotti. He confined himself to those made in relation to the Haram-esh-Sherif, popularly known as the Mosque of Omar, and those on the north side of the Haram, the site of the fortress of Antonia.

The first point is to determine the position of the Temple of Solomon. This is now fixed beyond all question by the discovery of the water system of the Temple, still existing beneath the platform of the Haram. In the ancient Jewish sacrifices large provision had to be made for the effectual washing away of the blood and offal of the victims slaughtered for the altar, and we have been informed historically of the extent of the water system provided for this purpose. Aristeas, in the time of Ptolemy Philadelphus, mentions that a natural spring gushed out from within the Temple, and was received into subterranean reservoirs, which were connected by conduits to the extent of five stadia about the Temple, with secret apertures known only to the ministering Levites. In the rocky cave under the dome of the Mosque of Omar there was a circular slab covering another hollow beneath, as was known from its giving forth a hollow sound on being struck. Professor Willis had been the first to conjecture that this was the drain and cesspool of the Jewish altar, described in the Mishna. This is now proved by actual exploration to be the case. An aqueduct entered the lower cave from the south, and a drain ran from it to the north, and afterwards turned east towards the Valley of Kedron, where the blood and offal, diluted with water, were in olden times sold to the gardeners for manure.

We therefore conclude that this was part of the water-system connected with the Temple of Solomon. He proceeded to show how the view that the Mosque of Omar stood on the site of that edifice could be further worked out. The site on which the mosque stands is a raised platform of natural rock, scarped at the sides, and the measurements of the inner walls give the exact size of the inner Temple, and fulfil the conditions required by the disposition of its various buildings, as determined by the site of the altar, already fixed by the previous considerations.

The next subject discussed was the subterranean passage of Herod the Great, by which he connected the fortress Antonia with the eastern gate of the Temple. Josephus has mentioned this passage; but there is a discrepancy between his statement, as we now read it, and the facts discovered; for Josephus writes that the passage ran to the eastern gate of the *inner* Temple, while the passage discovered terminated at the eastern gate of the *outer* temple. The difference might, however, be adjusted by a slight correction in the text of Josephus, which involves only the alteration of half a letter. The Greek *sigma* (Σ) was so like the *xi* (Ξ), that they might easily be interchanged, so that the original reading may have been ἐξωθεν (outer) consistently with existing phenomena, instead of ἐσωθεν (inner), according to the received reading, which does not accurately describe the way discovered. The importance of this discovery is, that it determines the position both of the fortress Antonia and of the eastern gate of the Temple. Attention was next drawn to a block of ancient masonry, embedded in the rock near the north-west angle of the Haram. The north wall of the enclosure at this angle is cut in the living rock, and presents a precipice of 20 or 25 feet. In the Book of Maccabees, and in Josephus, we are told that the Macedonians, under Antiochus Epiphanes, built a fortress to command the Temple. This the Jews, on recovering the city, regarded with so much horror, that they laboured incessantly, night and day, for three years and six months, to demolish it; and not only demolished the fortress, but cut away the very hill on which it stood. The question then, is, whether the masonry belonged to the original fortress of the Macedonians, or to some part of the fortress Antonia, erected by Herod on the site of the Baris of the Asmonæans. The lecturer was disposed to refer it to the Antonia, and thought that it threw light upon a remarkable prediction recorded in Josephus in reference to the taking of Jerusalem by Titus. Josephus says that the Jews, by the demolition of Antonia, made their Temple quadrangular; while it was written in their oracles "that their city should then be taken when the Temple should become a quadrangle." The demo-

Digitized by Google

lition of the buildings of Antonia, which had projected into the court of the Temple, would have had the effect of making the Temple quadrangular. Notice was now taken of a truly stupendous sub-way that had been discovered outside the north-west angle of the Temple. It is 224 feet long, 22 feet wide, and 29 feet high. Two side passages run out, one to the east and one towards the west. The lecturer presumed this was the scene of the fearful tragedy recorded of Aristobulus and Antigonus, the two sons of Hyrcanus, who, on the death of their father, divided the kingdom between them. Being together at Jerusalem at the Feast of Tabernacles, attempts were made to set Aristobulus against his brother on the plea that he was plotting to seize the kingdom from him. Aristobulus so far yielded to these representations as to send a message to his brother to come to him unarmed; and at the same time he placed some of his body-guard in a dark, subterraneous passage, with instructions to fall upon him if he came armed. The messenger was intercepted by Aristobulus' wife, who sent a request to Antigonus to come armed. He was thus fallen upon and killed. The intelligence was conveyed to his brother, who, in the mental agony caused by the occurrence, was attacked with vomiting of blood. The servant who was carrying it away accidentally spilt it on the very spot stained with the blood of the murdered Antigonus. The attendants who witnessed the occurrence raised a cry of horror at seeing the blood of the two brothers thus mingled together. The cry reached the ears of Aristobulus, who was lying ill in the Baris, afterwards called Antonia, and he insisted upon knowing the cause. The shock incident on the intelligence occasioned such an increase of his malady that he shortly died in the greatest remorse.

The gallery recently discovered by Signor Pierotti seems entirely to answer to the description of the dark vault in which this murder was perpetrated; but, whether this were so or not, there can be no doubt that it was a covered passage of communication between one part of Antonia and another. And this position of the fortress Antonia is further confirmed by the accidental discovery of a side portal of the great arch known as the "Arch of Ecce Homo." This is thus proved to be an ancient Roman gate, and the only use that could be assigned to it, in such a situation, was that it was the gate that connected the fortress Antonia with the city.

The Anthropological Society commenced its meetings on Tuesday last. The inaugural address was "On the Study of Anthropology." The President, Dr. James Hunt, said the Society had been formed for the prosecution of the study of an important branch of science, for which up to the present time there had been no fit place for discussion in any other Society. By some writers, especially by Dr. Latham, the term anthropology has been circumscribed in its meaning to the mere relationship of man to the mammalia. If no other question were involved this would still be an important one—but anthropology had a far wider range than this when regarded in its proper aspect. What time has been wasted in idle speculations, assumptions, and theories respecting the history of man; what volumes have been poured from the press on the origin of the human family! and yet at this moment man's place in nature is a matter of high dispute. Ethnology treats chiefly of the history of nations and races; ethnography of their geographical distribution. Anthropology has a more extended field and is the science of the whole nature of man; and its duty is to investigate the laws regulating the development, distribution, and conditions of mankind. Hitherto attention has been devoted almost exclusively to the physical anthropology which Blumenbach introduced; what is wanted now are investigations into the mental and moral characters of the distinctive races of mankind. Psychological investigations are of as high importance as physical investigations. Perhaps psychological distinctions may proceed from physical causes, but we shall be more likely to get light thrown on such difficult questions if both classes of investigations are conducted at the same time. A serious charge has been made against the American school of anthropologists, that the interest of maintaining slavery has induced them to advocate a distinct origin for the negro race. Such a charge is doubtless a calumny; but if it could be proved that the negro had descended from the ape, and only a few generations ago, it did not alter the fact that at present he is a man and has so much in common with ourselves, that such parentage could be no excuse for using him cruelly. It could never be an object of the present society to support slavery with its abuses, but at the same time it must not shrink from the candid examination of any doctrine; and it would be its duty carefully to record all deviations from the higher European standard of human organization and the analogies with inferior animals which are manifested in the negro race. Anthropology as a *science* could scarcely be said to have any existence at all, notwithstanding the years of labour by ethnologists and anatomists. Why there should be accumulations of reliable facts and systematic collections of all classes of animals but man, is a psychological question of some interest, but whatever the reason, there is no doubt of the fact. Dr. Morton, in America, had attempted to remedy this want, and others had followed his example in this country; but what has been done is still comparatively useless for want of some general and recognised principles of anthropology. However valuable as illustrations crania may be, the information they afford is insignificant compared to the knowledge to be derived from casts of the interior of the skull-cavity. The importance of a collection of such representative brain-casts of monkeys, apes, and men has been felt, and a collection is already being made by Mr. Flower at the College of Surgeons. Metaphysicians have attempted to prove the logical necessity of the unity of mankind. Prejudices, superstitions, interests, and gratuitous assumptions have stood in the way of the only method by which satisfactory results can be obtained—inductive and deductive reasoning. The state of affairs is then exactly what was to be expected, that while progress has been made in every other branch of knowledge the so-called "Science of man" remains very little better than where Herder left it nearly a hundred years ago. Thanks to geologists, the evidence had been obtained of the vast antiquity of man. When Professor Waitz, in 1860, before the British Association, affirmed that to reconcile the hypothesis of the unity of origin of mankind (for which he is an advocate) man could not have been on the earth less than 35,000 years, very likely not less than 9,000,000, his remarks were favoured with laughter; but since the question has grown more and more into public consideration, and the statement of Professor Huxley in his new book issued a few days ago, that "if any form of the doctrine of progressive development is correct, we must extend by long epochs the most liberal estimate that has yet been made of the antiquity of man," is received without derision.

In Borneo we have a myth of the creation of man from the dust of the earth, and that woman was made from the toe of the man; the Thibetians, on the other hand, unblushingly claim their descent from the ape. No one will deny the possibility of such a descent for man, by some law of development; but the transmutation of species has yet to be proved; and not only are, in a scientific aspect, the views that have been propagated on the unity of man's origin from a single pair purely hypothetical, but so also are those of the plurality of originating pairs, and that of the creations of men in nations as held by Agassiz. It had sometimes been asserted that there was less difficulty in accounting for existing conditions by assuming a plurality of origin than to explain how all races could be descended from a single pair. Science, however, has nothing to do with what was the easiest explanation, but with what is the truth.

The address then noticed in detail various prominent topics which would necessarily attract the attention of the Society; and with respect to the discussions which should be permitted at the meeting, the President said the unity of mankind was an article of faith with many persons whose opinions deserve respect, but as an article of faith it could not be permitted to be discussed, although, as a scientific hypothesis, it and every other view could be fully investigated, and treated with the utmost liberty of thought and speech.

Such is a brief summary of the presidential address. The establishment of a new learned society would ordinarily be a matter of interest, and when one is formed specially to investigate a subject, portions of which are occupying the talents of some of the most eminent men of the day, it is natural to feel an interest in the basis on which its proceedings are to be conducted.

The Geological Society has awarded the Wollaston Gold Medal to Professor Gustav Bishoff, of Bonn; and the Wollaston Donation Fund to Professor Senft, of Eisenach. In the anniversary address the President, Professor Ramsay, discussed the Breaks in the Succession of the British Palæozoic Strata, and the theoretical considerations connected with the general subject of physical breaks, especially the hypothesis of Mr. Darwin, and the question of the contemporaneity of strata; he concluded that the intervals of time unrepresented by Palæozoic strata in Britain were of longer duration than those which are thus represented.

Cast iron has recently been experimentally manufactured at the Crevelea Iron Works, by the use of condensed peat. The quality of the iron thus reduced is said to be equal to the best Swedish iron. Crevelea is about four miles from Drumkeeran, in Leitrim, and in the neighbourhood are situated some of the coal-mines of that county; but the district is particularly remarkable for the enormous quantity of iron-stone which is found throughout it in a state of great purity. The works were erected some ten years since; but owing to the distance of the coal-mines from them, and for other reasons, were abandoned. Near at hand is a vast plain of peat, and the experiments have been undertaken with a view to utilize this ready and economic source of fuel in the smelting of the valuable and abundant iron-ore of the district.

It has long been known that peat is a remarkably pure fuel, possessing all the elements for melting iron, but the difficulty has been in getting rid of the water in the peat, and to produce a sufficiently consolidated material to resist the blast requisite for smelting iron. This has been effected by Mr. Buckland's machine, which by means of an Archimedean screw, and a perforated strainer of two feet diameter, delivers the fine peat to a brick-making machine and rejects the coarse roots and fibres through a waste pipe. The strainer being inclosed in a heated chamber, with an opening for the escape of steam, the moisture is rapidly driven off. The blocks of peat are next removed to a drying shed, through which a current of hot air passes, and they soon become as hard as oak, and more dense than any peat submitted to hydraulic pressure.

This peat-iron manufacture, if carried out commercially, will, undoubtedly, prove a matter of great importance to Ireland, especially if, as has been stated, the strength of the Crevelea iron exceeds that of either English or Scotch. One feature peculiarly encouraging to this result has been already pointed out by Mr. Anderson, of the Institution of Civil Engineers of Ireland—namely, that as the price of charcoal-iron for making steel is £6. 10s., whilst ordinary pig-iron is £3. 2s. per ton, if the iron produced by peat-charcoal be equal to that obtained by the use of wood-charcoal, there is no reason why Bessemer's process should not be adopted at the Crevelea works, and the iron converted into steel at once. Even though the cost of peat-charcoal should turn out to be higher than has been stated, yet the price to be obtained for the steel would yield a handsome profit.

LIST OF MEETINGS OF LEARNED SOCIETIES FOR NEXT WEEK.

MONDAY, 2ND MARCH.

MEDICAL—At 7 P.M. Annual Election of Officers and Council. At 8½ P.M. "On Some Points in the Treatment of Prolapsus Uteri."
MEDICAL AND CHIRURGICAL—At 8 P.M. Anniversary.
ASIATIC—At 3 P.M.
ENTOMOLOGICAL—At 7 P.M.
GEOLOGISTS' ASSOCIATION—At 7 P.M.
ROYAL INSTITUTION—At 2 P.M. Monthly Meeting.

TUESDAY, 3RD MARCH.

CIVIL ENGINEERS—At 8 P.M. "The Perennial and Flood Waters of the Upper Thames." By Rev. J. C. Clutterbuck, M.A.
ETHNOLOGICAL—At 8 P.M. "The Brain and Skull in Some of the Families of Man." By L. J. Beale, Esq.
PHOTOGRAPHIC—At 8 P.M.
PATHOLOGICAL—At 8 P.M.
ROYAL INSTITUTION—At 3 P.M. Professor Marshall "On Animal Mechanics."

WEDNESDAY, 4TH MARCH.

SOCIETY OF ARTS—At 8 P.M. "On the Influence of Social Institutions on the Progress of Art in this and Foreign Countries." By Geo. R. Burrell, Esq.
GEOLOGICAL—Somerset House, at 8 P.M. 1. "On the Permian Rocks of the North-eastern Parts of Bohemia." By Sir R. I. Murchison. 2. "On the Correlation of the Several Divisions of the Inferior Oolite in the Middle and South of England." By Dr. Holl.
LONDON INSTITUTION—At 7 P.M. "Vertebrata." By C. Carter Blake, Esq.
PHARMACEUTICAL—At 8 P.M. "Additional Observations on Storax." By Mr. D. Hanbury.

THURSDAY, 5TH MARCH.

ROYAL SOCIETY—At 8½ P.M. 1. "On Skew Surfaces." By A. Cayley, Esq. 2. "Researches on the Refraction, Dispersion, and Sensitiveness of Liquids." By Dr. Gladstone and Rev. T. Dale. 3. "On the Change of Form assumed by Wrought-Iron and other Metals when Heated and then Cooled by Partial Immersion in Water."
ANTIQUARIES—At 8½ P.M.
LINNÆAN—At 8 P.M. 1. "Geographical Distribution of Aculeate Hymenoptera of the Eastern Archipelago." By F. Smith, Esq. 2. "Description of Two New Conifers from the Rocky Mountains." By Andrew Murray, Esq. 3. "On the Parisitism of the Mistletoe." By John Harley, M.D.
CHEMICAL.—At 8 P.M. "On the Assimilation of Nitrogen by Plants." By J. B. Lawes, Esq.
ROYAL INSTITUTION—At 3 P.M. Dr. Frankland, "On Chemical Affinity."

FRIDAY, 6TH MARCH.

ROYAL INSTITUTION—At 8 P.M. "On the Most Recent Spectrum Discoveries." By W. Allen Miller, M.D., F.R.S.
ARCHÆOLOGICAL INSTITUTE—At 4 P.M.
PHILOLOGICAL—At 8.15 P.M. "On the Names of Certain Insects." By Dr. Ernest Adams.
LONDON INSTITUTION.—At 7 P.M. "On Economic Botany." By Professor Bentley.

SATURDAY, 7TH MARCH.

ROYAL INSTITUTION—At 3 P.M. "On the Science of Language." By Professor Max Müller.
MEDICAL.—At 5 P.M. "Anniversary Oration." By Dr. Habershon.

LIST OF NEW PUBLICATIONS FOR THE WEEK.

Addison's Humourous Essays, with Memoir. 18mo., cloth, 1s.
Agathos, and other Sunday Stories. By the Bishop of Oxford. Twenty-fourth edition. 18mo., cloth, 2s. 6d.
Albert Edward, Prince of Wales, Early Years of. Fcap., boards, 2s. 6d.
All the Year Round. Conducted by C. Dickens. Vol. VIII. Royal 8vo., 5s. 6d.
Bickersteth's (F. & E.) Memoirs of Doing and Suffering. New edition. Fcap., cloth, 3s. 6d.
Bohn's Classical Library. Demosthenes' Orations. Translated by C. R. Kennedy. Crown 8vo., cloth, 5s.
Brock's (Mrs. C.) Working and Waiting. New edition. Fcap., cloth, 5s.
Bressmann & Jones's English and Danish Dialogues. Third edition. Fcap., cloth, 5s.
Caughey's (A. H.) Home and other Poems. Fcap., cloth, 5s.
Chambers's Household Shakespeare. Vol. VIII. Fcap., cloth, 3s. 6d.
——— Standard Reading. Book II. 18mo., cloth, 8d.
——— Book III. Royal 18mo., cloth, 10d.
——— Library for Young People. The Little Museum Keepers. 18mo., cloth, 1s.
Children (The) of Long Ago. By Author of "Words for Women." Royal 16mo., 2s. 6d. plain; 3s. 6d. coloured, cloth.
Coleridge's (S. T.) Poems. New edition. Fcap., cloth, 6s.
Cooper's Novels. Cheap edition. Wyandotte. Fcap., sewed, 1s.
Coote's (H. C.) Practice of the Court in Common Form Business. Fourth edition. 8vo., cloth, 21s.
Conch's (J.) History of British Fishes. Vol. II. Royal 8vo., cloth, 17s.
Cox's (Rev. J. W.) Tales from Greek Mythology. Second edition. 16mo., cloth, 3s. 6d.
Crawley's Handbook of Games. 18mo., cloth, 3s. 6d.
Daniel's (G.) Love's Last Labour not Lost. Fcap., cloth, 7s. 6d.
Disraeli's (I.) Curiosities of Literature. New edition. Vol. II. Crown 8vo., cloth, 3s. 6d.
Dirck's (A.) History of Electro-metallurgy. Fcap., cloth, 4s.
Duncan's (Rev. H.) The Cottage Fireside. Sixth edition. Fcap., cloth, 2s.
Eton Ovid's Metamorphoses. Notes by Rev. W. B. Marriott. Fcap., cloth, 4s. 6d.
First Lessons in English History. Sixteenth edition. 18mo., sewed, 1s.
Fownes' (G.) Manual of Elementary Chemistry. Ninth edition. Fcap., cloth, 12s. 6d.
Giles Witherne. By Rev. J. P. Parkinson. Sixth edition. Imperial 16mo., 1s.
Giles' (S.) Meteorological and Statistical Guide. Second edition. 8vo., cloth, 7s.
Griffin's (Gerald) The Collegians; or, the Colleen Bawn. Cheap edition. Fcap., sewed, 1s.
Haraszthy's (A.) Grape Culture. 8vo., cloth, 25s.
Hodder's (E.) Memories of New Zealand Life. Second edition. Fcap., cloth, 3s. 6d.
Hood's (Thos.) Poems of Wit and Humour. Twelfth edition. Fcap., cloth, 5s.
Hopkinson's (J.) Working of the Steam-engine Explained. Fourth edition. 8vo., cloth, 12s. 6d.
Hornbeck's (E.) English and Danish Dictionary. Two vols. 12mo., half bound, 12s.
Horse-Racing: its History, &c. 8vo., half bound, 12s.
Howitt's (Wm.) History of the Supernatural. Two vols. Crown 8vo., cloth, 18s.
Hunt's (J.) Stammering and Stuttering. Fifth edition. Crown 8vo., cloth, 2s. 6d.
James' (G. C.) The Companies Act, 1862, with Notes, &c. 8vo., cloth, 5s.
Journal of the British Archæological Association. Vol. XVIII. 8vo., cloth, 31s. 6d.
Kennard's (Rev. R. B.) Essays and Reviews: their Origin, History, &c. Crown 8vo., cloth, 6s.
Kingston's (W. H. G.) Tales for all Ages. 16mo., cloth, 3s.
Language of Flowers. Thirteenth Edition. 18mo., cloth, 7s.
Life in the South. By a Blockaded British Subject. Two vols. Crown 8vo., cloth, 21s.
Lillie's (Dr. J.) Lectures on the Thessalonians. 8vo., cloth, 9s.
Littledale's (R. F.) Offices for the Service Books of the Holy Eastern Church. Crown 8vo., cloth, 6s.
Lloyd (W. W.) On the General Theory of Proportion in Architectural Design. 4to., sewed, 6s.
Lyons' (Rev. H.) Evening Sacrifice. Crown 8vo., cloth, 3s.
Lytton's (Sir E. B.) Novels. Library edition. Lucretia (two vols.). Vol. II. Fcap., cloth, 5s.
Macleod's (W.) The Six Standards of Arithmetic. Standard II. 18mo., sewed, 1s.
Marcy's (R. B.) Prairie and Overland Traveller. New edition. Fcap., 2s. 6d.

(Originally established A.D. 1667.)

CAUTION.—The extraordinary success attending the use of Dr. J. COLLIS BROWNE'S CHLORODYNE has induced certain unprincipled persons to vend spurious compounds under this name. This wonderful remedy allays pain, soothes the system, and invigorates nervous debility. It effectually cures, as will be seen by medical testimony, CONSUMPTION, COUGHS, ASTHMA, BRONCHITIS, NEURALGIA, RHEUMATISM, &c. Never be tempted to buy Chlorodyne except in sealed bottles, having the Government Stamp, with the words "Dr. J. Collis Browne's Chlorodyne" engraved thereon. A sheet full of medical testimonials accompanies each bottle. Sole Manufacturer, J. T. DAVENPORT, 33, Great Russell-street, Bloomsbury, London. Sold in Bottles, 2s. 9d. and 4s. 6d.; sent carriage free on receipt of Stamps or Post-office Order.

KEATING'S NEWFOUNDLAND COD LIVER OIL is distinguished by Testimonials from eminent Physicians, among whom are the following:—Professor TAYLOR, M.D., &c. &c.; Dr. SCOTT, M.D., L.R.C.P., F.L.S., &c.; Dr. EDWIN PAYNE, M.D., L.R.C.P., M.R.C.S. This Oil, being purely of *hepatic* origin, is pronounced to be of the greatest *therapeutic* value, in which the prescriber and patient may have the utmost confidence.

Sold in half-pint bottles, 1s. 6d., pints, 2s. 6d., quarts, 4s. 6d., and five-pint bottles, 10s. 6d., imperial measure, by THOMAS KEATING, Pharmaceutical Chemist, 79, St. Paul's Churchyard.

DINNEFORD'S PURE FLUID MAGNESIA has been during twenty-five years emphatically sanctioned by the Medical Profession, and universally accepted by the Public as the best remedy for Acidity of the Stomach, Heartburn, Headache, Gout, and Indigestion, and as a mild Aperient for delicate constitutions, more especially for Ladies and Children. It is prepared, in a state of perfect purity and of uniform strength, by DINNEFORD and CO., 172 New Bond street, London; and sold by all respectable Chemists throughout the world.

IMPORTANT ANNOUNCEMENT.

JOSEPH GILLOTT,
METALLIC PEN MAKER TO THE QUEEN,

BEGS to inform the Commercial World, Scholastic Institutions, and the Public generally, that, by a novel application of his unrivalled Machinery for making Steel Pens, he has introduced a NEW SERIES of his useful productions which, for EXCELLENCE of TEMPER, QUALITY of MATERIAL, and above all, CHEAPNESS in PRICE, must insure universal approbation, and defy competition.

Each Pen bears the impress of his name as a guarantee of quality; they are put up in Boxes containing one gross each, with label outside, and a fac-simile of his signature.

At the request of numerous persons engaged in tuition, J. G. has introduced his WARRANTED SCHOOL and PUBLIC PENS, which are especially adapted to their use, being of different degrees of flexibility, and with fine, medium, and broad points, suitable for the various kinds of Writing taught in Schools.

Sold Retail by all Stationers and Booksellers. Merchants and Wholesale Dealers can be supplied at the Works, Graham-street, Birmingham; at 91, John-street, New York; and at 37, Gracechurch-street, London.

DR. DE JONGH'S
(Knight of the Order of Leopold of Belgium)

LIGHT-BROWN COD LIVER OIL, prescribed by the most eminent Medical Men as the safest, speediest, and most effectual remedy for
CONSUMPTION, CHRONIC BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GENERAL DEBILITY, DISEASES OF THE SKIN, RICKETS, INFANTILE WASTING, AND ALL SCROFULOUS AFFECTIONS,
Is incomparably superior to every other kind.

SELECT MEDICAL OPINIONS.

Sir HENRY MARSH, Bart, M.D., Physician in Ordinary to the Queen in Ireland.
"I consider Dr. De Jongh's Light-Brown Cod Liver Oil to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

Dr. LANKESTER, F.R.S., Scientific Superintendent, South Kensington Museum.
"I consider the Cod Liver Oil sold under Dr. De Jongh's guarantee to be preferable to any other kind as regards genuineness and medicinal efficacy."

Dr. GRANVILLE, F.R.S., Author of the "Spas of Germany."
"Dr. Granville has found that Dr. De Jongh's Light-Brown Cod Liver Oil produces the desired effect in a shorter time than other kinds, and that it does not cause the nausea and indigestion too often consequent on the administration of the Pale Oil."

Dr. LAWRANCE, Physician to H.R.H. the Duke of Saxe-Coburg and Gotha.
I invariably prescribe Dr. De Jongh's Cod Liver Oil in preference to any other, feeling assured that I am recommending a genuine article, AND NOT A MANUFACTURED COMPOUND IN WHICH THE EFFICACY OF THIS INVALUABLE MEDICINE IS DESTROYED."

DR. DE JONGH'S LIGHT-BROWN COD LIVER OIL is sold only in IMPERIAL Half-pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.; capsuled, and labelled with his stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable Chemists and Druggists.

NEW NOVELS
IN CIRCULATION AT ALL THE LIBRARIES.

This day, the Fourth Edition, in 3 vols.

AURORA FLOYD. By the Author of "Lady Audley's Secret."

"We are surprised in looking back upon it to observe in how few sentences the character is unfolded; yet how completely we can conceive the personage sketched, so simple and straightforward, so honest and so true. For this piece of *genre* painting, slight as it is, we are inclined to compliment the authoress highly."—*Times.*

The Eighth Edition, in 3 vols.

LADY AUDLEY'S SECRET. By the Author of "Aurora Floyd."

"Full of rapid incidents, well put together: when we begin to read, we cannot choose but go on.....It is a good galloping novel; like a good gallop, to be enjoyed rather than criticised."—*Times.*

This day, in 3 vols.,

THE HOUSE BY THE CHURCHYARD.
By J. SHERIDAN LE FANU.

"Just as Mr. Thackeray speculates over his 'puppets,' and says, 'I think Arthur was not quite satisfied with his own apology for himself to Warrington,'—or, 'Did Mr. Pendennis grieve the less for his mother, because he had got a white hat?' and so forth,—just so Mr. Le Fanu half quizzes his own characters, and half conveys to you, after Mr. Thackeray's fashion, that there is a point not very far down, at which his own knowledge of them completely stops, and beyond which he is as much in the dark as his readers about their spiritual secrets."—*Spectator.*

THE NEW SENSATION STORY.

This day, in 3 vols.

A TANGLED SKEIN. By ALBANY FONBLANQUE.

TINSLEY BROTHERS, 18, Catherine-street.

Just Published, Post 8vo., price 7s. 6d.,

THE JAVELIN OF PHINEHAS; or, Christ's Own Judgment upon Christendom; and more particularly upon the Union of Church and State. Being a Full Examination and Comparison in their Prophetic Aspect, of the Seven Epistles of Rev. II. and III., and of the Seven Parables in Matt. XIII. By Rev. WILLIAM LINCOLN, Minister of Beresford Chapel, Walworth, S.E.

London: SIMPKIN, MARSHALL, & CO., Stationers'-Hall-court.

Now ready, price 6d.,

THE SOCIAL AND POLITICAL BEARINGS OF THE AMERICAN DISRUPTION.
By A. J. B. BERESFORD HOPE.

CHAPMAN & HALL, 193, Piccadilly.

In 3 vols., Post 8vo., 21s.,

ROBA DI ROMA. By WILLIAM W. STORY.

"Mr. Story has indeed given us a most pleasant addition to our gallery of Italian pictures from life. It will help more than any English book we know to give those who have never visited Rome some insight into the secret of the singular fascination exercised by the Eternal City. It will recall many pleasant memories to those who have lingered among its haunting glories. . . . Mr. Story is just the man to give Northern minds the reflection of Italian bright and many-sided life. He has lived in Rome in the spring and summer, as well as the winter or tourist's season. He has studied the life of the people, as well as the lions of the place."—*Reader.*

"It is doing no injustice or discourtesy to any of the sculptors, whose works were displayed at Kensington, to say that to the 'Cleopatra' and the 'Libyan Sibyl' of Mr. Story was assigned the highest place in their own region of art. But Mr. Story does not depend for fame on his chisel alone: he is also a man of letters. He now presents us, in two volumes of descriptions of Rome, with the fruits of a long familiar acquaintance with the habitudes of the Eternal City. The volumes throughout prove that the development of Mr. Story's power in a particular direction has not retarded the growth and free play of his other gifts; but that he can always find relaxation, not in absolute rest, but in variety of excellence."—*Press.*

CHAPMAN & HALL, 193, Piccadilly.

TO TEACHERS and PRINCIPALS of SCHOOLS and COLLEGES.—EDWARD STANFORD has the pleasure to announce that his CATALOGUE OF EDUCATIONAL WORKS, Atlases, Maps, Globes, and School Stationery, is Now Ready, and can be had Gratis upon application, or by Post for One Stamp.

THE ANTIQUITY OF MAN, from Geological Evidences. With Remarks on Theories of the Origin of Species by Variation. By SIR CHARLES LYELL, F.R.S., Author of "Principles of Geology," "Elements of Geology," &c. &c.

JOHN MURRAY, Albemarle-street.

THE "PIONEERS OF BRITISH INDUSTRY."

I.

Now Ready, with 7 Portraits and nearly 300 Illustrations, 3 vols. 8vo., 63s.

LIVES OF BRITISH ENGINEERS. From the Earliest Period down to the Death of ROBERT STEPHENSON. With an Account of their Principal Works; and a History of Inland Communication in Britain. By SAMUEL SMILES, Author of "Self Help," &c.

CRITICAL NOTICES.

"I have just been reading a work of great interest, which I recommend to your notice—I mean Smiles's 'Lives of the Engineers.' No more interesting books have been published of late years than those by Mr. Smiles. What we want in this country is earnestness—and nothing can be better adapted for this purpose than the examples held out to us of successful and persevering energy, such as are to be seen in the great lives which Mr. Smiles has given us."—*Sir Stafford Northcote.*

"A chapter of English history which no one could have written so well as Mr. Smiles. It is a history of the growth of the inland communication of Great Britain by means of its roads, bridges, canals, and railways; and a survey of the lighthouses, breakwaters, docks, and harbours constructed for the protection and accommodation of our commerce with the world."—*The Times.*

"A very delightful account of some of the great captains of industry. The book is full of interest and instruction."—*Spectator.*

"A book which has at once the conciseness necessary to render it valuable to the professional man, and the interesting character which makes it acceptable to the general reader."—*Mining Journal.*

"Mr. Smiles may fairly claim the merit of having produced one of the most interesting and instructive works that have been published during the present year."—*London Review.*

II.

Also by the same Author, and to be had separately.

LIVES OF GEORGE AND ROBERT STEPHENSON, Forming the Third Volume of the above work. With 2 Portraits and 70 Illustrations. 8vo., 21s.

"In the life of Robert Stephenson, Mr. Smiles enters upon new ground, and has produced a biography little inferior in interest to his former narrative of the career of George Stephenson."—*London Review.*

"Mr. Smiles's third volume of 'The Engineers' contains the biographies of George Stephenson and his son Robert. It is impossible fully to comprehend either without the other. Father and son understood one another better than any other person. It is delightful to contemplate these two great men in their intercourse with each other."—*Daily News.*

"Mr. Smiles has enjoyed the active co-operation of those who were able to throw a light upon the subject, including Robert Stephenson himself."—*Mining Journal.*

III.

SELF HELP. With Illustrations of Character and Conduct. 55th Thousand. Post 8vo., 6s.

IV.

STORY OF THE LIFE OF GEORGE STEPHENSON. 18th Thousand. With Woodcuts. Post 8vo., 6s.

V.

WORKMEN—THEIR EARNINGS—SAVINGS—AND STRIKES. 5th Thousand. Post 8vo., 1s. 6d.

JOHN MURRAY, Albemarle Street.

Now ready, in 1 vol. Post 8vo., cloth, gilt top, price 12s.,

NEW GENERAL ATLAS.

DEDICATED BY SPECIAL PERMISSION TO HER MAJESTY.

THE ROYAL ATLAS
OF
MODERN GEOGRAPHY.

IN A SERIES OF ENTIRELY ORIGINAL AND AUTHENTIC MAPS.

By A. KEITH JOHNSTON, F.R.S.E., F.R.G.S.,
Author of the "Physical Atlas," &c.

With a complete Index of easy reference to each Map, comprising nearly 150,000 Places contained in this Atlas.

Imperial Folio, half-bound in Russia or Morocco, £5. 15s. 6d.

"No one can look through Mr. Keith Johnston's new Atlas without seeing that it is the best which has ever been published in this country."—*The Times.*

"Of the many noble Atlases prepared by Mr. Johnston and published by Messrs. Blackwood & Sons, this Royal Atlas will be the most useful to the public, and will deserve to be the most popular."—*Athenæum.*

"We know no series of maps which we can more warmly recommend. The accuracy, wherever we have attempted to put it to the test, is really astonishing."—*Saturday Review.*

"The culmination of all attempts to depict the face of the world appears in the Royal Atlas, than which it is impossible to conceive anything more perfect."—*Morning Herald.*

"This is, beyond question, the most splendid and luxurious, as well as the most useful and complete, of all existing Atlases."—*Guardian.*

"There has not, we believe, been produced for general public use a body of maps equal in beauty and completeness to the Royal Atlas just issued by Mr. A. K. Johnston."—*Examiner.*

"An almost daily reference to, and comparison of it with others, since the publication of the first part some two years ago until now, enables us to say, without the slightest hesitation, that this is by far the most complete and authentic Atlas that has yet been issued."—*Scotsman.*

W. BLACKWOOD & SONS, EDINBURGH AND LONDON.
SOLD BY ALL BOOKSELLERS.

THE PEOPLE AND THE PRINCESS.

THIS day will witness the grandest reception ever given by a great nation to a young princess. In her honour the largest, the busiest, and the gravest population inhabiting any European metropolis will lay aside their toil and surrender themselves to an outburst of kindly sympathy and enthusiastic welcome. For something like six miles she will pass between thick lines of men and women, whose name and nationality she is about to assume, and at whose head she comes to take a prominent place. For a couple of hours she will never cease to hear abreast of her carriage the hoarse but earnest and affectionate cheers with which our people greet those whom they have taken to their heart. By no court ceremonial, by no formal introduction to a restricted circle, will she assume her place as a daughter of England. Her adoption will be ratified in the public streets and by the amplest expression of the popular will. The moral significance of the scene will not be obscured by the accessories of a tawdry pageant. To a foreign eye the procession must seem singularly meagre, and, perhaps, in some points not a little grotesque. The traditional glories of the Lord Mayor will not save his state coach from appearing the ridiculous piece of lumber that it is; the banners of the City companies are not a powerful element of spectacular effect; military display will be scantily provided for by a few squadrons of Life Guards; while the most easily satisfied sightseer must fail to extract any high gratification from gazing at the authorities of London and Westminster as they ride past in a long file of dingy vehicles. Except the occupants of one royal carriage, there will be nothing to arrest or gratify the attention of the masses who will throng the streets, or hire at extravagant prices uncomfortable seats at windows or upon stands. But this will be enough to satisfy them, as it has been enough to bring them together. Under ordinary circumstances, an English crowd is easily contented with a very small allowance of amusement. And on this occasion they assemble, not so much to seek amusement, as to indulge a variety of sentiments. By an instinct which arises naturally in the breasts of those who are trained in our free political life, and accustomed to find a manly pleasure in public demonstrations, the inhabitants of the metropolis have comprehended that it is their privilege and duty to give the first expression to the general feeling in regard to the marriage of the Prince of Wales. Something must be set down to the youth, beauty, and attractions of the Princess. If the age of chivalry is gone, its romance and tenderness still live amongst us. Their influence is, indeed, felt in social strata to which in olden times it did not descend. There is much of knightly courtesy and knightly devotion in the spirit which to-day brings a vast multitude to honour her whom the nation has chosen as the mother of her future kings. But as fair a bride might have met a scantier welcome had the country received with less gratification the alliance which she brings. Recent events have not tended to obliterate that distaste for German matches which sprang from the too exclusively German predilections of our first Hanoverian sovereigns. The mistaken policy of alien rulers has too often ranged Denmark with our enemies. Still our conflicts have left no rancour behind; and both nations have been ever ready to re-knit the bonds of friendship which ought to unite those who own a common origin and are united by many ties of mutual interest. We willingly welcome every new pledge of a good understanding. And although we have no inclination to set too high a value upon dynastic connections, we are by no means indisposed to show that, in this instance, we desire a royal marriage should have its bearing upon our international relations. We need do no more than allude to the natural interest with which the domestic feelings of Englishmen and Englishwomen invest such an event as the present. Nor is it necessary to dwell upon the manner in which that interest is augmented by a deep sense of all that we owe to her Majesty and the late Prince Consort. We should indeed be ungrateful if we did not exhibit a vivid sympathy with their eldest son when he takes upon himself the household duties and responsibilities which they discharged so well. Our gratitude is not, indeed, free from that lively sense of favours yet to come, in which a cynical wit has professed to find the essence of that virtue. We readily and eagerly accept the early marriage of the heir to the throne as a proof that he intends to tread in the steps of his parents—as a solid ground for hope that a pure and virtuous Court may exercise upon the next generation the beneficial influence which such a Court has shed upon our own.

Continental observers will probably be most struck with the vast fund of loyalty which such a demonstration shows to be latent in our hearts. Nor can it be denied that this sentiment enters largely into the popular rejoicings. That such should be the case will not surprise Englishmen, who know how difficult it has been even for vicious sovereigns totally to alienate the affections of their people. At no time in our recent history has the crown ever been really in danger, under whatever weight of unpopularity its wearer might labour. At present, we are loyal, in the sense both of attachment to the throne and to her by whom it is filled. There is no doubt that the contemporary experience of other countries has materially deepened our sense of the blessings we enjoy under a constitutional monarchy. This is no longer, as it has sometimes been, a mere opinion; it is now a

Digitized by Google

fervent conviction, and one which we take pride in declaring before the world. It is not, however, this political feeling which is uppermost with us to-day. In the midst of gaiety and gladness all hearts will turn to the widowed Queen; and the warmth of our welcome to her son will redouble at the recollection that he is conducting to Windsor one who hopes to be a support to his mother in her affliction. There is yet another thought which will not be foreign to many at least who take part in these proceedings, and which is consciously or unconsciously a main source of the tender and affectionate solicitude which the Royal children inspire. The education of the Prince of Wales was the work to which his father devoted the best energies of his life. We cannot honour his memory more worthily than by accepting his son as that which it was his wish to make him. Nor can we better show his Royal Highness how strong is our confidence in him, how great are the expectations he has excited, how noble and yet—with the support of a faithful people—how easy is the path of usefulness which lies before him, than by associating ourselves thus prominently with him at this serious crisis of his life. It is to feelings such as these that the Princess Alexandra owes the reception she will meet. They justify and account for what might otherwise seem but the freak of overwrought and excited popular imagination. They impart to the proceedings, as we have already said, an importance and significance which they would have lost in great degree had there been room for suggesting that a gorgeous state show had drawn the multitude together by motives of vulgar curiosity.

But although the procession itself will not make any great display, those who take part in it will witness a sight in the highest degree impressive. There is an element of grandeur in every assembly of human beings on so vast a scale. How much more striking becomes the scene when we know that they have met in obedience to impulses entirely spontaneous! The Government have had no hand in this demonstration, except so far as doing their little best to obstruct it. From first to last it has been a thoroughly popular movement. Other capitals would have been more richly and gracefully decorated on such an occasion. But then the decorations would have been carried out or suggested by those who wield the powers of the State. There will, perhaps, be much that is mean and tasteless in our efforts to impart a festive character to the dreary and sombre lines of our London streets. But this will be redeemed by the fact that they are, at any rate, the genuine offering—the unasked and unforced expression—of the feelings of a free people, manifested either by individuals in their private capacity or by the elected rulers of each separate locality. If any one be tempted to smile at the grotesqueness which we admit is never absent when the Lord Mayor and Corporation of London are present, their royal highnesses may well look with complacency upon those venerable relics of olden times, which attest the stability of our attachments and the obstinacy with which we cling, even in the busy present, to the historic past. If the city ceremonial reminds them of one side of our national character, the other will find ample representation in Hyde Park. Passing along the lines of our Volunteers, the Princess will not only see that a commercial need not be an unwarlike people: but she will have before her the latest and not the least striking proof that the country is young and vigorous in its mature age, and that if our hearts still warm to venerable associations and ancient recollections, our hands and our minds are instant to do the work of the passing time. She cannot learn anything which it is more important that an English king or queen should keep constantly remembering. While the throne derives strength from its antiquity, its occupant does not fulfil our expectations if he simply reposes in his high station. Although he may not interfere actively in the government of the country, he need not be idle or without authority in many important matters. In the last century the Whigs and the Tories held sharply contrasted theories as to the position of the sovereign. While the latter desired that he should govern as well as rule, the former strove to reduce him to the position of the spiritual Emperor of Japan, or, at any rate, they would have had him a *fainéant* king with a member of one of the Revolution families as the mayor of his palace. In this, as in many other instances, we have discovered that each party had possession of a half-truth, and have arrived at a compromise on this basis. If we exclude the Sovereign from political action, we call upon him to exercise a legitimate power in the wide domain of social life. It is his part to give a tone to our manners; to sway our opinions on many subjects, and guide our tastes in many directions; to interpret and represent our feelings; to bring together, for objects of philanthropy or usefulness, those who would scarcely act together under a less august head; to stimulate many movements which make but slight appeals to popular passion or predilection, and must gain, if at all, from above, the strength, which they cannot gather from below. We know how admirably the late Prince Consort discharged these duties, though the husband of the Sovereign, under all the disadvantage of a foreign origin, and contending against unjust suspicions, which only left him in his tomb. His Royal Highness the Prince of Wales enters upon a path which his father has smoothed for him, and with every advantage which to that father was denied. We do not permit ourselves to doubt that he is honestly desirous to do the work which God has placed before him. It is our pleasure to believe that in her who will so soon be his consort, he will find the best and truest assistance. Her part may not, indeed, be so conspicuous as his. But female influence is not less real because it is unobtrusive. It is to her that we shall mainly look to maintain the domestic character and the moral purity of our court. And when we trace the beneficial influences of its descending example, it is towards her that our gratitude will be chiefly directed. But we will not pursue too far a serious and a sermonizing vein. Hopefully and trustfully looking forward to a brilliant and happy future for the youthful pair, we add our voice to the common shout of welcome—to the common prayer, that every blessing may be showered upon their wedded life.

THE BISHOPS AND DR. COLENSO.

THE Bishops are doubtless judicial persons. Had they legal power to summon Bishop Colenso to their bar, and there to pronounce judgment on the merits, their extra-judicial appearance as a body, advising Dr. Colenso to retire from office in a Church whose formularies he has boldly renounced, would be indefensible. But they have inherited an office which has no constitutional or legal jurisdiction over an erring episcopal brother. They cannot at present convict and expel. This is a grievous flaw in the Church, but in their case it is a misfortune. It is, therefore, a reason for legislation, not for censure of the Bishops. But because they cannot do what ought to be done, it would surely have been unworthy of a body of chief ministers of the Church to have remained silent in the face of such a distressing fact. They have, therefore, used the moral force they retain, as their only substitute for that legal and constitutional action which they ought to have. By all means let them be armed with legal power to eject a convicted episcopal sceptic, but, till they are so armed, let them exert that moral power which, in this country, can never fail to have effect.

The *Times* justly inveighs against the deplorable fact that ecclesiastical law lays hold on erring priests, but sacredly refuses to lay a hand on erring bishops. Nothing can be more absurd or unfortunate. But surely it did not become the Bishops to remain doggedly silent, because they could not ecclesiastically strike. Denuded, in this case, of powers that ought to exist in a Church—and that must one day, and soon, be restored in some shape—they still retain that moral weight as a collective body which it became them to wield, and which they have brought to bear on Dr. Colenso, we believe, with an effect that will have its echo in the consciences and hearts of the people. They have done what they could. Every Churchman, of every type and tint of theology, every thoughtful, honest, and upright Englishman, felt that longer silence on the part of the episcopal bench, in reference to the work and position of Bishop Colenso, must have been accepted as connivance or approval. There was left no loophole for an escape from speaking out—no possible or imaginable compromise that would command the acceptance of the merest fraction of the people of England. It may be thought by many, that they ought to have pronounced judgment on the peculiar dogmas enunciated in the work of the Bishop of Natal; and thereby to have vindicated the fundamental articles of the Church of England from an attack the more offensive that it has been made and published by one bearing the orders, and bound to the doctrines and discipline of that venerable establishment. From the popular point of view, this would have been, if

SOVEREIGN LIFE ASSURANCE COMPANY

48, ST. JAMES'S STREET, LONDON, S.W.

Trustees.

THE RIGHT HON. THE EARL OF SHREWSBURY AND TABLOT.

SIR CLAUDE SCOTT, BART. | HENRY POWNALL, ESQ.

Directors.

CHAIRMAN—THE LORD ARTHUR LENNOX.

DEPUTY-CHAIRMAN—SIR JAMES CARMICHAEL, BART.

JOHN ASHBURNER, ESQ., M.D. | JOHN GARDINER, ESQ.
T. M. B. BATARD, ESQ. | J. W. HUDDLESTON, ESQ., Q.C.
LIEUT.-COL. BATHURST. | CHARLES OSBORNE, ESQ.

Bankers.

SIR CLAUDE SCOTT, BART., AND CO.

FOUNDED IN 1845.

REPORT

OF DIRECTORS, AND STATEMENT OF PROCEEDINGS AT THE ORDINARY MEETING OF PROPRIETORS, held on the 7th of MAY, 1862,

LORD ARTHUR LENNOX in the Chair.

THE REPORT OF THE DIRECTORS, made in the Spring of last year, appealed to the Proprietors and others interested in the Office, to assist the Directors in making 1861 the most successful year of the Company's operations; and, notwithstanding the absence of general commercial prosperity throughout the country, the Directors are happy to say that in many respects the desired result of their appeal has been realised.

This year was, however, remarkable in the experience of this Office, as it is believed it was in that of other similar Institutions, for the number of lapsed Assurances, especially in those districts where industry has been impeded by the suspension of our commercial relations with America.

At the same time the business effected has been greater than at any former period, the New Premiums amounting to £6,055 11s. 3d. Assuring £171,250 by the issue of 722 Policies.

The point, however, on which the Directors have most reason to congratulate the Proprietors is, that after a very careful and rigid investigation into the position and prospects of the Company, made in pursuance of the requirements of the Deed of Settlement, by Mr. PETER HARDY, the eminent Actuary, the result, as embodied in the following Report, is of the most satisfactory character.

"TO THE CHAIRMAN AND DIRECTORS OF THE SOVEREIGN LIFE ASSURANCE COMPANY.

"GENTLEMEN,—I have the honour to submit herewith a full statement of the result of the valuation, just completed, of the Assets and Liabilities of the Sovereign Life Assurance Company, up to or as of the 31st December, 1861.

"This investigation has been, on the present occasion, a work of considerable magnitude and labour, as the number of Policies actually in force exceeds 5,000, covering Assurances to over One Million Sterling, and embracing almost every class or description of Life Assurance.

"I am happy to be able to assure you that the condition of the Company is sound and prosperous, and holds out every prospect of increased success. The Bonus, which the Directors may safely declare as the result of this valuation, is larger in amount, both as regards the Shareholders and the Assured, than that declared on any previous occasion; and this Bonus has been fairly earned by the past operations of the Society, *without in the smallest degree touching any portion of the future profits.*

"The valuation has been made with the greatest care and exactness, and the reserve for the future is most ample for the purposes of safety, and quite sufficient, with care and management, to maintain hereafter a proportionately favourable rate of improvement.

"I have the honour to be,

"Gentlemen,

"Your very faithful servant,

(Signed) "PETER HARDY,

"April, 1862." "Actuary."

It may be remembered, that on the declaration of the last Bonus the Actuary strongly urged the propriety of postponing the Actual Division of Profits until the alternate triennial valuation; the prudence of which course, though it naturally occasioned disappointment in some few instances, is now apparent; and it is most gratifying to the Board, while reviewing the peculiar difficulties which those alone who are actively engaged in the business of Life Assurance know to have existed during the last six years, to present so favourable a Report, especially as it emanates from a gentleman of such high character and professional standing as Mr. HARDY.

Without in the smallest degree encroaching on future profits the addition sanctioned by this investigation will give to each Share a Bonus of 4s. 6d. or 9 per cent. on the paid-up Capital, being three times the sum allotted on the last occasion, and 75 per cent. of the divisible Surplus will be added to all Policy-holders, assured at participating rates, on the 31st December last, in proportion to the premiums paid since the last Division.

The Circulars, announcing the allotment to individual Policies, will be issued as soon as practicable.

The Directors recommend that the usual Dividend of 5 per cent., free of Income-Tax, be paid on the Capital for the half-year ending 31st December last.

The Directors retiring are LORD ARTHUR LENNOX, T. M. B. BATARD, Esq., and JOHN GARDINER, Esq., who, being eligible, offer themselves for re-election.

(Signed) ARTHUR LENNOX,
Chairman.

practicable, the most effective course. But having no power to expel, and no desire to enter on a theological discussion, they have seized the salient feature in the work of Dr. Colenso, and from that have justly and logically shown that a Bishop who avows certain opinions, which we will specify bye and bye, ought, *ex proprio motu*, to retire from the Church of England, if he would not remain in it as a violator of the distinct engagements that, by his office, it imposes upon him. They deal with him as a Churchman only, and leave to others to dissect him as a professing Christian. That he cannot with any decency or self-respect —certainly not with any sympathy on the part of Churchmen—either hold his bishopric or officiate in the congregation, is now a manifest and undeniable fact. This the Bishops have made transparently clear. Whatever else he has renounced, he has denuded himself of all claims to be a Churchman, and necessarily, if he persists in retaining his office, of that respect which is due to a consistent man.

The Bishop of Natal tells us, in his preface to his second volume, at page xxi., "The Bishops and clergy use habitually that solemn form of address to Almighty God in the baptismal service, which expressly assumes the reality and historic truthfulness of the story of the Noachian Deluge: 'Almighty and everlasting God, who of thy great mercy didst save Noah and his family in the ark from perishing by water.' But the fact is, that by the present law of subscription, each clergyman is bound by law to believe in the historic truth of Noah's flood, as recorded in the Bible, which the Church believed some centuries ago, before God had given us the light of modern science." The question which the people of England will seize and discuss is not whether the Noachian Deluge be—what evidences external to the Mosaic record prove it to be—an historical fact, but whether the Church of England, in this portion of her liturgy, accepts it as such. The Bishops, in this instance, reflect the mind of the people, and, indeed, the belief of every man of common sense, when they seize the statement embodied in the very heart of the baptismal service, and appeal to the Bishop of Natal, as an honest man, either to retract his avowed disbelief of it, or to renounce a communion whose services cannot be read by an officiating minister without his accepting *ex animo* the Noachian Deluge as a literal and authentic fact. It is not a question of theology, but of common honesty, truthfulness, and decency. These are still fireside virtues in English homes, and what the English cherish by their hearths they will not allow to be outraged by their altars. On the Stock Exchange, in the counting-houses of London, in the commercial transactions of the world, any flagrant violation of these duties would be scouted, and its practitioner sent to Coventry. Surely, on a loftier level, and in a holier atmosphere, we cannot sanction or tolerate what "the children of this world, wiser in their generation," repudiate with manly scorn.

Were this reference to the Noachian Deluge the only reference in the service to an historic Scriptural event, it would be enough. But the Bishop of Natal candidly admits that there are other facts in sacred history which he believes to be myths and fables incorporated with the Liturgy. He regards the passage of the Red Sea as a fable, and its recognition in the Liturgy as a stumbling-block and a "chain tightly bound about the necks of the clergy."

But, it may be asked, what does Dr. Colenso suggest as best to be done in these complicated circumstances? He is perfectly candid. "I see no remedy but to omit such words, to disobey the law of the Church on this point, and take the consequences." Now, let us just see the effect of this episcopal advice from one appointed and sworn to enforce the laws of the Church of which he is a chief minister. The solemn oath to conform fully and faithfully to the service, taken at ordination, is here treated with contemptuous disregard. Oaths may bind laymen, but clergymen override or annul them at discretion. "There are times," says Dr. Colenso, "when a faithful servant is bound, as he loves his master and cherishes his best interests, to disobey his orders."

Really, this is misunderstanding the nature of the engagement. It is not that of a servant's duty to his master, but of a covenant or lease between honest men. The Bishop requires the other party to give him, in terms of the lease, all the advantages guaranteed to him, while Bishop Colenso refuses to perform his part of the covenant. Such conduct, in this vulgar world of ours, would be followed by an ejection or a Chancery suit, the issue of which would not be doubtful. The whole question, as handled by the Bench of Bishops, resolves itself into this: Can Dr. Colenso, as an honest man, persist in holding office in a Church whose services he cannot read, whose articles he has boldly impugned, whose clergy he advises to skip what they don't believe, and draw the emoluments they don't deserve? Neither the Bishops of England nor the laity are prepared to tolerate this; and we are thankful that the episcopal bench, with a unanimity almost unprecedented, has delivered its judgment in such terms, and with so pointed a reference to the equivocal position of Dr. Colenso, that if he retain one spark of self-respect he must voluntarily leave a communion from which he dissents, and join some denomination—if such there be —in which his criticisms or crotchets will find hospitality. How Dr. Colenso can return to Natal, and require candidates for ordination "unfeignedly to believe all the canonical Scriptures of the Old and New Testaments," which the Bishop himself not only does not believe, but positively denounces, we cannot comprehend. But where law cannot be set in motion, the consciences of men in such a case pronounce a verdict which implies the highest censure. He must resign his position, or he must retain it amid the reproaches and the pity of those who feel grieved that so unworthy a spectacle should be presented to the world by a Bishop of the Christian Church.

Dr. Colenso may despise the solemnly expressed judgment of the Bishops of the Church of England. He may laugh at ecclesiastical thunder which is followed by no bolt. But if he would still enjoy the respect of those who laud his fidelity to his conscientious convictions, he should retire from office in a Church, from whose doctrinal and ritual teaching he dissents. By shrinking from this test of his sincerity, he will practically discredit the opinions which he has advanced, even more effectually than such replies as they have yet provoked, or are likely to meet hereafter.

EUROPE AND POLAND.

IT is not for the interest of Europe that the Polish nation should once more be crushed to the ground by the iron heel of Russia. The Cossack nightmare, which used so heavily to bestride the breasts of European statesmen, is becoming, it is true, a thing of the past. The Sheffield Foreign Affairs Committee, and the coterie of wiseacres on whom Mr. Urquhart's mantle has descended, are left almost alone. Nobody believes that it is reserved for some coming Czar to make a mouthful of modern civilization. But the future power of Russia must continue to be a source of disquieting speculation to all English and continental politicians who are interested either in the politics of the East or in the general progress of freedom. Russia is now passing through a crisis. What will be the character or the tendency of the Russia of the future it is difficult to say. But one thing is certain, that the Russia of the future will be powerful; and that—unless it departs very widely from the traditions of the old Russian school—it will be, upon the whole, aggressive and pushing. Yet the barrier which Europe has hitherto been content to raise against the Cossack is one that seems only half-suited to the age. Turkey, said Napoleon the Great, is a marsh which defends our right flank. It would be unwise to look upon the marsh as permanent, or to regard it as a satisfactory guarantee against all the chances and changes that may befall the world.

It is a grave question how far the Turkish Empire is capable of reformation. Its very existence is threatened both from without and from within; and the day is perhaps not indefinitely distant when the public opinion of the Continent will refuse any longer to tolerate the maintenance for merely material purposes of a Power at once unchristian, semi-barbarous, and tyrannical. Great Britain in particular has already begun to excite the murmurs of foreign nations on account of her loyalty to the Turks. She seems to jealous foreign eyes to care more for the high-road to India and for the Sultan, than for the interests of any number of oppressed Maronites, or for the name of the Redeemer of mankind. The position is a false one for a great and generous nation. It brings us into continual conflict with the religious sentiment of Europe. It is true that the Christians of the East are distinguished neither for their piety, their guilelessness, nor their honesty. If Religion is to be found on the side of the true believer, Justice sometimes takes up her

Digitized by Google

abode with the Mahomedan. But only the imperative exigencies of policy can reconcile us to a state of things for the security of which it is necessary that Christianity should not advance too swiftly or suddenly in the East.

The natural obstacle for Europe to oppose to Russia would be a ring of strong and independent nationalities, none of which should be liable to be overwhelmed by the religious influences of the Greek Church. If the Czar threatens to overshadow Europe, let freedom stand and bar the way between Europe and the Czar. It is difficult for England to throw herself thoroughly into such a line of defensive conduct. When it is a question of strengthening the hands of rising nationalities, Lord Russell and other English foreign Ministers consider it their auspicious mission to remember that England has interests in the East. The cause of nationalities and liberty is not compatible with the cause of the Ottoman Empire. As they increase, Turkey must decrease; and, doubtful of the future, uncertain as to the temper and disposition of Eastern Christianity, England's successive Governments pause—as well they may—before they leave go their hold upon the rotten and surge-beaten *débris* that constitute the remains of an empire which once seemed likely to engulf a large portion of the civilized world. The French, who have less interest in maintaining the Eastern *status quo*, and more faith in general principles of progress than ourselves, are only half-content to sacrifice Eastern Christendom to an English alliance. The whole seaboard of the Mediterranean, animated by the wild vision of an overland route, and the Venetian splendour of re-renewed commerce with the East, exclaims against us. Still we hesitate to abandon Turkey. It is but a wreck; and yet it is better to cling to a wreck than to be washed away. Nationalities, therefore, are not altogether favoured at the English Home Office. They are an explosive and dangerous petard, fitted, no doubt, for offensive purposes against a foreign despotism, but capable of hoisting Europe further than England wishes. But the Eastern policy of this country is beginning to seem to many people too perilous to last. Lord Palmerston's name is indissolubly bound up with it; but after Lord Palmerston comes the deluge. The noble Premier himself is not unconscious of the difficulty. With an ingenuity that is the clearest proof of genius, he has already begun to provide against the evil day. A significant change has come over the spirit of his dreams; and the first fruits of the change have been conciliation of the Greeks and sympathy with renascent Poland.

The right of England and France to interfere between Russia and her victim rests upon indisputable ground; it is only the expediency of interference which can be questioned. For moral purposes, the two great Powers of the West are the legally constituted protectors of the Polish race; for it is idle to draw the fine distinction that our original compacts authorise us to intervene when we wish, without binding us to interfere when we ought. Powerful empires are bound by the clearest of moral obligations to use all lawful opportunities to succour the oppressed, and to redress wrong; nor—when intervention is legitimate according to the strict letter of European treaties—is it anything but a Christian duty to intervene. Even if Poland stood to us in no nearer relation than any other suffering people, it would be possible to press the theory of non-intervention too far. Non-intervention, rightly understood, is the only safe rule of political conduct. But non-intervention certainly does not mean a passive endurance of all spectacles, however repulsive, provided they are enacted within the frontiers of a foreign State. All that we signify by the term is, that nations should be free to regulate their internal concerns, and to choose their own forms of government. It cannot be seriously maintained that we are bound to look on silently while hordes of Russian soldiery sweep over Poland with the announced programme of extermination, bloodshed, and plunder; while they slaughter the innocent, torture the guilty, and indiscriminately outrage the women. Non-intervention is a sacred principle, but it does not bid its adherents to acquiesce in sights at which humanity revolts. There is a limit to the patience of England and of France. The question is simply whether that limit has been overstepped, whether or no it is expedient at this juncture to say so, and in what way a warning may be given to Russia without irritating the pride of a northern despot, and plunging the Continent into the horrors of a bloody European war.

The press of this country has been reproached with a desire to goad the French Emperor into war, while we remain at peace ourselves. That sinister imputation cannot, at all events, be laid at the door of this journal. We should regard a one-handed French war as a great misfortune both for Europe and for England. We have no wish to relapse into the old attitude of dissatisfied neutrality which we found so painful in the Italian war. Selfishness is inherent in human nature, and yet it may be predicted of Englishmen that they are capable—whatever the Continent may think to the contrary—of a generous and disinterested sympathy with Polish independence. As a commercial and prosperous people we fear war; but there are some things that we fear more than war. Great Britain has no intention of retiring behind her shop counter and viewing all that passes on the Continent with opulent indifference. Such a *rôle* would be calculated to lower our national influence and dignity, and bold indeed would the Minister be who proposed that we should adopt it as a nation. That Poland should be relieved of her heavy and grievous burdens has become the desire and the purpose of England. It is a ridiculous libel to assert that we can possibly wish to see Poland liberated by the single arm of France. What have we to gain by such a war of liberation? On the contrary, our interests are twofold; first, that France shall act, and that she shall *not act singly*. If the Polish cause is committed to the exclusive championship of a Napoleon, we know what will be the upshot: a terrible war, a sudden and unsatisfactory peace, an extension of French influence in Europe, an extension of the French frontier upon the Rhine; and, last and worst, the recognition of some assumed right on the part of the French Emperor for all future time to mould the destinies of the resuscitated Polish people to suit his own plans, and to interfere again whenever the name of Poland is heard in Europe. The game of Rome and Italy has been played too well for us to wish to see it played again with Poland and with Warsaw. The remedy—or, rather, the prevention—is obvious. If England, Austria, and France combine, there will in all human probability be no war; but if the decrees of Heaven should be otherwise, combined action on the part of these three Powers will, at all events, prevent a conflict waged purely for the sake of civilization from degenerating into a French raid. Savoy and Nice would at this moment be still Italian soil if England and Prussia had united with France in throwing their ægis over Piedmont when the Austrians passed the Po in 1859. If Austria and England stand firmly by the Poles at this juncture, so similar in all its characteristics, Poland will not have at some late hour to repent that she received the outstretched favour and assistance of a Napoleon, and the Rhine may still continue to flow as a Prussian and a German river.

DISTRESS IN THE RELIEF COMMITTEES.

WE have for many months been familiar with the difficulties and distress of the Lancashire operatives; we have now to make acquaintance with the difficulties and distress of the Lancashire Boards of Guardians and Relief Committees. It was impossible that such a gigantic calamity as the cessation of more than half the industry of the most industrious district in Great Britain could be dealt with, even by the most skilful hands and on the most liberal scale, without much embarrassment and many mistakes. It was equally impossible that upwards of a million of money could be distributed in charity through new channels and to new applicants, without giving rise to much imposture, without encouraging much idleness, and without to a certain extent demoralizing and pauperizing a considerable portion of the population which had become dependent upon eleemosynary aid. It was equally impossible, again, that as the crisis was prolonged and threatened to assume a chronic form, administrative problems connected with the organization of labour and the sound principles of economic science should not arise, of a peculiarly complicated and perplexing character. The recent reports—especially one presented to the Central Relief Committees on the 24th of last month—show how keenly all those difficulties are foreseen and felt by the gentlemen who have the management of the case, and who have hitherto performed their functions with such signal intelligence and devotion.

In the first place, the Committee has come to the conclusion that there is no probability of more than half the cotton operatives being able to obtain ordinary employment

Digitized by Google

or to earn anything like their usual rate of wages for more than a year at least to come; and, unless the American war should cease and the American ports be re-opened, there can be no doubt that this conclusion is correct. What, then, is to be done with this unemployed population, which cannot be less than a quarter of a million, and which must have, on the lowest calculation, another quarter of a million dependent upon it? The difficulty lies, not in finding funds to support them—for, either by subscription, or by rates, or by loans under Mr. Villiers' new Act, the funds, we know, will be forthcoming,—but how to administer these funds so as to do as much good and as little harm as possible; how to find labour as well as food for this great multitude; how, in a word, to *minimise* the number who must be maintained in idleness and by charity. The long discontinuance of manual labour both enervates the physical and impairs the moral vigour of the operative; while the absence of any adequate means of applying an effective labour test to the recipients of relief, is almost fatal to the power of distinguishing cases of genuine and inevitable destitution from cases of indolence or imposture. It has, therefore, been urged, as a measure of the greatest importance, that the landowners and capitalists in the manufacturing districts should not only seize this occasion of undertaking and pushing forward works of public or private utility which, under ordinary circumstances, they would have either postponed or spread over a series of years; but should perhaps even endeavour to create artificial employment by inaugurating some works of "convenience or ornament," which, though not necessary, would not be utterly superfluous or unserviceable. The first part of the suggestion, at least, we need have no hesitation in endorsing.

In the second place, it is beginning to be found that great numbers of the operatives are by no means as zealous in seeking work or as ready to accept it when offered, as they ought to be. The scale of relief has been so liberal, and the assistance has been rendered in so many forms and made so easily attainable by all who were in need, that, *everything considered*, many factory-hands have begun to find their present condition not much less pleasant and desirable than their former normal and independent one. For example, a man who used formerly to obtain 18s. or 20s. a week when in full work, prefers the 8s. he now receives from the Relief Committee or the parish authorities for doing nothing to the 9s. or 10s. he might earn at a factory by *half-time*. At all events, his day is at his own disposal, he can live on less when he is idle; and he can often pick up a few spare sixpences by odd jobs. The girls employed at the sewing-schools, again, are often in no great hurry to go back to the loom or the roving-frame. It is true that they now only receive 3s. 6d. a week, whereas they used to earn 8s. on full time, and might now earn 5s. or 4s. 6d. on half time. But the work of the sewing-school is easier than that of the factory; they are gaining a useful and perhaps lucrative accomplishment; their clothes do not wear out so fast; they can keep themselves more neat and clean; and, above all, they can lie in bed till eight o'clock in the morning instead of having to get up at five o'clock.

In the third place, though the circumstance of there being in Lancashire a far larger population than can at present naturally find employment ought to lead, and eventually must lead, to a decided reduction in the rate of wages,—and although manufacturing has become so unprofitable a business that the men ought in common fairness to be willing to share the losses of their masters, yet they have shown a decided reluctance to accept work when offered them at any lower rates than those current in the prosperous times of two years ago. There is a strong disposition on their part rather to remain a burden on the parish or the Relief Committees, if they can obtain 8s. or 10s. a week from either source, than to accept 12s. or 15s. from a manufacturer, if those earnings involved being paid on a somewhat lower scale. As long as they are supported by charity, therefore, they can refuse or accept work nearly as they please—a proceeding which of course cannot be endured. At the same time the Committees seem to fear—though admitting it to be a prospective rather than actual evil—that as long as they continue to give relief to partially employed operatives to eke out inadequate earnings, those earnings will continue to be inadequate, partly because masters may be stingy, but still more because workmen will be indolent and careless. In short, they are beset with difficulties on all sides.

Another question has also been forced upon their attention within the last three weeks, and still gives rise to much doubt and discussion—that of emigration. Some Australian colonies have offered a free passage, and hold out tempting prospects of ultimate success, to five hundred of the manufacturing operatives, provided they can be furnished with an adequate outfit. The Relief Committees, therefore, have had to consider, first, whether they were at liberty to employ the funds entrusted to them for such a purpose—a purpose certainly not originally contemplated by the subscribers;—and, secondly, whether it was desirable or not to encourage the emigration of factory hands at all. The first question, we think, they may conscientiously answer in the affirmative, seeing that the funds were placed in their hands to relieve the distress of the district in any way they deemed most effectual and judicious. The second question is more doubtful; and we discussed it a few weeks ago. We now only recur to it for the sake of bringing out in strong relief a point we only stated loosely at that time—namely, the extent to which the cotton operatives are apparently being taken up by flax and woollen mills. These two industries appear to have increased as the cotton trade has languished, and nearly *pari passu*. It seems by no means improbable, therefore, that ere long the Lancashire operatives may all be wanted at home. If so, emigration, though it should certainly not be discouraged, ought not to be artificially aided or stimulated. The following tables refer only to the amounts of the several articles *exported*. This is an imperfect clue to the amount *produced*, no doubt, but it is the only one we possess.

MR. GLADSTONE ON CONSOLS.

NO excuse need be made for returning to the consideration of Mr. Gladstone's scheme for the conversion of a portion of the Consolidated Annuities. The plan is of some immediate importance, but deserves attention still more because it may furnish a precedent for much extended action in the future; whilst its intricacy is such that some repetition is necessary to secure a due apprehension of its details. It will be remembered that Mr. Gladstone has introduced into the House of Commons a Bill on Post-office Savings Banks; the Bill, which has been printed since we last drew attention to the subject, is very short, consisting of only four clauses, but these clauses attempt two utterly distinct objects. The first and second clauses are designed to facilitate the winding up of old Savings Banks, and contain provisions for the transfer of their assets and their liabilities to the new Post-office Savings Banks; upon these clauses we have nothing to say. The third and fourth clauses are, as we have said, devoted to an entirely different end, no less than the conversion of a portion of the Three per Cents. into an equivalent made up of Two-and-a-Half per Cents. and terminable annuities. A little explanation will show at once the nature of the plan proposed by the Chancellor of the Exchequer, and how it is connected with the Post-office Savings Banks.

The funds deposited at the several Post-office Banks are remitted to the Commissioners for the Reduction of the

Digitized by Google

National Debt, and invested by them in the purchase of Three per Cent. Consols. We may suppose that in this way the Commissioners are the holders of £1,000,000 Three per Cent. Consols—that is to say, that the Commissioners are entitled to a perpetual annuity of £30,000 (three per cent. on a million), which the country is entitled to redeem under certain formalities by the payment of £1,000,000 in money. It is now proposed that instead of holding a perpetual annuity of £30,000, redeemable in the way stated, the Commissioners shall hold a perpetual annuity of £25,000, redeemable by payment of the same sum of a million; and, moreover, an annuity terminable in the year 1885, of such an amount, that it shall be equal in value to the perpetual annuity of £5,000, which the Commissioners relinquish. This is the scheme which is expressed rather than explained, when otherwise worded, as a plan for the conversion of £1,000,000 Three per Cents. into £1,000,000 Two-and-a-Half per Cents., and a terminable annuity to compensate for the difference in income of the two stocks.

The Bill cannot be said to have advanced very far since we last considered the project. It has passed a second reading, and after one or two miscarriages the House went into committee upon it; but at this stage the Chancellor of the Exchequer announced his desire that the committal should be formal only, and that it should be recommitted. It appears that some deputations are about to wait on him to remonstrate against parts of the Bill, and he proposed to reserve a consideration of its details until he had heard their objections.

Mr. Gladstone's plan is obviously separable into two perfectly distinct parts: he proposes as one part that one-sixth of the perpetual annuities on which he would operate should be converted into terminable annuities; to use the example we have already given, out of the perpetual annuity of £30,000 he would convert £5,000 into a terminable annuity. To this part of the proposal of the Chancellor of the Exchequer we conceive no valid objection can be sustained. Mr. Hubbard has, indeed, objected that there are few buyers of terminable annuities, and consequently they never fetch their proper price in the market; but if the conversion be restricted within the proposed limits, there seems no reason why the terminable annuities created should be brought into the market at all unless they sold at their theoretical value. It is scarcely possible that the funds of the commissioners should be so reduced that they would be unable to keep intact that proportion of them which they will hold under the form of terminable annuities. Against this slight objection there are to be placed many advantages: financiers of all parties have long desired to reduce the permanent burdens on our national industries, whilst we have the start of our competitors; and in the creation of terminable annuities they have discovered a means of relieving our successors by an additional burden on ourselves so slight that it would probably not at all affect the annual savings of the people. Hitherto they have been unable to find customers for the annuities they desired to introduce; Mr. Gladstone has supplied the want through the Commissioners of the National Debt, and had his plan been confined to this part it would have received our unqualified approval.

It seems only necessary to state the second part of Mr. Gladstone's plan to show the grave objections to which it is open. If we resume the example we have used, we find that, having taken in hand perpetual annuities of £30,000, redeemable by payment of £1,000,000, and changed £5,000, part of the perpetual annuities, into equivalent terminable annuities, he proposes that the remaining £25,000 perpetual annuities, which have been hitherto redeemable by payment of £833,333⅓, shall for the future be redeemable only on payment of the original £1,000,000. This is the concession which is involved in the proposed creation of Two-and-a-Half per cent. annuities. Without receiving any compensating advantage, the Chancellor of the Exchequer urges us to create anew the capital he has paid off: out of every £6,000,000 stock he will pay off £1,000,000, and forthwith raise the remaining £5,000,000 to the old capital of £6,000,000. It may be thought, indeed, that the concession is valueless, inasmuch as redemption is as much out of the question in the one case as in the other; but although redemption is no doubt impossible, the change involves also a relinquishment of the possibility of a real reduction in the rate of interest. As long as the £25,000 perpetual annuities are redeemable by payment of £833,333⅓, there is a certainty of reducing the amount of the annuities if the current rate of interest on Government securities should permanently fall below 3 per cent.; but if we make the same annuities redeemable only by payment of £1,000,000, the rate of interest must fall below 2½ per cent. before any reduction of the annual charge can be effected. The proposed change, therefore, not only produces an increase in the nominal capital of the funds operated upon, but a postponement of a reduction in the annual burden. When M. Fould last year relinquished the chance of reducing the rentes by a similar increase of the sum at which they were redeemable, he obtained from each rentier a certain bonus for the concession; Mr. Gladstone throws away the chance of reduction without receiving any consideration.

It is difficult to assign an adequate reason for this second part of Mr. Gladstone's proposal. He does, indeed, secure a stock bearing the denomination of Two-and-a-Half per Cents., but the advantage is plainly unreal and illusory; it is acquired, not by a reduction of the annual charge, but by an increase of the nominal capital, and by such a method it would have been equally easy for him to have created a Two or a One per Cent. stock. No fundholder would hesitate to receive £300 stock bearing interest at one per cent., in exchange for £100 at three per cent.; and the suggestion is a mere *reductio ad absurdum* of Mr. Gladstone's scheme. Beyond the name of Two-and-a-Half per Cents., no advantage is readily discernible; there is another result indirectly attained, but we do not believe it has been contemplated by the Chancellor of the Exchequer. It is clear that the transformation will partly operate as a boon to the National Debt Commissioners, and those gentlemen, if suddenly called upon to meet their liabilities, would be found insolvent. These unhappy Commissioners have been the slaves of every successive Chancellor of the Exchequer; whenever that functionary has wanted to raise or renew a loan, to create Exchequer Bonds or re-issue Exchequer Bills, he has availed himself of the funds of the Commissioners for the purpose of rigging the market. The result of this manipulation is said to be a clear deficiency of two millions; the assets of the Commissioners are by so much less than their liabilities; and the Chancellor of the Exchequer may perhaps flatter himself that he is doing an act of justice in helping to repair the losses caused by himself and his predecessors.

The extent of the operation at present contemplated by Mr. Gladstone is small, but it may fairly be regarded as the commencement of a permanent and more extended system. The funds deposited at the Post-office Savings Banks must largely increase, and, as we pointed out a fortnight since, there is no reason why the funds held by the National Debt Commissioners on account of the trustees and managers of the old Savings Banks should not be subjected to a similar treatment. The Commissioners have the same control over the two funds and are under the same responsibility on their account; nor does it make any difference that their responsibility in the case of the Post-office Banks is a direct responsibility to the depositors, whilst in the other case it extends no farther than the trustees and managers, to whom the depositors in ordinary Savings Banks must look for payment. An extension of Mr. Gladstone's scheme to the funds of the ordinary Savings Banks would multiply the field of its operations thirty or forty fold.

It is to be hoped that the House of Commons will not heedlessly sacrifice the management of the National Debt to Mr. Gladstone's vain fancy for Two-and-a-Half per Cents. Could he secure anything more than a name, we should gladly accept his services, but, like the dog in the fable, he appears about to lose the substance in grasping at its reflected image. There are lovers who have been once rejected, yet hanker after their old love when all the qualities which excited the passion of youth have departed, and there remains but the shadow of a name. We may admire the constancy though we cannot approve the wisdom of such an attachment. The Chancellor of the Exchequer seems to be in some such case. Ten years ago he wooed the Two-and-a-Half per Cents., and there appeared at one time a prospect of success. The Fates were too hard for him, and he lost the treasure which it seemed in 1853 he might possibly secure. In 1863 he renews his passion, but the present object of his vows has only a name to connect the pursuit with that of ten years since: everything else has changed. It is the duty of all good men at such a crisis to step in and, if they have the power, to prevent the infatuated lover from making a fool of himself.

ENGLISH POPULAR FESTIVITY.

MR. MILL, who is somewhat prone to depreciate the good qualities of the nation to which he belongs, accuses Englishmen of an extreme incapacity for personal enjoyment, and asserts that they derive less pleasure from what they spend than any other set of people in the world. Such an opinion seems strangely unfounded at a time like the present, when the whole nation is deliberately preparing to make merry on the largest possible scale and with the utmost possible abandonment to the spirit of the occasion. If Mr. Mill is right, and if our social qualities are so feeble as he insinuates, the sanguine anticipations so universally prevalent with reference to the approaching revels are destined to result in a melancholy mockery; and bonfires, illuminations, and fireworks, will only serve to disclose a nation of sorry impostors, pretending to derive enjoyment from what in reality only intensifies their incurable gloom. People never look so ludicrous as when affecting conviviality, and trying to reach the conviction that they are enjoying themselves. When Lord Dundreary, poising himself with some difficulty on a three-legged stool, says to the wearied object of his affections in a tone of ill-assumed confidence that this is what he calls snug, he presents a fair example of this woful kind of self-deception. Social life in its various phases of pic-nics, dinner parties, visits, and the like, abounds with instances of the same thing; but in admitting this we are only saying that social life in England, as elsewhere, is a matter in which circumstances and the idiosyncrasies of individuals exert an almost unlimited power. That dinner-parties are often slow, pic-nics uncomfortable, and visits impracticable, is too true; but it is too narrow a basis to sustain the sweeping generalization that every Englishman is essentially and characteristically incapable of enjoyment.

The English mode of revelling is unquestionably different from that of Frenchmen, Italians, or Spaniards; and it is perfectly intelligible how an English national festival might be unutterably dull and stupid in the eyes of a vivacious Celt. But an Englishman, we maintain, is capable of as profound enjoyment after his own fashion as any Roman that ever pelted with *confetti*, or Irishman that ever broke heads at Donnybrook. The fallacy consists in supposing that, because our pleasures are not as the pleasures of "Mossoo," therefore they are only sham pleasures; and in forgetting the wholesome rule of *chacun à son goût*.

Next week a rare opportunity offers itself to the philosophical inquirer for comparing the English and French modes of keeping holiday. The 10th is the day fixed for the Prince of Wales's marriage; the 11th is the Parisian festival of the *Mi-Carême*. Abstinence from worldly follies and pleasures for six whole weeks is more than the volatile Gaul can endure even in theory; and, accordingly, Lent is divided into two halves—the day which divides it being celebrated with the same riot of unreason as the carnival which precedes it. It is, moreover, the Fête des Blanchisseuses, and the boulevards are thronged with carts conveying the washerwomen and their male partners, clad in the most grotesque and varied costumes. The great joke after the Parisians' own heart is for a washerman to assume the garb of a woman, and then go through certain extravagant and wanton antics, which are not over delicate in a man, and would be downright gross in a woman. Another dons an ass's head, and fills the beholders with a delight as intense and as fatuous as that with which Billy Bottom inspired Titania. Soon as the evening shades prevail, night is made hideous by meaningless blasts from a thousand horns, and the festival closes with the orgies of a masquerade at the opera. Surely the British spectator may reasonably arrive at the conclusion that there is a pleasure in being mad, which none but madmen know. And the same is true of the reckless fooling of a Parisian carnival. What can be more prepossterous or disgusting than the procession of the *bœuf gras* on the three days before Ash Wednesday? The beast is so overfed that he can with difficulty drag his own carcase along, and, in spite of gilded horns and a wreathed neck, he presents a picture of the most abject distress. He is attended by young butchers, in the classic garb of ancient Romans, as well as by nymphs not so correctly behaved as gaily attired. Yet all Paris flocks out eagerly to see this. That an Englishman should be unable to discover the pleasure of assisting at the grotesque buffoonery of these costermongers' saturnalia, or of watching a wretched brute dragged along the streets in triumphant procession, followed by spangled Goddesses of Unreason, is, after all, not a conclusive proof that he is devoid of all capacity for enjoyment.

The Spanish mode of keeping high festival is still less in accordance with English tastes. The marriage of an heir-apparent in Spain would doubtless be celebrated by the sacrifice of unnumbered hecatombs, and enthusiastic multitudes would find a suitable expression of their joyous sentiments in applauding tortured bulls, and horses trampling out their own entrails. An Englishman delights not in the blood of bulls; he is hopelessly unable to emulate the barbarous ecstacies of the truculent Spaniard. Neither would he heartily enter into the spirit of an Arab *kotou*, or enjoy with proper sympathy the clashing cymbals and monotonous howling of a Hindoo festival. Yet England can upon occasion, and in her own style, vindicate her title of "merry." We can enjoy ourselves without committing cruelty on the one hand, or encouraging the antics of idiocy on the other. We do not think it essential to enjoyment to relapse either into barbarism or childishness; nor do we deem pleasure incompatible with gravity and decorum. The Prince's wedding-day will be celebrated among us by the bestowal of comfort, for that day at least, upon classes to whom comfort is unhappily not familiar, and by various reasonable social gaieties; but, while doing this, we shall not leave undone or neglected the lighter incitements to hilarity and rejoicing, and while distributing substantial benefits, shall not forget the illuminations, fireworks, and torchlight processions which should signalize an auspicious event. The enjoyment of a grave people is fully as great, or, in other words, is as real and pervading as the more boisterous and extravagant excitements of the purely Celtic races.

Mr. Mill considers that our "extreme incapacity for enjoyment" is a common characteristic of all countries over which Puritanism has passed. If this be meant, as it probably is, to intimate the existence of a direct and close connection between Puritanism and "incapacity for enjoyment," we must again question the soundness of Mr. Mill's view. Our national gravity—a phrase preferable to the more unmodified one on which we have been commenting—is a result principally of our extreme practical tendencies and devotion to practical interests, though it would be absurd to deny that the cause which Mr. Mill assigns has had a measure of influence. We believe, however, that its influence has been almost wholly indirect, acting through the industrious and active habits which it fosters, and by which it is in turn supported. The more earnest and practical a national character becomes, and the larger the share it takes in affairs, the graver will be the mood of national enjoyment. We may cite as an illustration the feebleness and lack of spirit with which the carnival of this year is reported to have been observed throughout the towns of Northern Italy. The interests of that people are now actively excited and engaged in matters of practical business; and in proportion as this grows to be the general condition, enjoyment will not decrease in amount, but assume graver and more reasonable forms. Such, at all events, we take to be the correct account of the gravity with which Englishmen celebrate their festivals, and which has been mistaken for a rooted incapacity for enjoyment.

THE SHOEBLACKS OF LONDON.

TO spend £6,228 is much easier than to earn that sum by honest labour. Yet this is the amount gained in pennies during the past year in the streets by the 373 boys of the London Shoeblack Brigades. But a far deeper interest is excited when such commercial prosperity is seen to be only one phase of an effort to combine religious education with remunerative employment, and to give this double benefit to homeless children, that they may hereafter work and behave and live as honest citizens of a Christian land. The first Shoeblack Society was begun in March, 1851, in preparation for the Exhibition of that year. Seven other societies have since sprung up, and the movement is still expanding. All these societies are managed on precisely the same plan, though by distinct committees, and they are restricted to certain districts by a sort of "Congress of Shoeblacks," which gravely mapped out London, painting the frontiers with the red, blue, yellow, brown, and other colours of the various uniforms. Besides these, there is a society for Roman Catholics, differently managed, and there are also the Pariah shoeblacks, not in allegiance to any society, undisciplined, vagrant, and troublesome,—the "freebooters," as they may be called,—who prefer the licence of the idler,

Digitized by Google

with small gains, to the strict rule and larger earnings of the legalized system. The original Shoeblack Brigade has its head-quarters near Temple-bar, in a large house paid for by the boys themselves, with every other expense; for this Society has been, for several years, entirely self-supporting. About 1,300 young lads have been sent out and started in life by the agency of this one Society, which employs at present 74 boys, who earned last year £1,824. These wear a red uniform, and are managed by ten lawyers in the Temple and Lincoln's Inn, who, without a patron or a chairman, have carried on the work for twelve years in perfect harmony. They have regulated the savings and investments of all the earnings of their *protégés*, amounting to more than £17,000. The boys employed by this society are selected from twenty ragged schools in the district, and each of them continues his attendance at the particular school every day after his work, as well as on Sundays, affording a good example to his schoolmates, and an object of abiding interest to the teacher of his class.

Before eight o'clock in the morning you will find all these happy little fellows, neat and clean, in the Society's great room, where a hymn is sung, and a short prayer is offered. Fortified with hot coffee and other good things for the "inner boy," they march to their stations, and, if it is a sunny day, they ply a busy trade. Nobody cares to have his boots cleaned while it rains, but fair weather encourages the suggestion, "Clean your boots, sir?" from a smart little lad, with one hand to his cap, and the other pointing to your dirty shoes. The charge for this operation is one penny, but there was a case in which a man with a wooden leg claimed and was allowed his legal right to compound by paying a halfpenny.

The Society's officers visit every station frequently, and supply blacking to the industrious, or bestow reproof on the idle, until about six o'clock, when all the boys return with their earnings, and soon fill up a great bowl with copper money, amongst which are often found some foreign francs and cents. Part of what each boy brings in is paid to himself, part is laid by for him in his bank, and part is retained for the expenses of the society.

It is thus that each lad is taught to earn, to spend, and to save money, with honesty, care, and providence. Many of them keep adding to their store until £20 is hoarded, but from time to time they draw on their "bank," to help a mother's poverty or a sister's sickness, or to sport the vanity of a "bran new waistcoat with blue-glass buttons." The sights and sounds that encompass these shoeblacks, stationed all day in the most prominent outposts of our streets, and keenly on the look-out and listening all the time, supply plenty of gossip for their meeting again at night, which is always a merry meeting. Down they go to a lavatory, where, at a dozen basins, amidst great fun and frolic, they wash the "outer boy," in preparation for a hungry attack on the supper table. They have pictures and periodicals, draughts and dominoes, placed on the table for their amusement, as they talk and eat and play; and then they all hie off to evening school.

A visit to the depôt of one of these societies enables us to judge of the cheerful character of the boy-life of the shoeblacks; but the annual treat, when all the societies assemble in new bright uniforms, is quite a hilarious scene. The Freemasons' Hall was filled last week with their tea-party. They mustered in their several colours. Each society waved its banner as proudly as a city guild, and the crest of the "old reds" was a blacking-bottle borne on high. Two of the boys' bands drummed and fifed the regiments into line of battle, for a grand charge on the mounds of cake; and the number of drummers in the bands of the Guards, who have been imported from these societies, indicates that their music is by no means only fit for play-time. Such are the occasional festivities of the London Shoeblack Brigade. One of the speakers at this meeting, Lord Charles Russell, began by telling the boys, "I was once a shoeblack myself, but there was this difference between my shoeblacking at Westminster School and yours—that you always get a penny for your work, whereas often I had only a kick for my pains, and that too from the very boot I had polished!"

It must be a very dull heart that could be present on an occasion like this without rejoicing that to so many children, who else would be running wild, or perhaps be *driven* along the broad path to crime and misery, a new path is open to industry and happiness, and that now it may be truly said, "No boy, with hands to work, need starve in an English town."

It is evident that a shoeblack's occupation is only a temporary means of subsistence, by which he may live while he learns, and may acquire habits of industry, and earn a character that fits him for regular work-day life. Hundreds of these boys are thus, every year, enabled to enter the army and navy, to become domestic servants or errand boys, or to emigrate to wider fields of labour in the colonies. Many of them write to the Society, from all parts of the world, remembering with gratitude the share it has had in saving them from ruin, the kindness of the committee, the pleasant evenings with the magic lantern, the country excursions, the schooling and discipline, the rewards—nay, the punishments of their shoeblack days—and more than all, the gentle influence of their Sunday school.

Failures there are, no doubt, both numerous and grave, but in what effort of social reform can we say there are not? Year by year, however, the success of this system of managing the street boys has increased, and the managers, who claim a right to speak from experience, assure us of the fact, that the London shoeblacks are a signal instance of the happy fruits of that practical Christian benevolence which gives work, and food, and learning, and home to the outcast, while it cheers the desolate heart with the love of a friend to the friendless.

THE "SATURDAY REVIEW" DEFENDANT.

"And first," says the Dean of St. Patrick's, in his "Argument against Abolishing Christianity," "I am very sensible how much the gentlemen of wit and pleasure are apt to murmur and be choked at the sight of so many draggle-tail parsons, who happen to fall in their way and offend their eyes; but at the same time those wise reformers do not consider what an advantage and felicity it is for great wits to be always provided with objects of scorn and contempt, in order to exercise and improve their talents, and divert their spleen from falling on each other, or on themselves; especially when all this may be done without the least imaginable danger to their persons."

The Rev. Dr. Campbell has obtained a verdict against the *Saturday Review* for libel, and the damage to the reverend gentleman's character has been assessed at the very moderate sum of £50. Perhaps the Doctor's character was so unassailable that no bombardment, however severe, could do it any injury; perhaps it was so well known, that it could suffer no damage from any attack; perhaps the criticism was so feeble that it inflicted only £50 worth of injury. Those who read the articles in the *Review* and know the history of Dr. Campbell may draw their own conclusions. Dr. Campbell is the conductor of a journal which, under the various names of the *Ensign*, the *Standard*, and the *Banner*, supports the cause of Protestantism, and exerts its efforts to Christianize the heathen and to warn the people, but especially the Queen, against the dangers of Popery. Every person in this country is entitled to express his opinion, and of course Dr. Campbell and his hundred thousand subscribers are entitled to theirs. The increase in the circulation of his periodical was a legitimate ground for congratulation, and accordingly the reverend gentleman, in that spirit of business-like piety which distinguishes him, not only proclaimed his success, but published the names of the more illustrious subscribers to his journal. There were the Earl of Shaftesbury, the Earl of Gainsborough, Mr. Kinnaird, and others well known in the religious world, who seem to have come forward to support Dr. Campbell with generous alacrity. Here was tempting game afoot. Dr. Campbell was a very zealous Protestant and a prominent Dissenter. Like a Spanish bull he had come bounding into the arena, and a good bait was inevitable. True to its Church-Militant maxims the *Saturday Review* loosed its ecclesiastical bulldog upon the flanks of the champion of British Protestantism, and the skilled brute proceeded to worry his victim with all the truculent skill at his command. Not satisfied with denouncing Dr. Campbell and all his school, the *Saturday Review* insinuated that the reverend gentleman was a gross impostor,—that he was not only indifferent to the conversion of the heathen, provided he could increase the circulation of his journal; but that he had put forward a list of eminent, though fictitious names, for the purpose of decoying a crowd of ignorant fanatics into subscribing to the journal. In an article published last June in the *Saturday Review* the champions of High Church principles insisted that Dr. Campbell had invented a telling list of subscribers, and that his enthusiasm for the conversion of the heathen was in real truth an enthusiasm for the replenishment of his own purse.

A grosser accusation it is difficult to imagine, and Dr. Campbell

Digitized by Google

was certainly justified in bringing an action against those who had ventured to make it. The trial took place before the Lord Chief Justice, and resulted in a verdict of £50 for Dr. Campbell. It was distinctly proved that the subscribers were not fictitious, for the very persons whose names had been put forward appeared in the witness-box. Even the old man who had been described as an "Old Soldier," and whose existence had been charitably ignored, came forward in *propriâ personâ*. The only defence alleged by the *Saturday Review* was, that the writer himself believed in the truth of the calumnies which he had uttered against Dr. Campbell, and it was therefore insisted that the calumnies were privileged. There was no plea that the libellous charges were true in fact; on the contrary, it was not only admitted that they were untrue, but that no sort of inquiry had been made as to whether they had any foundation. It was vehemently insisted that this was immaterial, but the Lord Chief Justice maintained the contrary opinion. "One man," said Sir A. Cockburn, "must not calumniate another merely because he believes what he says." This dictum is to form the subject of future discussion. But there are one or two reflections naturally arising out of the trial, and the peculiar position of the plaintiff and defendant in this action, which are not uninstructive.

There is something exquisitely humorous, though no doubt somewhat audacious, in the *Saturday Review* taking up its parable against those who make a trade of religion. Let any one run over the file of that periodical, and see what literary capital it has made out of this sacred subject. Dr. Cumming, Mr. Spurgeon, all sorts of Low Churchmen, and Dissenters, have formed the staple material of its weekly lucubrations. Had it been the object of these amiable writers to point out the errors into which others have fallen, and to instruct the ignorant, they would have written in a different tone and at more distant intervals. If Dr. Campbell used the conversion of the heathen as a means of puffing his journal, it may with as much justice be said that the *Saturday Review* has used a good many popular religious writers for the same ignoble purpose. Animated by the proverbial spirit of theological hatred, this periodical has exhibited extraordinary ingenuity in its attacks upon popular religion. With an art which the most skilful of French cooks might envy, the mangled remains of eminent Low Churchmen have been served up almost weekly in every possible shape and with every variety of sauce. And the system has answered. Unfortunately the mass of mankind have a secret pleasure in hearing their fellow-creatures abused, and those who do not disdain to pander to that appetite are sure of their reward. Let it not be supposed that the sarcasm of the *Saturday Review* is without a distinct purpose. If a courtly prelate of High Church tendencies were to expose himself to ridicule, or if some rubrical fanatic were to set his parish in flames by insisting on some obnoxious ceremonial, it is needless to say that no word of rebuke for such folly would be found in the pages of the *Saturday Review*. But when a hard-working and popular clergyman of Low Church views is elevated to the Bench, no time is lost in disparaging his merits and inventing a fictitious history of his life and times. If a body of ladies combine for the purpose of aiding young women to emigrate and to improve their condition, the sardonic Anglo-Catholic journalist is at once ready to insinuate that the ladies are little better than they should be, and practically engaged in supplying the colonial Haymarkets with the sort of living commodities required. If a number of young men, scorning the frivolities of fashion, choose to descend into the squalid dens of Whitechapel "to visit the fatherless in their affliction," a Saturday Reviewer makes the amiable suggestion that these ostentatious young guardsmen are doing all this by way of "spiritual plate-powder." If there are "midnight meetings" of fallen women, the opportunity is improved by suggesting that those who attend such places will probably do themselves an injury and their auditors no good. It is impossible not to admire the perverse ingenuity which can misconstrue every act done and every word uttered by a Low Churchman or a Dissenter. Anything for piquancy and paradox! No matter how sacred may be the subject—no matter how indecent the allusion—there is nothing too high, nothing too low, for the use of such essayists, provided only it can be used to damage a religious adversary or to throw ridicule upon popular religion. It would be grossly unjust to assert that all the writers in the *Saturday Review* are animated by this spirit. But there is at least one class of subjects—and that, perhaps, the most important—which are habitually treated in this fashion. It has become a trade, and the trade flourishes.

Exception has been taken to the ruling of the Lord Chief Justice, on the ground that as the jury found that the Saturday Reviewer really believed in his own calumnies against Dr. Campbell, a verdict ought to have been recorded in his favour. It is to be hoped that this objection will not prevail. Can it be said that a person is to have no redress because a writer can be found malignant enough to make the grossest charges which are not only untrue, but with respect to the truth or falsity of which he has made no sort of inquiry? If a High Church clerical scribe can be found so virulent in his hatred, so prurient in his imagination, so ingenious in his perverseness, and so impervious to all sense of justice, that he distorts facts without compunction and even invents them when he thinks fit—shall it be said that all the rancorous effusions of his spleen are to go unpunished, and that because he is inspired by a sectarian malignity "which believeth all things and hopeth all things" against his fellow citizens,—these fellow-citizens must submit calmly to imputations which are not only scandalous but confessedly untrue? This is not the law as the Lord Chief Justice understands it, and we see no reason to doubt the correctness of his opinion.

RUSSIAN REFORMS.

THE time has arrived in which the emancipation of the Russian peasantry is to be rendered complete. With the 2nd of March terminated the period which the Emperor allowed to the proprietors and their serfs, for the final settlement of their mutual accounts. At the end of that time it was hoped that definite arrangements would have been made, and that nothing would be left for both parties to do but to celebrate the anniversary of liberation by a universal festival. But what monarchs propose their subjects are not always disposed to accept. The time has elapsed, and the question still remains unsettled. The serfs refuse to work out their own liberation, and their former masters find themselves in a strangely anomalous position. The bargains which ought to have been concluded have not in most cases passed through even the preliminary stages, and the Government will be obliged to devise means for settling a hundred thousand suits, each involving the contending interests of a herd of ignorant and angry litigants. The Emperor's good intentions, which long before this ought to have resulted in facts, are compelled to remain mere ideas; and his single will appears unable to cope with that of stubborn millions, who present a passive resistance which no entreaties can modify, and no arguments can overcome. The Ministry has as yet afforded little assistance, and the army of officials is as powerless as it is unpopular. The Emperor may well look around in dismay for counsel, and it is even possible that he may at times be inclined to listen to a voice which, from secret hiding-places, and through the medium of concealed and proscribed speakers, calls for the convocation of the old and half-forgotten States General.

The recent number of the *Quarterly Review* contains a learned and interesting article on the decline and fall of constitutional government in Russia, and of those popular assemblies the revival of which is now demanded by the more advanced members of the liberal party. The early history of that country is not an alluring subject. So little has been written about it by impartial authors in generally intelligible languages, that the Sclavonic portion of Europe appears to most voyagers up the stream of time to be wrapped in impenetrable mist, muffled voices only being vaguely heard within it, and a few indistinct forms dimly looming through its veil. At last, Peter the Great emerges from the cloud, the palaces of St. Petersburg start up from the swamps of the Neva, the beard falls off from the Muscovite chin, and the Russian empire takes its place among the powers that be. From that period despotism is its characteristic; and the old constitutional restrictions on arbitrary power, and the assemblies in which the voice of the people made itself heard, being effectually concealed from the descendants of a race of freemen, are eventually forgotten by them. But hidden away among the mouldering archives of decaying towns, and written in a language of which few foreigners understand a word, there still exist the records of a time when slavery was unknown in the land, when patriotism meant something nobler than a blind obedience to a single irresponsible chief, and when the virtues which Freedom fosters were more than historical reminiscences.

In the article to which we have referred, a sketch is given of the progressive steps by which the towns of Russia, originally "mere agricultural or pastoral groupings of population, ultimately became industrial and administrative centres," around which were formed district and provincial communes, till at last they united in a communal federal union, of which Novgorod and Pskov were the capitals. The authority of each commune was vested in a *Veché*, or common council, at which it is supposed that every citizen had a right to be present, although only the representatives of the town

Digitized by Google

population and the officers of the Government had the power of speaking and of voting in it. By it the mayor, and at Novgorod both the prince and the archbishop, were elected. In it the internal affairs and the foreign relations of the State were discussed; it could constitute itself into a criminal court for the trial and punishment of felons; it exercised a control in all matters relating to internal police, finance, and the administration of justice; and it had a voice in every declaration of war or conclusion of peace. The towns in those days were peopled by a race of sturdy burghers—men accustomed to deliberate freely about their own affairs, and very jealous of any unconstitutional interference with their rights, on the part of their princes; and the open country, which was looked upon as the general property of all, was farmed on the purest communistic principles by peasants who were their own masters, and were able to wander freely wherever they chose.

This state of things lasted until the Tartar invasion. Under the Mongol rule the liberties of the towns became restricted, while the power of the princes increased, and when an attempt was made to drive out the invaders, the necessity arose for a centralization of power. The grand dukes of Moscow gradually became arbitrary sovereigns, and when Ivan the Great had succeeded in freeing the country from the Tartar rule, he proceeded to subjugate it to himself. The *Vechés* were abolished throughout Russia, and the bells which had been wont to call together the citizens of the little republics were silenced for ever.

But the grand dukes of all Muscovy, and their successors the Czars of all the Russias, found a difficulty in ruling without the aid of some kind of representative councils, and accordingly the place of the *Vechés* was taken by "a series of assemblies which, although desultory and unfrequent, were nevertheless parliaments on the broadest basis of popular franchise." In 1550, a code of laws was framed by the States-General, a body consisting of the chief officials of Church and State, and deputies elected by the clergy, the nobility, and the bourgeoisie. In 1566 they were summoned to give their advice respecting the war with Poland, and in 1584 to assist at the consecration of a new czar. On his death, the line of Rurik being extinct, the States-General proclaimed his brother-in-law as his successor, and again in 1613 they met to choose a Sovereign for the vacant throne. Their choice fell upon Michael Romanof, who was obliged to swear that he would observe the conditions of a charter which was drawn up by the "council of the whole land," and which stipulated "that he would neither make new laws nor change old statutes, and that in all important matters he would not give an arbitrary decision." But soon after his accession Michael is supposed to have withdrawn this charter, and to have replaced it by another in which the conditions limiting the power of the Sovereign were omitted. What became of the original document is not known with any certainty, though a box which is said to contain it is shown in the museum at the Kremlin, but the new one is still preserved in the archives of the Russian Foreign Office. Gradually the States-General lost their power under the mismanagement of the Czar's father, the Patriarch Philaret, but after his death they partially regained their importance. In 1648 they were convoked by the Czar Alexis Mikhailovich, for the purpose of compiling a new code of laws, and again in 1653, in order to give their opinion concerning the petition of the Malo-Russian Cossacks to be taken under the protection of Russia. The successor of Alexis called them together for the sake of altering some of the privileges enjoyed by the nobles, but on his death in 1682, they were dissolved by the Regent Sophia.

With the dissolution of this assembly terminates the Parliamentary history of Russia. Peter the Great utterly disregarded the constitution which Michael Romanoff had sworn to observe. The mass of the people he despised profoundly, while he cordially detested the nobility; and accordingly his rule became a ferocious despotism, under which the nobles declined into insignificance, while the peasantry sank into a state little superior to that of the brutes they tended, and the whole of the executive power under the Czar passed into the hands of a bureaucracy, formed on the most approved German model. The "peculiar institution" of slavery had by this time produced its natural results. Originally the Russian peasant was, in every sense of the word, a free man. Gradually his liberty became restricted. In the middle of the thirteenth century a census was taken, in order to secure the regular collection of taxes, and at the same time all dwellers upon state lands were summarily forbidden to leave them without special permission; thus the custom gradually arose of allowing the rural population to migrate at the beginning and end of the agricultural season only. This custom was legalized by successive ordinances of the Czar, but the death-blow was not given to freedom till the 24th of November, 1597, when a decree was issued forbidding all peasants to leave those lands on which they should be found on that day. From that time they became mere slaves, bound to the soil, and subjected to the arbitrary proprietor of the land they tilled. Under the curse of slavery they rapidly degenerated; and when Peter the Great mounted the throne, he found himself the ruler over a nation of savages. The idea of the people having a right to share his power with him was not likely to occur to that illustrious madman, and neither he, nor any of his profligate successors, until the time of Catherine II., gave a thought to the subject. But her ideas were more extended, her views more enlightened. She wished to be popular with her subjects, she was anxious to gain the applause of the philosophers, and she longed to become celebrated as a lawgiver. In order to gain these three ends, she appointed a commission for the preparation of a new code of laws, the members of which were elected by the people, and which formed in reality a Parliament in which all classes of the nation were fairly represented. The deputies assembled at Moscow in July, 1767, and carried on their deliberations there and at St. Petersburg until the spring of 1769. From them originally emanated the idea of the numerous administrative and judicial reforms which rendered the reign of Catherine really illustrious. To them also belongs the merit of having recommended at least a modification of serfdom, and a return to constitutional principles of government; but counsels such as these proved so distasteful to even a philosophic Empress, that she promptly disbanded her presumptuous advisers. Since that time, almost a hundred years ago, no general assembly has represented the Russian nation. The Czar's power strengthened as it grew older, and an increasing population grovelled contentedly before the demi-god who adorned the imperial throne. During the reign of Nicholas the system of absolutism reached its fullest development, and until his death there seemed to be not the slightest chance of a recurrence to constitutional principle. But now all is changed. The Emperor Alexander has organized a system of reforms more sweeping than the most daring Radical would have ventured to suggest a few years ago. Slavery is abolished, justice is unshackled, Truth is requested to step out of her well, and Freedom is invited to consider herself at home. So at least declare some few sanguine admirers of the imperial policy. There are not wanting, on the other hand, gloomy critics who protest that the reforms are mere shams, that the promises of the Government are specious deceptions, and that the apparent progress of liberal ideas is really the commencement of a retrograde movement. But the pessimists seem clearly in the wrong. Much undoubtedly remains to be done, still much has been effected. The emancipation of the serfs is a measure for which the Emperor deserves the highest credit, and the legal reforms are good as far as they go. It is stated that the ancient representative assemblies of Finland are to be resuscitated, the Government having found it so difficult to feed its subjects in that province during the recent famine, that it has become inclined to recognize their partial independence. Poland might possibly obtain the same favour, if the voice of Liberal Europe could reach imperial ears; and the whole empire might after a time share in the benefits already enjoyed by its outlying dependencies. The constitutional party in Russia grows stronger every day, and, unless its influence were checked by the reaction which the Polish insurrection must create, it might even be able before long to eject its enemies from office, and to afford to the Emperor the aid of a Ministry which would possess the confidence of the nation, and enable him to fulfil the glowing promises he has made, and to complete the peaceful revolution he has commenced.

"LADY AUDLEY" ON THE STAGE.

A NEW melo-dramatic play, the story of which is that of "Lady Audley's Secret," taken from the strange wild novel of Miss Braddon, whose sudden popularity is a significant literary phenomenon of the last few months, has this week been put upon the boards of the St. James's Theatre. We have already expressed some dislike, on grounds of morality and good taste, for this class of novels. These narratives of unredeemed depravity, while pandering to the morbid thirst for violent "sensation," can neither chasten, refine, nor invigorate the mind. They fail to perform that high function which was assigned by Aristotle to the tragic art when he said that its true use is "to purge the heart of man by pity and terror;" coming thus in aid of the solemn office of religion, with examples of a spiritual power surely avenging the perpetration of sin. Such, indeed, was the object of the earliest tragedians, whose works have been preserved to us from that heroic age of Greece, when, at Athens, the old soldier of Marathon wielded his poetic "thunder-phrase" to enforce the inviolability of

Digitized by Google

the moral law, by depicting, in the Furies of conscience, the fearful messengers of the gods. And such, too, was the aim of our own Shakspeare, faithful to the same idea, which reason had suggested to the heathen, and which Christianity has more certainly revealed,—that the visitations of remorse are sent into the presence of the guilty mind by a judicial infliction, and emanate from the sphere of supernatural power. The tent of Richard, the banquet-hall of Macbeth, haunted by the ghosts of their slain, bear witness, along with the fatality brooding in the atmosphere of their final acts and preparing their foreseen destruction, to this awful lesson of a Divine punishment of crime, in the appointed anguish of the soul which has sinned. That weird imagery, however, of the mediæval or classical mythologists will not do for modern fiction. Unless the now fashionable tales of adultery and murder are to display the wreck of human nature within the breast, as an effect of violating the laws imposed by the sovereign will and wisdom ruling all, they will not serve for the moral instruction of this age. It may, however, be allowed, that a story is not always bound to supply express moral edification. To enlarge the range of our sympathies, by interesting us in the joys and sorrows, the hopes and fears, of its various personages, and by calling upon us to share the conflict of good and evil motives which divide their hearts, is still more properly its aim.

But it is essential that they should be characters with whom we *can* sympathize—that they should be capable of good, though struggling with evil, and perhaps overcome by it—that they should be human beings, and not mere demoniac impersonations of unrelenting vice. We cannot feel any real interest in the mental sufferings which may be conventionally attributed to such a one as Lady Audley, since we never find her touched by any generous or tender affection. We can understand her dread of detection and vengeance, but not her remorse. A compound of the coarsest worldly ambition, with fiendish malignity and pride, though tricked out in the external graces of womanhood, has about her so little that is feminine, or even that is human, as to make it difficult to conceive her feelings, unless she were physically tortured, or hanged. It might be possible to feel for the other persons of the story, or even to feel with them, but that they are thoroughly commonplace. Mr. Robert Audley, for instance, is the ordinary type of the social detective, who, like Mr. Walter Hartright in "The Woman in White," is obliged, by his private acquaintance with the victim of a mysterious villany, to undertake the task of its exposure. And his friend, her ladyship's first husband, whether dead or alive, behaves in so inconsequent a manner, that, while we think no man was ever more badly used, we cannot heartily echo Robert Audley's vow, "Heaven help those who stand between me and the secret, for they shall all be sacrificed to the memory of George Talboys!" The fact is, that all the characters in the book, and all the readers of it, are, "Heaven help them!" sacrificed to "the secret," which, after the middle of the first volume, is no secret at all.

Being, therefore, neither a story with a moral purpose nor one truly illustrative of human character, nor one fitted to exercise the affections and sympathies with an innocent and natural play of feeling, this novel has yet proved attractive to many readers. And so, the reports of the trial of Constance or Catherine Wilson may have seemed attractive to them as a narrative of extreme and almost incredible wickedness; over which they linger, detained by that sort of fascination which a sight of some monstrosities in nature has been said to exert. It is, perhaps, the more attractive to those once brought within its sway, because it seems so repulsive to those who view it from a distance, still walking on "in maiden meditation, fancy free." At first view, the notion that a very pretty, ladylike young woman, decorated with a waxen complexion, blue eyes, and golden hair, will compass the death of several men for the sake of maintaining her position as the wife of a country baronet, gives rather a disagreeable shock to our sense of social security and to our habitual esteem for the lovelier sex. But this rare specimen of feline craft and cruelty, as she is safely caged within the covers of Miss Braddon's three volumes, affords a piquant gratification to those who more closely study her caressing gambols, without any fear of her claws. Indeed, we are even disposed to believe that, if the lady existed in real life, and, having escaped the sentence of the criminal law, were eligible in the matrimonial market, she might, after a month's publicity in the police-courts and assize-courts, receive as many proposals from suitors for her hand as were made notoriously to a renowned female poisoner at Edinburgh, after her acquittal, three or four years ago. Supposing the motive which had prompted her crimes to be past, the vanity of her new possessor might be tickled with the idea of caressing so perilous a creature.

Lady Audley, as she appears this week upon the stage, is the same person that we found her three or four months since, in a deplorably successful book. If the public recognition of Miss Braddon's undoubted cleverness as a writer must be qualified with sincere regret, that an Englishwoman should have chosen for her literary model the abnormal creations of Balzac, we have no scruple in giving to Miss Herbert, as an actress, the praise of having thoroughly entered into the spirit of her part with an intellectual grasp of its utmost capabilities, which even improves upon the author's conception. If she has much rant to utter, it is no fault of hers. Nor is she ill-supported by the other performers, slight as is the interest of their parts. That of Luke Marks, the debauched, dishonest, grumbling gamekeeper, by whose agency, rather than by Robert Audley's ingenious pursuit, her ladyship's crimes are discovered, is played by Mr. Frank Matthews, the manager, with a humorous appreciation of the roughest manners of rustic low life; while Mr. Arthur Stirling, in the part of Robert Audley, and Mr. Gaston Murray, as the unfortunate Talboys, do their obvious business in a vigorous and manly style. The scenery, expressly painted for this play by Mr. Beverley from the laboured descriptions in the novel, has more than one good pictorial effect. Of the drama itself, as compressing within two hurried acts the leading events and dialogues of a story but too familiar to most readers of the popular fictions of the day, it is needless that we should say much. It will, however, be readily understood, that the unnatural behaviour and the improbable incidents, upon which the forced complications of "Lady Audley's Secret" depend, do not become less glaringly offensive, when detached from the less salient passages of the book and placed in close sequence upon the stage. The actual meeting of Talboys with his unfaithful wife, the altercation between them, and their mutual threats and defiance just before she throws him down into the well, serve only, as they are introduced into this play, to show yet more than in the novel how absurd is the notion that any woman in that position, though it were to save herself from an accusation of bigamy, would at once resort to open and deadly violence, instead of trying, by hypocrisy and blandishments, to disarm the anger of a man who passionately loved her. And though, in the duel of sharp insinuations and evasions which afterwards takes place between Robert Audley and the suspected murderess, the skill of both performers is most effectively displayed, we are struck with the fact that Lady Audley never attempts to seduce the man whom she has so much cause to fear, and so, while affecting to share his anxiety, stifle his first suspicion by the influence of her natural attractions. She prefers to burn him to death in his bed. In this respect, at least, the story is free from one objectionable element,—that of illicit love. It has nevertheless, in our judgment, an unwholesome moral tendency. It is an appeal to that low taste for criminal horrors which is sufficiently catered for by the Old Bailey reports, without enlisting the arts of the novelist or the dramatist for its prurient gratification. We cannot approve its success.

PURE JOY.

Practical men are often perplexed as much as they are amused by the familiar sight of a number of children launched promiscously upon a level grass-plot, and advised, in general terms, "to go and play." No set form of amusement is prescribed, and no assistance is given; the happy beings are expected to look at the frisking lambs, to consider their ways, and be playful. The most curious part of the spectacle is, that the children at once proceed to do it. They seem to understand what they have to execute, and how to set to work, as well as if some definite laws of "playing about" had existed from time immemorial. This singular faculty disappears, it is true, with the assumption of jackets. Growing boys will play for hours if they have something to play at, and they will play with the most rudely improvised materials if the circumstances are only such as render amusement illicit; but set them to disport themselves deliberately under the conditions above mentioned, and they will at once turn sulky and misanthropic. The task gets harder as the years advance; it is as reasonable to expect an infant to preach a sermon, as to expect a middle-aged gentleman to gambol. Nor is this incapacity for gratuitous exultation confined to physical sports. No intelligent person of a practical turn of mind can contemplate, without serious misgivings, the duty of becoming wildly joyful. Serenity of mind, he will probably feel, is at once easy and pleasant, if only the purse is heavy and the conscience light; but this is not nearly sufficient to reach the standard which is represented by the word joy. What is wanted is something gushing and tumultuous. "Go to," he will say, "let me now devote myself to exuberance of spirits." But what will the best

Digitized by Google

ntentions do if the spirits refuse to boil over? Jubilant rapture is delightful to look at, but it is distressingly difficult to get hold of and appropriate. With the most bacchanalian intentions in the world, how are fathers of families to begin? If history were consulted, it would be found that some nations, under the circumstances which we are considering, have proclaimed a general abrogation of debts. In modern days, nothing could be more repugnant than such a course to a well-balanced mind, unless it were the general payment of them. We do not seek such surprises or revolutions in our social relations to one another. Perhaps the wildest dream that the average Englishman could indulge in, in the way of festive re-adjustment of property, would be a day in the distant future set apart by the nations of the world for a universal restoration of umbrellas.

It is not with mere theory, however, that we are now concerned. The question of being joyful is one of considerable practical importance at the present moment. Here are twenty millions of Englishmen told that they are to make merry with all their might on a certain day of the coming week; and, what is more, there is not a man among them who is not disposed to do it to the best of his power. We are awakening, rousing ourselves from the gloom of the past year; *solvit se Teucria luctu;* in virtue of a natural reaction, if for no other reason, we should wish to dance and play. The national movement towards merry-making is thus redeemed from any touch of vulgarity by the evident sincerity which prompts it. Now, will any one suggest some good mode of rejoicing? The more inventive spirits in all the town councils of the realm have been studying the subject for weeks. Their success, we are bound to say, has hardly been equal to the emergency. If there have been any attempts to depart from the established routine, and introduce some new and grandly festive conceptions, they have been few and far between. Still, there is here and there, in the catalogue of provincial designs, a spark or two of originality. To eat and drink comes, of course, by nature, and feeding children is part of every programme; but for Nottingham alone it is reserved to add to the genial character of the day by a monster temperance gathering; and Liverpool, on the strength of its grand public room, will enliven the occasion by a "series of organ performances." For the most part, the schools are to be treated to plum-pudding; but we should have hoped that the member whom Pontefract returns to Parliament would have had sufficient influence in one branch of practical art to prevent the sons and daughters of his constituents from being "regaled with tea." At Manchester there will be, in celebration of the occasion, a "general display of flags." Bath will supply its children with fourpence apiece, and a bun. At Richmond there will be public sports; in other words, the corporation will "play about." Kidderminster alone, noble Kidderminster, proposes to roast three oxen whole. The only news from Worcester is the mysterious announcement that a hitch has occurred in the proceedings. As regards the expense of the day, the corporations may be divided into three classes. Some vote the money from the public chest, on the principle that the rate-payers are sure to be loyally-minded, and that those who can revel, and won't revel, ought to be made to revel; some consider that the funds would be best supplied by private contributions; lastly, Sunderland will be provided with amusement at the cost of its munificent mayor.

It is not without some curiosity that we have read the announcement in the newspapers of the part which the Volunteer corps are to take in the pageant of next week. At first it was proposed that the riflemen should line the streets of the metropolis through which the procession was to pass; and the proposal was not finally rejected till it was sagaciously observed that if this idea was adopted, each Volunteer would have to supply lining for about three yards of space with his own proper person. At present the understanding is that the city corps is to take the city streets for itself, while the remainder of the force is to be brought into Hyde Park out of the way of "demoralising" cabs, and far from the irritating conversation of the general public. These last will certainly have the best of it. We strongly suspect that the task of lining the streets will be one of more toil than profit. Volunteers may be men of magnificent physique, but the duty of arresting and repelling a street boy who is bent on creeping through one's legs must be a far from dignified one. Moreover, it has to be explained by what engines of coercion these Volunteers are to be supposed to act. We all know the influence which moral force exercises in problems of a political nature; but if there is any one case in which moral force is likely to break down, it is that of an aggressive sightseer. Private Jones may be a miracle of manly symmetry, and a tower of strength to his country on a field-day at Brighton; but what is the unfortunate man to do when taken in the rear by enemies who are rapid in movements, and more often butchers than not? He may not shoot them without the word of command, and he is not of a bloodthirsty disposition. Has he any resource if the proletarian in a blue frock refuses categorically to move further back? "How if a will not stand?" was the very sensible reply of the watchman to the explicit commands of Dogberry; and even the resource of letting him go in Heaven's name will not avail the Volunteer in this instance. May he go so far as to request him to come on, one at a time? May he use strong language? If so, how strong? Or will his only resource be to appeal to the police, and threaten to write to the *Times?* The War Office, with all its green books and red books, has never yet published explicit injunctions to the riflemen on the subject of lining streets.

As regards the festivities themselves, there is but one representation which it seems particularly necessary to urge upon the authorities of the various towns. Whatever else there is, let there be fireworks. Fireworks leave an impression upon the uneducated mind which even dinners fail very often to produce. Buns eaten are soon forgotten; but rockets and Roman candles live and blaze in the memory for ever. There is something much more vivid about fireworks, more traditionally festive, more suggestive of pleasurable excitement, than in any amount of dull and useful food. There is the element of wastefulness, too, in burning gunpowder, which is a very large ingredient of all true merry-making. And, more than all, a display of fireworks is essentially public. All share alike in the spectacle. There cannot be one catherine-wheel for the rich and another catherine-wheel for the poor; one touch of pyrotechny makes the whole world kin. Without any leanings towards Unbridled Democracy, and without any wish to attack the general system of things, it is impossible to help observing with satisfaction that the privilege of looking up into the air is one which it requires no intellectual or pecuniary qualification to enjoy. The millionaire may gaze at the rockets as they rush up with all the gorgeousness of their blazing tails, and think that, admitted, as the poet has it, to that equal sky, his faithful but badly-dressed fellow-citizen is at that very moment bearing him company. Let there be fireworks then, even if the roasted oxen have to be sacrificed for them. The chief object of all festive arrangements is, after all, to prove to ourselves that we are happy; but if, omitting abstract joy, there is any wish felt to give general practical pleasure, and signally to commemorate the day, the best means to devise for the purpose are those which will be most universal in their capacity for pleasing, and most vivid in their immediate effect on the senses.

ART AND SCIENCE.

AIR TRACTION.

How many of the toys of our childhood contain the scientific principles with which, in advanced manhood, we push on the civilization of the world! Boys, for instance, have gone on pea-shooting for generations, and nothing has come of it; but in our day a clever engineer has asked himself, If a pea can travel by the mere pressure of the breath along its pea-shooter, why should we not turn atmospheric pressure seeking to fill a vacuum to some account in the affairs of men, and shoot, not peas, but letters, parcels, and other light articles, through Brobdignagian peashooters from point to point under our streets? Mr. Rammell has asked this question, and finding men of substance to believe in the feasibility of his plan, has set to work, and is now shooting heavy mails of letters day by day under the streets between the North-Western Railway Station and the North-west District Post-office. The pedestrian passing along Crawley-street and Eversholt-street in that neighbourhood may hear a loud rumble under ground, but he little dreams that, like swift shuttles, carriages are shooting to and fro all day long beneath the roadway between the two points we have mentioned; and, as a consequence, that the red mail-carts that of old tore along the highway are now seen no more, being beaten out of the field by the peashooter beneath his feet.

The cradle of this new drudge that man has called into service to do his bidding is a modest brick shed near the bottom of the Euston-square Station, which any one is free to enter, and when he does so he is puzzled mightily to understand the use of the strange engines he sees before him. There is the mouth of the tube, and there are the travelling trucks, ready to be thrust into it; and as we look, a bell rings at some little distance up the rail—this is a signal that a mail-train has arrived at the Camden station, and that it will speedily be at Euston-square. At this signal we hear a shovel of coke thrown into a furnace, a small steam-engine begins to beat swiftly, and a whirring sound is heard within a great iron case which is noticed on one side of the shed. This, we are informed, is the pneumatic wheel—the mouth, in fact, which is to propel or draw the trucks through the tube. This wheel is 21 feet in diameter, and is composed of two discs of iron, not placed quite parallel to each other, but tapering off from axis to periphery. These discs are braced together by spoke-like parti-

Digitized by Google

tions, and these partitions communicate with an opening for the entrance of air about the axis. As this wheel rapidly revolves, the air is sucked in at its centre, and thrown off in a perfect gale at its open rim or edge. This gale is not allowed to disperse itself, however, but when any work has to be done, is confined within a case, just as a paddle-wheel is confined within a paddle-box, and allowed to pass out at the will of the engineer through a pipe in connection with the great pneumatic despatch-tube. In like manner, the air that is sucked in at the axle is all conducted from the despatch-tube by a similar pipe. Here, then, we have the means of pulling or pushing the travelling-carriages along their subterranean road, and as we speak we see it in operation; for a mail-guard opens a door, throws in two or three mail-bags just snatched out of the guard's van as it rolls into the station, the iron carriages are shoved into the tube, the air-tight door at its mouth is closed, and the engineer, with a turn of a lever, directs a torrent of air upon them, and we hear them rumbling off on their subterranean journey at a rate, as we are informed, of twenty miles an hour. Ere we have done looking and wondering, we notice that a water-gauge, on which the eye of the engineer has been fixed, becomes depressed at one arm and elevated at another. "It has arrived," he says; and almost ere he has said it, a bell connected with an electric telegraph warns him that the attendant at the other end of the tube is about to thrust the carriage into the tube on its return journey. It had been pushed along, as we have said, by the pressure of air thrown out by the wheel, but it has to be pulled back by suction; the valve of the suction-pipe, in connection with the centre of the disc, is accordingly opened, and speedily we hear a hollow rumbling, and out shoots the carriage, ready once more for fresh bags. At present 110 mails pass in this way from the station to the district post-office during the day, and not only letters but trucks of iron of the weight of five tons have passed, and adventurous visitors now and then perform the journey to their great delight. The principle having been thus practically tested, the directors are getting ready to lay down a 4 ft. 6 in. tube between Euston-square terminus and the W.C. district Post-office at the corner of Southampton-street, High Holborn, and thence along Holborn-hill to Smithfield Market, the General Post-office, and the depôts of the great carriers in Gresham-street, Messrs. Pickford and Messrs. Chaplin & Horne, both of which firms have entered into an arrangment with the Pneumatic Despatch Company to carry their parcels to and from the station. Without doubt, before long, all the main thoroughfares will be traversed by these swift shuttles, passing to and fro by the impulse of the air—performing the part of letter-carriers between distant parts of this great metropolis, and consequently multiplying the deliveries, and shortening the time in which they are transmitted, giving us also an hour or more later for writing our country letters than in the old days of the mail-carts which may be expected to grow as scarce as mail coaches. But the public will scarcely gain less advantage from the action of this invention as a carrier and a parcel delivery company. Our streets are at present blockaded at certain times of the day by the three-horse railway waggons passing between the great carriers and the railway termini. This traffic will be greatly lessened, if not totally annihilated, as the Pneumatic Despatch Company ramify their carrying-tubes through the metropolis, and pass underground the goods going from station to station, and again from the stations to our great markets. The magnitude of this traffic is only known to those who carry it on. Taking Camden Town as one of the stations which supply the London commissariat, we find that a hundred tons of meat and poultry daily pass thence to Smithfield, and ten tons of butter; whilst thirty tons of fish pass daily from Billingsgate to the railway station, and an equal weight of oranges and dried fruit escapes into the country by the same outlet. We scarcely dare say how many tons of vegetables are brought into Covent Garden Market by the spring carriages of the different lines, but we may mention that the South Eastern Railway one morning delivered in that market no less than 13,000 baskets of fruit; whilst as much as two hundred tons a day of rhubarb and other vegetables are sent northward from the Camden Station. A very large share of this immense daily traffic will doubtless fall into the hands of this company, as they will be able to carry so much cheaper and much quicker than the ordinary vehicles possibly can do, and they will be able to deliver directly into the market, and beside the rail.

But, says the reader, if such heavy traffic as this is contemplated by the promoters of the new carrying system, why not carry people as well as goods? That is just what Mr. Rammell contemplates doing. The great success of the Metropolitan Railway has proved that the public is not adverse to subterranean transit; and, indeed, the impossibility of providing sufficient space above ground over the more crowded portions of the metropolis, has necessitated this method of underground intercommunication. Hence we do not fancy there will be any objection on this score. But, the reader will remark, the atmospheric method of propulsion has been tried, and proved a failure. But that was a system by which carriages above ground were moved by a small piston working in a pipe underground, and the expense of exhausting the air was too great to compete with locomotive traction. A pressure of 10 lb. on the square inch was required to move this piston; a pressure of 5 oz. is sufficient to move the carriages that Mr. Rammell proposes to drive inside his tubes; and the reason is evident. Each carriage will present an area of say 9 feet square to the atmosphere; in other words, the augmented area makes up for the diminished pressure. But, says the affrighted reader, this projector does not intend that we are to ride in a dark tube with the pressure of a gale of wind blowing upon us? At first sight the objection does seem a strong one; but we must remember that the carriages would be going with the gale, and, therefore, it would not be felt. There is something exceedingly novel in the method by which Mr. Rammell proposes to work the traffic. Groups of carriages would be placed at distances coinciding with the stations, and these carriages would be worked by the elastic rope of air in a continuous circuit, just as we see the buckets in the dredging-machines on the Thames working in an endless chain—one set of carriages going along one side of the double tube, and another returning by the other tube. It would be so arranged, however, that between station and station only one group of carriages could by possibility be in the tube at the same time, thus preventing any possibility of accident either by collision or by one carriage overtaking another. It is needless to say that as the atmosphere in these railway tubes would be circulating every moment, there would be perfect ventilation;—we say tubes, but they may be brick arches, put such as those of the Thames Tunnel, only much smaller,—a headway of nine feet, with a width of eight, being quite sufficient for the passage of very roomy carriages, seated like an omnibus and lighted like an ordinary railway-carriage. The plan seems so utterly strange that the reader may shrug his shoulders and doubt its practicability; but that part of the business has been disposed of at Euston-square, and we are informed that the whole plan of operations will, in all probability, be tested in public ere long. It luckily happens that, at the present moment, the main high-level intercepting culvert at Hackney Marsh, which runs under an embankment for three miles in length, will be lying idle for many months, as it will not be required for the metropolitan main drainage scheme; and in these culverts, if he gains the commissioners' permission, he will erect his pumping machinery and run his trains. We are told that traffic can be worked considerably cheaper by this method than it can be done by the locomotive, and that the cost of constructing an underground rail on this system would also be one-third less than the cost of the Metropolitan line. These are matters which have to be brought to the actual working test; at the same time, the comparatively diminished area of tunnelling required, and the great gain consequent on the abolition of the heavy locomotive, which is so destructive to the rails, tend to corroborate the correctness of the statement. Gradients which would be impossible to the heavy locomotive are ascended and descended with perfect ease by means of the elastic rope of air. For instance, the ascent and descent of the Fleet Valley at Holborn-hill and Snow-hill, will be as easily worked as the level road, and the train can work through sinuous curves which would be fatal to the locomotive. The strong pressure public opinion is bringing to bear upon the Government in favour of keeping the few open spots we have in the metropolis, will doubtless be fatal to many of the schemes which propose to cut and carve our great city in all directions. It seems, therefore, that a scheme which can be worked underground in a space not larger than that occupied by good sized culverts, and which would not interfere with the great drains—for in the main thoroughfares, such as Oxford-street, there is ample room between them and the roadway—stands a good chance of obtaining public favour. Of course we speak in the public interest only, and the experimental trial at Hackney Marsh will soon give us the public verdict one way or the other. But whether this prove to be only one of those abortive schemes which Time gathers year by year so plentifully in his wallet, or a great invention, there can be no doubt that the Pneumatic Despatch Company have established their principle of working, and that this great city will henceforth have its lighter traffic and parcels and letters carried on by a circulation of air ramifying in a network of tubes through soil, as the human body was supposed to be supplied by a similar circulation, before the time of Harvey.

WHO PHOTOGRAPHED THE MOON?

THE tendency shown in scientific quarters of late, by certain persons, to appropriate the merit of discoveries and accomplishments of others, renders it well that—without paying any regard to those minor squabbles about priority which, in the active competition between scientific investigators, ever will occur—public attention should be from time to time drawn to those more important cases where seemingly attempts are made to rob a justly-earned fame, or to gather boasted laurels by pilferings from others' works. Last year the Astronomical Society awarded their gold medal to Mr. Warren De la Rue for his numerous and most successful applications of photography to practical astronomy, and amongst the various applications so admirably conceived and so effectively carried out by him, was a series of enlarged photographs of the moon. Exquisite photographs had been previously taken with Mr. De la Rue's very fine telescope, and the magnified images of them were received on sheets of photographic paper: views of any size, up to 18 inches or more, according to the power of the lens employed, were thus obtained. These views, it is evident, must possess every detail of the original pictures, down to the most delicate gradations of tints and half-tints. Such maps of the moon were at once appreciated by astronomers, and even persons of no scientific turn of mind dwelt with delight over those displays of the great mountain ridges, enormous craters, and the extraordinary physical features of our companion world. Subjects so popular were not likely to remain long unpublished, and Messrs. Smith and Beck advertised copies for sale.

The original photographs by Mr. De la Rue are about an inch across, and copies of a selection of these, showing various

Digitized by Google

phases of the moon, are sold by Messrs. Smith & Beck in the neat form of a folding book. Moreover Mr. De la Rue, not content with merely getting single photographs of our satellite, took double or stereoscopic views, and some of these, also reproduced under his sanction by Messrs Smith & Beck, have proved so attractive to the public as to have reached an enormous sale. That Mr. De la Rue should have imitators was not to be wondered at; and that any one should attempt to outvie him in his own domain—for such by the most meritorious and incessant labours he has made astronomical photography,—was not only to be expected, but was a fair and honourable rivalry. No surprise was therefore felt when before the meeting of British *savants* at Cambridge last year, a book of Selenography was displayed, illustrated with enlarged photographic views of a portion of the moon's disc. So little astonishment was felt at such a competition that neither the publishers nor the astronomer who made the originals suspected they were looking at copies of their own works; and it was only when attention was drawn by a young astronomer to a spot in M. D'Orsan's plates which he could not find by telescopic inspection on the moon's surface, that the idea of anything wrong was conceived. But as this particular spot was due to a defect in De la Rue's *original* photograph and had no existence on the moon at all, suspicion was naturally aroused, and, on a closer inspection, it was found that there were not less than twelve or fourteen similar and equally palpable cases in D'Orsan's photographs of the occurrence of defects that existed in De la Rue's original. Moreover, some defects which had been transferred were too prominent to escape D'Orsan's attention, and have been, without doubt, "picked out" of his plates and subsequently painted over. Any one may see this for himself by rubbing a wetted handkerchief over these places, when specks of the white paper will show up from beneath, just as when an artist "takes out" in the like manner from a water-colour drawing. In order to make this matter more intelligible, we will explain what these spots are, and how they are caused. In the first place, they differ from the shadows of mountain-peaks or crater-cavities, or any other natural shadow, in not being softened off at the edges. They were produced in this way. When the collodion was spread over the plate, minute bubbles of air got inclosed in it, and subsequently burst; or little points of grit turned off the collodion. Thus were left, in one of these ways, little holes, no bigger than the finest pin-points, in the collodion film; holes so small that it requires a microscope of twenty linear power to see them distinctly. These little holes, however, in the printing of the positive views from the original negative, let the light through, and were printed as minute solid black dots. When the small originals were magnified into large plates, the magnified representations of these dots in the enlarged views became conspicuous, and where they occurred in prominent parts of D'Orsan's plates, were evident defects; hence the scraping. Some, however, were not so evident, as, for example, one between the craters Orontius and Sasserides, on a low flat-topped mountain or wall-less crater, and which, doubtless, got mistaken for the shadow of a volcanic funnel or vent. This is the spot first detected, and has no existence on the moon at all, as numbers of other photographs by Mr. De la Rue prove, and as any one who possesses a telescope may see for himself.

But this is not all. M. D'Orsan as yet has published but two plates. These are professedly representations of the moon at two stages of her age, but in reality one is an exact, and the other a "doctored" enlargement of the best positive of one of Smith & Beck's stereoscopic slides printed from De la Rue's originals. Now these two views of D'Orsan's not only correspond exactly with each other, and with De la Rue's photograph in respect to the details and portions of the moon's surface pourtrayed, but also in respect to the direction, extent, and size of the shadows, and in the amount and direction of the illumination of every object in them, with the exception that in the first of D'Orsan's plates portions of the anterior margin of the moon's portrait have been "stopped out," and are consequently entirely absent. There is another important point. As the moon ages, we all know more and more of her disc appears, and when she wanes gradually less and less is seen. Now, the painting out of a part does not produce the same effect as the moon exhibits. As part after part of her surface comes gradually into view, the tops of the highest mountains catch the light before the lower levels; and so, if we take Smith & Beck's No. 3 view—D'Orsan's No. 2 copies being from Smith & Beck's No. 4—and compare it with D'Orsan's No. 1, we shall see that while in it all the plate is perfectly black over the area of the "stop-out," there are numerous objects in De la Rue's beautiful original—some faintly, some more or less brightly lighted up. Amongst them is one remarkably conspicuous, perhaps the most extraordinary of all the remarkable objects on the moon—the gigantic crater, Tycho. Setting aside the impossibility of the moon's showing at different periods of her age the same illumination of her disc, and setting aside the still greater impossibility of such a concurrence of variable circumstances and relations as would be necessary to produce such a result happening at the wider period that D'Orsan states to have elapsed between the times of taking his and De la Rue's photographs, how is M. D'Orsan to account for the extraordinary absence of Tycho? "Painted out" is, we think, the only possible explanation. Whether M. D'Orsan's capabilities of literary appropriation be any criterion for estimating his capacity for the exercise of a similar propensity in a scientific matter, we would not hazard any expression of opinion. But we put below a passage from M. D'Orsan's book, and one from one of the memorable Dr. Chalmers' sermons, preached many years before lunar photography was thought of.

From Dr. Chalmers's Sermons, edited by Rev. Wm. Hanna, published by Constable, Edinburgh, and Hamilton and Co., London, 1855, vol. iii., page 20:—

. . . . "Who can question it? What is seen may be nothing to what is unseen, for what is seen is limited by the range of our instruments. What is unseen has no limit; and though all which the eye of man can take in, or his fancy can grasp, were swept away, there might still remain as ample a field . . . . which the Divinity . . . . may have peopled with innumerable worlds."

From D'Orsan's "Our Satellite; or, Selenography according to the present State of Science," part I., page 17, published 1862:—

. . . . "For who can question it? What is seen is nothing to what is unseen; for what is seen is limited by the range of our instruments. What is unseen has no limit; and though all that the eye of man can take in, or his fancy can grasp, were swept away, there might still remain as ample a field as ever, which the Deity might have peopled with innumerable worlds."

The remarkable similarity of these passages may be accidental. But considering there are many more examples, if M. D'Orsan should hereafter prove himself innocent of having taken to himself words and views that belonged to others, it will still have to be recorded as an inexplicable psychological fact that he thought exactly like Chalmers, and photographed exactly like De la Rue.

There is but one course open to M. D'Orsan. Let him at once state the dates on which he took his photographic views—if he ever took them at all; let him say where they were taken, with what telescope; and these three data given, the scientific knowledge possessed of this particular subject is such, that the truth or falsity of any statement could be made intelligible to every child in the kingdom. If he has been guilty of copying let him boldly aver it, and render De la Rue the justice that is due to him. For proving his right no testimony of witnesses is required; no challenges nor inspections are needed. But if M. D'Orsan refrain or hesitate to speak, the conviction in every competent mind will be dead against him.

THE SMALL ARMS TRIAL.

THE proceedings of public bodies are very often far from intelligible; even when the object is distinctly stated, it not unfrequently happens that the adaptation of the means used to the end proclaimed, is not evident to ordinary perceptions. Of this latter phase the annual small arms trial at Plumstead Marshes seems to us an example. The ostensible object would seem to be the classification of weapons permissible to be used in the different shooting-matches at the riflemen's grand trial of skill on Wimbledon Common; but any direct bearing between the trials at Plumstead, as at present arranged or permitted, and the ostensible object of the society, comparing the qualities of the rifles of various manufacturers, we think can hardly be extracted from the circumstances. In point of fact, the trials which have terminated during the past week have practically resolved themselves into a trial—not of rifles, but of rests. Not only may rifles of any calibre not less than ·450 inch be used, but each party may choose his own ammunition; consequently, there can be no possibility of the comparison of the value of one method over another in the various forms of grooving rifles adopted by the manufacturers, most of which are possibly neither improvements nor strictly inventions, but simply alterations to avoid the infringement of previous patents. Scientifically, the question of rifling reduces itself to this: the twist in the barrel of the gun giving the rotatory motion to the shot, there remains theoretically a best practical form of bore and a worst form of bore. When the gun is fired the impact of the explosion, acting on the rear end of the bullet, drives out the metal laterally. If, then, the section of the bore presents an elongated parallelogram, it is evident that a great part of the projectile force of the powder must be wasted in driving out the metal of the bullet into the angles of the bore, and that if this were not so driven out effectually, a considerable further waste of the explosive gases would occur through their finding an uninterrupted egress through vacancies between the imperfectly expanded ball and the corners of the rifling. This is the worst conceivable form, and no gunmaker, of course, would adopt it. The form which is theoretically the most correct is Lancaster's. In his guns the bore is an oval, deviating in the slightest practical dimensions from a true circle. It is obvious that the slightest amount of the projective force only is required to drive the ball into the shape of this bore, and that there are no angles at which any particle of force can be lost by an escape of the explosive gases. The old angular rifling was adopted under the idea that it was necessary for the bore to grip the bullet in order to ensure its spiral horizontal motion through the air; then grooving was introduced under the idea of forming ridges on the bullet to slide along in the grooves. But whatever form of rifling be adopted by our best makers, their knowledge of principles is so great, and their practical manufacture so excellent, and the superiority of one man's weapon over another is so slight, that for practical purposes they are admitted to be equal. As a proof of the real value of the Plumstead trials, we may point to the differences they present when compared with the results of the ten months Government trials of last year. It appears that at 500 yards the shooting given in the Government trials with three weapons, Lancaster rifles gave an average of 6·08 inches; at 1,000 yards, 22·52 inches: while it will be seen, on a reference to the tables of the present trials, that even with a hardened bullet and

Digitized by Google

what is termed a mechanical fitting ball—that is, one manufactured in dies to the form of the bore—the rifles tried by the National Rifle Association failed to achieve an equal result:—

The returns for Plumstead are:—

At 500 yards:—Whitworth, ·57 feet; Turner (?); Baker, ·65; Parsons, ·73; Bissell, ·87; Aston, ·91.

At 1,000 yards:—Whitworth, 1·64 feet, 2·10, 1·50; Parsons, 2·37, 1·94, 2·16; Baker, 2·74, 2·78, 2·73; Turner, 3·02, 2·65, 2·47; Bissell, 3·40, 2·89, 2·97.

It will be observed that the Government and the National Rifle Association returns are made in figures of different value. The Association returns being in feet will have to be reduced into inches for strict comparison with the Government returns. Much misapprehension appears to exist in respect to the term "mechanical fit." It must be conceded that, if the leaden cylindrical bullet be perfectly expanded by the impact of the powder, no fit can be more perfect to the bore, that is more *mechanical*. If, therefore, any particular form of rifling, such as the hexagon, requires a ball to be cast or "swedged" into the form of the bore in order to develope its best shooting, it is a proof that the work to be done by the cylindrical bullet in adapting itself to the form of the bore at the moment of discharge is greater than can be fulfilled under the conditions employed; as a consequence, the lead does not entirely fill up the interior of the bore, and the gas escapes at the angles of the hexagonal cutting, making a deep serration on the lead surface. If further proof be wanted, the difference of angle of elevation as required for the same rifle when the mechanical fitting and the ordinary cylindrical projectiles are respectively used would be quite sufficient to entirely support this position. It may be laid down as an axiom, that in proportion to the depth or angularity of the grooving, so will be the ratio of failure when the only ball applicable to military purposes, the cylindrical, is employed.

With respect to the cleaning-ramrod employed by Mr. Whitworth, it was only a resort to an old principle. Twenty years ago it was a maxim amongst riflemen to "clean your weapon after every shot." What riflemen then did openly, Mr. Whitworth tried to do covertly. There is no doubt it was against the rules, and which, by ingenious special pleading, it may be tried to cover. We do not know whether, with the knowledge one has of everyday transactions, Mr. Whitworth should be blamed for trying to get a "pull" over his competitors; we are disposed to blame him only for getting found out.

The question of rests, however, in these annual trials, is a serious one. The heavier the slide the worse the shooting; and if any screw be tightened, it seriously affects the accuracy of the shot, and this to such an extent that a quarter of a turn of a screw, by making any part of the rest rigid, will entirely destroy the efficacy of the rifle.

It appears to us, then, that if the National Rifle Association are seeking for the best form of weapon, no particular speciality should be allowed to any person; that all rifles ought to be tried by the same officers, without any interference from the makers; and that all competitors should be confined to the same kind of ammunition, which should be announced by the committee in sufficient time prior to the contest to enable manufacturers to make their weapons of suitable dimensions.

MUSIC.

HANDEL'S greatest choral work, "Israel in Egypt," was given on Friday week, by the Sacred Harmonic Society, with a general completeness and efficiency which left but little to be desired. This colossal work, marvellous in its grandeur, and equally so as being the product of less than a month's labour, exhibits Handel in his most learned aspect—fugue and counterpoint being here more abundantly employed than in any other of his oratorios. Although Handel's musical education, like that of his great contemporary Bach, was based on a study of the severe classical composers of the Church school, Handel, unlike Bach, devoted his early years chiefly to the composition of dramatic music—and when he afterwards occupied himself with that grand series of oratorios by which his name will chiefly live, he frequently mixed the secular and sacred styles in a manner that is sometimes felt to be somewhat incongruous. Allowing an oratorio to be a sacred drama, involving impersonation and characterization, and thereby necessitating some expression of human passion and emotion; still, the language and sentiment appropriate to sacred characters and situations should be conceived in a more lofty and abstract tone than such as would befit stage heroes and heroines. In some of his oratorios, Handel, from the concessions which he made to public taste, has overlooked this broad distinction, and has mixed up the grand and the pretty, the sublime and the popular styles, in a manner that, judged by the canons of high art, is, to say the least, anomalous. "Israel in Egypt," however, is a remarkable exception among the oratorios of Handel, as consisting almost entirely of choruses, mostly conceived in the highest, some in the severest style of the art. True, this work, unlike most of Handel's other oratorios, is not dramatic in its form; the words are selected from the Holy Scriptures, and there is no characterization or impersonation. Probably it was owing to these causes that "Israel in Egypt" met with but small success in Handel's own time, notwithstanding the omissions and additions, and interpolations even of Italian songs, with which it was sought to attract the public to the few performances which were given of the work. It was reserved for later generations to appreciate this oratorio as it deserves, and to rank it as one of the grandest and most sublime compositions within the whole range of the art. In "Israel in Egypt" we find all the scholastic learning of the great Italian school of church music, combined with a sublime poetical sentiment, which render the work a marvellous compound of art and imagination. To the Sacred Harmonic Society, we believe, belongs the honour of having revived "Israel in Egypt" in its original form, and divested it of those alterations by which a great work has been long disfigured. The crowded (indeed too crowded) state of Exeter Hall on Friday the 27th, afforded one among many current evidences that there is now a public, and a large one, for music of the highest and sublimest order; and probably few, if any, of that vast throng would have desired any of those *ad captandum* interpolations by which it was sought to coax former audiences to the performance of "Israel in Egypt." The general execution of the choruses was far superior to what we were accustomed to from English choristers of a few years since. There was more of light and shade, and less coarseness and vulgarity of tone than might fairly be allowed for among so large an assemblage of singers, of whom it would be too much to expect that every individual should be a refined and finished artist. The fact is, the executants are too numerous, and this is one of the signs of the modern tendency to an exaggeration by which many of the minuter details and shades of expression must be lost. Even in the large room of Exeter Hall, a select band and chorus of about one-half the boasted number of "nearly 700 performers," would produce quite a sufficient volume of tone, be much better able to execute with precision passages of any rapidity; and infinitely more likely to realize those delicate gradations and inflections which give life and colour to a musical performance. There are few conductors who could sway like Mr. Costa so large a multitude as that over which he presides; and, at times, it requires all his indomitable energy and force of will to keep these numbers in consentaneous action. In the performance of Friday week the choruses, which, as usual, pleased the most, were "The hailstone chorus," "He rebuked the Red Sea," with its following noble fugue; and the grand choral climax, "The horse and his rider." The solo singers were Miss Parepa, who has few equals in versatility and general efficiency, Miss Marian Moss, Madame Sainton-Dolby, Mr. Montem Smith, Mr. Weiss, and Mr. Lewis Thomas. The great duet for two basses, "The Lord is a man of war," admirably declaimed by Messrs. Weiss and Thomas, was one of the most effective performances of the evening. The Popular Concert of Monday last comprised among the instrumental selection—Weber's pianoforte solo Sonata in E minor, and Mendelssohn's Sonata for pianoforte and violoncello in D. Of Weber's four solo sonatas, those in E minor and A flat are most thoroughly representative of his peculiar genius and of the romantic school; the first-named work bearing especial traces of the composer of "Der Freyschütz," in that combination of wild gloom, melancholy tenderness, and passionate vivacity which places his pianoforte works next after those of Beethoven as the music of characteristic expression. Mendelssohn's Sonata is one of those outpourings of vehement and triumphant joyousness in which, although a work of his middle period, is to be traced much of the influence of his early admiration of Weber's impulsive style, as also of that master's brilliant pianoforte passages. Both these works were, of course, admirably played, the pianiste in each case being Madame Arabella Goddard; the violoncellist, in the latter instance, Signor Piatti. Beethoven's last quartet (op. 135)—one of those marvellous musical reveries which are not yet accepted by those who adhere to the conventional forms of the art—and a quartet by Haydn, completed the instrumental selection. The vocalists were Mademoiselle Corbari, and Mr. Wilbye Cooper, who replaced Mr. Sims Reeves, absent from indisposition. Mr. Lindsay Sloper, as conductor, was a worthy *locum tenens* for Mr. Benedict.

THE PAST WEEK.

EVERY other topic sinks into insignificance in comparison with the happy event which England begins to celebrate to-day. The heart of the nation throbs with a universal emotion of joy, and whatever the loyalty of a free and prosperous people can do to pay homage to the royal pair who in the bloom of youth are about to unite their hands and hearts in the holy contract of marriage, has been prepared with all the magnificence ingenuity can devise or money can procure. The sun has but to rise upon us this morning with the same gladdening face with which he has looked down upon us during the week, in order to complete the glory of the pageant with which England welcomes her future Queen.

On Thursday week—the day fine and mild—the Princess Alexandra commenced her royal progress from Copenhagen, and her departure presented an imposing spectacle. All the houses between the palace and the railway station were adorned with garlands and hangings, and decorated with English and Scandinavian flags. Immense crowds thronged the streets through which she had to pass; and at three o'clock, accompanied by her parents, Prince Christian and Princess Louise of Denmark, and her eldest brother, the fair Dane set out from the palace escorted by the Hussars of the Guard, under a benediction of flowers rained upon her from the windows along her route. At the station she was received by a guard of honour splendidly decorated; and there

Digitized by Google

the Ministers and high functionaries, the municipal authorities and the *élite* of Copenhagen being assembled, the Chief President of Copenhagen delivered a farewell address to her. From Copenhagen to Korsör, where she arrived in the evening, her reception at all the railway stations was enthusiastic, the peasants pressing forward in crowds to welcome her. Korsör was splendidly illuminated. The Mayor delivered a congratulatory address to the Princess. The Burgomaster, too, unburthened his feelings in a speech, in which he dilated on the congenial topic of the Prince of Wales's virtues, and all Korsör expressed its joy in a grand display of fireworks. Early on the morning of the 27th, the Princess embarked on board the Royal steam-ship Slesvig, and at four in the afternoon arrived at Kiel. At a quarter past six in the evening, her Royal Highness left Kiel for Hamburg, whence she departed for Hanover at ten, on the morning of the 28th, arrived there at a quarter to three on the same day, and there she was welcomed at a banquet in the Royal Castle of Herrenhausen at five on the following day. She left Hanover at one p.m. on the 1st instant, and reaching Cologne in the evening, passed the night at the Hôtel Bellevue, in Deutz. At ten a.m. on the 2nd the Princess left Cologne, and arrived at Brussels at four in the afternoon. There she was received with great ceremony by the Duchess of Brabant, the Count of Flanders, the Burgomaster of Brussels, and the English and Danish ambassadors. The weather was magnificent, and an immense crowd assembled along her route through the city to the Palace, where she was entertained at a state dinner in the evening. On the following morning—with the members of her family, the Duchess of Brabant, the Count of Flanders, and the principal persons of her suite—the Princess visited the King of the Belgians at Laeken.

Leaving the Princess at Brussels, we will now state briefly the programme of her arrival and the procession through London. The royal yacht will arrive off Gravesend Terrace-pier at eleven o'clock this morning. The Prince of Wales will reach Gravesend in time to go on board the yacht at half-past eleven, and the landing will take place at twelve. At a quarter before one the royal train will start from Gravesend, and arrive at the Bricklayers' Arms station at twenty-five or twenty minutes before two. Then the members of the Royal families will partake of a slight luncheon, and will enter their carriages to leave the station at about five minutes to two. The procession through London will be at the pace which a carriage-horse ordinarily walks, so that it will reach London Bridge at about a quarter-past two; Temple Bar at about twenty minutes or a quarter to three; the entrance to the Park at about half-past three; the Marble Arch by ten minutes to four; and the Paddington station by, at latest, twenty minutes past four.

By command of the Queen, the Crown Princess of Prussia held a drawing-room on behalf of her Majesty, on Saturday afternoon, at St. James's Palace, when 250 ladies had the honour of being presented, 500 more attending the reception. This honour is equivalent to a presentation to the Queen, but we regret to see that it was obtained at the customary cost of convenience and damage to the ladies' dresses. Why is the unseemly scramble of these occasions persisted in, when the remedy is simple and obvious? When the last additions were made to Buckingham Palace, it was announced that the new rooms would be so constructed as to admit of their being used for holding levées and drawing-rooms. Has this promise been kept? and, if so, is there any insurmountable reason why the ladies attending drawing-rooms should be passed through a species of royal mangle?

The latest telegrams from Malta announce the continued improvement of Prince Alfred's health.

Last week Mr. Hennessy gave the House of Commons an opportunity of expressing its opinion on the wrongs of Poland, and the expression was unanimous. If opinion could restore its rights to a people, the Poles are in a favourable way just now to become again a nation, for throughout Europe there is but one mind as to the justice of their cause. Even in Russia it is doubtful how far the Government can depend upon the weapon, its army, with which it is endeavouring to put down the insurrection; for Russian soldiers have, in more than one instance, returned to their depôts without arms and without wounds. In the Prussian Chamber of Deputies the debate on the affairs of Poland closed on Saturday, with a majority of 260 against 57 in favour of the motion of Herren Hoverbeck and Carlowitz recommending neutrality in the Polish question, and asking that both Russian soldiers and Polish insurgents should be disarmed upon entering Prussian territory. In our own House of Commons, though Mr. Hennessy's motion for an address to the Crown—representing that the treaty obligations of Russia towards Poland had been broken, and submitting that their breach demanded the interposition of England—was withdrawn, no speaker doubted that the oppression of the Poles deserved at the hands of civilized nations the strongest condemnation. Lord Palmerston, while hoping that Mr. Hennessy would not press his motion, denounced the late act of conscription as most barbarous; a cruel political piece of tyranny under the pretence of a military measure. To a sovereign gifted with the feelings of the Emperor of Russia, he could not doubt that a military success would be a signal calamity. If the insurrection was put down, he would have a country in which the plains would be bathed in blood and the towns be smoking ruins. Lord Palmerston, however, denied, what Mr. Hennessy seemed to have assumed, that our obligations under the Treaty of Vienna bound us to interfere. They gave us the right to do so; but between treaties which give the right to interfere and those which impose an obligation to do so there is a real and substantial difference. He trusted the House would leave the matter in the hands of Government. To this the House assented.

On Monday, in the House of Lords, the Duke of Somerset moved the second reading of the Naval Coast Volunteers Act Amendment Bill. He stated that on the 1st ult. the number of Royal Navy Reserve men was 14,000; of Coast Volunteers, 8,000; of Coastguard on shore, 3,000; and of Coastguard in ships, 2,000. The total number of men available as a reserve was 28,000, which would be increased by the end of the year to 30,000. The only drawback to this great scheme was that the Coast Volunteers were not to be taken more than 300 miles from the shores of the country. The Bill proposed to reserve to the present Volunteers the limit on which they had taken service, but not to enter any more men with that limitation. The Bill was read a second time. In the Commons, the Tobacco Duties Bill was read a second time. The Corrupt Practices at Elections Bill, and the Births and Deaths Registration Bill (Ireland) also engaged the attention of the House. On the motion of Lord Palmerston, the Select Committee on Promotion and Retirement in the Navy was nominated as follows:—Mr. Walpole, Sir Francis Baring, Sir John Pakington, Lord Clarence Paget, Sir John Hay, Mr. Stansfeld, Sir James Elphinstone, Mr. Ayrton, Sir Henry Willoughby, Sir Harry Verney, Sir William Miles, Mr. Finlay, Mr. Maguire, Mr. Dodson, and Mr. Scholefield; with power to send for persons, papers, and records; five to be the quorum.

In the Commons, on Tuesday, the Regent Circus Bill was defeated on the second reading. This was one of the twenty-eight metropolitan railway bills of which we have heard so much of late as threatening the disfigurement of London. Mr. Harvey Lewis moved, as an amendment to the second reading, that the Bill be read "this day six months." Mr. Robertson, in opposing the amendment, explained that, of the twenty-eight bills which had been proposed, nineteen only affected the north side of the Thames. "Of these," he said, "six had perished by their own weight; four more had no new works in view, but related merely to internal arrangements by the railways themselves. Of the remaining nine, three were merely junction lines, of perhaps a few chains in length and mostly outside the metropolis, and one (the Ludgate Station) was not a new work, having been already sanctioned by Parliament in connection with the London, Chatham, and Dover Railway. Deducting these four from the residue of nine, there remained five bills, of which four had been already read a second time, either in that House or in the House of Lords. So that the Regent Circus Bill, now under consideration, was the only one of the twenty-eight left, and a simpler case a committee could never have been called upon to deal with." The House was not of this opinion; and the second reading was lost without a division. Subsequently Mr. M. Gibson stated that, in consideration of the importance of the subject of metropolitan railways, he had given instructions to an officer of the Board of Trade to devote himself to investigating and reporting upon the general character of the metropolitan railway schemes. His report would be laid before the House. Mr. Torrens moved for a Select Committee to inquire into the legality of enclosures which had been made in Waltham, Epping, and other forests of Essex, in consequence of numerous sales of the rights of the Crown by the Commissioners of Woods; and to ascertain what steps should be taken to preserve the rights of the public, of the poorer foresters, and the inhabitants of the metropolis. The Attorney-General objected that such a motion would erect a Committee of the House into a court of judicature to try the rights of individuals as opposed to the rights of the Crown. But he consented, by way of compromise, to a committee "to inquire into the condition and management of the royal forests in Essex, and into any enclosures which may have taken place therein since the report of the commissioners of 1850, and to consider whether it is expedient to take any steps for preserving open spots in some forests." Mr. Torrens accepted this proposition, and withdrew his motion. On the motion for the reading of the Municipal Elections Bill, which proposed to allow votes to be taken by ballot, Mr. G. Hardy moved that the Bill be read a second time that day six months. Lord Palmerston, as he had always been an opponent of the ballot, and as the supporters of the Bill avowed that it was the first step towards proposing the ballot for Parliamentary elections, seconded the amendment, and the Bill was lost; 58 members voting for it, and 93 against it.

On Wednesday, in the House of Commons, the third reading of the Qualification for Offices Abolition Bill was carried by a majority of three, the division standing thus:—For the motion, 175; against it, 172.

Forty of the bishops, English, Irish, and Colonial, of the Established Church, "moved by a deep brotherly anxiety," have addressed Bishop Colenso, suggesting, if not a way out of his "difficulties," at least a way out of the Church, by retiring from his episcopal office. They waive the question whether he is legally entitled to hold it,—a question complicated by the fact that he is at a distance from his diocese and province—and they invite him to consider the reasons he himself has given in the preface to Part II. of his work, for retiring from it. These are, that he no longer believes that which he voluntarily professed to believe, as the indispensable condition on which he was entrusted with his office; that he entertains the conviction that he cannot use the Ordination Service, inasmuch as in it he must require from others a solemn declaration that they "unfeignedly believe all the canonical Scriptures of the Old and New Testament," which, with the evidence now before him, he says "it is impossible wholly to believe in;" and finally, that he believes that those who

Digitized by Google

think with him are precluded from using the baptismal service, and, as the bishops presume, other offices of the Prayer-book, unless they omit all such prayers as assume the truth of the Mosaic history. The bishops urge that such opinions are so inconsistent with the office Dr. Colenso holds, as to cause "great pain and grievous scandal to the Church," and they solemnly ask him whether, without harm to his own conscience, he can retain his position when he can no longer discharge its duties, or use the formularies to which he has subscribed. What answer Dr. Colenso will return to this address we shall see. In the mean time, supposing him resolved to retain what can hardly be more than the symbols and emoluments of his bishopric, it is a question whether his resignation would put an end to the matter. Though he may cease to be Bishop of Natal, he must, by existing law, retain the episcopal character, and derive from it whatever authority, and, what is more to the point, publicity it can confer. Probably, this appeal failing, the best course would be to leave Dr. Colenso to his fate and to the public. The second part of his book has created, comparatively with his first, but a slight sensation; and this experience may have the effect, in time, of rendering his difficulties as little thought of as they were by himself till he had the luck to fall in with the "intelligent Zulu."

It has for some time been foreseen that other measures than those we have hitherto been making for the relief of the distress in Lancashire must be adopted, unless we are agreed indefinitely to maintain a large population on eleemosynary funds. It is idle to pretend that there is any prospect of speedily obtaining a sufficient quantity of cotton at a price which will enable us both to supply our idle hands in their old occupation, and to sell what their industry would produce. And apart from the impossibility of our being able to continue those efforts of benevolence which thus far have enabled us to avert from the operatives the full consequences of the cotton famine, it is a serious question how far they would become demoralized by continuing in a state of idleness. The propriety, under these circumstances, of diverting their industry into new channels has of late been frequently discussed, and emigration has been proposed as one of the readiest and best means of doing so. Now the colony of Canterbury, New Zealand, has voted £10,000 to assist the emigration to that province of a portion of our operatives; but as generally they are in want of an outfit, application has been made to the Mansion House Relief Committee, and the Central Committee at Manchester, for aid to secure this necessary preliminary. At first the application was refused, as proposing something which did not fall within the immediate object for which the funds held by these committees were subscribed. But this was taking a narrow view of the intention of the subscribers. The primary aim of that intention was the relief of the operatives from the immediate pressure of the calamity which had befallen them. But any step which will convert immediate into permanent relief cannot be considered foreign to the wish of the subscribers. The treasurers of the British Ladies' Female Emigrant Society offer their services to receive subscriptions towards an outfit, and request that donations may be paid to the credit of the "Outfit Fund for Emigrant Operatives," at Messrs. Ransom, Bouverie & Co., 1, Pall Mall East, S.W.; and that persons who may be willing to supply clothing will transmit it "to the care of the Secretary of the British Ladies' Female Emigrant Society, 51, Upper Charlotte-street, Fitzroy-square."

The experiment of a double-screw steamship, tried in November last, has just been repeated by the same builders, Messrs. Dudgeon, Brothers, of Limehouse. Their new ship is the *Kate*, a vessel of 500 tons, which made her trial-trip under the inspection of the Admiralty with perfect success on Saturday. The advantages of the two screws are many. The ship can be steered by them without assistance from the rudder. No apertures are needed as "screw-swells" in the stern, which can thus resume its normal strength; there are no outer stern-ports to knock away; and if one screw is disabled, the other remains. But the principal advantage of the two screws is the time and distance saved in turning. By working the screws in opposite directions the ship can be turned upon her own centre, as upon a turn-table. This was proved by the trial of the *Flora* in November last and that of the *Kate* on Saturday. The latter had hardly left the pier when her superiority to a ship with a single screw was proved by bringing her head round at once down the river in less than her own length from the pier, while a single screw steamer off in the stream was taking up the entire width of the river in attempts to get her head down, in which she did not succeed till the *Kate* was a mile on her way. The immense advantage of this power is at once apparent when we consider the great difficulty—nay, impossibility—of manœuvring in narrow waters such vessels as the *Warrior* and *Black Prince*, which take from eight to twelve minutes to complete a circle when under full steam. Here, then, we have another revolution in our navy, one of whose advantages is, of course, an acceleration of speed, though to what extent was not tested on Saturday.

Bread is again one of the sensation subjects of the day. Mr. Tremenheere has made a second report to the Secretary of State, in which he says that his revelations of last year touching the manufacture of bread in London apply equally to its manufacture in Ireland and Scotland, where the bakehouses are so uncleanly and deficient in ventilation, that the health of the journeymen is undermined. The bread itself is contaminated by noxious gases and by the numerous animals which are so readily generated by the heat inseparable from such bakehouses, wherever accumulations of flour-dust and dirt favour their production. Why is this? Are there conditions inseparable from the nature of this trade, which render it indispensable that the producers and consumers of the staff of life should be poisoned by it? Surely the powers of association, which can transmit our parcels and our persons underground, could help us to withdraw the making of bread from the dingy and filthy cellars in which it is now manufactured. Mr. Tremenheere offers some suggestions by which the sufferings of bakers may be lessened by limiting their hours of employment. But cannot Parliament, in its omnipotence, do something for the eaters of bread by appointing a term beyond which it shall be unlawful to bake it in places where dirt becomes one of its unavoidable ingredients?

The Thames Embankment Commissioners appointed to inquire as to the further improvements, eastward from Blackfriars, and southward from Westminster, best calculated to carry out the design of the embankment, have resolved upon making at the city end a street as straight as possible from Chatham-place to the Mansion House. At Westminster they propose to enlarge Old Palace-yard to at least the size of New Palace-yard, showing the south side of Henry VII.'s Chapel and the Chapter House; to clear a space as large, south of Victoria Tower, down to the river; to screen the river-side premises with a row of houses in character with the site; and to widen Millbank-street the whole way to Vauxhall-bridge. On the west of Old Palace-yard, Mr. Gilbert Scott proposes to build round two sides of the "garden" a double row of immense cloisters, communicating with the Abbey; and at New Palace-yard the Commissioners propose to cut off the projecting portion of the Sanctuary north of the Abbey, in order to straighten and widen the route to Victoria-street. They have not had the courage to propose the removal of the block of houses between Parliament-street and King-street; but King-street is to be widened on the west side, the new Government offices being thrown back for that purpose.

The annual general meeting of the National Rifle Association was held on Wednesday, at Willis's Rooms. His Royal Highness the Duke of Cambridge, president, took the chair, and announced that, generally speaking, the Association is in a flourishing condition. There is a balance at the bankers of £1,308, which, with what has been invested, amounts to £3,859. He complained, however, that the subscribers had not increased as was expected. A thousand annual subscribers is but a limited number for such an association.

A curious case has been brought upon appeal before the House of Lords, after thirty years' litigation in the Court of Chancery. In the year 1780, Dr. Cochrane, a native of Scotland, left his country, and entered the service of the East India Company as assistant surgeon in their Bengal establishment. In 1790 he formed a connection—was married to her, as the appellants allege, according to the forms of an Indian marriage—with Raheim Beebee, a princess of fourteen years of age, at Cawnpore, in the state of Furuckabad, then an independent Mahometan state. By this princess, on whose fair fame no imputation is cast, he had several children, all of whom, except Susan, the present appellant, born on the 17th of December, 1807, died shortly after their birth. On the 23rd of November, 1808, Dr. Cochrane, being in England, was married to a Scotch lady named Margaret Douglas Fearon, with whom he returned to India. Of course there was nothing out of the way to the mind of the Mahometan princess in her husband taking to himself another wife; and it is alleged that Mrs. Cochrane the second, treated the native Mrs. Cochrane with the utmost respect, and her daughter Susan with affection, while the two ladies were residing in separate establishments at Calcutta. On the 8th of December, 1818, residing still in India, Dr. Cochrane made a will, by which he left £12,500 to his child by the Indian princess, and, in terms of affection, conjured the second Mrs. Cochrane to bring her up in a manner befitting the morals and dignity of her station. Both his sons by the second marriage died without issue in 1835, and after the death of both parents. The widow of the first son, after having taken out letters of administration to her husband, married a Mr. Lord in 1842, and died in 1844. On his return to Scotland, where he was domiciled at the time of his decease, Dr. Cochrane made a second will which, it is alleged, had the effect of entirely revoking his former one, by which he left the legacy of £12,500 to Susan, although it did not contain any express clause of revocation. In 1826 Susan married Lieutenant Moorhouse; and the contest lies between Moorhouse and his wife, the appellants from the adverse decision of the court below, and Mr. Lord, in whose favour that decision has been made. This is the gist of a case in which a fortune of upwards of £200,000 awaits the final disposition of the House of Lords.

Dr. Kenealy's "New Pantomime" made its appearance on Wednesday in the Guildhall Police-court, before which the author cited Mr. Job Pickles Whiteley, proprietor, and Mr. Peter Bayne, part proprietor and editor of the *Weekly Review*, for unlawfully publishing a certain false, wicked, and defamatory libel concerning him. The libel consisted of an article headed "Kenealy's Outrage on Public Decency," in which the doctor was severely handled. "There are creatures," says the writer, "in the animal world which make themselves felt by the noisomeness of their presence, and in them we find the precise type of those men who, conscious of their impotence to wing their way into the heaven of true fame, attract notice by drawing upon themselves the anger and execration of mankind." Proceeding to apply this remark to Dr. Kenealy, he continues, "Never in the course of our experience have we seen these remarks so pointedly and painfully illustrated as they have just been by Edward Vaughan Kenealy, LL.D., in the obscene, infamous, and revolting poem which he has flung before his coun-

Digitized by Google

trymen, with the title of "A New Pantomime." Warming, as he proceeds, the writer denounces the poem as "the most audacious experiment which has been made since the appearance of "Don Juan" on the moral endurance of the British public;" and says that "Kenealy does not intend to add witchery to vice, but from innate and unmitigated coarseness of mind, he fails to distinguish between the pure and the foul, between the becoming and the gross." He says, "he wallows in the mire as in his native element;" that "the book reflects not only an ill-regulated, but a polluted mind;" and that Dr. Kenealy "is a man to lash little boys till they stagger and fall down, or to eclipse the fame of that murderous pedagogue, Mr. Hopley, by putting them to death by slow torture." There is much more of this in the article, for which, by his counsel, the writer offered to apologize, so far at least as what is personal to Dr. Kenealy is concerned. This offer was refused, unless all the offensive portions of the article were retracted, and the case went on. For the defence it was argued that the book is, without doubt, "a mass of the grossest obscenity, impurity, and folly;" and the defendants' counsel laid particular stress on that portion of the new pantomime entitled the "Abyss of Hell," in which "Dr. Kenealy, without any ground for personal pique, but with petty spite, speaks of many personages, reflecting on individuals even now alive,"—Dr. Millman and Mr. Peter Cunningham, amongst others. The allegation of blasphemy, counsel argued, was justified by the fact that Dr. Kenealy had placed among the denizens of hell Joshua, David, and other Scriptural personages, together with Henry VIII., Queen Elizabeth, Lady Mary Wortley Montague, James I., and Earl Nelson. Alderman Phillips, notwithstanding all this, considered the article libellous, and committed the defendants for trial.

Mr. Seward's peremptory refusal of the proposal of the Emperor of the French for the appointment of commissioners to meet on neutral territory and discuss the differences between North and South, and the impression that his refusal may imperil the friendly relations of the two countries, has caused some uneasiness in Wall-street. The *New York World* denounces his conduct as a great mistake, and considers that it is the duty of the North to prepare itself for fresh complications, which the recognition of the South must introduce into the struggle. The Senate has passed a Conscription Bill providing that all able-bodied male citizens between the ages of twenty and forty-five, and all aliens and emigrants within the same ages who have declared their intention to become citizens, shall be enrolled, liable to conscription; the first call to be made on citizens between the ages of twenty and thirty-five, and unmarried citizens between the ages of thirty-five and forty-five; the second on all persons subject to military duty under the Act. The Senate has also passed a bill authorising the President in all domestic and foreign wars to issue letters of marque; the authority is limited to three years. It is believed that both bills will pass the House of Representatives by a considerable majority. The resolution calling a Convention at Louisville has been defeated in the Senate of the Illinois Legislature. The resolutions in honour of General M'Clellan, passed by the New York Assembly, have been rejected by the Senate. Military operations up to the 19th remained at a standstill. No change has occurred at the seat of war in Virginia, beyond the strengthening of their earthworks by the Confederates at Fredericksburg, and the endeavours of General Hooker to improve the discipline of his soldiers. A report was circulated in Wall-street on the 17th ult. that General Banks had been defeated by the Confederates in an engagement within seven miles of Port Hudson, but no details were given. Reports up to that date state that the canal opposite Vicksburg, by which the Federals have endeavoured to turn the course of the Mississippi, continued to be a failure, and letters received up to the 6th ult. mention that no attack was expected to be made for several weeks. At Charleston, also, the attack was indefinitely postponed. The Federal commanders of the vesssels blockading that port have officially refuted General Beauregard's report that the blockade had been raised. They allege that they never quitted the blockading line usually occupied by them, and that no vessel of any description crossed the bar after the Confederate rams returned to Charleston. At Roanoake Island the Federal commander had telegraphed for reinforcements, anticipating an attack from the Confederates, who had collected one hundred small boats, and were concentrated upon the mainland. It was reported that Confederate General Hindman's army in Tennessee was demoralized, and that three hundred of his troops were frozen to death in marching from Van Buren. It will hardly be believed that even Mr. Lincoln should have conceived the idea of sending General Butler back to resume the command at New Orleans. Mr. Seward objected to this. But it appears also that Butler declined to return to his post except upon conditions which the Government found it difficult to accede to. The intelligence up to this point brings us down to the 19th ult.

News to the 21st ult. informs us that President Lincoln has expressed his intention to re-adopt the Conservative system; that Mr. Seward will be retained in his present office, and that General M'Clellan will be made Commander-in-Chief of all the Federal Armies. To this project was attributed the acquiescence of the Democratic members of Congress in the late financial and military measures of the Government. The attack on Charleston and Savannah was expected, in Washington and New York, to take place on the 20th. The *Richmond Enquirer* of the 19th ult. publishes a proclamation by General Beauregard, invoking all able-bodied Carolinians and Georgians to arm themselves with any description of weapons they can procure, and all non-combatants to retire to a place of safety. Preparations for the defence were being rapidly perfected, and the troops and people were calm and confident. The *Alabama* continues prosperous in her career of destruction. On the 26th of January, fifty miles south of St. Domingo, she captured and burnt the barque *Golden Rule*, belonging to the Panama Railroad Company; and, in the absence of documentary proof that it belonged to neutrals, destroyed the cargo with the vessel. On the day following she captured and burnt, off Altively Rock, the Boston brig, *Chastelain*, Captain Semmes, taking possession of the nautical instruments of the vessel and 800 dollars in gold. The Democratic peace resolutions passed by the Assembly of Illinois were defeated in the Senate by the withdrawal of a sufficient number of Republican members to deprive it of its constitutional quorum. On the 11th ult. the Kentucky House of Representatives rescinded the peace resolutions previously passed. These two facts, together with the change in Mr. Lincoln's policy and General M'Clellan's appointment to the command-in-chief, may retard for the moment the increasing symptoms of a desire for peace.

The Parisian mind is uneasy as to the fate of French arms in Mexico. Rumours are afloat that General Forey has made a demand for reinforcements in men and material, a demand which, it is said with probability, cannot be complied with. It is a matter of surprise that General Forey has not done more with the forces at his disposal, seeing that General Scott, in the war between the United States and Mexico, with less than half the army General Forey commands, took, in a single campaign, Vera Cruz and Jalapa, defeated General Santa Anna at Cerro-Gordo, Contreraes, and Churubusco, entered Mexico on the 15th of September, and signed, a few months later, a treaty of peace highly advantageous to the United States. The Federal press appears inclined to improve the opportunity of General Forey's compelled inaction. The *New York Herald*, in an ironical tone, trusts that Mr. Seward "will see the feasibility, not to say humanity," of offering the mediation of the Washington Government between France and Mexico. As France feels commiseration for Federal misfortunes, "surely," says the *Herald*, "we are bound to feel the same commiseration for her in Mexico. . . . . The difficulties of France in Mexico are harassing, and, what is more, they are increasing. The Mexicans remain blind to all the advantages of Napoleon's rule, and they are shedding the blood of their would-be benefactors. They lasso them, assassinate them, poison them. Really, we must mediate; and, as a proof of untiring and devoted friendship to France, we must endeavour to induce other Governments to join us in our offer." The sting of all this lies in the fact that the French army in Mexico seems really helpless, and the French Government, with the affairs of Poland and its own financial difficulties threatening, powerless to aid General Forey.

The Prussian Chamber of Deputies has carried a motion in favour of the neutrality of Prussia in the Polish insurrection by a majority of 246 against 57. From the ministerial explanation of M. von Bismarck, it appears that by the convention with Russia every overstepping of the frontier by Russian or by Prussian troops requires the previous consent of the Prussian Government. This is but a nugatory qualification of the convention as explained by Earl Russell, since the authority to give such consent may easily be deputed. But almost as important as this point is the respect for constitutional government, and the dignity of Parliament displayed by M. von Bismarck in his several speeches in the Chamber, in which he treated the deputies with insolent contempt, and defied the authority of the Vice-President of the Chamber. Admonished by this gentleman that he was speaking apart from the question, he replied, "I will permit myself to remark to the President that I cannot admit his right to a disciplinary interruption of my speeches. I have not the honour to be a member of this Assembly; I did not make your regulations, nor share in the election of your presidents; I am not subject to the disciplinary influence of the Chamber. The disciplinary power of the President ceases at this bar (the table at which the Ministers sit). My only superior is his Majesty the King, and I have yet to learn that any legal or constitutional enactment has placed me under the discipline of the President of this House." In the same strain he continued. He endeavoured to fasten upon the Chamber a direct sympathy, even to extent of partizanship with the Polish insurrection; and when asked why the Government did not dissolve the Chamber, said, "Before we do that, gentlemen, we should like the country to have an opportunity to learn to know you right well." As M. von Bismarck still remains in office, he may be supposed to speak the sentiments of the King. The breach between the throne and the country has thus been still further widened; and as yet there is no sign that the Court will abate its pretensions to conduct the policy of the country at home and abroad without reference to the wishes of the people. We may here mention that Earl Russell has despatched a note to the Prussian Government, couched in language appropriate to the debate in the House of Commons; and that the semi-official *General Correspondenz* of Vienna has in its impression of the 2nd instant the following words:—"Since the Polish insurrection has, by the convention between Russia and Prussia become a European question, the other Powers will diplomatically intervene in favour of Poland." It appears that the surrender by Prussia to Russia of the four Polish students who were on their way to their homes, was made under the provisions of the Treaty of Münchengrätz, a kind of supplement to the tripartite convention known under the name of the

Digitized by Google

"Holy Alliance," by which supplement Austria, Prussia, and Russia were severally bound to refuse protection or asylum to any subject of the three Powers who should be guilty of the crimes of high treason, misprision of treason, or armed insurrection, or of having joined a society militating against the security of the respective Governments; and were moreover bound mutually to deliver up to each other individuals accused of such crimes immediately upon demand made to that effect. Prince Gortschakoff two years ago released Austria from her obligations under the treaty of Münchengrätz; but M. von Bismarck, it is stated, renewed them on behalf of Prussia on the 8th ult.

Of the progress of the insurrection in Poland it is difficult to obtain a clear idea. If any doubt, however, remained of the universal consent of the Poles to the movement, there can be none now. The Russian Government appears to be too distrustful of the temper of its own population to diminish the army by sending large detachments into Poland. For some time a belief has been cherished by the Russian peasants that the 3rd of March would witness a communistic feat in the re-distribution of the land, and it has been thought that the disappointment of that hope would be followed by an insurrection in Russia Proper. Such an event would tell with prodigious force in favour of the Poles; as the apprehension of it has already been favourable to them in withholding the Government of St. Petersburg from pouring into Russian Poland an overwhelming mass of troops. The hundred thousand soldiers, however, at which the Russian force in Poland is computed, should be sufficient to give a good account of the ill-equipped patriots who again appeal to the humanity and sympathy of Europe; but as far as at present appears they have not been successful in their attempt to do so. What their actual success has been we can hardly say. A Cracow telegram of the 28th inst. says, on the authority of the *Czas* of that day, that the Russians were beaten by Langiewicz, near Malagoszec, after an engagement which lasted five hours. A Warsaw telegram of the 1st inst. states, on the authority of a supplement to the official *Dziennik*, that the bands of insurgents commanded by Langiewicz and Jjezirranski have been totally defeated near Woloszezow; that the insurgents lost 70 baggage-waggons and 152 horses; that Langiewicz was wounded and had fled, and that the peasants were said to be seizing the fugitive insurgents, and to have delivered up 200 to the Russians. Against this we have a telegram from Sosnowice, dated the 1st inst., stating that Langiewicz, with 6,000 of his followers, arrived at Zombkowitz early on the morning of that day, and that an engagement took place between his forces and the Russian troops, in which the latter were totally defeated. Again, a Breslau telegram of the 2nd reports another victory by 4,000 Poles near Myskow over a body of Russians who were proceeding from Czenstochau to Zombkowitz to reinforce the troops attacked at the latter place by the insurgents. It is also stated, on the authority of private letters from Warsaw, that the Government there is publishing, for private circulation amongst military men, a journal in which the Russian losses are admitted to be constantly augmenting and the insurrection to be daily on the increase. Certain it is that the Poles have gained possession of the Southern Railway, along which, communicating with the south and south-west, their positions begin within ten miles from the capital. At Skirniwice, where the Northern and Southern Railways join, their position is strongly fortified, giving them command of the entire railway communication between Germany and the West. Everywhere erratic bands of insurgents, numbering seldom more than 400 men, crop up, seize whatever the coffers of the villagers will yield for the national cause, and vanish again without giving time to the military to reach them; and notwithstanding the good offices of Prussia, men and materials find their way across the frontier,—Not always, however, with ultimate success. A touching instance of misfortune is mentioned in the Posen correspondence of the *Times*, in the case of Prince Dragomirecki, who, "fresh from the velvet carpet of his Paris hotel," had hastened to do his duty in the quagmire of a Lithuanian wood. With his sixty associates, the greater part of them of the same social station as himself, they had just managed to reach Polish ground, when, in the forest of Sieradz, they found themselves face to face with a party of Mahometan horsemen. Shouts of defiance on either side, a desperate struggle, and the silence of the woods reigned again over a number of mutilated corpses." But the greatest gain which the Polish cause has received appears to be recognized in the arrival of General Mieroslawski upon the scene of insurrection. He is spoken of as a master tactician in the art of war, and the dexterity with which he has evaded the military catchpoles, and made his way into Poland, says much for his subtlety. About a fortnight ago he left Paris with the intention, apparently, of proceeding to Italy. Arrived at Lyons, where he was recognized at the railway station, he disappeared, and returned to Paris, his beard shaved off, and his person otherwise disguised, in the garb of a valet. Thence he departed for Germany, travelling as the *commis voyageur* of a French merchant, under a French name, and with a French passport. On the 14th ult. he passed through Berlin; on the 15th he was at Mowraclaw; on the 16th, at Strzelno; and on the 17th, at six in the morning, he crossed the frontier, where he was saluted by a band of insurgents who had been sent to receive him, and on the 18th he took the command-in-chief of the district of Plozk, and announced his arrival in a solemn proclamation to his countrymen. Mieroslawski, by his celebrated book on the Polish revolution of 1831, has shown that he has a perfect knowledge of his country and its resources. Sixteen years ago he acted as leader of an insurrection in Posen, and taken prisoner was condemned to death, when the revolution of March, 1848, broke out at Berlin. The prison was stormed by the insurgents, and Mieroslawski, with his associates, set at liberty, and carried in triumph through the streets. In 1849 he accepted the invitation of the envoys of the Provisional Government at Baden and the Palatinate to take the command of the army which had to fight against the then Crown Prince, now King, of Prussia, upon whose army of 100,000 men he inflicted severe losses with a force of only 20,000, and almost succeeded in taking the Prince and Herr von Kavn prisoners. Many acts of atrocity are reported as having been committed by the Russian soldiers. After the defeat of the Poles under Kurowski, who shot himself on the field at Miechow, the peasants report that the Russians behaved like wild beasts. A Russian gendarme bayoneted the Burgomaster Orzechowski, and his body was dragged naked through the streets. The Cossacks, in spite of their officers, forced their way into some houses, which they plundered, after putting old and young to death. In one building were assembled eighty women and girls. The Russian officers defended the entrance till overborne by their soldiers, who were inflamed with drink, and threatened to force admission, they were obliged to send the women into a wood at the back of the house, where they wandered about all night. At St. Petersburg the inhabitants are incensed with the Poles, and orders are said to have been sent to suppress the revolt within ten days, at any cost, by torch or sword, or both.

If we are to believe the telegram which appeared in the daily journals on Wednesday, Cardinal Antonelli and Monsignor de Merode have become incompatible members of the Pope's Government. It appears that Monsignor de Merode has caused the arrest of the Chevalier Faussi, Cardinal Antonelli's *attaché*, chief of his household, and his confidential friend and agent. The Cardinal has in consequence resigned. But the telegram says further that the arrest of Chevalier Faussi is an overt act of endeavours which the Minister of War has successfully made to undermine the Cardinal's influence with the Pope, because the Cardinal had opposed what he styled the Minister's "follies." Several other cardinals, the telegram adds, took the same view, "lamenting, also, the want of caution displayed by his Holiness in asking the hospitality of the English Government, together with his general lack of reserve." The Pope had not come to any resolution about the Cardinal's resignation.

The resignation of Marshal O'Donnell, occasioned by the Queen's unwillingness to dissolve the Cortes, has been followed by several ineffectual attempts to form a new Ministry. The Marquis of Duero having failed, Marshal Narvaez was invited by the Queen to try his hand. He also failed, and the task was then devolved upon the Marquis Miraflores. The Marquis Havana will be the new Minister of War; Señor Sierra, Minister of Finance; Monares, Minister of Justice; Mata-Aloz, Minister of Marine; and Lopez, Minister of Public Works.

On Thursday night, at 11, the Royal squadron, conveying the Princess Alexandra, brought up off Margate. The Princess, with the Prince and Princess Christian of Denmark, left Brussels at half-past 9 on Thursday morning for Antwerp, where they embarked for England. The English Minister, the Grand Marshal of the Belgian court, and other personages of distinction, accompanied the august party to Antwerp.

In the House of Commons on Thursday, Mr. Cobden called attention to the large number of "obsolete vessels of war" in the British navy, in which category he placed 106 wooden steam line-of-battle ships or large frigates. Lord C. Paget explained that the great mass of the men in wooden ships were employed in small vessels on distant stations. He complained of Mr. Cobden's broad statements, which he had not made until events were over, and when it was safe to criticise.

Dr. Colenso has replied to the address of the Bishops, declining to comply with their suggestion that he should resign his episcopal charge. Yielding to none of the bishops in heartfelt reverence for the Holy Scriptures, he yet does not believe, with their lordships, that all our hopes for eternity rest "on the literal historical truth of such a narrative as the scriptural account of the Noachian deluge." To resign his office, he says, would be to admit that he is legally or morally wrong, "which I am very far from feeling." So far from abdicating the episcopal office, he says he feels that it requires him to persevere in the task he has undertaken of setting before the English Church "the real facts of the case in regard to the composition of the Pentateuch," believing that the progress of true religion is "grievously impeded in this country by the contradictions which undeniably exist between the traditional notion of the historical truth of all the narratives contained in the Pentateuch and the conclusions of science."

A Cracow telegram of the 5th instant reports an engagement between the Poles and Russians, lasting an hour and a half, which took place on the afternoon of the 4th, near Pryzkowaskala. The insurgents retired upon the heights.

La France of the 5th says that M. Billault will communicate to the Senate an important document addressed by the French Government to the Cabinet of St. Petersburg, defining "what the Emperor Napoleon expects from the justice and generosity of the Czar for appeasing Poland, by ample and serious guarantees, in conformity with treaty rights and with the principles of civilization." "The reply," says *La France*, "is expected to-day or to-morrow, and everything leads us to hope that it will be favourable to the wishes which have been expressed." The debate in the Senate will probably take place on Tuesday next.

REVIEWS OF BOOKS.

SYLVIA'S LOVERS.*

The success of "Adam Bede" and its successors attested the possibility of a delineation of peasant life, sufficiently humorous and pathetic to stimulate the inquisitiveness and enlist the sympathies of a fastidious, highly educated, and *blasé* audience. The fragile prettiness of Hetty, the saintship of the interesting Dinah, the sententious comicality of Mrs. Poyser,—all were too striking in their way to fade easily from the mind, and from that time to this the dispensers of fictitious literature have favoured us with a succession of "cottage interiors" as minute, if not as spirited, as those of the Dutch School of Painting. Mrs. Gaskell has many qualifications for success in this line of art. She has command of a vernacular which is piquant, picturesque, and sometimes touching. Her north country talk, if not invariably well sustained and sometimes a little theatrical, is at any rate sufficiently good for the general public; she has a quick eye for the effective points in scenic grouping, and there is a genuine touch of pathos about those parts of her writings in which she is herself sincerely interested. Moreover, she seems to have studied Yorkshire and Lancashire life to good effect, and some of the characters introduced into her latest story (such, for instance, as that of Kester, a sort of half farm servant, half confidential friend,) are sufficiently removed from the conventional types of modern life to attract us by their curious originality. And yet the effect of the whole story is to disappoint those who remember the glow with which they followed Mrs. Gaskell's earlier romances to their *dénouement*, and the first-rate artistic ability displayed in the compilation of such a biography as that of Charlotte Brontë. For one thing "Sylvia's Lovers" is eminently an "unsatisfactory" novel. The good-natured inclination to make everything go right in the long run, and to believe that this is, after all, the best of all possible worlds, is absolutely set at naught. The book is full of gratuitous suffering, nor does the conclusion leave us any reason to fancy that when the dark cloud of tragedy has drawn off, the mournful landscape will be, in any material respect, altered for the better. The chief incidents, upon which the tale turns, are as old as the history of story-telling. A serious, sentimental youth falls desperately in love with a flighty girl, who, after leading him for some time along the stony path of adverse courtship, proceeds herself at last to fall desperately in love with a roving, marine Don Juan, whose personal charms and audacious behaviour make him secure of feminine conquests wherever he comes. Upon this primitive foundation the whole superstructure of the tale is raised; and as the scene lies at the close of the last century, the authoress has the opportunity of interweaving some capital press-gang stories, and the execution of a man for riot, which are the real backbone of the book. Novelists who wish to be effective always stand in need of a grievance, and the political position of England at this period of her history involved many grievances of the most serious description. No more tyrannical interference with the liberties of the subject has probably ever been attempted than the arbitrary impressment of sailors for the royal service, and nothing but the desperate struggle in which England was engaged could be held to justify a measure, which hurt much, and terrified even more than it hurt.

That it often resulted in intolerable hardship,—that it entailed dreadful sufferings,—that it roused a furious spirit of discontent and disloyalty among the classes whom it principally affected,—might be conceived without the aid of Mrs. Gaskell's vivid delineation; but in no part of the story are her powers so thoroughly aroused as when she describes the several seizures of the Monkshaven fishermen, the fights which resulted therefrom, and the miserable doom to which, through their instrumentality, a simple, well-meaning old man was brought. It is in resisting one of the raids of the press-gang that Kincaid, the hero of the piece, first makes his appearance; and nothing can be better than the description of the sort of charm which the prestige of personal bravery, and a desperate wound received in opposing a supposed outrage, invested him in the eyes of an impressible, passionate, and enthusiastic girl.

A nation, stirred to its depths by a world-wide struggle, dazzled by great military achievements, fretted by oppressive laws, is far better material for the novelist's purposes than the uninteresting prosperity, which, in modern times, drives the framers of fiction into the invention of imaginary grievances, and chequers their pages with tragical catastrophes, too wildly impossible even for the most willing and eager credulity. Real life, then, is full of real tragedy, and the most faithful delineation of its incidents is the most artistically effective. Mrs. Gaskell seems to have felt this, and to have bent herself assiduously to reproducing the actual state of feeling and mode of life among the sea-faring population of the northern coasts at that time. Education, thoughtfulness, morality were, it is needless to say, all widely different from what they are among ourselves. Very worthy heads of families indulge in frequent inebriety and occasional smuggling; virtuous wives and mothers see as little harm in one as the other; prejudice is supreme, knowledge scanty, reading an honourable but half-dangerous accomplishment, religion of a simple and not very profound order. One of the best characters here is that of the unfortunate yeoman, who afterwards gets hanged for taking part in a riot. He is tender-hearted, generous, honest; but his domestic tyranny is complete, his scope of thought extremely limited, and his scorn for the opposite sex as thorough as that of a savage.

"Women's well enough in their way," he says, in a conversation with the family tailor who has dropped in for a chat, "but a man may have too much on 'em. Now, there's me, leg-fast these four days, and a'll make free to say to ye a'd a deal rayther have been loadin' dung i' the wettest weather, an' a reckon it's th' being wi' nought but women tires me so: they talk so foolish, it gets int' th' bones like. Now, thou know'st thou'rt not called much of a man oather; but, bless ye, t'wenth part's summat to be thankful for, after nought but women. An' yet, yo' seen, they were for sending yur away in their foolishness!"

Presently the conversation turns on the metal buttons of the yeoman's coat, and their expected suppression by Government in favour of the silk weavers. Daniel's indignation is naturally roused. "A were wed in them," he says. "an' a'll wear 'em to my dying day, or a'll wear noane at all. They're for makking a pack o' laws; they'll be for meddling wi' my fashion o' sleeping next, and taxing me for every snore a give. They've been after t' winders, and after t' vittle, after t' very saut to 't; it's cleaner by hauf an' more nor it were when a were a boy: they're a meddlesome set o' folks, law makers is, an' a'll never believe King George has ought to do wi 't. But mark my words: A were wed wi brass buttons, and brass buttons a'll wear to my death, an' if they moither me about it a'll wear brass buttons i' my coffin." This sort of thing sounds extremely natural and life-like, and it is here that the authoress of "Cranford" and "Mary Barton" naturally feels most at home. The effect would be more agreeable but for the immediate proximity of characters less primitive and free from self-consciousness. Philip Hepburn, for instance, the serious lover, is a painfully morbid piece of modern civilization, and the act of cruel treachery into which his passion for Sylvia betrays him, belongs, we think, to a condition of thought and feeling far more advanced than ought to be found in a Yorkshire shop lad a century ago. In any case, we are sure that no sufficient disgust is shown in the story for the almost brutal cruelty with which he treats the object of his passion, in concealing from her a secret upon which her happiness depends. Many things are fair in love as in war; but a man who can bear to see the woman he loves pining away with a grief which only his false selfishness prevents him from removing, deserves, it appears to us, the very worst that can befall him. No such gentle casuistry as Mrs. Gaskell describes would silence the outcries of conscience and honour, supposing either to exist; and it is only in the French fictions of the latter empire that we expect to find ardent affection turning a man into little short of a demon.

The capital defect, however, of "Sylvia's Lovers" is the change which comes over the story in the course of telling. We begin with an intense fidelity to nature; we end with the wildest of melodramas; for two volumes we are occupied with the little joys and sorrows of a seaman's cottage and a Quaker's shop; in the third we are hurried off to a siege in the Holy Land, our senses stunned with sallies, bombardments, surprises, wonderful meetings, still more wonderful escapes, and the performance comes to a close in the midst of a dazzling display of the most approved historical improbabilities. This is a strange fault for so experienced an artist as Mrs. Gaskell to have committed. The very excellence of one part of the story makes us morbidly sensitive as to the defects of the other. "Such as you are at the commencement," says one of the greatest literary authorities, "continue to be throughout." Miss Braddon, and the other compilers of the "sensation stories" just now the fashion, observe the rule strictly, for their whole canvass is full of monstrosities, to which the eye gradually gets so accustomed, that one ceases to be shocked. If the very framework of a story warns the reader not to look for probability, he makes up his mind to the marvellous, and accepts the prodigies as a matter of course. Mrs. Gaskell, however, is an artist of another and a higher school, and it is only in a moment of carelessness or fatigue that she forgets to "hold the mirror up to nature," and starts off on a courageous expedition into the region of the impossible. If any ordinary novelist sent off one hero to Palestine to rescue another hero, his deadly enemy, under a heavy fire of artillery, we should take it as a matter of course, and neither wonder nor complain; but when the hand which depicted "Ruth" descends to such commonplace trivialities, we feel disposed to murmur at the eccentricities of talent, and in behalf of the authoress, no less than of the public she has so often delighted, to warn her against forgetfulness of the first principles of her art, and against neglect of those true natural types upon which all genuine art is necessarily dependent.

* Sylvia's Lovers. By Mrs. Gaskell. Smith, Elder, & Co. 1863.

POEMS IN THE DORSET DIALECT.*

We gladly welcome this reprint of Poems, which, without a single adventitious aid, have, by the force of their own merit, won their way to general admiration, and secured for their author a high position in English literature. They first appeared some fifteen years ago, and as they soon gained an audience far wider than that for which they were originally intended, they have now arrived at a third edition, and are reproduced in a new form, with various additions and omissions. The changes are not all for the better. We regret that, out of deference for his non-Dorset readers, Mr. Barnes has altered his former style of spelling, which, although it might look repulsive to a careless reader, recalled so successfully

* Poems in the Dorset Dialect. By William Barnes. First Collection. Third edition.

the rich and broad utterance of the Vale of Blackmore. We regret, too, that he has discarded from this edition the Dissertation and Glossary, which gave additional value to the simple collection of his early poems; and we hope that he will be able to fulfil his promise of publishing it separately, when he has expanded it into a fuller and more accurate monograph of Teutonic speech.

Mr. Barnes's book has a philological as well as a literary interest, and as it was to the former that the author originally gave the chief prominence, we shall proceed to speak of it first. "To write," he says, "in a fast out-wearing speech-form may seem as idle as the writing of one's name in snow of a spring day. I cannot help it. It is my mother-tongue, and is to my mind the only true speech of the life that I draw." There is excellent sense in the remark. Mr. Barnes's poems would have lost half their interest if they had come to us in any other dress than the graphic and vigorous vernacular of the peasantry, whose lives they describe; and besides this, they are far more likely to endure from the interest taken in the dialect which they embody and preserve, than they would have been from any beauty which they possess as specimens of pastoral poetry. The spread of education, the extension of railroads, and the consequent fusion of all local peculiarities into the one main stream of national life, will soon have obliterated all traces of the southern dialects of England. Hence any book which strives to perpetuate these fleeting varieties of language, before they have finally evanesced, will be full of value to the future philologist. For there is no dialect which is not worthy of the careful and independent study of all who make the science of language a means for arriving at the most important conclusions of history and philosophy. The idioms and pronunciation of a Dorsetshire labourer might be set down by ignorant persons as vulgar and uninteresting, because they would consider them to be the mere uncouth corruptions of more correct and refined speech. A cockney who should overhear a Dorsetshire boy saying that "he'd a-seen a waps eätèn an apricock," or that he "catched sight of the voxe a-hiden in the vuzzen," might probably turn up his nose at what he would consider to be the jargon of an illiterate clodhopper. Yet such a judgment would err widely from the truth. In almost every single instance the Dorset dialect, so far from being a corruption of written speech, is a much older form, and one far more nearly approaching the mother language than any which is in use among educated men. Thus in the sentences we have quoted the form "*a*-seen" is a retention of the *syllabic augment*, which though now lost in common English, is found in Anglo-Saxon, and is still retained in German. The word *waps* is the old and correct form "waeps," for which "wasp" is a later metathesis; and *apricock* for "apricot" is an interchange of sounds of universal occurrence in other dialects, as we may see by comparing *ποκα* with *ποτε*, and the Oscan pronunciation *pilpit* with the Latin *quicquid*. So, again, taking the other sentence, *catched* is a regular perfect, formed, like many others, from a natural dislike to anomalous formations; *voxe*, for "fox" is found in a song of the fourteenth century; and *vuzzen*, for "furzes," retains the Anglo-Saxon plural termination of nouns. Even these few cases will perhaps be enough to prove that provincialisms, as they are called, are not to be confounded with the clipped and degraded forms of language which arise from defective education and blunted senses; but that they have their own dignity and importance for the linguistic student, and deserve from him as much attention as the local varieties of Greek have received at the hands of classical scholars. To elucidate the peculiarities of English dialects is a task at least as useful and as dignified as to hunt for Patavinities in Livy, and explain the Bœotisms of Iolaus in the Acharnæ of Aristophanes. In fact, the Dorset dialect resembles Doric in many of its features. It has the same musical breadth of tone, the same boldness, simplicity, and dislike of mere imported elegancies; it is equally keen in humour, and strong in raillery and hyperbole. It is, moreover, as Mr. Barnes has pointed out, both purer and richer than the dialect which is chosen as the national speech; purer, inasmuch as it retains many words of Saxon origin, for which the English substitutes others of Latin, Greek, or French derivation; and richer, inasmuch as it has distinctive words for many things which book-English can hardly distinguish but by periphrases, as an instance of which Mr. Barnes adduces the words *moot*, the underground part of a felled tree; *mock*, a tuft of sedge; *strawèn*, a set of potatoes growing from one tuber; and *wride*, a bush of many stems; for all of which we have in English only the one word *root*. So that Mr. Barnes has every right to use the motto which he has so felicitously chosen—

Δωρίσδεν ὀ' ἔξεστι δοκῶ, τοῖς Δωριέσσι.

"And Doric people, I presume, may use the Doric tongue."

So far we have been speaking of the philological value of the volumes before us; we must not forget their poetical claims. In this respect they present us with a very memorable instance of a modesty which cannot often be paralleled in literary history. For they were published with the avowed intention of giving a specimen of the phraseology current among the villages where the author lived, and it was hardly even hinted that they had any intrinsic merit. Fondly attached to his native dialect, Mr. Barnes nevertheless expected that non-Dorset readers would regard it only "as a fit vehicle for the diurnal wants and passions of a boor," and expressed it as his fondest hope, that it would "entertain without corrupting the happy mind of the milkmaid with her cow, or the dairy-farmer's son in the hayfield." Mr. Barnes greatly underrated his own powers. The freshness, the tenderness, the purity, the simplicity of his poems, has caused them to be received with approbation by a far wider and more critical circle. Shenstone published his celebrated poem, "The Schoolmistress," as a professed burlesque; Gay wrote his "Shepherd's Week" to ridicule and parody the pastorals of Ambrose Philips; yet in both these cases the truthfulness and inherent grace of manner which they displayed gave to the poems a permanent popularity. Shenstone, in an artificial age, ceased to be afraid of having written naturally; and Gay's rustic scenes were admired independently of their sarcastic purpose. Similarly, but in a manner more creditable to himself, Mr. Barnes has been accepted as a poet, while he only ventured to offer himself to notice as the versifier of a rustic neighbourhood. There are several writers of whom he occasionally reminds us. In true poetic feeling, in humour, and in power of language, he is equal to either of the poets whom we have just mentioned. His realistic descriptions of rustic life,—not only on its sentimental side, but in its rudeness, its ignorance, its occasional depression, its many superstitions—often recall the village scenes of Crabbe, like whom he aspires

"to paint the cot
As truth will paint it, and as bards will not."

In some of his best and highest pieces he even reminds us faintly of Theocritus and of Burns. We do not, of course, for a moment mean to compare Mr. Barnes to these poets. He has none of that infinite sweetness of diction, that unapproachable melody and brightness which flood the verses of the sweet Sicilian singer; none of the boundless mirth and fiery strength which characterize the glorious Scot. But, like both these great poets, he is always simple, sensuous, passionate; and it is no mean praise to say that he has written some pieces of which neither of them need have been ashamed.

There are many of Mr. Barnes's poems which we should be glad to quote. As illustrations of peasant life they are full of keen observation, of genial sympathy, of humour, and of pathos; and their style varies easily and gracefully from the plaintive tone of the more serious pieces to the boisterous fun of those which sing of merrymakings and sweethearts' squabbles. We have only space for two of the shorter poems, which are favourable specimens of Mr. Barnes's power:—

"SLEEP DID COME WI' THE DEW.

"O, when our Zun's a zinkèn low,
How soft's the light his feäce da-drow
Upon the backward road our mind
Da turn an' zee a-left behind;
When we in chilehood's daes did vind
Our jây among the gil'cup flow'rs
All droo the zummer's zunny hours;
And sleep did come wi' the dew.

An ä'terwards when we did zweat,
A-twilèn in the zummer het,
An when our daely work wer done,
Did meet to have our evenen fun;
Till up above the zettèn zun
The sky wer blushèn in the west,
An' we laid down in peace to rest,
An' sleep did come wi' the dew.

* * * * *

An' when at laste our ethly light
Is jist a dräèn in to night,
We med be sure that God above,
If we be true when he da prove
Our steadvast fâith and thankvul love,
Will do vur we what med be best,
An' tiake us into endless rest,
As sleep da come wi' the dew."

That Mr. Barnes has lost none of his power since his first collection appeared, we may prove by quoting the two last verses from "The Child an' the Mowers." The mowers had taken out with them a fine little boy—

"An' out there as they rested at noon,
They drench'd en wi' eäle-horns too deep,
Till his thoughts wer a-drown'd in a swoon;
Ay! his life wer a-smother'd in sleep.

Then they laid en there-right on the ground,
O'. the grass-heap a-zweltren wi' het,
Wi' his heäir all a-wetted around
His young feäce wi' the big drops o zweat;
In his little left palm he'd a zet,
Wi' his right-hand his vore-vinger's tip,
As for zome'at he woulden vorget,—
Ay! zome thought that he woulden let slip.

Then they took en in hwome to his bed,
An he rose vrom his pillow noo mwore,
Vor the curls on his sleek little head
To be blown by the wind out o' door.
Vor he died while the hăy russled grey
On the steäddle so lately begun:
Lik' the mown-grass a-dried by the day,—
Ay! the zwath-flow'rs a-kill'd by the zun."

To all who are capable of seeing the real poetry in these verses we heartily recommend Mr. Barnes's little volumes. They will find in them many lyrics which come straight to the heart, and to which they will often recur when they are tired with affected conventionalities, and seek to find genuine feeling, sweetly, calmly, and melodiously expressed.

A PAINTER'S CAMP.*

Mr. Hamerton belongs to the valuable class of men who, having done something distinctive, have consequently something to say—he enjoys the further advantage of knowing how to say it well. It is a great pity that, with this triple claim to attention, Mr. Hamerton appears not to be aware what a sensible reader cares for. All about his adventures, except the matter-of-fact statements bearing upon the real purpose of his book, all about the odd or ordinary characters he has met, and incidents he has been concerned in, is so much paper and print gone to waste; tedious and useless to read, the impression which it produces is that of having been written for swelling one compact and acceptable volume into two rambling and tiresome ones. We gather, however, from the introduction that such is not the real history of it; that it was, on the contrary, written in cold blood, chapter by chapter, as having an intrinsic value of its own, both to writer and reader, — not even compiled from the casual jottings of a diary, which Mr. Hamerton steered clear of, as being too fragmentary for his purpose. A formidable deliberation and sense of responsibility seem to have governed Mr. Hamerton from the outset. "I will dedicate," he says, at starting upon his experiments, "two old portfolios to the preservation of these papers; one shall be called *Action*, and the other *Meditation*. In the first I will put such papers as concern the active life of a landscape-painter, and in the other such reflections as naturally occur to him whilst he labours, and are suggested by his work." To all this part of the book a sentence in one of his most useless chapters would furnish a suitable motto: "As I have nothing better to do just at present, I will make a retrospective chapter of it." But we venture to differ from Mr. Hamerton's supposition that he had nothing better to do; since the book which, in reality, Mr. Hamerton has produced not only contains a good deal of interesting matter, sound thought, and very efficient writing, but much that proceeds from and records experiences entirely out of the common track. If a good third or more were rejected from the 900 pages which compose the work, it would be quite *sui generis*. We therefore say no more of the less valuable stuff with which Mr. Hamerton has alloyed his substantial material, but pass to giving some account of the latter.

Mr. Hamerton is a landscape-painter, domiciled, it would appear, near Burnley, in Lancashire. A number of hints leave the impression that he is a man of good family and position, who has adopted painting as a profession through an innate and unconquerable love for it, somewhat to the scandal of good-natured friends. Whether Mr. Hamerton is a good or a bad painter we confess ourselves to be wholly ignorant; we do not recollect to have ever seen any of his handiwork, or even heard his name. We trust that he is a good one. Certain it is that, in enthusiasm, energetic industry, and an endeavour both to think out and to work out his art, there can be few painters of the present day to beat him. His book contains the narrative of a course of study, beginning in September, 1856, and ending (so far as these volumes carry it) in November, 1861. His object was to study Highland scenery on the spot; settling down in the very heart of the hill-solitudes, permanently there to watch nature in all weathers, and record her aspects. He began by experimenting on the border of Lancashire and Yorkshire, living in a dell of the hilly road, in a hut of his own invention. Mr. Hamerton is evidently a man of ingenuity, well able to grapple with the difficulties of an exceptional position, and to turn his hand to what needed doing, though the troubles of cookery seemed to have beaten him. The first hut was constructed wholly of panels, conveyable separately, and then bolted together. Four of the largest panels were filled with the best plate-glass, so that the artist, after selecting a subject within view from the hut, could paint it inside from first to last, a point which he very properly insists upon as being important to secure in the interests as well of the work itself as of the worker. The hut proved a good piece of invention and construction, answering its purpose capitally. After a month or so of this Lancashire experiment in wild weather, the author started in the following spring for Scotland and fixed in the Island of Iniskeil, in the middle of Loch Awe. Besides his own hut, his encampment now included a hut for the servant, and a tent available for some of the uses of a kitchen and storehouse. He also got two boats made upon a plan of his own, which is thus described:—

"My boats are an adaptation of the double canoe, constructed in galvanized iron, with watertight compartments. Each canoe has its rudder, and the two rudders work together by a connecting rod. The deck is roomy and firm in proportion to the draught of water, and the larger of the two double boats carries a lateen-sail with singular steadiness. In adapting the old savage idea to my own use on the Northern lakes, I wish to have a craft that will possess the following qualities in combination.

"1. She must never require *baling*. Any water she may ship must discharge itself.

"2. She must be incapable of being capsized.

"3. She must not draw more than nine inches of water.

"4. She must have a large, flat, steady deck, that I can put an easel on, and a chair, and a table in calm weather, just as well as in my painting room.

"No common boat could possibly possess these qualifications. It became therefore necessary to set one's inventive faculties to work.

"In the Marine Museum of the Louvre there are some interesting models of South Sea canoes, both double, and with the balancer. During a stroll through that Museum I found something which seemed to promise all I required, with a little careful adaptation.

"The result is a craft which, though utterly unorthodox, the reverse of nautical, and a piece of open rebellion against all the traditions of old England on the subject of boats from the days when painted Britons paddled about in coracles, down to the last University boat-race, may, nevertheless, be of much utility to me.

"I have then two boats, each of them double, and I call them the *Britannia* and the *Conway* in honour of the tubular bridges, to which they bear some resemblance, being tubular, double, and of iron."

These aquatic oddities proved satisfactory. Their principle was discovered to be the same as that of the life-boats patented by the late Mr. Richardson, and of which his "challenger" is an example. Mr. Hamerton is stout in his maintenance of the principle, and its successful application; and from the experiences which he narrates, we think a bold or a prejudiced man would be needed to impugn the views expressed. A slight notion of both boats and camp may be obtained from medallions designed by Mr. Hamerton for the binding of his book. No other illustrations are supplied; but the author hopes, sooner or later, to publish some of his studies of the scenery in a separate form.

Mr. Hamerton professes to have learned a great deal, and to have accomplished little, in his first Highland encampment. Next year he returned to Loch Awe, taking the peninsula of Innystrynich on a lease of five years, obtaining a cottage for head-quarters, and altering the camp-equipage into a more portable form. In this respect, however, there was still something deficient; and the author afterwards designed a tent, which, at a cost below £30, he pronounces to be perfect for its object. He also had a new tubular boat built, with the improvements which past experience suggested. After a great deal of hard Highland study and work, in every season and all weathers, Mr. Hamerton found it necessary in November, 1861, to seek the drier climate of France. The last he tells us of himself is, that while anxious to revisit Loch Awe, he is also bent upon "a thorough illustration of all the navigable French rivers." He pronounces the Scottish Highlands, after all, to be the most unmanageable of all places for strict painting from nature, though "a noble field for painters from memoranda." The rain, and incessant change of effects, themselves very strong, are among the leading obstacles.

The latter half of the first volume improves in practical and artistic tone, including a sufficiency of interspersed descriptions of which Mr. Hamerton most rightfully considers that a very little is amply enough; a series of careful statements and analyses, in a somewhat different line, of effects of nature watched by him; and discursive observations upon questions of art. Such observations, which are only the garnishing of Volume I., form the staple of Volume II., which has the separate inscription of "Thoughts about Art," and would bear to be republished as a distinct work. There is plenty of good sense and reasoning in this volume, based upon that most sure and precious of foundations—real practical knowledge of the subject. Indeed, we apprehend that, next to Mr. Ruskin, Mr. Hamerton is best qualified and adapted of all professed writers upon art to gain the public ear. A certain Ruskinian tinge may be recognized in his style, and he is always ready to do justice to that great explorer and surveyor of the demesne of fine art; at the same time that he writes from an independent point of view, and commands respect for divergences as well as coincidences of opinion. As an art-theorist, Mr. Hamerton must be regarded as identified, by sympathy and practice, with the pre-Raffaelite movement, Mr. Holman Hunt being his especial hero; though he gives accurate credit to other aims and methods of painting.

We have no space to enter upon or discuss at any length the particular views which Mr. Hamerton expounds in his second volume. the leading topics, and to append an extract, is all we can afford. Four of the most elaborate chapters are those upon "The Painter in his Relation to Society," a relation which Mr. Hamerton holds to be especially false and unfair; "the Relation between Photography and Painting," carefully and truthfully analyzed; "Word-painting and Colour-painting," which is extremely well put, clearly bringing out the total inability of words to compete with forms and colours in the actual exhibition of scenic facts, with a handsome tribute to the extraordinary powers of Tennyson and Ruskin as word-painters in poetry and prose; and "Painting from Memoranda," which is full of detailed practical experience and suggestion. Whatever his opinion on the point may be worth, it is pleasing to find that the writer takes a very sanguine view of the future of British art, both as to its intrinsic excellence and the acceptance which it is likely to find with the public; though the ordinary purchasers and critics of the day are objects of his continual castigation.

* A Painter's Camp in the Highlands, and Thoughts about Art. By Philip Gilbert Hamerton, Author of "The Isles of Loch Awe." In two vols. Macmillan & Co.

FRENCH LITERATURE.

We notice, among the new publications of the past month, several which are of some importance to the literary history of France. "The Dictionary of the French Language," by M. Emile Littré, a member of the Institute, claims our first attention. M. Littré produced not long ago, under the title of "A History of the French Language," in two volumes, a valuable scientific treatise upon that subject, being a precise and substantial account of the Celtic, Roman, and Teutonic derivations of the language, with its growth, its additions, its gradual transformation and extension to the present time. This dictionary, of which the two first portions have now appeared, will form at least four quarto volumes. No

Digitized by Google

other work so complete as this has yet been attempted on the same plan. Each word is made the subject of a special disquisition, upon its origin and etymology, its orthography, its meaning and different acceptations; in short, its whole individuality, which is traced through the French writers of successive ages, and illustrated by well-chosen examples. The twenty-fourth volume of "The Literary History of France," an undertaking begun long since and zealously carried on by the Academy of Inscriptions and Belles Lettres, is just finished. This volume relates to the fourteenth century, and it comprises an essay by M. Victor Leclerc, upon the state of literature, and one by M. Renan, upon the state of the arts, in France at that period, both of which are very interesting. "The History of the University of France," from its foundation to the present time, by M. Ch. Jourdain, is a work in four volumes, displaying the process of French intellectual development in another point of view. Two volumes came out last year, and the remaining two have now come out. With the history of that great institution, since it was founded in the tenth century, and of its varying relations with the State and the Church, from age to age, is mixed up, as one might have expected, that of many famous persons and events.

Another new book, which helps to throw light upon the past history of French literature, is the memoir of Buffon, written by his secretary, M. Humbert Bazile, and edited, with notes and comments, by his great-great-nephew, M. H. Nadaud de Buffon, in a single octavo volume. Buffon, as a naturalist, has been wholly superseded by modern science, but as a great writer, and as a man of learning, he will always deserve our regard. This memoir, the data for which are supplied by family papers, shows not only the private life of the man, and his personal character, but his methods and opportunities of gathering knowledge, and his habits of literary composition.

Although not much in the way of original speculative philosophy has appeared in the past month, something has been done towards the history of philosophy. There is the essay of M. Barthélemy St. Hilaire, upon the Meteorology of Aristotle; this eminent member of the French Institute having devoted himself to a thorough study of that great encyclopædic mind of Greek antiquity, whose prerogative has been owned by so many ages, far remote from his own. Another student of philosophy, not, indeed, equal to M. Barthélemy St. Hilaire in learning, but of a still more inquiring spirit, is M. Foucher de Careil, who has, after much research in the principal libraries of Europe, and the discovery of some manuscripts never before printed, at length completed his edition of the works of Leibnitz, in four volumes,—which, by its comprehensiveness, its accuracy, and the value of its notes and commentaries, merits to be the standard edition. We pass on, however, to some recent treatises on morality, which are of a simpler and more popular kind. M. Alphonse Grün, formerly the editor of the *Moniteur Universel*, has produced a small book, "Thoughts of Different Ages of Life," which we can fairly recommend. Without didactic pretension, and without the affectation of a system, this volume of sagacious and elevated moral instruction is composed of the thoughts which have arisen, at successive periods of his life, in the mind of a man accustomed to reflect upon his own experience, and to bestow serious consideration upon the acts of an individual career. Here are the thoughts of a youth, open to all sorts of illusions, as well as to generous aspirations; the thoughts of his manhood, engrossed with social and civil cares; lastly, the thoughts of his latter years, in the season of repose and recollection. The link of connection between these pages is, that they all emanate from the sincere self-communings of a single mind—that of a man who has not ceased to meditate upon his own inner life, while traversing, as he has done, that period of great changes and agitation in worldly affairs which has elapsed from 1789, when the author was a child, to 1862, when he gives us the fruit of his long experience, as an old man. Books of this sort are too seldom produced in France, and deserve commendation when they do appear, especially when, as in this instance, they combine a high tone of feeling with a degree of literary perfection worthy of the best models. Another treatise of an ethical character, but more directed to social interests, is that of M. T. Loiseleur on "Crimes and Penalties in Ancient and in Modern Times." The author, in one volume, attempts to trace the history of the various punishments prescribed for each crime, from the most ancient times, and to show the different ways in which it has been dealt with; he draws from this historical experience some practical suggestions, and infers that the moral principle, underlying the gradual mitigation of penal codes, is that of regarding the amendment of the criminal as the true aim to be kept in view by them. This is, certainly, an important chapter in the history of civilization; and it is instructive to remark how some offences which, like heresy, blasphemy, and witchcraft, at one time were visited with the most cruel and deadly tortures, have at other times, or in other countries, escaped with a slight penalty or none at all, while, on the contrary, certain practices which once were scarcely thought to be immoral, have taken their place in the criminal code. We do not say that M. Loiseleur has fully and exactly discussed every part of this extensive subject; but his volume contains a store of very curious and erudite information, accompanied with arguments of a high order. Along with these books of moral philosophy, is to be ranked a treatise by M. Léon Dumont, on the "Causes of Laughter;" which does not resemble the well-known Latin dissertation, in the fifteenth century, entitled "*Ars ratioque os distorquendi*, or the Art of Making Ridiculous Faces," but is, on the contrary, a psychological, rather than a physiological, inquiry into the subject of laughter, based on the speculations of such grave philosophers as Tiedemann and Schoppenhauer, as well as of Jean Paul Richter. It is not a volume that will make the reader laugh, but one that will teach him what is the nature of laughter, together with that of irony, raillery, comedy, ridicule, and all which depends upon the jesting faculty of mankind. This moral analysis of mirth is decidedly preferable to the physical analysis of sorrow performed by a certain chemist, who one day said to his wife, "I have decomposed your tears, and find that they contain a portion of phosphate of lime, some chlorine, sodium, mucus, and water." But let us now quit the books of philosophy (*solvuntur risu tabulæ*) with this one on the philosophy of laughter.

The next is no laughing matter. Of all arts cultivated in the nineteenth century, there is none which men now study with greater interest than that of killing men. M. Chesnel publishes a "Dictionary of Naval and Military Armaments," illustrated by engravings, and containing, in the dictionary form, all conceivable information as to the past history and the present state of whatever has been invented in the art of war,—strategy, tactics, armies, fleets, discipline, evolutions, weapons of every sort, battles, sieges, warlike operations by land or sea. The volume just published by M. Xavier Raymond, of the *Débats*, on the "Maritime Forces of France and England," has a more particular interest. He gives us, with some judicious observations of his own, the compared statistics of the two navies, and of their recent increase, on one and the other side of the Channel. As though it were a set-off against this review of the formidable rival powers, which will never again, let us hope, be arrayed in hostility against each other, M. Michel Chevalier gives us a volume in the International Exhibition of 1862, being a sort of introduction to the official reports of the French section of the jury, which are to form six goodly octavo volumes. The subjects embraced in this work are not confined to the French part of the Exhibition, but include the contributions of every nation, thereby presenting a comparative study of the various manufactures and products of the whole world, by men specially qualified to describe them; but the introduction, by M. Michel de Chevalier, may be had separately, and is worth reading by itself.

Amidst all the ardour of those commercial and industrial pursuits with which France, as much as any nation, is now occupied, the memories of her former parliamentary Government are still kept alive, and the most distinguished of her fallen statesmen continue to provide for their reputation with posterity by collecting their speeches and writings for publication. As documents of French parliamentary history, M. Guizot thus republishes, in a companion volume to his Memoirs, the most important of his speeches in the French Chambers,* with a powerfully-written introduction, entitled, "1814, 1830, and 1848," three most significant dates in the annals of France in his time. M. Guizot delineates the moral characteristics of the three generations of Frenchmen whose activity predominated at those periods respectively; he shows the energetic contests for liberty which they have carried on, and expresses his own confidence in its future restoration to France. The "Political Writings and Speeches" of the Duc de Broglie are a collection of the same character, though not equally important or of so near an interest. The collection, in four volumes, of the miscellaneous works of M. de Montalembert, including his speeches and writings on politics, literature, and art, presents greater diversity, and is animated by a more impassioned spirit, which has frequently led the orator to contradict himself in his most eloquent passages. A fresh instance of this has just been seen in a brisk controversy which is going on, through the *Union* and the *Journal des Débats*, between M. Montalembert and M. Eugène Rendu, a writer devoted at once to the cause of liberal Catholicism and to that of Italian unity.

There are some other new publications, however, which belong directly to the urgent political affairs of the day. While the obstinate conflict in North America is being fought out with such pernicious fury, we may read, with some interest, the testimony of an eye-witness, M. Georges Fisch, as to the commencement of that fratricidal war. "The United States in 1861" is the title of his book. He was there at the moment of President Lincoln's election, when the old enmity between North and South broke out into an appeal to arms. To understand, however, the crisis which he describes, it is well that French and European public opinion should have been prepared by the writings of M. Agenor de Gasparin and M. de Tocqueville, on the institutions and character of that great republic which has become a prey to such convulsions. M. Proudhon, in an essay "On the Federal Principle, and on the Necessity of Reconstituting the Revolutionary Party," has again surprised public attention with a sophistical artifice. He is the champion of federation, as the essential principle upon which all society should be based, and in which alone he sees any hope for liberty hereafter. It will not be forgotten that he published a book against Italian unity, at the end of last year, when he, the great revolutionist, suddenly joined the phalanx of the enemies of the new kingdom of Italy, maintaining that a federal system of government was the best possible settlement for that country. What is still more astonishing, he now contends for the application of the same system to France. He can see no other remedy for that excessive centralization which has been one of the enduring causes of despotism in France; he advocates a free association of French provinces and municipalities, in short, of all those local

* Histoire Parlementaire de M. Guizot. Hetzel.

Digitized by Google

individualities to abolish which was the policy of the old monarchy, and has likewise been the effect of subsequent revolutions. It will be seen that M. Proudhon still adheres passionately to his extreme theory of individuality, and persists in regarding anarchy as the best possible *régime*, for the sake of which he proposes to destroy the whole fabric of French administrative unity. Pursuing, with keen irony and epigrammatic force, the application of this strange argument to the existing state of parties in France, he urges the Liberals to reconstruct their own party upon his principles, with a view to undo that which the revolution has done, by a new revolution of the most sweeping kind. It is, however, in spite of the vigour he has displayed in advocating this course, not very likely that he will gain many partizans to its adoption.

Descending, at length, from the heights of philosophical and political speculation, we may notice two or three recent productions of French novel-writers; and amongst these "Dominique," by M. Eugène Fromentin, is one of the most successful. In the portraiture of a guilty love, which checks itself, however, and stops short of actual criminality, this young author, whose story first appeared in the *Revue des Deux Mondes*, shows a higher order of thought and moral insight than most of the novelists of this day. He gives vivid expression to the mental conflict, the agitation, and remorse, which disturb the hearts of Dominique and Madeleine, till at length they bid each other an eternal farewell, and escape the brink of that precipice on which they have been standing. "Count Kostia," by M. Victor Cherbuliez, is a type of those half-Gallicised Russian noblemen, who hide the bear's paw in a Paris glove, and dissemble their barbaric insolence with a smile of politeness—fierce, secret, and sudden, both in their loves and in their hatreds; the unsocial presence of this stranger contrasting with the German idyllic simplicity of the Rhineland, amidst whose scenes and its genial people he has fixed his abode, until, by the good-humour and the gentleness of Gilbert and Stephanie, the wild Muscovite undergoes a salutary change. "The History of a Man," by M. Amédée Achard, is a tale that does not end so happily. This "man" is one of those impulsive, violent, savage natures, which, being impatient of the restraints of civilized life, are always coming into collision with the laws of society. At length the Marquis de Clerfons, with all his faults, his revolts, his struggles, and his defeats, arrives at the miserable end predestined for him, reminding us of those victims of an evil fatality, whose souls, as we read in the Arabian tales, are seized by the demons at the very moment when they first come into being, and can never again be retrieved.

SHORT NOTICES.

Sir William a Beckett, reversing the example of Sir William Blackstone, has taken his farewell of law to addict himself to poetry. Late Chief Justice of Victoria, he has come home amongst other objects to try the effect of a volume of "unaccredited verse," secure that it will at least be welcome to his friends, and to those nearer and dearer than friends, who will be thankful for a more durable memorial of his thoughts than could exist for them in disjointed leaves of unrevised manuscript. It is to his desire to furnish them with such a memorial that we owe this pleasant little volume.* The "Earl's Choice" is one of the latest efforts of its author. It is a tale in blank verse, in six parts, with the loves of two brothers and two sisters for its theme. Sir William à Beckett thinks that people should marry without respect to equality of station, provided they are naturally on an equality, and this is the doctrine his poem is intended to enforce. The story is not remarkable for novelty in the plot or in the telling; but if there is not much either to surprise or delight, there is very little to offend; while the thoughts are generally of a manly and healthy character. Sir William is happier in his rhymed verses; and occasionally he throws off some lines of unaffected beauty. For instance:—

"And what was that I loved so well?
Was it the beauteous form
Now resting in its narrow cell,
The breast no longer warm,
The voice that had so sweet a tone,
The eye that once so fondly shone—
Did these contain the charm
That made me weep thy parting breath,
And binds me to thee still in death?

"No!—these were but the clothing fair
Of spirit robed for earth,
And destined all to perish *there*
As things of mortal birth;
Things that to me were very dear,
Though soon—too soon—to disappear;
Yet honoured for their worth
No more, when they no longer spoke
The inner light which through them broke.

"It may be that, at first, there fell
Despair's unthinking tear,
In gazing on the coffined shell
Of pearl so bright and dear.
But Faith o'er sorrow's cloud soon threw
A light that shone with rainbow hue,
Whilst Hope came smiling near,
And bade me look where angels dwell
For her that here I loved so well."

* The Earl's Choice and other Poems. Smith, Elder, & Co.

All the poems entitled "Under the Cypress," either are the expression of what the poet has felt as a man, or their subject awakens the tenderest chords of his lyre. Most touching are the lines, "No Longer Here," beginning thus:—

"'Tis daybreak in the chamber where,
A year ago you died;
And baby as we call him still
Is sleeping by my side.
* * * *
"He nestles to me whilst my arms
Around him gladly twine,
Until his cheek is resting where
So oft hath rested thine;
And, as my sighing heart-pants beat
Beneath his little ear,
He little dreams the sigh's because
Thou art no longer here."

Lines full of pathos, hardly surpassed even by those which follow, under the title "Her Portrait," of which we have room only for the last two stanzas:—

"God-given wife to me,
Light of this life to me,
No more by side of me
(Pleasure and pride of me),
Fondly beholding thee—
Fondly enfolding thee—
Gentle and dutiful
Art thou, my beautiful!

"One morn she woke not;
Spoke to, she spoke not;
Still she slept—seemingly—
Ah! 'twas *un*dreamingly;
Vainly we stay'd by her,
Vainly we pray'd by her;
Nought could awaken her,—
Angels had taken her!

Mr. Francis Alexander Mackay* contributes to our table his "Lays and Poems on Italy." How far they will affect, for good or evil, the poetical fame of the author of "The Crook and the Sword," "The Heir of Lorn," and "The Curse of Schamyl," we are unable to say, not having read any of these productions; but taken, *per se*, the "Lays and Poems" are hardly of that class of composition which will deter the author from making a second venture for fear of not coming up to the standard of his first. We see no reason why a man who has the taste for it, and the time, should not put forth a volume of such poetry every week, though we should be loth to encourage him to do so. Take the following for an example:—

"From Chiavari's shore a skiff
Puts off and makes for yonder cliff,
Where Laura's bower looks o'er the bay,
Where sheds her lamp its cheering ray.
Now strains melodious from the boat
Are heard, and o'er the waters float,
To where they fall in cadence clear,
As watchful, listening, loving ear," &c. &c.

Mr. Mackay's blank verse is a very little better than his rhyme, but neither are worth dwelling upon longer.

"Ancient Leaves"† is the title of a book of "Translations and Paraphrases" from poets of Greece and Rome, rendered by D'Arcy W. Thompson, who has shown good taste in his selection of subjects, and ability in putting them into their new shapes. Mr. Frederick G. Tuckerman is the author of a book of Poems,‡ the right of translating which he has humanely reserved. If it is difficult for an English reader to follow their meaning, what would be the effect of the endeavour on a Frenchman or German? We don't say that they are all hopelessly abstruse, or that occasionally they have not the true poetic ring. But we have found ourselves baffled every now and then, in spite of the most earnest endeavours to discover what the author means. If any one, for instance, will tell us what Mr. Tuckerman means by the following sonnet, we shall feel obliged to him:—

"The starry flower-like stars that fade,
And brighten with the daylight and the dark,—
The bluest in the green I faintly mark,
And glimmering crags with laurel overlaid,
Even to the Lord of Light, the Lamp of shade,
Shine one to me;—the least, still glorious made
As crownèd moon, or Heaven's great hierarch.
And, so, dim grassy flower, and night-lit spark,
Still move me on and upward for the True;
Seeking through change, growth, death, in new and old,
The full in few, the statelier in the less,
With patient pain; always remembering this,—
His hand, who touched the sod with showers of gold,
Stippled Orion on the midnight blue."

All this is even less intelligible to us than the English preface to the "New Guide to Conversation, in Portuguese and English," by José da Fonseca and Pedro Carolina, in which is the following passage:—

"The *works* which we were comparing for this labour, find use us

* Lays and Poems on Italy. Bell & Daldy.
† Ancient Leaves. Edinburgh: Edmonston & Douglas.
‡ Poems by F. G. Tuckerman. Smith & Elder.

Digitized by Google

for nothing; but those what were publishing to portugal, or out. They were almost all composed for some foreign, or for some national, little acquainted in the spirit of both languages. It was resulting from that carelessness to rest these *works* full of imperfections and anomalies of style; in spite of the infinite typographical faults which sometimes invert the sense of the periods. It increase not to contain any of those *works* the figured pronunciation of the english words, nor the prosodical accent in the portuguese: indispensable object whom wish to speak the english and portuguese languages correctly. We expect then who the little book (for the care what we wrote him, and for the typographical correction) that may be with the acceptance of the studious persons, and especially of the youth, at which we dedicate him particularly."

If we were bound to decide between the preface of Messrs. José do Fonseca and Pedro Carolina and Mr. Tuckerman's sonnet, we should say that the sonnet is the more perplexing puzzle of the two.

THE RECENT EXCAVATIONS AT ROME.

In the *London Review* of December 20, we gave an exact description of the very interesting remains of architecture and fresco painting which had been discovered beneath the church of San Clemente, at Rome. The merit of these discoveries belongs to Father Mullooly, prior of the Irish Dominicans, who has lately been assisted by the liberality of several of our countrymen in the laborious and costly task of excavating further beneath the foundations of the modern church. The Prince of Wales, in his last visit to Rome, testified his interest in this matter by a personal examination of the works, which are still going on, and by a subscription towards the fund raised for that purpose. It is, gratifying, therefore, to report the more recent progress of the undertaking, since the discovery, in August last, of the second pier in the central nave of the ancient church of St. Clement, ornamented with frescoes no less perfect than those of the first pier, described in our former notice.

The fresco picture towards the central nave, as in the pier first discovered, is divided into three compartments, the upper part of the figures in the highest having been partly destroyed. In the centre of the highest compartment is a figure of the Saviour, draped in a richly folded mantle descending to the feet, which are bare; he is seated on a throne richly decorated, and holding before his breast an open book, on the pages of which are the words FORTIS. UT. VINCULA. MORTIS—probably referring to the saint who forms the subject of the centre picture. An archangel stands on each side of the throne; on the right St. Michael, and on the left St. Gabriel; both robed in tunics and Greek stoles, ornamented with gems, and holding golden censers in their hands. At one extremity of the picture stands St. Clement in pontifical robes, and at the other S. NYKOLAUS. This is either St. Nicholas, who filled the chair of Peter between the years 858 and 867, or St. Nicholas of Bari, who lived at a much earlier period.

The centre picture represents the story of the celebrated Roman pilgrim, St. Alexius or Alexis. In the back ground rises a noble palace; from a loggia or window in the upper part of which, a gentlewoman, supposed to be the deserted bride of St. Alexius, is intently contemplating the scene below. The scene represents the senator Euphemianus, on horseback, followed by his suite of two armed cavaliers, one of whom carries his sword on his shoulder. In front of the senator is the pilgrim, in a supplicating attitude, his pilgrim's staff in his hand, and wallet over his shoulder. The senator, motioning with his hand towards the palace, seems to reply to the pilgrim that he will there find the wished-for hospitality. The names EUPHEMIANUS and S. ALEXIUS are written below the feet of each respectively. A little further to the right of the spectator, and towards the centre of the picture, is the second scene, representing the death of St. Alexius. The pilgrim is extended on a pallet, while over him leans the pope in pontifical attire, giving with one hand the apostolic absolution; while in the other he holds the mysterious scroll, which the unknown pilgrim, who is dying, would confide to no other hands but his. The pope is accompanied by his clergy, thirteen in number, one of whom carries the so-called cross of Constantine. In the third and last scene, on the right of the spectator, the painter has sought to represent the affecting incident of the recognition of the pilgrim when it is too late. The dead body of Alexius is lying on a bier covered with a red pall, on the border of which are crosses and birds. The pope, surrounded by the same attendant clergy, has read the scroll, which reveals the name of the unknown pilgrim. At this announcement, Euphemianus and his wife, struck with grief at the discovery that it is their son who lies dead before them, tear their hair, while the bride, whom Alexius had deserted on the first night of their marriage, throws herself on the body, covering the face with kisses and tears. At the same time, the pope seeks to assuage their grief with the words "Venite ad me, omnes qui laboratis;" while with his right hand he gives his benediction to the body. Under this picture, in one line, are the words NON PAT (PATER) AGNOSCIT MISERERI Q SIBI POSCIT PAPA TENET CHARTAM VITÆ QUE NUNTIAT ARTAM.

In this picture we have full confirmation of the romantic story of St. Alexius. It is, however, noteworthy, that while tradition fixes the date of the death of Alexius in the pontificate of Innocent I.—that is, between the years 401 and 417—this fresco evidently refers it to a later pontificate, that of St. Boniface, who filled the chair of Peter from the year 418 to 422; the name written below the Pontiff's feet being B . . . . ATIUS, which, though difficult to decipher, is evidently Bonifatius.

The lowest compartment consists of a large frieze, garlands of fruit and flowers gracefully intertwined, with birds between them.

A fourth fresco has just been discovered on the side of this pier. In the upper compartment is the lower half of a figure of St. Ægidius, abbot. In the centre picture is represented the bishop and martyr of Sebaste, St. Blasius, in the act of performing the well-known cure attributed to him. He is extracting from the bleeding mouth of a child, who is presented to him by its mother, a thorn or bone, which has stuck in its throat. The agonized posture of the child, and the attitudes of the mother and the saint, form a group full of life and expression.

The picture in the lowest compartment is exceedingly curious. It represents a wolf in the act of carrying off a pig, which he has seized by the back and holds aloft between his teeth. In the life of St. Blasius we read that a certain widow's sole possession consisted of a pig, which being carried off by a wolf, the poor widow begged St. Blasius to have it restored to her. He laughingly replied, "Dry up your tears, your pig shall be brought back;" and at the same moment the wolf reappeared and deposited the pig at the widow's feet. Not long after, St. Blasius was thrown by his persecutors into prison, when the poor widow sought to show her gratitude to him by killing her pig and sending Blasius its head and feet, together with some bread, and a candle. The saint ate, and thanked her, saying, "Offer each year in my church a candle, for love of me, and whoever does so shall have my protection." So says the legend. Mrs. Jameson observes that this saint keeps his place in the English reformed calendar, and as patron and protector of woolcombers and woolstaplers is especially popular in Yorkshire, where he is regarded as the inventor of woolcombing. He was, till lately, commemorated in the town of Bradford by a festival held every seven years, wherein Prince Jason and the Princess Medea, with Bishop Blaise and his chaplain, all walked together in grand procession. He has three churches dedicated to his honour in England.

As to the time when these curious frescoes were executed there is much diversity of opinion. In the judgment of Overbeck, the Duke of Sermoneta, and other artists or connoisseurs, they belong to the fifth or sixth century of the Christian era. But some would refer them to the tenth or eleventh, relying on the half-Italian sentences, which were mentioned in our former notice, as inscribed on the lower compartment of the first pier. *Fili delle putte traite*, the coarse objurgation addressed by the master architect to his workmen, is but too intelligible. But we scarcely know the exact period at which the change of language took placé among the Roman plebs, after the northern barbarians came in. There is reason to believe that 1084 was the date at which this ancient church was destroyed by fire; but the date of its building is lost. These frescoes certainly belong to the decline of art. The fragments in the aisles are very rude in execution. Yet in all, particularly in the fine frescoes representing St. Clement and St. Alexius, we see the work of artists whose minds were full of the traditions and influences of antique art. The proportions of all the figures are exceedingly good, the attitudes full of life, and the composition very skilful. The face of St. Clement, officiating at the altar, has sufficient individuality to be a portrait; and the figure of Theodora may, for elegance and nobleness of form, for the beauty of the composition, for the correctness of the drawing and skilful arrangement of the drapery, be compared with those noble portrait statues of Roman ladies, such as the so-called Pudicitia of the Vatican, which give us so elevated an idea of the women of ancient Rome.

Is it, then, possible, to attribute works, containing so much that is excellent in every way, so much vitality of art, to the tenth or eleventh centuries? Kugler says:—"The slightly animated gait which imparted to the figures some appearance of life ceases with the eleventh century, at which period an absolute statuesque immobility of form commences, while the artist soon ceased to comprehend both the principles and effects of organic movement." In our opinion, the fresco of St. Clement officiating at the Altar, and its companion pictures, do not betray the vices of that age of decadence in art. The fresco of St. Alexius is inferior, in various points, though it is marvellously full of incident, life, and expression; but the figure of St. Nicholas, in the corner of the upper compartment, if proved to be Pope Nicholas I., must be dated subsequent to 867. It is, however, not improbable that the fresco may be of earlier date, and that the supplementary figures of St. Clement and St. Nicholas may have been added at the time when the church was repaired by Nicholas; or the figure may represent the much earlier St. Nicholas of Bari. Although some of the ornaments on the dresses are of a somewhat barbarous character, particularly in the upper compartment of the pier last discovered, yet we nowhere find any traces of the gilding and extraneous ornamentation that characterized the Byzantine period, when splendour and costliness of material made up for want of power in art. On the contrary, the tone of the frescoes, while brilliant in colouring, is quiet in effect. The background of the "St. Clement" picture is black, like many of the frescoes found in Pompeii, while that of the "Alexius" picture is, in one part, a dark blue, scarcely to be distinguished from black, and in the other a very dark brown.

Other important discoveries have also been made; among which is an inscription that proves the date at which the high altar was erected. At the base of the ambones, in the upper church, a slab of marble had been used for foundation, which, on excavation, turns out to be part of the high altar of the ancient church. Father Mullooly found what appeared to be letters along the edge of this slab. Careful examination, and the removal of the dirt with which centuries had incrusted it, brought to light the following inscription: "Altare tibi, Deus, salvo Hormisda Papa, Mercurius Presbyter cum sociis offert." This altar, therefore, was consecrated between the years 514 and 523, the duration of the Pontificate of Hormisdas; and the priest, John Mercurius, who was then titular of the basilica of St. Clement, ascended the chair of Peter in 532, under the name of John II.

Under what circumstances the destruction of the ancient church took place, is matter for conjecture. The most probable supposition seems to be that it was destroyed by the victorious army of Robert Guiscard in 1084. We read in Gibbon that a hasty word from the conqueror was the signal for fire and pillage, and that a spacious quarter of the city, from the Lateran to the Coliseum, was consumed by the flames and devoted to perpetual solitude. Is it likely, therefore, that the church of St. Clement, situated in the very centre of this quarter, could have escaped? Again, we also read that Robert's Saracen auxiliaries took this opportunity of rifling and profaning the

Digitized by Google

holy city of the Christians. Have we not here a reason for the destruction of the high altar, while other parts were left? The fact that they were fighting against the anti-Pope Clement III., who had just been consecrated in the Lateran, and in favour of Gregory VII., who was shut up in the castle of St. Angelo, may also be a reason why so little respect was paid to the church bearing the usurper's name.

For these valuable discoveries we are entirely indebted to the perseverance and energy of the Rev. Father Mullooly, but for whose efforts they would still have remained in oblivion. Much has been done, but much more is left to be accomplished. Cuttings are now being commenced towards opening up the nave; and, doubtless, still more interesting discoveries will follow those already made. Meantime, it is to be hoped that the money will not be denied which is needful for our countryman to complete his disinterested task.

CORRESPONDENCE.

SISTERHOODS IN THE CHURCH OF ENGLAND.

TO THE EDITOR OF THE "LONDON REVIEW."

SIR,—Will you allow me to correct an error into which the writer of the article headed "The New Champion of Orthodoxy" has fallen, when he says that Dr. Pusey was my spiritual director? The inadvertence may be deemed material, inasmuch as the authenticity of the information given in "Sisterhoods" is presumed to depend upon this circumstance. Dr. Pusey was never my spiritual director, and I never spoke to him in my life, as none but his "children" did.

I may explain that when any fact mentioned in the volume did not come under my own observation, I wrote from the materials furnished by ladies who were cognizant of all the circumstances of the occurrence, and who are prepared to avow their connection with the anecdote. Your obedient servant,

MARGARET GOODMAN.

London, March 3, 1863.

IN NUPTIAS ALBERTI EDVARDI ET ALEXANDRÆ.

QUÆ tibi damnosos terra edidit, Anglia, quondam,
Jam pelagi reges det tibi lætificos.

xiii. Kal. Feb. MDCCCLXIII.

[TRANSLATION.]

ON THE WEDDING OF ALBERT EDWARD AND ALEXANDRA.

Now, Albion! may the land that bore
Sea-kings, a terror to thy shore,
Thee with a line of sea-kings bless,
To give thy people happiness!

J. H. ABRAHALL, Combe Longa.

January 20, 1863.

LIST OF MEETINGS OF LEARNED SOCIETIES FOR NEXT WEEK.

MONDAY, 9TH MARCH.

BRITISH ARCHITECTS—At 8 P.M.
GEOGRAPHICAL—At 8½ P.M. "Recent Explorations in Australia," by Messrs. McDowall, Stuart, Landsborough, McKinlay, &c.

Estimates given for Work in any of the above branches, and for the Erection of Observatories.

31, SOUTHAMPTON-STREET, STRAND, W.C.

CAUTION.—The extraordinary success attending the use of Dr. J. COLLIS BROWNE'S CHLORODYNE has induced certain unprincipled persons to vend spurious compounds under this name. This wonderful remedy allays pain, soothes the system, and invigorates nervous debility. It effectually cures, as will be seen by medical testimony, CONSUMPTION, COUGHS, ASTHMA, BRONCHITIS, NEURALGIA, RHEUMATISM, &c. Never be tempted to buy Chlorodyne except in sealed bottles, having the Government Stamp, with the words "Dr. J. Collis Browne's Chlorodyne" engraved thereon. A sheet full of medical testimonials accompanies each bottle. Sole Manufacturer, J. T. DAVENPORT, 33, Great Russell-street, Bloomsbury, London. Sold in Bottles, 2s. 9d. and 4s. 6d.; sent carriage free on receipt of Stamps or Post-office Order.

THE PATENT AMERICAN KITCHENER, with recently Patented Improvements,

IS THE CHEAPEST AND MOST ECONOMICAL COOKING RANGE EVER OFFERED TO THE PUBLIC.

It saves half the fuel usually consumed, cures smoky chimneys, requires no brickwork setting, is fully equipped with cooking utensils, and MAY BE SEEN IN OPERATION DAILY at

J. H. RIDDELL'S AMERICAN STOVE WAREHOUSE,

155, CHEAPSIDE, LONDON.

Illustrated Prospectuses, with Prices and Testimonials, free.

THE NEW STUDIO EASEL,

VERY SIMPLE AND EFFICACIOUS.

WINSOR & NEWTON,

MANUFACTURERS,

38, RATHBONE-PLACE, LONDON.

PERFECT TEA.—W. and G. LAW are now SELLING a MIXTURE at 4s. 4d. per lb., containing the FINEST TEAS of 1861-2, ex Fiery Cross, Northfleet, and Caduceus, along with the finest flavouring teas of 1862-3. There has been nothing imported this season to compare with these magnificent teas. Carriage paid on 12lb. and upwards to any railway station in England.

TEA AND COFFEE WAREHOUSE,

544, NEW OXFORD STREET (near Mudie's).

ORNAMENTS for the DRAWING-ROOM, LIBRARY, &c. An EXTENSIVE ASSORTMENT of ALABASTER, MARBLE, BRONZE, and DERBYSHIRE SPAR ORNAMENTS. Manufactured and Imported by J. TENNANT, 149, Strand, London, W.C.

WHITWORTH RIFLES.—The MANCHESTER ORDNANCE and RIFLE COMPANY beg to give notice that Whitworth Ordnance Rifles and Ammunition are manufactured by Mr. Whitworth's Patent Machinery only at their Works in Sackville-street, Manchester.

Application may be made either at the above works, or at the Company's Office, 28, Pall Mall, London, S.W.

The Rifles and Ammunition may be also obtained through the agency of any respectable gunmaker.

FOREIGN WINES, LIQUEURS, &c., at MODERATE PRICES.

THE attention of Gentlemen and Families is respectfully invited to our prices:—

Ports, in wood, 20s., 24s.; Matured, 28s., 36s., and 42s. per doz.
Ports, old, in bottle, 36s., 42s., 48s., 54s., 60s. to 96s. per doz.
Sherry, 21s., 24s., 28s., 32s., 36s., 42s., 48s., 54s., and 60s. per doz.

Established 1807.

DR. DE JONGH'S

(Knight of the Order of Leopold of Belgium)

LIGHT-BROWN COD LIVER OIL, prescribed by the most eminent Medical Men as the safest, speediest, and most effectual remedy for

CONSUMPTION, CHRONIC BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GENERAL DEBILITY, DISEASES OF THE SKIN, RICKETS, INFANTILE WASTING, AND ALL SCROFULOUS AFFECTIONS,

Is incomparably superior to every other kind.

SELECT MEDICAL OPINIONS.

Sir HENRY MARSH, Bart, M.D., Physician in Ordinary to the Queen in Ireland.

"I consider Dr. De Jongh's Light-Brown Cod Liver Oil to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

Dr. LANKESTER, F.R.S., Scientific Superintendent, South Kensington Museum.

"I consider the Cod Liver Oil sold under Dr. De Jongh's guarantee to be preferable to any other kind as regards genuineness and medicinal efficacy."

Dr. GRANVILLE, F.R.S., Author of the "Spas of Germany."

"Dr. Granville has found that Dr. De Jongh's Light-Brown Cod Liver Oil produces the desired effect in a shorter time than other kinds, and that it does not cause the nausea and indigestion too often consequent on the administration of the Pale Oil."

Dr. LAWRANCE, Physician to H.R.H. the Duke of Saxe-Coburg and Gotha.

I invariably prescribe Dr. De Jongh's Cod Liver Oil in preference to any other, feeling assured that I am recommending a genuine article, AND NOT A MANUFACTURED COMPOUND IN WHICH THE EFFICACY OF THIS INVALUABLE MEDICINE IS DESTROYED."

DR. DE JONGH'S LIGHT-BROWN COD LIVER OIL is sold only in IMPERIAL Half-pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.; capsuled, and labelled with his stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable Chemists and Druggists.

SOLE CONSIGNEES:

ANSAR, HARFORD, & Co., 77, Strand, London, W.C.

CAUTION.—Beware of Proposed Substitutions.

THE WEDDING AT WINDSOR.

WITH every befitting accessory and circumstance of pomp and pageantry, the Royal wedding was celebrated last Tuesday in the ancient chapel of St. George. The venerable pile has never witnessed a fairer or a more striking display. Around the spot clings many an historical association, carrying us far back into the early days of the monarchy. For us its sombre and austere interior will henceforth wear a lighter and more gladsome aspect, as the scene of nuptials in which have culminated a people's hope and joy. Nothing was wanting to this great occasion. The illustrious of our own country and of foreign lands thronged the choir. The bride and bridegroom stood amongst the scions and representatives of many friendly and allied houses—fair-haired Scandinavians and Teutons mingling for the first time at such a ceremony with the dark-skinned Oriental. The Knights of the most distinguished Order in Christendom occupied the places which bespeak their close relation and their near approach to the throne. The fair daughters of the oldest, the proudest, and the most powerful aristocracy yet left to Europe, did suit and service in the train of her who came to wed their future sovereign. But gorgeous and picturesque as was the courtly show, there was yet a grander sight, of which England itself was the theatre, and to which the whole English nation contributed in enthusiastic loyalty. From the little borough which nestles under Windsor Castle, to the furthest confines of the land, there was not a village or a town—thriving seaport, busy hive of manufacturing industry, or the vast metropolis, our empire's heart—which was not filled with the sounds and signs of rejoicing and of love. Nay, even this was not all. Far away across the ocean—in Canadian forests, under the Southern Cross which looks down upon young Australia, and beneath the burning skies which bend over ancient India,—the hearts of our fellow-subjects were beating in unison with our own. For this day all distinctions of rank, class, and opinion, were sunk in such an expression of attachment, of sympathy, and of confidence, as never before greeted the heir to any crown. Nor did any dissentient voice break the general harmony. No fitter time, indeed, could be found for offering, at the foot of the throne, our respectful homage and our earnest congratulations. No marriage can be regarded as a commonplace event. Even when the sacred rite unites the lowliest and the most obscure, it is a crisis in the life and destiny of two human beings; the fertile source of happiness or sorrow not confined to themselves; the sweet or bitter spring of unnumbered blessings or curses to those who wed and to the society of which they form part. How august, then, must be the bearing upon a nation's future of such a marriage as we have just seen celebrated! By it the Royal Family, beneath whose rule we so love to live, renews itself under the happiest auspices. We see in it a deliverance from all fear of a break in the direct line of our native-born princes. We trust that it will give us a young and buoyant Court; not, as in times we willingly forget, ranged in opposition to the older and graver one, but reinforcing its strength and increasing its influence by the freshness of sympathy, the natural enthusiasm, the openness to new thoughts and ideas, with which it is the privilege of youth to aid and inspire the calmer wisdom, the more cautious steps and the more sluggish feelings of mature age. It is desirable that the influence of the rising generation should be felt near the throne as it is in every other part of our political or social life. Never had prince or princess a fairer opportunity of playing a great part as faithful interpreters to the Sovereign of the sentiments and ideas of their own contemporaries. The nation confidently expects that they will not lose sight of this duty; that they will not, even in the pure enjoyment of domestic happiness, forget the claims of that public station to which they are born. At the same time it is keenly alive to the fact, that domestic purity and devotion are the indispensable foundations of their usefulness. Of these, however, we do not doubt. The Prince of Wales has had before him the best example in his mother and father. Even before we saw her, report had invested the Princess with every virtue that may adorn a crown, or shed happiness upon a family circle. Since she has shown herself in our streets, he would indeed be a rash man who ventured to hint a doubt of this, in any assembly of his countrymen or countrywomen. But had our hopes and expectations been based merely upon these reasoning considerations, our rejoicings would have wanted much of their warmth, and been characterized by much more of self-restraint. The people were deeply affected and thoroughly won by the romance of a love-match in a rank where such things have been far from common. This was the touch of nature which broke down all the barriers which rank and etiquette interpose between sovereign and subjects. Those who thought about the matter found here the best pledge for the realization of our fondest wishes. To those who did not think, the same conviction was suggested by the unerring instinct of their own hearts. Therefore was it both natural and well that we should do as we have done. Our generous outburst of deep and genuine feeling will not fall fruitless to the grouud. Nations, like individuals, gain immensely by throwing off now and then the restraints of conventional habit, and by giving vent to the finer emotions and exercise to the more unselfish capabilities, which are apt to languish amidst the routine of daily life. Such demonstrations as those in which we have taken

Digitized by Google

part sensibly raise the tone of the public mind. They bring home to us how much we all have in common; they increase our confidence that this is generally felt; they give us a new and sound reason for believing that in any great crisis or struggle Englishmen will still stand shoulder to shoulder unto the last. Nor can they be but a passing morning's gratification to those in whose honour they are offered. All but the basest are rendered better by being trusted. If there is anything good in a man, the surest way of bringing it out is to show that we know it is there, and that we rely upon his doing justice to himself. The marvellous reception of last Saturday, the universal celebration of the marriage of Tuesday, were manifestations of so complete a trust in the Prince and the Princess of Wales, that they must indeed be unworthy if they do not strain every nerve to deserve the love which is heaped upon them. They are called to no ordinary inheritance—that of the unbounded devotion of the freest people on earth. Reserved as we are, we have opened to them the innermost recesses of our heart. They can have seen nothing there but the most affectionate loyalty, and they are bound by the strongest obligations—by the proudest recollections—to make the happiest day of their lives the fertile source of happiness to the country that rejoiced with them.

There is yet another aspect of this marriage on which we cannot omit to dwell for a short time. The Queen may depend upon it that she has not been forgotten by her subjects in this hour, to her, of mingled joy and grief. As we read the accounts of the ceremony at Windsor, our fullest sympathy was given to the widowed mourner, across whose heart were seen to fall in rapid succession the shadows of departed happiness and the sunshine of rising hopes. We dare not seek to chase away the feelings which overpowered her when the chorale of the late Prince Consort swelled through the chapel. There are things too sacred for strange hands to touch. But it has not been the least source of our satisfaction at the early wedding of her eldest son, that it tends to fill up some of the gaps which the last few years have made in her family circle. It seems but a short time since that circle was before us with its completeness unbroken; the happiest example to be found of good fortune well deserved by high qualities and unswerving affection. Death has since taken the mother and husband; while two daughters have been carried off by marriage to foreign homes. In all probability it will not be long before another of our fair and amiable young princesses wins the heart of some eligible suitor; and she in turn is in great part lost to her parent. There is only one way in which to fill the void thus created. It was with inexpressible pleasure we learnt some months ago that the Queen was finding in the presence and affection of her future daughter-in-law an object of interest and a source of consolation. We all heard with emotion of the simple and heartfelt words in which the Prince of Wales described it as the dearest wish of his affianced, to become a comfort and support to his mother in her affliction. Probably not even a daughter could discharge that duty with so much effect. The strongest interest of a widowed mother always centres in the rising family of her son. And if this be so in ordinary life, how much more must it be the case, when in that son is the hope of a Royal line,—when it is upon him that this mother trusts to devolve, some day, a crown that it has been her pride to keep stainless and increase in honour! If such proud anticipations, and the affectionately solicitous cares they suggest, do not drive away regret, they must at least mitigate its pressure. The young household will have its difficulties and dangers, like others in a humbler sphere. The Queen will not forget that upon her alone now devolves the duty of shielding them as far as possible from the ill consequences of inexperience. Whether or not she be prevailed upon to shorten the period of seclusion which she has assigned to herself, there will still be many purely domestic matters on which her advice and assistance will be required. With how lively an interest she is prepared to respond to the call, might be seen in the smiles and salutations with which, through her tears, she greeted her son and his wife as they left the altar a wedded pair. She will feel like other mourners the healing effect of a greater tension of mind. If time is the greatest, action is no slight consoler. This she will henceforth have in the most attractive form—rewarded, too, we venture to believe, with the most winning and daughterly affection. On the other hand, the Prince of Wales will now be in a position to render his mother far more effective assistance than heretofore in much State business, and in many State ceremonials which would otherwise bear hardly upon him. We trust, however, that her Majesty will not lean too much upon his aid; will not seek to substitute him for herself beyond certain easily understood and well defined limits. The people have borne with the tenderest consideration the long retirement of their monarch from public life. But they are not prepared to see that retirement become permanent, even in favour of the heir to the throne. They do not desire the virtually premature termination of a reign to which they owe so much. Their attachment to her Majesty makes them desire ardently to see her once more amongst them, meeting her parliament, and taking in national affairs the part which is her right. Nor would it be really loyal to conceal the fact that they deem themselves fairly entitled to ask that this shall be so before very long. The time must come when the unrestrained indulgence of grief ceases to be a virtue, and when loss of consideration and of honour must attend any one who cannot or will not listen to the voice of duty. We trust that the new family ties with which the Queen has been blessed may be the means of leading her gently and gradually, but decidedly, to the resumption of her place as head of the nation. We still look forward to many happy and glorious days under her gracious rule. We rejoice in the marriage of the heir-apparent, because it promises to bring new lustre to her throne, and restore her to us, at no distant day, the happy sovereign of a loyal and affectionate people.

THE DRAGGING HOME OF THE PRINCESS.

ON Monday night the Earl of Dalhousie, who, as Lord Panmure, acquired considerable celebrity during the Crimean war for his proficiency in the art of "how not to do it," very appropriately took the City authorities to task for their defective police arrangements during the passage of the Royal *cortége* through London, and for their "false pride" and "self-sufficiency" in having declined the proffered assistance of the Metropolitan police on that occasion. From a paragraph which appeared in Tuesday's *Times*, it would seem that the City police are desirous of casting the blame of this failure on the City of London Volunteers, to whom the task of keeping the ground in front of the Mansion House had been entrusted by the acting Commissioner of the City Police, who has brought under the notice of Colonel McMurdo what he considers to be a breach of orders by the City of London Volunteer Brigade. Whilst Colonel McMurdo is occupied in the bootless task of unravelling this tangled skein, we will take the liberty of making a few observations on another portion of last Saturday's pageant, which has been universally condemned as totally unworthy of the great national event which the British public were doing their best to celebrate with becoming splendour. We allude to that part of the procession which depended for its success on the officials of the Court.

We do not know who is to be considered responsible for its organization, whether the Secretary of State for the Home Department, or the Lord Chamberlain, or the Earl Marshal, or the Master of the Horse. We do know, however, that Sir George Grey accepted the proffered attendance of the civic dignitaries as far as Temple Bar, and firmly declined to allow them to proceed a step further, on the plea that the burgesses of the city and liberty of Westminster were entitled to lead the array from thence to Hyde Park Corner. And we should also like to know how it came to pass that, whilst the Lord Mayor and the Aldermen of London accompanied the Prince and the Princess in becoming state as far as they were allowed to do so, the burgesses of Westminster should have been permitted to replace them in dresses and in equipages which would have disgraced a gang of thimble-riggers on their way to Epsom races? They were, indeed, headed by the state carriages of his Grace the Duke of Buccleuch, as Lord High Steward of Westminster, and of Lord Camperdown, as Churchwarden of St. George's, and by the two beadles of the Burlington Arcade; but even the brilliancy of these well-known dignitaries scarcely atoned for the score of shabby flys and glass coaches, crammed apparently with undertakers' men, which obtruded themselves into the procession at Temple Bar. The Duke of Buccleuch's prize coachman, too, would have been far more effective had he not so immeasurably outgrown his canary-coloured coat; nor did Lord Camperdown's jibbing horses, after bringing the pro-

Digitized by Google

cession to a halt several times, and being at last ignominiously shunted out of it at the end of Park-lane, add much to the decorum of the ceremonial.

The procession of Saturday last either was a State procession or it was not. If it was not a State procession—why were we not spared the ludicrous sight of Lord Salisbury and his twenty Deputy-Lieutenants of Middlesex uneasily perched on troop horses of the artillery borrowed for the occasion? Why were we called upon to admire his Grace of Buccleuch's enormous and scantily-coated coachman, and the noble Churchwarden of St. George's and his concomitant beadles? And, if it was a State procession, may we not reasonably ask, where were the gilded Court equipages and their cream-coloured and jet-black teams, laden with brilliant trappings? Where were Garter Clarenceux and Norroy Kings at Arms? Where were their faithful pursuivants, Bluemantle, Rouge Dragon, Rouge Croix, and Portcullis? Where were the great officers of State and their equipages? Why were the public shabbily fobbed off with five or six of the seediest undress carriages that the Royal Mews could turn out? Lord Dalhousie admitted that, on the occasion of which we are writing, "the whole of the people of the metropolis were striving to excel each other in doing honour to the illustrious Princess who was passing through their streets, and in upholding the character of the country for loyalty and hospitality;" and it is somewhat mortifying to reflect that whilst we were so occupied, the Dundrearies of St. James's and Buckingham Palace appear to have been employed—and with complete success—in baffling our efforts and in rendering them ridiculous.

And this is not the only occasion of late on which the public has had good reason to complain of the insolent indifference of the paid servants of the Royal Household. At the first levée held by his Royal Highness the Prince of Wales, it was but to be anticipated that the English nation should press forward to do honour to its future king. The attendance, therefore, was unusually great. Nevertheless, the Lord Chamberlain and his officers took no heed whatever of that circumstance, of which they must necessarily have been well aware beforehand. A shameful scene of confusion ensued. After struggling for hours in crowded passages, angry and wearied and perspiring men, with disordered and torn dresses, were protruded forcibly into the Presence, leaving the rooms in which they had been confined strewed with broken feathers and epaulets, and with medals and crosses, which had been forcibly wrenched from their persons during the affray. And all the apology or explanation offered to them by the officials when they remonstrated against such usage was—"How can we help it? Why do you come here in such numbers? If you do not like a crush, you had better stay away." A sharp paragraph or two in the press, and a question asked by Mr. Gerard Sturt in Parliament, obtained for the ladies who attended the drawing-room held on the following Saturday rather better treatment, and conclusively proved, that if the Lord Chamberlain and his subordinates would condescend to do their duty, the disgraceful scene to which we have alluded need never have occurred at all.

It is said, and perhaps truly said, that St. James's Palace does not offer sufficient accommodation for the numbers of people who now-a-days frequent levées and drawing-rooms. If this be so, Buckingham Palace is not far distant, and it has not been forgotten that the enormous expenditure lavished on that ugly pile was justified in Parliament by the assurance that it was necessary, in order to provide the very accommodation which St. James's can no longer supply.

But, whether the levées and drawing-rooms are held at St. James's or at Pimlico, one thing is clear, that if persons are admitted to Court to pay their respects to their sovereign, they ought to be treated with attention and respect by the servants of her Majesty, as long as they are under her roof. It is very possible that some people may now and then gain admittance there who had better stay away; indeed, it has been said, that at the very last levée a ticket-of-leave man was presented by a noble Duke, "on his early return from Australia." But those mistakes occur through the *laches* of the Lord Chamberlain, and he must settle them with his Royal Mistress as best he may. The prevailing fashions of the day, and the light materials of which ladies' dresses are mostly composed, render increased space indispensable; and it is clearly the Lord Chamberlain's duty to provide it, either by limiting the numbers at each drawing-room, or by devoting more rooms to the reception of the guests, and by creating additional avenues for their entrance and exit. The truth of the matter is, that the Court officials and their friends, enjoying what are called the privileges of the *entrée*, are not themselves subjected to any of the indignities suffered at drawing-rooms and levées by the general public, and derive considerable amusement, whilst comfortably grouped around their Sovereign, from the dishevelled and towzled appearance of the poor creatures who, emerging breathless from the pen in which they have been stifled and hustled for an hour or more, are suddenly propelled across the Presence by the Court pages in much the same spirit as that in which sheep used to be driven by the licensed drovers in the palmy days of Smithfield market. It is to be hoped that at the Court receptions about to follow the auspicious event which was consummated on Tuesday last, better order will be taken, and that the servants of the Court will at last discover that civic dignitaries are not the only class of persons who justly incur unpopularity with the public by unjustifiable displays of "false pride" and "self-sufficiency."

ROYAL PROGRESSES.

ENGLAND was once indeed great in Royal progresses. Of late years we have not experienced much generosity on the part of Government; but we have always proved the hearty nature of the English populace. Other countries may have surpassed us in stationary festivities in particular cities; but there was once a time when we shone conspicuously in that species of demonstration, which is prolonged over a large extent of ground, and passes onward from point to point like a procession. It may have been owing to the active habits of our people—to their fondness for horse exercise and field sports; but whatever the reason, the fact has been many times made apparent. Not that the custom was indigenous. The Romans, as we all know, had their triumphal entries after the successful conclusion of wars; and Tamerlane harnessed vanquished princes to his chariot, and taunted those "pampered jades of Asia" with the slowness of their pace. But the progresses of English royalty have generally been of a more amiable kind—though not invariably so; for, when Richard II. was escorted back to London by Bolingbroke, and

> "No joyful tongue gave him his welcome home,
> But dust was thrown upon his sacred head,"

he might be excused if he thought that mode of doing honour to a Sovereign somewhat objectionable; and the eight kings who once rowed Saxon Edgar over the river Dee, at the same time relating the story of Brutus the Trojan, very probably grumbled in their hearts at the cruelty of their treatment, and the fatigue of the double work they had to perform. These, however, are exceptions. For the most part, our pageants are for good-natured purposes; and even when Edward the Black Prince led the humbled kings of France through the streets of London, the mortification was softened by all the graces of chivalry, and all the courtesies of a brave and generous victor.

Good nature was emphatically the element which gave its chief attraction, its chief meaning, and its chief value, to the ceremonial of last Saturday. On *that* ground we may safely challenge comparison with the most magnificent shows of former days; when the balconies glowed with tapestry, and the conduits flowed with wine; when knights and ladies rode in cloth of gold, and the velvet housings of horse and palfrey glittered with barbaric splendour. From the Nore to Gravesend, from Gravesend to Southwark, from Southwark to Paddington, from Paddington to Eton and Windsor, it was one long expression of popular good will. The purely philosophic mind may quarrel with a sentiment which cannot be made to square with the dry formulas of reason; but in ordinary human natures the feelings and instincts are stronger than the mere intellect, and there is often a deep perception of truth in these kindly ebullitions. The people accept the presence of Royalty as a visible emblem of their own national power; and they welcome a stranger to the old historic circle with the same warmth of heart with which they hail the members of the Royal family itself. Rather by intuition than by reflection, they perceive that the intercourse between the monarchy and themselves had far better be cordial on both sides than arrogant on the one part and sullenly submissive on the other. So, on Saturday, knowing that all they did was done out of pure love and impulse, and not by compulsion, they lined the streets,

Digitized by Google

and greeted the fair young face with shouts of affectionate regard.

The spectacle of a vast concourse of human beings simultaneously swayed by one common emotion is always touching and impressive, and of course the more so when the emotion is of a sympathetic nature. But we own we should be better pleased if, on occasions such as that which we have just celebrated, the affluence of good feeling in the popular heart were accompanied by a little more external splendour. It has been observed that we, being a free nation, arrange all these matters for ourselves; that we do not need Government assistance, as they do in countries despotically ruled. This argument, it may be answered, has a certain shabbiness, as the result itself has. It implies that Government should restrict its action to the barest matters of police; that a nation which pays more taxes than any other in the world is to be shut out on the most festive occasions from any amusement but what it can purchase and improvise for itself. Of course we do not wish to be ruled on the *panem et circenses* principle; but a little generosity at such times would do no great harm. Individuals can do scarcely anything towards the production of a general effect except in the matter of illuminations. Hence the aspect of London on Saturday. Rough stands covered with scarlet cloth, banners which had done duty several times before, and draperies that were not conspicuous for richness, formed the chief adornments of the metropolis as the Princess Alexandra rode from one end of it to another. London Bridge, with its pictures, its incense-steaming tripods, its triumphal arch, and its temporary statues, the Mansion House, St. Paul's, and Temple Bar, were the best things in the route; but these were the work of a large corporate body, which is the next thing to a Government in amplitude of resources and concentration of power. On the other hand, the City made a miserable exhibition of itself in its contingent to the procession. The Common Council had, not unnaturally, felt that their dignity was lowered by the proposal of Sir George Grey and Sir Richard Mayne that the Lord Mayor and his court should take their place in the rear of the line. Mr. Deputy Anderton seemed to think it the best part of the show, and feelingly lamented the disappointment to the citizens of Westminster which would be sure to result from the rigorous determination of the Government not to permit the banners and "State carriages" to cross the mystic boundary which separates the east from the west. "It would be a great disappointment to the citizens of London," said Mr. Anderton; and "he believed the citizens of Westminster were equally disappointed." They must console themselves next Lord Mayor's day; for the procession was merely a curtailed edition of the annual show of the 9th of November. What could the Princess have thought of that marvellously-grotesque vision of staggering old men and tawdry flags? And why, if the pageantry was given at all, were the men in armour excluded? There would at least have been some show of reason in *their* presence; for they might have been regarded, by persons possessing an imagination at once vivid and kindly, as champions prepared to do battle with all comers on behalf of the fair Dane. But why should the Princess and the citizens of London have been edified by that extraordinary banner of the Vintners' Company, representing "Bacchus in a chariot?" Hymen might have been appropriate to the occasion. "Cupid, all armed," would have gone to the heart of every woman in the crowd. But why Bacchus? Certainly, when the last Prince of Wales was married, Bacchus assisted largely in the rites; but that is happily a bygone state of society, and we see no good in reviving such memories. The Vintners might as well have omitted that flag, and contented themselves with the banner of their patron saint and its accompanying standards.

From all this nightmare of vulgarity and pretence, the interposition of Government on such occasions might save us. It is contended that none but despotisms provide decorations or amusements for the people. We can only say that it is a pity the despotisms should have this all to themselves. The Rev. Rowland Hill used to set hymns to secular tunes, because he regretted that the devil should monopolize the best music. For the same reason, it is surely objectionable that the despotisms should engross all the best holiday-making. We cannot conceive it possible that the virtue of the whole English people would be corrupted by the expenditure, on the part of the State, of a few thousands on making the metropolis gay and alluring for a day or two. They certainly do these things better abroad. They did them better in England some centuries ago. The "Progresses" of Queen Elizabeth were characterized by great splendour; and when the people returned the compliment, they did so in right royal style. The reception of the Queen at Kenilworth was a romance. The whole Pagan mythology took form to welcome the royal guest to the castle of the Earl of Leicester, and for seventeen days the walls of that stately building shut in fairy-land. Three years later, the town of Norwich entertained her Majesty with so magnificent a reception that the hospitable citizens were half ruined in "velvet, silks, tinsels, and cloth of gold," as Hollingshed relates. This was partly owing to a thunder-storm which burst into the middle of the pageant, and of which the old chronicler, who was "our Special Reporter" on that occasion, gives a pathetic description, having been wet through by the rain. The masques of the same period and of the succeeding age were a species of show in which the general public had no share; but they may be instanced as evincing the munificence with which the English court in earlier times turned seasons of rejoicing into occasions for encouraging the arts. The private theatricals of the present day are but a poor affair in comparison with the sumptuous dramas which the united genius of Ben Jonson and Inigo Jones produced for the delight of James I. and Anne of Denmark, and often for that of private noblemen, in their ancestral halls and castles.

Part of the very usefulness of Royalty consists in its elegance and liberality. In a Republic—unless it be an oligarchy, like that of old Venice—we do not demand those adornments which are proper to monarchical States. The aspect and manners of a citizen President may be as rough and simple as you will; but we expect to see the Graces gathering round the throne. There was something indicative of a narrow, though an honest, mind in the excessive plainness of the manners of George III. and his consort. The highest ideal of the old King was, confessedly, the life of a Buckinghamshire farmer; and he appears to have done his best to act up to that splendid standard, in his costume, his eating and drinking, and his domesticities. The effect on the nation was marked, and sufficiently unpleasant. The tone of society through the greater part of that long reign of sixty years was one of intellectual vulgarity. Utilitarianism, in its poorest and most contracted form, was the ruling spirit. Never were the externals of life,—costume, architecture, and the like,—so ugly and poverty-stricken. It was the very despotism of shabbiness. The typical Buckinghamshire farmer, with his bull-dog and his top-boots, and his inability to understand the use of anything which did not put bread and bacon on his table, or money in his pocket, became a pattern for the whole nation; and we suspect that a recent writer in *All the Year Round* was correct in suggesting that the popular figure of John Bull originated in that way. This tendency was an error. We do not want the reckless profusion and *bizarre* taste in which the French Court has recently indulged. Ladies dressed as trees and bee-hives are not required here; and the appearance of Salammbô at Buckingham Palace would very properly be objected to by the Lord Chamberlain. But, now that we have a young Prince and Princess to represent her Majesty, it would be well if a little gaiety were restored to London; and it would do much to reconcile all classes if, on special occasions, such as that which has signalised the past week, the millions were treated with an ampler and more tasteful provision of sights and shows.

THE LONDON MUNICIPALITY.

THOUGH, in our criticisms of the proceedings of last Saturday, some fault is justly found with the negligence or parsimony of the Court officials, we have still to bear in mind what is the chief organic defect which the arrangements for such an occasion betray. It is, in our view, the want of a sufficient municipal representation of London. It is true that London itself was there; and never did "the million-peopled city" present itself more wonderfully, in the spontaneous assemblage of a vast multitude, and in the unanimous sentiment which inspired them. But there were no personages commissioned or worthy to rank themselves on behalf of London, as spokesmen of the whole metropolis, and to receive our fair guest with an official welcome. The street decorations, too, lacked that sustained grandeur and

Digitized by Google

unity of scenic effect, which might have been created by the superintendence of one ruling body along the entire route. And although, between London-bridge and Temple-bar, the City authorities contrived to display, at more than one point, a sumptuous and not unskilful use of the large funds at their disposal, they have fallen into sad disgrace by the helpless inefficiency of their police.

This failure, indeed, was illustrated in a ludicrous manner by the disorder and confusion of the street traffic, not merely on the Saturday, but throughout the first three days of this week. Everybody who tried, at any hour on Monday or Tuesday, to make his way along the main thoroughfares, especially from the Mansion House to London-bridge, had a disagreeable experience of this. But much worse remained to spoil the height of popular festivity. We deplore to add that on Tuesday evening the corner of Farringdon-street and the Poultry were turned into scenes of human slaughter; four women being killed at one place and three at the other, by the absence of those precautions which a competent direction of police authority would have secured. This is a very bitter drop in the cup of this week's rejoicing, when we have seen, day after day, an honest pleasure and the light of loyal affection beaming from a hundred thousand faces of the best-humoured people in the world. It is very painful now to learn that, for many of their families, this rare demonstration of public gladness, and of what Lord Hardwicke calls the "kindness" of the people of London, has had such a tragical conclusion;—that upon such an occasion as this, when all hearts beat in sympathy with the bridal pair, and with their parents or kindred, seven poor women, among whom were daughters, sisters, wives, and widows of the labouring class, were horribly crushed to death, because the municipal guardianship of public safety, eastward of Temple Bar, is a pompous and feeble pretence. Besides this shocking loss of life, it is stated that more than one hundred cases of accident, involving broken ribs and limbs, dangerous contusions and suffocations, which were brought to the hospitals on that night, occurred in the City alone. This is, indeed, a terrible butcher's bill to pay for the pursy pride of an old-fashioned corporation which, taking counsel with its Gog and Magog, refused the aid, on Saturday, of the Metropolitan Commissioners of Police. How is it that no lives were lost in any other part of London; for instance, in Pall Mall, where the illuminations attracted, probably, as great a crowd as those of the Lord Mayor's Mansion, or any in the neighbourhood of Ludgate? How is it that the Strand was tolerably passable all day on Tuesday, while the alarm and distress of foot-passengers, and the dead-lock of vehicles, moving on by starts, a cab's length in half an hour, disgraced the civic rulers of Cheapside? It did not require a parliamentary debate to elucidate the cause of this difference between the aspect of London streets on this side and on that side of the picturesque old gateway, hung with cloth of gold, by which the semi-barbarous isolation of the civic precinct is shut up from the metropolitan civilization that surrounds it.

But the City Corporation is an ancient body, which has perhaps not yet made up its mind about the modern principles of street-police regulation—a new-fangled system, and smacking of a Continental origin. Pageantry, not police, is the object for which a municipality exists. The immortal Dogberry, though his instructions to the watchmen, like those given to the City police on Tuesday, were not so consistent and practical as might have been desired, had always two gowns, and everything handsome about him. So likewise the Corporation of Guildhall, with all its grotesque attendant livery of Cooks' and Vintners', Skinners' and Tallow Chandlers' Companies, is an institution which could make a goodly outside show, being plentifully furnished with the material appliances of State and dignity, if they were but used with a little more sense of propriety and good taste. We shall, certainly, not pass an unfavourable criticism upon the arrangements of their architect for the spectacle of Saturday last. London Bridge, with its double array of flaunting standards, odorous tripods, and portraits of the royal Danes, formed a gay and inviting avenue to the triumphal arch, itself somewhat tawdry, which abutted on Fishmongers' Hall; and the canopied range of seats around St. Paul's, by its construction and ornamentation, set off the noble church with very good effect. But we doubt whether, in the exhibition of their noble selves, the Lord Mayor, Aldermen, and Common Councilmen, preceded by the Masters and Wardens of the Trade Companies, with their chivalric banners, and the images of their mythological saints or idols, made exactly the sort of figure which most fitly represents the collective magnificence of London in this refined and enlightened age.

It is, therefore, patent to all eyes that the City Corporation, as it is, lacks at once the capacity of practical service, the character of social dignity, the legal title and jurisdiction, which a body claiming to appear on such occasions for the whole metropolis should possess. As for the other portions of London, they are, for all purposes of this nature, left without any corporate representation of their existence. Their invidious and absurd exclusion from this privilege, whatever it may be worth, was never more oddly exemplified than in last Saturday's curious parade. We saw then, in the Strand, how the great city of Westminster, in no respect inferior to the city of London,—the abode of the Court and of the Legislature, the quarter most affected by the highest classes of society,—could send forth no municipal officers of a higher quality than the High Bailiff who is nominated by the Dean and Chapter, with a train of simple Burgesses, who, beyond their private occupations as tradesmen, exercise no real authority and enjoy no dignity at all. Where onerous functions of substantial and public usefulness devolve upon the elect of the ratepayers, it would be alike impolitic, ungrateful, and illiberal to take any exception to the personal calling or the station in private life of those by whom such duties are faithfully discharged. But we are not aware that the respectable boot-makers, army tailors, and haberdashers, who, invested with the unassuming and unmeaning distinction of burgesses, bore themselves as the loyalty and gallantry of fashionable Westminster in the escort of a Royal Princess along the Strand, are in the habit of performing all those laborious and responsible services with which a municipal body is usually charged. The fact is that, what with the Metropolitan Commission of Police, the Metropolitan Board of Works, and the parish vestries, the ordinary functions of local self-government are in London, outside the City, divided among various concurrent jurisdictions, instead of forming, as elsewhere, the substantial ground of actual positive utility, upon which the civic dignities are based.

It may, however, be fairly asked, if it be an advantage that a community of local interests, defined by their natural limits, should be represented by a dignified official body, why is that district which is conventionally styled the City of London to claim a superiority over the rest? Not a twentieth part of the population of London, and probably a tenth of its realized property, exist within the boundaries of the City. With the highest esteem for the intelligence, the enterprise, and the wide connections of its mercantile men, we cannot admit that the City contains so large a proportion of all the elements of social influence that it should dominate over London at large. It is, moreover, quite notorious that the foremost City men are not those who usually hold the civic offices. The fussy vanity of a thriving tradesman may be gratified by receiving Lord Palmerston's ironical compliments, as the host of her Majesty's Ministers, and of the diplomatists of Honduras and Nicaragua, at the short-lived City Sovereign's inaugural feast; and if his Lady Mayoress have blessed him with a son and heir, he may catch still more eagerly at the chance of a baronetcy when he comes into casual contact with Royalty, as upon the occasion of this week; though, under the peculiar circumstances of this celebration, we trust that the City will have enough discretion not to expect, and the Court will have too much discrimination to bestow, an hereditary personal distinction as the reward for a gift of jewels. But it has seldom or never been observed that the great princes of British commerce, whose ambition is satisfied by that station in society which their wealth, and sometimes their political influence, confer upon them, are eager for such distinctions, with the grotesque accompaniments of a brief presidency at Guildhall. We believe, however, that if ever there shall be a fundamental reform of the London municipality, which must imply its territorial extension over the whole metropolis, and a more liberal constituency, embracing the diversities of social rank and culture that our population of three millions affords, the honours of such a Corporation will be eagerly sought by gentlemen of the highest accomplishments and position. Such men, invested with municipal authority, will perform with intelligence and freedom the business before them in council; they will greet, without diffidence or awkward presumption, the nobles of the realm, and grace

Digitized by Google

our popular institutions when they are welcomed to the festivities of the Court, representing worthily the greatest city in the world.

AUSTRIA AND POLAND.

THE British public are likely, before long, to make some more decided manifestation in favour of Poland than they have yet done. Just in proportion as the Poles prolong the heroic struggle in which they are engaged will English sympathy for them increase; and the more pertinaciously the Prussian Government pursues its present infatuated policy, the more surely will it bring about that action on the part of the Western Powers which it is most anxious to avert. Throughout all Europe the revolutionary leaven is working. Before long, the expression of feeling, not merely at home but abroad, will be loud and earnest. It is important, under these circumstances, before the agitation commences, that people should understand what to agitate for. Mob diplomacy is always to be deprecated; but when sensation questions of foreign policy arise, the Government is driven into taking the popular view, whether it be right or wrong; and our duty is to endeavour, as far as possible, to educate those masses who do practically direct the foreign policy of the country. If that policy is generally rather of a sentimental than a practical character, it is because we are a free people with generous impulses, and if they sometimes drag us into wars, we are neither intelligent enough to foresee, nor cowardly enough to fear the result. Whether it will be for the interest of England that Poland should be reconstructed is a matter of no importance to the public. The Poles are brave—the Poles are oppressed. They are fighting for freedom,—how can we best help the Poles? That is the sum and substance of the question in the mind of the free-born Briton, and it is one we will endeavour to answer, all the more readily because we believe that it will be for the interest of this country that Poland should be reconstructed. The cry of the revolutionary party is for money; we are not of opinion that this is the first necessity. We consider that the cause of Poland will be best advanced by moral pressure brought to bear on the proper quarter. The destinies of Poland lie in the hands of Austria. It is useless remonstrating with Russia. There is not an instance in the history of its diplomacy of Russia conceding to "representations." In the case of the Crimean war, we so far misjudged her as to imagine that a military demonstration would have more effect than a diplomatic communication. The result proved our ignorance. The influence of Prussia, as affecting the struggle, is not so serious as people imagine. Morally, the attitude taken up by Prussia has rallied popular sympathy more strongly in favour of Poland than would have been the case had she remained neutral. Strategically, as long as the Gallician frontier is free, the co-operation of Prussia with Russia is of no great moment. Everything depends at this crisis on the policy of Austria. This is a point that should never be lost sight of. And Austria can be forced into adopting that course which will be the best for her own interests, though she is too blind to see it herself, if the Government of this country, supported by public opinion, speaks decidedly. At present she is pulled in different ways by a variety of considerations. Her policy is essentially feminine in its character. She allows motives of pique to sway her to the detriment of her interests; she is much given to flirting, but expects to be largely rewarded for her favours. Then she is undecided and easily moved either by fear or vanity, obstinate withal, quick at comprehending wherein lies her own interest, but slow to act—ready to receive advice, averse to following it—not without a certain high-souled integrity and purity of purpose; altogether a difficult morsel for diplomacy to deal with; but at this moment, on the course she is about to pursue hangs the peace of Europe. We may make a guess at the nature of the considerations which M. von Schmerling and Count Rechberg have been entertaining. They may say, "France and England are aware that we hold the game for the moment. We are, therefore, in a position to make a bargain if we adopt the policy they desire; what shall we gain by adopting that policy? The enmity of Russia. That would not signify if Poland were reconstructed, and served as a buffer between our respective frontiers; besides, we owe Russia a grudge, for openly stating to the Hungarians that they need not fear another Russian invasion of Hungary in the event of another revolution in that country. Then we gratify our traditional and undying jealousy of Prussia, who is getting deeper into the mud. We shall help to plant her there, but, on the other hand, we must abandon Gallicia; and, after all, we don't owe anything to the Western Powers, who behaved shamefully to us when we saved their armies in the Crimea by massing our troops on our Eastern frontier. We don't so much mind England; she is essential to us on the Eastern question; but France, after having despoiled us of our Italian provinces, now wishes to deprive us of Gallicia. If we only let her alone, she will take the Rhine provinces from our good friend William. On the other hand, the Poles tell us that if we will abandon Gallicia they will take an Austrian Archduke. This is a proposition worth considering. We never wanted Gallicia; it has always been a source of weakness to us rather than of strength — a hotbed of intrigue and revolution. We have had more difficulty in governing it than any other province, and were obliged once to let loose the peasantry to massacre the aristocracy. Gallicia is a decided encumbrance, but it is hard to part with territory. We are not usually generous in this matter. We must certainly have Venetia guaranteed to us if we do. Perhaps it might be worth while thinking of a Danubian principality. Meantime, the Emperor of France and the Czar have quarrelled. There is an end to that horrible Eastern combination, which was more dangerous to us than any other. We can breathe for a moment and coquette a little. *Il faut se faire valoir.* The Poles are requesting the Hungarians to keep quiet. As long as we pretend that we are in favour of Poland they will continue to tell them so. That is an immense comfort." But the fact is that Austria may play this game a little too long. If Russia succeeds in quelling the insurrection, and Austria maintains her present attitude, she has created a hostile Russo-Prussian alliance on her frontier, one object of whose policy will be revenge. She will have alienated the Western Powers, and exasperated the revolutionary party throughout Europe. She will have retained Gallicia it is true, but for how long, and at what cost? That province would rather rebel and be incorporated into Russian Poland than remain longer cut off from it in Austria. If Russia do not succeed in quelling the insurrection, and Poland is reconstructed in spite of Austria, the position of this latter power will be no better. Besides Russia and Prussia she will have Poland for an enemy, and must inevitably lose Gallicia. We leave out of the question the policy likely to be adopted by the Emperor of the French towards Germany under the circumstances.

On the other hand, if she generously abandons Gallicia, she will be entitled to place on the throne she creates a member of her own royal family; she will have disarmed the revolutionary party, and secured the friendship of France and England; she will have humiliated her rival, for Prussia will gain no equivalent for the Polish province she will lose; and she will have removed her dangerous neighbour, the Czar, from her frontiers. Let Austria join frankly in the policy of France and England. Let that policy be an open avowal on the part of the three Governments of sympathy with the cause of Polish independence. The Poles ask for nothing more. They must have a secure base of operation in Gallicia, and then, cheered on to the struggle by all Europe, they have no fears for the result.

THE BISHOP OF OXFORD IN A DIFFICULTY.

THE present Bishop of Oxford ought to be one of the most influential men in the country. He inherits a great name, he is a man of property, he is an admirable debater and an eloquent preacher, he is indefatigable in his diocese, and his zeal for the elevation of his order is conspicuous. How is it, then, that he has so little influence in Parliament or with the laity throughout the country? In the House of Lords his advice is seldom followed. He makes eloquent harangues, but prelates inferior in ability and in learning are listened to with more attention. In the country he can fill churches and collect large sums of money, but he lacks that vein of straightforward sincerity which inspires a genuine respect. To borrow a celebrated illustration from a well-known French comedy, he is one of those peaches which are exquisite to look at in the basket, but if you take one of them up you find a little spot like a black pin's-head, which shows there is something rotten at the core. Great men live too much in public in these days, and ecclesiastics have to rely too much on their real character to

Digitized by Google

suit such men as the Bishop of Oxford. He is by nature and by art a diplomatist and a courtier. He has all the chicanery of the one and saponaceous silkiness of the other. There is no better means of ascertaining the estimation in which a public man is held than the soubriquets by which he is known. Put these together and what manner of man do they describe? Something, it must be confessed, much more like an Artful Dodger than a Right Reverend Father of the Church.

Regarded from a scriptural point of view it may be said that the Bishop of Oxford has throughout life endeavoured to "be all things to all men." But this is a Christian ideal which few men are permitted to realize. In its pursuit a sort of chicanery is too often substituted for Christian charity. When the Bishop of Oxford, some years ago, signed a document against an ecclesiastical adversary without having read the books which he presumed to condemn, he was acting no doubt as he imagined for the glory of the Church. When, a few weeks after, he made the humiliating confession that he took the garbled quotations on faith, he was of course actuated by a similar motive. When he wrote his celebrated letter to Mr. Brock, his lucubrations were dictated by the anxiety he felt for the soul of a dear friend. And no doubt when he passed by the same dear friend — of whom in fact he knew scarcely anything—without acknowledging his existence, he would say that he did so to test that reverend friend's spirit of Christian forbearance. There are some people whom it is impossible to disconcert. To achieve this, however, requires consummate coolness and consummate adroitness. The Bishop of Oxford possesses both these qualities to a degree which may almost be said to amount to genius. His latest feat in this direction is the letter which his lordship addressed to his Archdeacons on the occasion of the Prince of Wales's marriage.

It may be remembered that the High Church party have been greatly scandalized by the fact that the season of Lent was selected for the celebration of that ceremony. Very strong letters were addressed to some High Church journals on the occasion. Very intemperate speeches were made by some hotheaded clergymen on the event. And amongst others the Bishop of Oxford was called upon to give his opinion as to the course which his clergy ought to pursue. The difficulty in which his lordship found himself was no ordinary one. As the acknowledged leader of the High Church malcontents he could not afford to adopt any course which would offend them. The duty of observing Lent seemed to them imperative, and they had pronounced against those who had forgotten it. On the other hand, his duty to the Court was not less pressing. The Bishop is not only a clergyman, but a courtier. There are things in this world which cannot be obtained without temporal influence. Promotion cometh from the Minister of the day, but the Crown has some voice in the matter. And no prelate need hope to be enthroned in St. Paul's or in Canterbury who should set his face against the festivities on the occasion of a Royal marriage. To add to the Bishop's difficulties, the Archbishop, unless we mistake, had already written to say that, considering the season, the popular rejoicing—though there should be rejoicing—should be moderate. Under this perplexing state of things, what was to be done? How was the Bishop's duty to the Queen, to his ecclesiastical superiors, and to his ecclesiastical partisans to be reconciled? To ordinary people the Bishop of Oxford might seem to be as completely blocked up as a cab on the other side of London-bridge on Tuesday night. But the late Sir Robert Peel, as *Punch* used to say, could wriggle through anything; and the Bishop of Oxford is by no means inferior to that great Protean archetype. This, then, is the letter which the Bishop addressed to his Archdeacons:—

"Cuddesdon Palace, March 4.

"My dear Archdeacon,—Having been applied to by some of our brethren of the clergy for advice as to their conduct on the day of the marriage of the Prince of Wales, I desire to convey to you my opinion that any rejoicing, to be real, must be manifested on the day of the wedding. The Lenten fast was originally an appointment of the Church with which the Archbishop of Canterbury had, and still has, by law, a right to dispense; and from the communications I have received from his Grace, I consider that he has dispensed with it for the auspicious day in question. I would therefore advise all, under the circumstances, heartily and without misgiving to take part in the loyal rejoicings which befit this great occasion.

"I remain, my dear Archdeacon, yours very truly,

"S. Oxon."

Surely this must be pronounced a masterpiece of ingenuity. He has reconciled himself with the Court, for he advises "all heartily, and without misgiving, to take part in the loyal rejoicings which befit this great occasion." He insists that they shall be not only hearty, but manifested on the day of the wedding. He has reconciled himself with his ecclesiastical superior, the Archbishop, because he only assumes to issue this manifesto in obedience to his command. He has reconciled himself with his ecclesiastical partisans, because he tells them that they are relieved from the duty of observing the Lenten fast by the dispensing powers of the Archbishop. But how or when was this dispensation granted? Who ever heard of it? Has any one seen a single letter or document under the hand of the Metropolitan to support this singular conclusion? The Bishop does not venture to say that any such document exists. All he says is, that from communications he has received from his Grace he considers that "he has dispensed with it (the Lenten fast) for the auspicious day in question." We should like to see the communications of which the Bishop speaks, and from which he drew so convenient a conclusion. Probably there is no means of getting a look at them. They cannot be moved for in Parliament. But perhaps a question might be put to his Grace, the answer to which might satisfy a very pardonable curiosity. If the Bishop had really desired to know the opinion of the Archbishop on the subject, he would of course have written a letter to his Grace, and would have published his answer. But the Bishop knew better. The Archbishop is a cautious, sensible man, and would have hesitated to exercise what the ingenious Samuel of Oxford calls his power of dispensation. The simple truth, no doubt, is that the Bishop thought it safer to draw his conclusion from some vague premisses, and thus to escape from the awkward dilemma into which his more hot-headed followers had brought him.

Once upon a time there sat in a railway carriage an ecclesiastical dignitary with his feet on the opposite cushion. There happened to be some other travellers in the adjoining seats. The train stopped at a station; the number of passengers on the platform was considerable, and one of them was about to enter the carriage and take his seat opposite the ecclesiastic. This, however, would have disturbed his comfort, and therefore he determined to get rid of him. But how? There was evidently a vacant seat in the carriage, and therefore the dignitary could not say it was full. But then he had studied casuistry, and the English language is ambiguous. Travellers are not all casuists, or even special pleaders: they construe words in the ordinary sense. When the anxious traveller was getting into the vacant seat, the dignitary, in the blandest accents possible, assured him that the seat opposite was "occupied," and so got rid of the threatened invasion. The other travellers naturally showed some surprise. The dignitary observed it, and turning to them whilst he replaced his feet on the opposite seat, he said, with the most insinuating smile, "You observe, my dear friends, I said *occupied*," and so no doubt it was—with his boots. It would be curious to know whether the courtly letter of the Bishop of Oxford to his Archdeacons was dictated in a like spirit of questionable ingenuity. If it was, it is little wonder that the Bishop of Oxford, with all his eloquence and all his professional zeal, inspires so little respect in the minds of the British laity.

ENGLAND AND AMERICA.

THE Northern Americans profess to be much astonished, and are certainly very sore, that England has not ranged herself more decidedly on their side in their quarrel with the South. The cause is explicable enough: like the fact, it lies upon the surface; and if the complainants had, in the faintest degree, the invaluable gift "to see ourselves as others see us," they would be at no loss to understand both the character and the pedigree of those peculiar and conflicting feelings with which nine-tenths of the educated and observant classes in Great Britain regard the sad transatlantic conflict. But as they scarcely seem to have a glimmering of the real truth, we will endeavour to explain it; and we do this the more readily because it will afford us an opportunity of speaking out a few sentiments which we have hitherto withheld out of forbearance and sympathy with a people struggling with a fearful national conjuncture, and therefore naturally and excusably irritable in their feel-

Digitized by Google

ings and unmeasured in their language. The plain truth is, that at the outset the Federalists did possess, in a remarkable degree, the sympathy of this country, and have lost it solely by their own blunders and misconduct. We were, to begin with, strongly disposed to blame the South for seceding from a long-established union, simply because they had been beaten in a contested election and because the power had passed from their hands into those of their antagonists; and we did not withhold the expression of that blame. We were inclined to give credit to the North for a noble purpose and for great power and determination to carry that purpose into effect. But they speedily made stupendous and successful efforts to undeceive and disappoint us; and they have lost the good wishes and admiration of Great Britain, not so much because they have deplorably mismanaged their cause, as because they have been at such unusual pains to stain, desecrate, and dwarf it.

They might have had a noble cause, or, at least, they might have made their cause a noble one; and, as our readers know, we, in common with many thousand sanguine Englishmen, gave them credit for intending to do so. As long as we could delude ourselves into the belief that they were fighting to exonerate their country from the burden of a ruinous institution and the reproach of a heavy sin; that, seeing that negro slavery lay at the root, immediately or remotely, of most of the differences that severed the two sections of the Republic and embittered all their feelings and envenomed all their controversies, they were resolved to end that fertile and terrible cause of dissension; that they had at length, as a people, fairly imbibed those emancipation sentiments which New England and Old England had so long preached at them in vain; and having ineffectually tried all legislative measures to gain their purpose, were now about to seize the golden opportunity which the seceding States had furnished to them to abolish the servitude of the black race totally and for ever;—as long as we could believe that the war was *for* this or would come to this, the great majority of our people wished them God-speed. We felt that, however horrible this civil war might be, here, at least, was an aim and purpose which might warrant and hallow even such a desperate and sanguinary expedient. But the Federal statesmen took care that we should not long remain under this favourable delusion. They cared far too little about the negro—most of them, indeed, hated him far too much—even to pretend that the contest was to be one for his emancipation or his welfare; and they were too honest not to say so openly. They announced very early in the day that they had not the slightest idea of liberating one single negro, or of interfering with the domestic institutions of a single State. At first they refused absolutely to receive fugitive slaves; afterwards they made no secrets of the embarrassments these poor runaways caused them, and they treated them as "contraband" articles, whose ultimate fate was to be left undecided till the termination of the war. A little later the President distinctly avowed that the interests of the negro did not enter in the slightest degree into his consideration; that he would liberate them or keep them in slavery precisely as he fancied that either course would offer the best chance for the restoration of the Union. And, finally, he issued his famous proclamation, a document bearing on its face the most complete negation of all genuine and honest anti-slavery doctrine; since in it he avowed that the freedom which he decreed was to be confined to those black men who had the good fortune to belong to disloyal masters. The Federalists were to retain their slaves; the Secessionists only were to forfeit them. With the promulgation of this wonderful manifesto—probably the most blundering ukase ever issued to the world—the scales at last fell from the eyes of Englishmen, and the North forfeited at once and for ever the sympathy of British anti-slavery enthusiasts. The contest might still possibly be over-ruled for good; but the *cause* could no longer be deemed a holy one.

In a political sense, too, there was a point of view from which the cause of the North might vividly engage our sympathies, and might seem not only attractive but almost even righteous. It was impossible not to feel with patriots who saw with a sort of agony that great country of which they were so proud rent in twain by the perverse mortification of a beaten party; and who, without inquiring too closely into the claims of law and justice, determined that all their dreams of a vast and peaceful Republic, occupying a whole continent without a rival, should not be dispersed in empty air, if any exertion or sacrifice of theirs could avert so mournful and disenchanting a catastrophe. We do not say—for we do not think—that they had any clear right to compel reluctant States to continue in the Federation; but the Federation represented a grand and dazzling idea, and every Englishman would feel that to maintain it unbroken, even at the cost of some violence, was politically worth a struggle, and perhaps not morally condemnable. But the statesmen and orators at Washington, Boston, and New York, would not allow us long to delude ourselves by casting even this ennobling halo round their cause. They proclaimed, in words as naked as they were insolent, that one of their chief reasons for clinging so passionately to the Union was that, with its severance, would be shattered their fond hopes of dictating to the world, with all the irresistible might of an entire continent, an unparalleled dominion, and a nation numbering two hundred millions; that if they once permitted the faintest attempt at disintegration, they would soon be obliged to descend to the ordinary political conditions of humanity, and America might end in being no better, or grander, or cheaper, or more prosperous, than divided and benighted Europe; and that if secession were consummated, their magnificent scheme of reigning from the Arctic circle to the Isthmus of Panama—that is, of trampling out of existence Canada, Mexico, and the Central American States—would have to be abandoned. This open display of schemes of unbounded and unscrupulous ambition was scarcely likely to conciliate our approval; but that mattered comparatively little. What *did* matter was that, as we heard all these things and pondered them in our hearts, it became impossible even for the most friendly and philosophic among us any longer to cherish the delusion that the Northerners had either noble conceptions or a sacred cause. Captain Wilkes, Mr. Seward, and Mr. Cassius Clay, may have helped also somewhat to open our eyes to the truth, but what finally completed our disenchantment was to find that these people—so attached to liberty, so boastful of their submission to the law, so servile in language to the written "Constitution" they said they were in arms to save,—as soon as their passions were aroused, did not hesitate to trample upon every right, every law, every dictum of the Constitution, every act and guarantee of liberty, which stood in the way, not of their ultimate aim, but of the instantaneous gratification of their will.

We thus learned at last that the cause for which the North were in arms was not what we had fondly fancied it, and was in no sense either grand or sacred. But Englishmen can sympathize largely with men who are fighting even in a questionable cause, provided they fight well and resolutely,—provided their statesmen are honest, their generals decent and reasonably capable, and their people and soldiers single-minded and driven to the field by eager patriotism and not by filthy lucre. But they are easily disgusted with the spectacle of mingled incapacity and worthlessness. Now what have we seen in the Northern councils and the Northern armies? The determination of the whole people was at the outset sincere, unanimous, and really magnificent, and that of the majority of the better classes, we believe, is so still. The vigour displayed was splendid, and was here greeted, as every one will remember, with the most cordial admiration; and the zeal of the masses who crowded into the ranks, though not certainly a zeal according to knowledge, was of a kind to remove mountains. But a change soon passed over the scene. The conceit of the people, and the corruption and self-seeking of both their civil and military leaders, brought about their natural fruit of disaster and of shame. There was cowardice as well as stupidity among the officers. There was shameless plunder and fraud among politicians and contractors. There was dishonesty and peculation on such a scale as the world had never seen before. The multitude below caught the filthy infection. Recruits extorted enormous bounties, and then skulked from the field or never even joined the ranks. Mr. Lincoln blundered; Mr. Seward bullied, boasted, and lied; Mr. Cameron jobbed; Mr. Chase, in his finance and his political economy, ran absolutely wild; General Butler roused the universal disgust, and nearly encountered the direct hostility, of European civilization; and the picture as a whole became sadder, meaner, and more sickening than we have looked upon for many generations.

With the sight of these disgraceful scenes came the reflection that if these were the sort of men whom Mr. Lincoln's election was to place in power—if these were the citizens who were thenceforth to bear sway in the Republic—if the

Digitized by Google

character of the Northerners were in very truth what it would seem to be if we are to judge it by their language and conduct since they won their Presidential victory and were able to display their unfettered natures—then it may well be that, after all, the South were right in refusing to bow to such a yoke or to cast in their lot with such fellow-citizens. Then, perhaps, the Carolinians and Georgians and Virginians were more nearly warranted than we believed in saying, "We will not have these men to reign over us." Then, perhaps, their Secession arose from the fact that they saw more deeply than we did into the full significance and effect of the transfer of power from their hands to those of the Republicans; and they were justified in feeling that continuance in such a Union was only practicable as long as they might guide the helm. Certain it is that few Englishmen would have long endured to live under the rule of men at once so incapable, so vulgar, and so unworthy as those who have swayed the destinies of the Free States since the dissolution. They have desecrated and dishonoured a great cause. They have thrown away a splendid opportunity. They have wasted unparalleled resources. With men, money, and science in unlimited abundance, they have utterly failed in an enterprise which they proclaimed to be easily and certainly successful. They have spent more money and shed more blood than any conqueror ever did before in so short a time, and they have no result to show.

ARCHBISHOP COLENSO IN ST. GEORGE'S CHAPEL.

A BISHOP may become an Archbishop. What a Bishop believes and teaches with impunity, an Archbishop may also believe and teach. Suppose an Archbishop of Canterbury holding the belief of Dr. Colenso, that the Pentateuch is a composition of fables; that its leading persons are myths, and its whole character "unhistorical," it will be found that "Noah's Flood and the Passage of the Red Sea," occurring in the Baptismal service, are not the only difficulties in which such a Bishop would be involved. Dr. Colenso proposes to skip these two "unhistorical" illustrations in reading the service, and thereby violating the law he has sworn to keep, in order to get rid, to this extent, of its obligations. But if one Bishop may thus omit one passage of the Liturgy, another Bishop, or Archbishop, may take the same liberty with another passage, because it also contains an allusion to some incident of the Scripture narrative, which he deems to be "unhistorical." Suppose the present Primate had been a Bishop of the school of Natal, or else that Dr. Colenso had been Archbishop of Canterbury, we ask our readers to ponder the difficult and disagreeable situation in which such a prelate would have been plunged, when commanded last Tuesday to officiate at the wedding of the Prince of Wales.

Unable, and we hope unwilling, to disobey a Royal command, he undertakes the duty, and to his horror he finds, in the opening address of the Marriage service, the following reference to "an unhistorical event:"—"Marriage is an honourable estate, instituted by God in the time of man's innocency." This, therefore, the Bishop skips, and perhaps this one episcopal leap is charitably construed in St. George's Chapel to be a mere mistake. Next, however, comes the prayer, "O God of Abraham, Isaac, and Jacob, as thou didst send thy blessing upon Abraham and Sarah, to their great comfort, so vouchsafe to send thy blessing upon these thy servants." Here Bishop Colenso, who, we are assuming, has been raised to the Primacy, would no doubt, on this occasion also, practise the prescription that he has been kind enough to give to the clergy in the following passage, which we extract from his book:—

"I see no remedy but to omit such words, to disobey the law of the Church on this point, and take the consequences. There are times when a faithful servant, as he loves his master and cherishes his best interests, is bound to disobey his orders."—(*Preface*, vol. II. p. xxiii.)

The officiating prelate, therefore, on the marriage of the Prince of Wales, holding the new notions of the Pentateuch, refuses to pronounce a blessing on the royal wedded pair, not because he thinks them unworthy, but because he believes Moses to be a myth, and his reputed writings to be full of falsehoods. But this is not the full extent of the confusion. Another prayer follows:—"Almighty God, who at the beginning did create our first parents, Adam and Eve, and didst sanctify and join them together in marriage," &c. The officiating Primate, with Dr. Colenso's views, must also skip this; and the concluding address, to be made to the royal pair, which refers to "Sarah obeying Abraham and calling him lord," must likewise be omitted.

It is evident from all this, that if Bishop Colenso were Primate of all England, he could not have officiated decently at the marriage or baptism of a member of the Royal family—or indeed of any other person. He could not have read the prayer that supplicates a blessing, or the address that gives direction and advice. Her Majesty would have been compelled to supersede him, or to command the presence of a suffragan, or to send her Royal commands across the Tweed, for one of the Scotch chaplains to take the place of a conceited, crotchetty, and unhistorical Primate; if she would not submit to the omission of half the beautiful service, by one who eats the bread she supplies and holds his dignity under her Crown. If the new-fangled school is to grow in influence, we do earnestly hope that Lord Palmerston may live at least another decade for the sake of the Church, and that he may have time to bring in a bill to lay heavy duties on the importation of Zulu theology into the Church of England.

SENSATION SPECTACLES.

We lately observed that the unconquerable Barnum had succeeded in attracting the attention of the American public in the midst of all the political confusion of the war. It was neither by exhibiting a mermaid, nor even Washington's old nurse. After an interval of some years, General Tom Thumb appeared upon the stage, in order to be married to a young lady of corresponding height, age, family, and position. The ceremony was performed with a due regard for the exigencies of New York fashion. A well-dressed crowd thronged a well-known New York church—and though the New York Chamber of Commerce wisely declined to attend in their official capacity, there were enough of the notabilities of New York present to lend an air of popularity to the scene.

The brilliant success, however, of Tom Thumb, some years ago, when he was presented in turn to the British nation and to the Queen, leads us to believe that if the General again comes to England he will excite an equal *furore*. This should lead us to look without cynicism on the recent success he has achieved in New York. Sensation spectacles are not confined to Transatlantic soil. The taste for them is a weed both of American and European growth. The war in America excites less interest than Barnum: just as the state of Poland does not draw the same crowd that will go miles to see a Spanish bull leap through a hoop. No mere principle or idea ever assumes the importance with half-bred people that is readily accorded to a personal or a private affair. If Mr. Seward was to kick his man-servant down stairs, the New York public would take more interest in the story than they do in all Mr. Seward's despatches. The mass of the American republic is evidently made up of people who, whatever their excellent qualities, are devoid of much refinement and education. A sensation spectacle will always have a charm for such persons. It is not that they require more excitement than men and women of higher cultivation. Sensation sights in themselves are not exciting to sensible minds. Most English gentlemen would find themselves a good deal bored, if they were called upon to attend Tom Thumb's marriage; nor would it yield them even the most transient happiness. But there would be as large a crowd at the ceremony, if it took place in St. George's, Hanover-square, as there was on the other side of the Atlantic. To take delight in personalities and all private transactions is characteristic of that class of mind which is active without being refined or powerful. The early history of civilization is full of personalities, and the early history of most men is the same. It is not till later life—if indeed it ever is—that a man begins to see that it is more worth his while to interest himself in ideas and in principles than in persons. It is for this reason that no keener pleasure can be offered to the readers of most newspapers than a piece of scandal or of gossip. The leading articles of the *Times* pass almost unnoticed, if there is a *cause célèbre* in the Divorce Court or at the Old Bailey. During the last few weeks the attention of the entire country has been aroused by a controversy in the leading journal of the day about a theological trial that was taking place in the Vice-Chancellor's Court at Oxford. The notables of old days, Dr. Pusey, Dr. Newman, and Mr. Maurice, appear upon the scene, and mix together in a sort of extempore theological tournament. Probably ninety-nine out of every hundred readers

Digitized by Google

are by this time familiar with the bearings of the entire question; and as the question is a religious one, each has his own view as to the various actors. But the reason that every one has read the letters of the various controversialists so carefully is that every one is attracted by the sight of a personal battle. It is the same feeling that makes us turn round to look at two men fighting in the street, or at a sprawling cab-horse. Something is going on: Jones has insulted Brown, or Robinson is prosecuting Smith for having said what Robinson used to say himself when he was young. This is more amusing than an abstract discussion of the merits of this or that opinion. We had rather give half an hour to watch Dr. Pusey sparring, than spend the same amount of time in reading Dr. Pusey's books. France, it is said, goes to war readily for an idea. John Bull, when he does go to war, never does so for anything so intangible. Either his pocket is touched or his feelings are injured, or his love of fair play is provoked. France might as well say that she never stopped at the corner of the street to look at anything but an idea. John Bull knows better. He would not give a single thank-you for an idea; but he would stop at a hundred corners to watch a policeman, an omnibus-horse, or a street affray.

There is much that is pretentious and overbearing in the policy which makes war in Europe for political ideas. But to rise from contemplating sensation spectacles and personalities to the more profitable and agreeable task of examining general principles is a mark of a growth in wisdom and experience of the world. There are two classes of spectators for whom the sensation spectacle is meant. There is first the ordinary and vulgar man, whose powers of attention and perception are fully developed; and who likes looking at anything provided it moves, and listening to anything provided it is noisy. Philosophy begins with wonder, and in the same way humanity begins with a sensation spectacle. Secondly, there is the man who has exhausted the lawful gratifications of sense, and falls back on what is *outré* and loud, because he is incapable of the higher gratifications of reason. It is a great gain when men learn to step over the heads of such observers of human affairs, and to try and get a broader view of life. This is done by dismissing what is personal in what they see, and fastening on what is permanent and real. Plato saw in the personalities of Love a mere ladder or stepping-stone to a more abstract state of mind, in which there was little left of anything personal. The real was for him a means of reaching the ideal. There is in all sober-minded people a tendency in the same direction, to get rid of what is accidental and to grasp at what is the principle at the bottom. One can imagine Epicureanism profoundly interested in a sensation spectacle, such as Léotard at the Alhambra or Tom Thumb at New York. This is only because Epicureanism is incompatible with sincerity and earnestness of purpose; because few Epicureans have ever been moralists, or politicians, or patriots. Any man who is sensible of the lights and the shadows of life, or who has a single motto or flag to which he pins his faith, waves such things aside. If there was more determination to conquer the South in New York, there would be less talk of either General M'Clellan or of General Tom Thumb. The idea of preserving the Union and of destroying slavery is a great idea. It is a proof of the vulgarity of American journals that the war in their pages is degraded into a personal narration of the doings and sayings of Mr. Lincoln and Jefferson Davis, and Seward, and Greeley, and George Francis Train. All historians care to know what Napoleon did or thought; but only gossips care to know what he had for dinner.

The philosopher who said of mirth that it was madness, would apply a more insulting name still to the love of burrowing in trivial personalities which is at the bottom of all the passion for sensation spectacles that is so prevalent. It is not easy to conceive of a greater abyss of intellectual degradation. To be interested in Tom Thumb's marriage belongs to the same habit of mind as that which is interested in Mr. Windham's presentation of a silver cup to Mace, or the speech in which Mr. Mace returned thanks for it. Yet it is clear that such details are swallowed with a morbid avidity by a large portion of the public. The schoolmaster during the last ten years has been abroad. A vast increase has taken place in the number of those who take a daily paper. There is a stir and a movement among the lower orders which is unprecedented in this country. The journals of the day have a new *clientèle* composed of readers who are honest enough and virtuous enough, but who are not squeamish, or sensitive, or capable of cultivated reflection. Some sort of pabulum must be supplied to them; and it is for this description of subscribers that sensation anecdotes are composed. Those who care for sensation spectacles now take in the news of to-day; and the newspapers must recognize their existence and cater for their amusement. A singular instance of this is supplied by the paper which has now the widest circulation in this country. The *Daily Telegraph* is by no means an uninfluential or an undignified journal. Its leading articles are written always with spirit, and occasionally with brilliancy. The tone it takes on political and moral matters is a very worthy, and, apparently, a very conscientious one. With the exceptions of the foreign intelligence, which is valuable, and the leading articles which are evidently written by men of talent, the rest of the paper is most uninteresting to educated people. The reason is, that the minor portion of the paper is composed for the benefit of lovers of sensation. It is written for the sake of persons who really care to know what has become of Mr. Windham and his Norfolk coach, or whether Lord Ranelagh has got a new uniform. It is the paper of the age: an age of sensation spectacles—of the progress of the masses—of rough and vigorous literature—of small refinement, but of very great generosity and good feeling. It is ridiculous to look on American taste for sensation as if it were altogether a Transatlantic quality: we have the same in England, only that it is swamped by a great deal that is classical in English training. The march of democracy has begun; and the beginning of the march of democracy, whatever be the limits to which it is tending, has much about it that must be distasteful to the sensitive and the well-bred. Among its other disagreeable characteristics is the love of a sensation spectacle; whether it be the spectacle of Mr. Windham in the Divorce Court or on the top of a Norfolk coach, or an Alhambra bull, or even General Tom Thumb.

THE ILLUMINATIONS.

If we are to judge by the standard of Tuesday night last, the English certainly do not yet understand the art of illuminating. It is true we have not had much practice, as it is but once in the last twenty years that our streets were a-blaze with a public rejoicing; but in twenty years the world has been transformed, and we did expect now a little more artistic skill than we witnessed on the marriage of the Queen. But we fear the public at large have no instinct for the beautiful, and do not take kindly to the decorative arts. What acres of bunting and what miles of gas-piping alight have we witnessed during the last week, and what distinct impression have they left upon the mind? An Englishwoman will hang her shawl upon her back in such a manner that it shall look like a boy's kite; the Frenchwoman will drape herself with it that it shall set off the figure to the best advantage. This instance is very typical of our general unhandiness in such matters. How a Frenchman must have raved at the way in which London, for a week, has displayed its flags across every street! Inspired by the genius of the washerwoman, enormous pieces of coloured bunting have been hanging from ropes, like so many coloured table-cloths from a clothes-line. To the middle-class Englishman a flag is a flag, and the manner in which it is arranged has very little to do with it. Such a thing as grouping never occurs to him, and probably he thinks that to do so would be to hide too much, not knowing that sometimes the half is better than the whole. In some instances, where the clothes-line method of flag-hanging was departed from, even greater absurdities were observable. Thus, at the Ordnance Office, in Pall-mall, the whole façade of the building was festooned with bunting, which hung against the bare brick-work, just like the chains of sausages draping a Christmas turkey; whilst at the Mansion House the City architect—who should have known better—apparently ashamed of the handsome Corinthian columns, muffled them up from base to summit in red baize, making them look like so many aldermanic legs in flannel.

The same want of originality was observable in the illuminating. The "tasty Englishman" hung out his star upon the external wall with a total disregard to any general effect, and the first letter of the alphabet was in request to a fearful extent; indeed we strongly suspect that the old "V" for Victoria has simply been inverted for Alexandra. At all events, beyond the "A" and the "E," and the Brunswick star, the shopkeeping minds of the metropolis never ventured to advance. There were transparencies of the happy pair, the Princess suffering under a fearful obliquity of vision, and the Prince smiling gravely with a bulged cheek; the motto never venturing beyond the wish "May they be happy," which, to judge from their looks, they certainly were not when they were taken. The fearfully monotonous effect of such devices repeated by hundreds was an undoubted reproach upon the public taste, and strongly pointed to the fact that illuminating to be effective should be the result of combined action rather than of individual effort. What, for instance, could have been more simple and effective than the grand double semi-circle of light which met the eye in the Quadrant? If all the gas of stars that paled their ineffectual fires in back

Digitized by Google

streets where they were never seen had been thrown into one common fund, there would have been sufficient to have traced St. Paul's and Westminster Abbey in living fire, and a scene would have been presented to the public mind which never would have been forgotten. We know that the genius of the nation is to do everything for ourselves; but if we allow the parish authorities to light our streets for us on ordinary occasions, surely on extraordinary nights of rejoicing we might do the same thing; and by selecting some striking municipal building, we may concentrate our means upon it, so as to produce a noble effect. Indeed, we have only to look at what was done by the authorities for the public buildings, to see that there is plenty of ability at command. The group of buildings by the Exchange, and the Government offices in Whitehall, told admirably by the mere force of the uniformity of the style of lighting adopted; whilst the National Gallery, with its coloured fires and the fountains in the square scattering their shower of silver under the influence of the electric light, was a real success.

But there was an aerial illumination far more beautiful and poetical than anything that our ugly streets, "cabined and confined" as they are, could show. The spectator, lifted above in a balloon, might, on Tuesday night, have witnessed a scene of surpassing beauty. The attempt to light the dome of St. Paul's, partial failure as it was, yet showed that the true light for illuminating purposes will find its birth in the electric battery. Standing upon Blackfriars-bridge we saw the dazzling sun, planted under the cross of the great cathedral, sending its vast ray now and then out into the dark void, lighting up spire after spire, as though the metropolitan mother church were counting its distant children, touching with fiery finger the glittering vanes, from far off Bow in the east, to Chelsea in the west. All the while the great dome itself lay hidden in the darkness of night, its outline only being marked by the circles of lamps which rose tier above tier, reminding one of that strange picture by Martin, "Satan in Council," in which the sky is illumined by the like circles of fire.

On the western verge of the metropolis a sight was witnessed, for only a few moments, which was scarcely less beautiful—the illumination of the summit of the Clock Tower at Westminster. As the distant spectator watched, he saw what looked like a fairy palace in the air, the lovely pavilion-like tracery showing all its gilded outlines like some vision in the "Arabian Nights." In other directions the distant observer might have seen great statues standing out against the darkness, lit with all the vividness of day; the Duke of York, on his tall column; Nelson, with his sad brow; the Iron Duke, with truncheon pointing towards his place of sepulture. Meantime, citywards the flames of fire shone on the summit of the Monument, and beside the opposite shore a phœnix, traced in fire, gleamed from the lofty tower of the glass-works. In the dark night there was something inexpressibly fine in the appearance of these strange apparitions, seemingly suspended in the air, and nearly all illumined by the unearthly electric light. In any future illuminations we hope to see more made of these points, so eminently calculated as they are to produce an abiding impression.

But we must not forget London-bridge, the dim outlines of which vanished and reappeared with the flickering of the fires in the tripods ranged along its parapet. The statues of the Danish kings, holding aloft their banners, every now and then came into light as the flames blazed up aloft. There was something strangely magnificent in the whole effect, and we congratulate the City architect upon his success in producing a scenic effect which had a touch in it of the grandeur of antique days. Neither must we overlook Temple Bar. Who could recognize the old black and grimy gateway in the festal arch, shining in white and gold, adorned with white statues of Hymen flaming his saffron torch, and blazing genially with clustered jets of gas? Never before did the old arch look so jubilant, and never before, most certainly, did it look down upon such a surging shrinking multitude as that which swayed to and fro like a solid wave beneath its arch. Of all the fearful sights of this night, when the streets were filled with such a multitude as the world has never seen but in the hosts of a Xerxes or a Napoleon, the most fearful was witnessed at this point and in the middle of Ludgate-hill, where four poor women were crushed to death in the frantic crowd. This occurrence was all the more sad, inasmuch as the lighting of the dome of St. Paul's was far more effectively seen from any of the bridges than from the narrow gulley in which the crowd was wedged. We cannot help remarking here, that we trust on any future occasion carriages will not be allowed to traverse the streets. Half the mischief occurred on Tuesday last in consequence of the roadway being jammed with vehicles of every description, which could neither get on themselves nor allow pedestrians to proceed. Those who attempted to ride found out what a hopeless method of progression it was, and we hope in future that the police will prevent its being adopted, as it is quite clear that they are utterly powerless to direct its circulation, or to organize its progress in any way.

The use of gas almost entirely displaced the old oil lamps, but there was one disadvantage in its adoption, its flickering in the wind, which we are glad to find was obviated in many instances on Tuesday night by the use of screens of crystal drops. By far the most perfect illumination in the metropolis was that of Mr. Harry Emmanuel, the Court jeweller. Here evidently a true artist had been employed, and the result was a magnificent piece of illuminated crystal jewellery—we can call it by no other name—in which the pattern was formed by very perfect imitations of precious stones. We have spoken rather harshly, perhaps, of individual efforts at illuminating, but there can be no doubt that this one was absolutely perfect. Poole, the Prince's tailor, also had a magnificent piece of architectural effect in crystal glass, with coloured shields, but although more favoured by the crowd, it was very far from being so artistic as the gem that shone over the establishment of Mr. Emmanuel.

AN UNILLUMINATED PLACE.

THE more brilliant the light, the darker, too often, is the fringe of shadow that surrounds it. Amid the blaze of glory that illuminated London on Tuesday night, there were dark places into which few rays of light, moral or material, found their way. These were submerged in that sea of light like reefs and shoals and dangerous quicksands beneath the flowing tide. It may solemnize, and yet not sadden, our bridal joy to look a little into one of those deep and dreary dens in which human nature exists, not lives, in this city of ours. There is a court not far from Drury-lane Theatre which lay in deeper shadow on Tuesday night, and reflected neither from heart nor hearth one ray of the general splendour. The waifs and strays and weeds and wrecks of the great sea of metropolitan life are daily washed up into that corner, there to fester and corrupt and disappear. But its statistics are alike expressive and suggestive. It contains in a very short and limited space twenty-one houses, each of which seems to gasp for air, and, like a plant growing in a dark underground cellar, looks sickly and bleached, and ready to expire. The light of day, by circuitous and ingenious routes, peeps in, as if in its catholic sympathies it would not give up the worst. Air—thanks to Him that made it—presses equally and impartially on all sides, and benevolently forces its way into otherwise unvisited scenes, though in this case it has so many hostile fœtid gases to enter into mortal combat with, that much of its refreshing energy is wasted before it gets into human lungs. All the water that is conducted into this court is consumed by the inhabitants, so that very little is left for sanitary purposes. Drainage can hardly be said to exist. There is one public convenience for each crowded house, but so inadequate, that the usual mode of supplying its place is the sill of each of the back windows, and there the scene of filth and indecency at ten o'clock in the morning beggars all description.

In each house are eight tenements exclusive of the underground cellar. The greatest number of persons in any one tenement is eight. The cellar is found also tenanted; but as such occupation is not legal, the cellar inmate invariably tells the visitor that she has a room up-stairs, and merely takes a change of air by her descent into the cellar; there are also lodgers not included, because they are disclaimed by the occupants, though the earnestness of the disclaimer suggests it is not true. The largest number of persons in one house is 47, and the total of the inhabitants of the twenty-one houses that make up the court is 671, of whom 222 are children apparently attending no school of any denomination—filthy, ragged, half-naked, and the special favourites of parasites of various species. The occupations of the parents are in some cases a secret, in other cases too easily guessed, but sometimes open and avowed. Among the latter are costermongers, occasional labourers, and wood-choppers. The females sell oranges and apples on the streets, and a few keep small shops in the court, and an exceptional clean room, entitled to this distinction by contrast, exists. Reading is so unknown, that the Council of Trent might safely trust them with a Bible in the vulgar tongue, and the only visitor (except the missionary) who has any claim to the distinction of scholarship, is the begging letter-writer, who drives here and in contiguous courts a flourishing trade. The highest rent for a single tenement or room is 2s. 9d., and the lowest is 1s. 6d. The rental of the court is upwards of £1,000 a year, and for this large annual revenue the landlord furnishes the sanitary, social, and illuminating advantages we have described.

Digitized by Google

If we descend to the details of individual life, we shall find every touch in harmony with the whole. In one room were found a father, mother, and family, and the eldest daughter the mother of new-born twins, unmarried and unhappy. In another room, the very worst, smallest, and most wretched, was found one solitary inhabitant—solitary, because the others were out foraging on their professional walks. He looked suspicious and unsettled, and his appearance suggested some personal inquiries, which he did not repel. On being asked how he lived and supported himself, he said it was "by doubling the police." On our informant begging an explanation of this new profession, he said, when the police call at this house he escapes by the back window, leaps the fence, and takes possession of a room in the next house, his name varying with the number of his tenement. When pressed for information as to the necessity of this, he said he had been eight times in prison and three times in penal servitude, yet unexpired, and for very many years he had not heard a sermon except in prison.

What to suggest in the way of improving such dark and dreary dens, it is hard to say. But of this we are satisfied, that model lodging-houses, admirable as exemplifications of what can be done, do not meet the case. Neat blocks of cottages, here and there, or tall architectural piles, containing a few sets of apartments, are very pretty to look at, but they can never overtake the social necessities of a London population. What is wanted is, the sanitary improvement of the existing houses or tenements of this moral drift or dregs of the metropolis. It should be attempted, though we fear there are difficulties greater than even Lord Shaftesbury can grapple with. This is plain enough—ragged schools and ragged churches will fail of fruit on a large scale till wretched homes are elevated. Four hours' teaching of the children of such abodes is more than neutralized by twenty hours' living and sleeping in the corrupted and festering air of a court, in which all moral lessons, all social decencies, and all sanitary life are outraged. These people, physically, are living like rats, — morally, they live like savages,—and religiously, they are heathens. Their only drawing-room is the gin-shop, their only excitement its poisonous liquids, and their change of air—answering to a visit to the country—is a year's residence in a prison where food and air and cleanliness might be an attraction it is not easy to resist. Something should be done, and that speedily. Railway stations are absorbing the sites of miserable dwellings, but they aggravate the state of those that remain. The poor become more concentrated, the wretched tenements get more crowded, and the living picture charged with darker and more repulsive colours. The problem thus presented ought to be taken up by the philanthropist, the legislator, and the Christian pastor, and earnestly discussed, though not easily solved. A profound scientific thinker once made the just observation, that as often as he found himself face to face with a great difficulty, he believed—what the issue justified—that he was on the margin of a grand discovery. May it be so now!

Under all the splendour of a rich and prosperous city are cellars in which woman has parted with all her purity, and man with all his dignity. If Naples has its dungeons, and Rome its Inquisition, and the Southern States their slavery, we must not disguise the fact that London has a teeming population living in conditions that might cause the gaols and penitentiaries, under penal sentence, to seem a positive luxury to about a hundred thousand of our people.

THE NEW OXFORD EXAMINATION STATUTE.

It is satisfactory to see that although the mutterings of the theological storm which has recently burst over Oxford are still audible, the University is engaged on a real though unpretending measure of internal reform. The change in the system of examinations which has just come under discussion, though apparently slight, may prove of real importance to the interests of education throughout the country. We, therefore, offer no apology for attempting to explain its bearings and design.

The system of examinations at Oxford has been of gradual growth. Instituted originally by Laud, as a necessary preliminary to a degree, it gradually fell into neglect, till in the last century it became the practice for a candidate to name his own examiners, and to provide them a dinner when the examination was over. With the present century the principle of awarding distinctions after examination was introduced; and in 1830, after various modifications, the statute of 1800 was improved into what is now generally known as the "Old System." By this statute "passmen" were distinguished from "classmen," and in order to take a degree it was necessary to pass two classical examinations, popularly known as Little-go and Great-go. A great change was made in 1850. The number of examinations and the number of subjects of study were both increased. For the two examinations under the former system four were then substituted. There were three classical—Responsions or Little-go, Moderations, and the Final Classical; and for the fourth a choice was allowed between the three subjects of Mathematics, Modern History, and Physical Science. Honours were awarded in all except the first.

This system has now been on its trial for ten years, and various estimates are formed of its success. There are many who look back with fond regret to the former state of things. Nowhere does the *laudator temporis acti* flourish in such exuberance as in the comfort of a college, or of a college living. Others again, and amongst them might be reckoned a large majority of the professorial and tutorial bodies, believe that great has been the gain in the increased breadth of view and intensified energy with which the studies of the place are pursued. But few would venture to give a verdict of unqualified approbation. On the whole, it seems fair to conclude that classical studies have been the chief gainers. A comparison of the Classical honour lists of the last ten years with those of the ten years preceding will show that, while there has been on the whole no great falling off in the number of honours in the Final Classical school under the new system, as compared with the old, there is the clear additional advantage of the Moderations list, in which about a hundred names now appear every year.

It can hardly, however, be denied that the new studies of Modern History and Physical Science have hitherto met with a far less degree of success than was anticipated by the framers of the statute of 1850. The fact is, these new schools have hardly as yet had a fair chance. Those who have any classical turn at all, and some who have none, devote themselves entirely to the classical school. Classical honours carry with them the highest prestige, and are the surest passport to a fellowship. A large majority have lost all energy and all desire to distinguish themselves in the schools, before they have surmounted the pass examinations in uncongenial subjects then necessary. It is now proposed to carry out in substance one of the recommendations of the University Commissioners: "that during the latter part of the academical course all students should be left free to devote themselves to some special branch or branches of study." In order to effect this end it is proposed simply to allow any man who takes honours in any one of the four final schools—Classics, Mathematics, Modern History, or Physical Science—to take his degree without obliging him to pass in any other. By the word "honours" is meant a first and second class in the last three schools, or a first, second, or third class in Classics.

This change, simple and unobjectionable as it seems, has raised the storm of opposition which a really useful measure always has to encounter at first. It is described as nothing less than an attempt to upset the classical system of education, and to set up a narrow and professional one in its place. When it is remembered what part of the classical system it is proposed to abolish, the value of this objection will be manifest. Take the case of the ordinary Oxford passman. He has already spent eight or ten years at school. What is called, ironically, his education, has, when he enters the university, cost between £1,000 and £1,500. He struggles into a college. He reverts to studies which puzzled his youthful brain some ten years before. He finds them as new and as difficult as ever. By dint of hard labour, his grammar and arithmetic—he is by this time twenty years of age—are pronounced satisfactory, and he has passed Responsions. Next year the same process is repeated with slight modifications; and he gets through Moderations. The rudiments of Classics are now at length laid aside; he learns no more grammar, and writes no more Latin prose, but commences the study of "Philosophy." This means that he reads with a translation (he is no longer expected to know the parsing), Xenophon's Memorabilia, or Cicero's Offices, or perhaps four books of the Ethics. This, and a portion of a historian, complete his classical curriculum. Then come six books of Euclid, or the modicum required for a pass in History or Physical Science, and in process of time he is enabled to write M.A. after his name and to vote in convocation. It is needless to say that very soon not a trace of his hard won success remains behind in the shape either of positive knowledge or mental training. He does, however, retain, and probably duly transmits to his descendants, a deeply-rooted aversion to intellectual exertion; and idleness in the schoolboy or the undergraduate is, in his eyes, no fault, for it is merely synonymous with abstinence from useless toil.

The great aim of a University in the regulation of an examination system ought to be the encouragement of the higher studies—in other words, of reading for honours. The great defect of the present Oxford *régime* is, that it seeks to extract labour by driving

Digitized by Google

men into pass-schools. It frets and wearies them with perpetual examinations, in subjects for which they may have no natural taste or aptitude. It is sufficient to harass them, but not to employ, far less to educate. It is next to impossible for a passman to study his book with any real interest, zeal, or earnestness. And the present system seems to aim at having as many passmen as possible.

If the proposed change is sanctioned by the University, each undergraduate will, soon after he has been a year at Oxford, be free to choose between the four branches of Literæ Humaniores, Mathematics, Physical Science, and Modern History. The range is wide enough for everyone, or almost everyone, to find scope for his peculiar bent. Whatever motive may impel him to work, whether it be a sense of duty, or ambition, or a relish for any particular line of study, it will now have free play. We believe the result will be most beneficial. We are far from apprehending any injury to whatever is good in the classical system. That system would rest its claims to the post of chief instructor on a rotten foundation indeed, if it depended on the influence it exercises on the ordinary passman. None of the better sort who are attracted to classical studies at present, will be deterred by the working of this statute. On the other hand, if by this means idleness is discouraged, and an atmosphere of intellectual exertion fostered, classical studies will share largely in the common benefit. We are yet far enough from a true theory of education; meanwhile we would gladly see a fair field and no favour between the four great subjects now recognized at Oxford.

THE MORAL OF OUR FESTIVAL.

Two real festal days have dawned on London. The first witnessed the royal bridegroom conducting his royal bride from Southwark to Windsor along miles of streets, amid the most enthusiastic demonstrations of welcome ever witnessed in this or other land. The evening of the second revealed a no less unprecedented and brilliant display, for it seemed as if a second sun had risen on London, and transformed tower, and monument, and pillar, into shafts of sunshine, and lighted up every face with a new joy. Very little sets Paris dancing. The mercurial Frenchman is always on the look-out for amusement. His sensitive nature draws a kindling excitement from scenes and shows that produce no effect on our more phlegmatic temperament. But London needs a great excitement or a grand occasion to raise its heavy plodding heart and its bowed-down back. On this occasion the great Metropolis fairly stood erect, and doffed its every-day working clothes, and cleaned its cloudy face, and gave itself up to all joyous and kindly influences. It paved its streets with living multitudes, and draped its dingy houses with ten thousand welcomes, and made the air ring with congratulations to the eldest son of Queen Victoria, conducting to her future home his beautiful young bride, who one day may be queen of an empire on which the sun never sets, and of a people whose loyalty is the more admirable because tempered by a love of liberty and independence, hardly won and dearly cherished. The whole nation was animated by one sentiment and inspired by one principle—that sentiment noble and full of sympathy—that principle unchangeable and lasting. There were no demonstrations at so much a head—no servile homage extorted by an iron sceptre. It was the unpurchased and unpurchaseable tribute of a free and loyal people, who know alike their duties and their rights, and, towards the objects that deserve it, feel a love that wearies not in the best and falters not in the worst of times. There is a homage no power on earth can command and no reward or menace can create. Its deep spring is the heart, and its rudest and least regulated expression, because spontaneous, infinitely transcends the dramatic exhibitions that in other lands are made to do duty in its stead.

The despot may raise up splendid palaces and pyramids and cities, but he cannot build up a noble and a loyal people. It is only where individual rights are respected—where the humblest home is sacred—where industry finds a sphere and the fruits of it are secure—where man neither feels nor is regarded as a beast of burden, a mere creature of appetite, a contributary to greatness he has no share in, and to wealth from which he derives no advantage,—that order, love, loyalty, and obedience attain their highest temperature and purest development.

The arrival on our shores of the Princess Alexandra and her union to the Prince of Wales did not create but only furnished the occasion for the outburst of those deep and latent feelings that honour alike the subjects, and the royal objects of their affection.

What may be before the Royal young couple who have so auspiciously begun their wedded life, no prophet can tell. The sky of Europe is dark and stormy, and the future of the nations anything but reassuring. Their part in the great drama of the world may be a difficult one; but of this they are sure,—the affectionate loyalty and service, and, if needed, the joyous sacrifices of a people who feel too intensely grateful to the Royal mother ever to feel indifferent to the happiness, prosperity, and greatness of her Royal children.

It is a low, vulgar, and material estimate of social life that recognizes no moral force in such stirring scenes and popular demonstrations. There is something nobler and more real than scales can weigh, or foot-rule can measure, or arithmetic can count, or pounds, shillings, and pence can pay for. Many a young man and maiden will remember, in after years and "in far-off summers we may never see," the royal, young, and beautiful bride and the happy Prince seated opposite, the objects of the respectful and hearty congratulations of millions, and will feel their loyalty inspired and glorified by the reminiscence. The whole nation wept some fifteen months ago with their bereaved Queen, now a widow, and last Tuesday it rejoiced with her eldest son, now a husband. This communion of prince and people in tears and joys, in burials and bridals—in all those emotions that lie deep down in the very heart of human nature—is neither a vain nor an unfruitful thing. It creates new links between the cottage and the palace, and inspires and glorifies old ones. The sympathy the million feel with the young couple, by a beautiful reaction, kindles sunshine in their own hearts, and subjects feel happier because their Queen and her eldest son are happy.

Cold, stiff, and insulated rulers reign over colder and stiffer subjects; but princes that win their happiness from the loving hearts of their people, and show on life's great days that, however distant and separated by social circumstances, they are, in their joys and sorrows, their affections and feelings, their wooing and wedding, entirely one—feel their popularity and power increased a hundredfold. It is in no feigned or formal words that we pray that blessings lasting as life may be theirs, who have just begun together, on a high and perilous level, the path of life.

THE BIDDING OF THAMES.

AN ALEXANDRINE.

THE sun was down; the daughter of the North
Sat in the ship which rested at the Nore,
Thinking, perhaps, the morrow would send forth
The million-peopled city, with its roar
Of popular joy, and pomps to meet the bride.
When, as the shore blazed welcome writ in flames,
Rose from the wave the ancient god of Thames,
And mounting at the happy vessel's side,
Spoke, with the murmur of a gentle tide:—

"Kindly for thee, child of a kindred State,
"Beats the full heart of Britain; on thy way
"My London throngs, unanimous, to wait
"The sweet arrival, and thy wedding day.
"Lady, this land was sad; and look, it smiles!
"Twice Princess, and a Queen of Hearts art thou,
"If, plighting with thy Prince the nuptial vow,
"Thy virtues woo the People of these isles,
"And wed thy name to Hope, which the late gloom beguiles.

"And by what act this people may be won,
"Hark while I teach thee; I, their River, know,
"Since first the English nation was begun,
"All things in England's bosom, where I flow,
"Saluting each proud seat of social powers,
"The halls of Learning, and Religion's fane,
"The House of Parliament, the marts of Gain,
"And Leisure's villas with their lawns and bowers.
"I bid thee to my Windsor's royal towers.

"There, Maiden, lives the Wife whose Lord is dead.
"Go, with her son, thy husband of to-morrow,
"As thou art woman, as thou wilt be wed,
"Be thou that Widow's child, and soothe her sorrow!
"So shall this Country bless thee; for it knew,
"With her, that grief which robs it of her face;
"And English women own no purer grace
"Than mutual tenderness; the matrons true
"Are daughters; Queens of Home, each yielding each her due."

ART AND SCIENCE.

MUSIC.

THE Philharmonic Society commenced its fifty-first season, in its old *locale*, the Hanover-square Rooms, and under its permanent conductor, Dr. Sterndale Bennett, on Monday last. It was at this

Digitized by Google

institution that many of the greatest works of the German symphonists were originally introduced into this country. Beethoven, Spohr, Cherubini, Mendelssohn, and other classical composers, have all received commissions from the Philharmonic Society, resulting in productions that have taken a permanent place among the greatest treasures of the art. Hence there is an agreeable association of ideas connected with the very name of the Philharmonic Society which renders the recurrence of its concerts an event of special interest to all who reflect how largely the growth of musical taste in this country has been promoted by the former exertions of this society. Pleasant it is, too, to meet, at these concerts, the old familiar faces of those who have attended them for many years with a staunch adherence that no ordinary cause can shake. The concert of Monday last was, more particularly in the instrumental selection, one of great and substantial interest, as will be seen by the following programme :—

PART I.

Sinfonia in G minor	Mozart.
Aria, Miss Lascelles, "Sanctum et terribile"	Pergolesi.
Concerto in E flat, pianoforte, Mr. J. F. Barnett	Beethoven.
Scena, Mdlle. Parepa, "Si lo sento" (Faust)	Spohr.
Overture in A minor (Nachklänge von Ossian)	Gadé.

PART II.

Sinfonia in A, No. 7	Beethoven.
Duet, Mdlle. Parepa and Miss Lascelles, "Ah, Mathilde" (Mathilde di Shabran)	Rossini.
Aria, Mdlle. Parepa, "Du Village Voisin" (Le Serment)..	Auber.
Overture (Jubilee)	Weber.

It was especially in his symphony in G minor that Mozart anticipated those chromatic and extraneous modulations which Spohr afterwards used so constantly and excessively — progressions which, in Mozart's time, were so novel and daring that the manuscript of this symphony is said to have been returned by the engraver as being full of errors. Whether in its daring harmonic innovations or its passionate expression, Mozart's symphony in G minor is one of the most remarkable among the precursors of those great orchestral works in which Beethoven opened a new world of instrumental music. As "Paradise Lost" and "Hamlet" are to other epics and tragedies, so Beethoven's pianoforte concerto in E flat stands forth beyond all works of its kind. Great as are its mechanical difficulties these sink almost into insignificance when compared with the depth of sentiment, passionate expression, and poetical feeling which its full interpretation requires. There are but few pianists of the present day, nimble as may be their fingers, who can intellectually grasp a work so full of significance and intention ; and many really fine players, in performing this concerto, unconsciously reveal their want of those higher attributes of a great pianist. Mr. Barnett is a performer of great mechanical excellence, and his execution of the concerto (from memory) evidenced careful study ; but he would have done better to have chosen a less exceptional work. Gadé's overture, played (if we mistake not) for the first time at these concerts, is an ambitious attempt to rival those picturesque musical embodiments of the wild grandeur of Scottish scenery and associations, which Mendelssohn has left in his overture "The Isles of Fingal," and his symphony in A minor. Gadé is a young Danish composer, who has been somewhat over-estimated in Germany, in consequence of the approbation bestowed on him by Mendelssohn, whose natural kindliness of temperament and freedom from all jealousy of possible rivalship, led him to welcome, somewhat too warmly, talents which, however estimable, give no promise of that power and originality, without which no special place is to be gained in the rank of the great composers. The overture in illustration of Ossian is constructed chiefly on a wild dirge-like theme which recurs with a frequency not justified by any interest or novelty that it possesses—indeed, throughout the work there is a re-iteration of most of the phrases which is not only tiresome but a manifest sign of poverty of invention. On the other hand, the instrumentation is masterly, evidencing a thorough acquaintance with, and command of, orchestral effects. It would have been easy to have selected a better specimen of Gadé's talent than this overture, which was but coldly received. Beethoven's magnificent symphony in A offered about as strong a contrast as possible to Gadé's overture, and a good illustration of the immense distance which separates talent from genius. Weber's brilliant overture (in which our national anthem is introduced) made an effective close to the concert, and was moreover appropriate to the special event of the week. Probably a similar consideration had something to do with the selection of a work by a Danish composer. In the vocal music, Mdlle. Parepa displayed her thorough acquaintance with very opposite styles by her equally admirable execution of Spohr's difficult *scena* and Auber's light and brilliant *aria*. Pergolesi's air and the flimsy duet of Rossini were unworthy of the remainder of the programme.

The last Monday popular concert was a "Beethoven night"—the programme consisting exclusively of works by that master. The chief features were the septet, led by M. Sainton ; and Mr. Charles Hallé's performance (with M. Sainton) of the great "Kreutzer" sonata, and the solo sonata known in this country as the "Moonlight Sonata."

During the week there have been various musical tributes in honour of the event which has been the all-absorbing subject of interest. The most important of these art-offerings is an "allegorical masque," entitled "Freya's Gift," written by Mr. Oxenford, composed by Mr. G. A. Macfarren, and performed on Tuesday night at the Royal English Opera. The Scandinavian goddess, Freya, was personated by Miss Louisa Pyne, to whom are allotted a scena, "Hither I come,"—reminding us somewhat (although without plagiarism) of the style of Weber—and a ballad, "When those you love," of the genuine English pattern ; the melody of which is so eminently vocal and pleasing that it will doubtless become a favourite. The remainder of the work consists of choruses, descriptive of the arrival of Freya and her welcome by Britannia, of English revels and sports, and concluding with a very clever and masterly combination of the Danish and English national hymns, in which "God save the Queen," turned into common time and with a little alteration of rhythm, is heard in conjunction with the bold strains of the northern tune. Both Mr. Oxenford's words and Mr. Macfarren's music are far above the average quality of such occasional pieces. The work is published by Messrs. Leader & Cock, the orchestral accompaniments excellently arranged for the pianoforte by Dr. Rimbault.

SWISS LAKE-DWELLINGS.

Since the admission of the correctness of the discoveries of rude chipped implements of flint in strata of geological age by M. Boucher de Perthes, attention has been turned alike by geologists, archæologists, and philologists, to every available source for evidence of the high antiquity of mankind, and for traces of the early conditions of ancient pre-historic races and peoples. The Danish archæologists had years ago classified the relics exhumed from refuse-heaps, peat-bogs, and tombs into a "stone," a bronze, and an iron age,—the two former ages, at least, being prior to any written Scandinavian records. More recently Swiss archæologists have made public their discoveries of equally interesting relics of an ancient people who dwelt in pile-houses on the margins of the lakes ; and in Ireland ancient lake-dwellings, known as "Crannoges," occur, and have received some, but as yet not much examination. To this phase of archæological research into the popular topic of the day—the antiquity of man,—Mr. Lubbock, F.R.S., the son of the eminent banker, has paid special attention during the past few years, and recently made it the subject of a very interesting lecture at the Royal Institution. To the pile-dwellings of the Swiss lakes,—which in a general manner are resembled by the pile-houses of Borneo at the present day,—attention was prominently drawn in 1854. The waters of Lake Zurich in that year, from meteorological causes were one foot lower than at any previous period of drought—not even excepting the memorable 1674,—and the inhabitants living on the shores of the lake at Meilen thought it a good opportunity to acquire more land by banking up the earth to keep out the water when it returned again to its former level. In dredging up the lake-bed for this purpose the piles of ancient habitations were encountered, and numerous relics of stone, bone, and bronze were brought to light.

Similar lake-habitations were subsequently found in other, indeed in almost all the Swiss lakes ; and it is evident that a careful examination of the remains found in them is calculated to throw much light on their ancient inhabitants. They afford, too, an interesting confirmation of the description given by Herodotus of the Pæonians, who dwelt in a similar manner over the waters of Lake Prasias. In a recent visit to Wauwyl, in the Canton of Lucerne, in company with Colonel Suter, Mr. Lubbock observed the piles still standing two or three feet above the ground, and extending round an island of stones artificially heaped to secure the piles. On this occasion several objects were collected, and many pieces of pottery, bones, &c. The total list of objects yet found at Wauwyl is 22 axes of serpentine, 22 arrow-heads, 136 flint-flakes, 13 corn-crushers, 80 sundries, 90 implements of bone. Some articles of wood were met with, but there was so much ligneous matter in the peat, that it was exceedingly difficult to make them out. Rude pottery was also found, but much broken up. Traces, too, of flaxen cloth it is believed have been detected ; moreover, quantities of corn occur, as well as some fragments of cakes or bread, and fruit. Amongst the latter, apples are plainly distinguishable. Professor Rutimeyer has determined amongst the animal remains those of the wild boar and ox, but it is singular all traces of hare are absent. Cæsar mentions a superstitious reluctance amongst the Ancient Britons to eat the flesh of that creature. Fox-bones, however, have been met with. But although these ancient lake-dwellers may have been reduced by hunger to eat those animals, they appear not to have been ever reduced to the strait of eating each other—no traces of cannibalism having been seen. Indeed, no human remains at all have been found which can with certainty be referred to the stone age, and we are at present quite ignorant of what kind of race the builders of the Swiss lake-dwellings were.

It is considered there are indications of a commerce, or rather barter, at the period of even the earliest of the pile-villages, as the materials for many of the stone articles do not exist in the lake district. The material of some of these is believed to have come from quarries in France, and it has been suggested that the lake-people may have made visits to those places, like the Red Indians of America to the pipe-stone quarries at Coteau des Prairies. Some amber found at Meilen belongs probably to the Bronze age. Nephrite, of which a few fragments have occurred, is supposed by the Swiss archæologists to have been brought from the East, but this substance is conjectured to have been passed from hand to hand as a rarity. Mr. Lubbock has also inspected Colonel Schwab's collection from

Digitized by Google

Nidau, on the Lake of Bienne, where there were not only objects of stone and bone, but also a surprising number of articles of bronze,—knives, axes, sickles, bracelets, 600 pins, more than 100 fish-hooks, and numerous rings, the use of which is not easy to understand. How so many articles that in those days must have been valuable came to be left at the bottom, has been a matter of mystery to some; and it has been asked, if Colonel Schwab could recover them, why could not the lake-people do so? This difficulty has caused a suggestion to be made that the lake may have been deemed sacred, and that they were offerings thrown in; but, if we remember that at the time these relics would have been accidentally dropped in, the site where they are now found was covered over with the platform of the pile-village, and therefore inaccessible, much of the seeming difficulty at once vanishes.

The antiquity of the bronze age must be great, as at the Roman period iron weapons were already in use by the nations north of the Alps. And the people who used these bronze articles must have been widely spread, for we find instruments extremely similar in use in different geographical regions, widely remote from each other, as in Denmark and Switzerland, at the same epoch—instruments of the same model, and if not actually cast in the same moulds, so like that it is evident the makers must have seen and been familiar with the same patterns. The union of copper and tin into bronze shows so much advance in metallurgical art, that we naturally look for a precursory age of copper. No trace of any such period is, however, met with in Europe; while the large quantity of copper and tin in use, and the fact that only at two places in Europe could the latter metal be obtained, indicate a rather extensive commerce during the Bronze period.

At the pile-houses of Nidau articles of iron have been found, but too few to permit the relics there to be classed in the Iron age. At Téne, on Lake Neuchatel, iron swords, differing in shape from those of bronze and unlike those also of the Romans, have been found. At Tiefenau, near Berne, however, similar swords have been found with Gaulish coins, and we may therefore refer these weapons to a period not much anterior to the invasion of Northern Europe by the Romans. Their historians, however, contain no allusion to any lake-habitations, and therefore it may be presumed the inhabitants at that time built their houses on dry land.

When iron came into use, its superiority in affording a cutting edge was so decisive that it supplanted bronze at once, and we have very few cases of bronze and iron weapons used together, except that bronze is sometimes used for the handles or scabbards of iron swords.

Mr. Lubbock exhibited classified tables of the articles found in these lake-dwellings, and showed thus they were of different dates. The strongest case of high antiquity was that of Waugen, on the Lake Constance, belonging to the stone age. At this place 1,610 stone and 350 bone relics were obtained, without a trace of any metal weapon whatever. Morges, on the other hand, is as decisive an example of the bronze age, 210 articles having been met with, and not a single axe of stone.

At Nidau there is evidence of the development of agriculture in the stones for grinding corn which are much more numerous than elsewhere. The bronze articles found there amount to 1,480; but it is not in the number of the bronze articles nor the mere absence of stone that renders this fact of importance, but the decoration on the articles. This is very beautiful, and yet there is not in it the slightest attempt to represent animal or vegetable forms,—the decoration consists entirely of linear ornamentations. The pressure of obtaining the means of subsistence, moreover, was not such but that time could be spared for dress and attention to the person. The pottery, as in the stone age, is very coarse, containing large grains of quartz, and has not been turned on the potter's wheel. The animal remains exhibit more domesticated species. By this kind of inductive reasoning and by calculations of the rate of deposit by the lake mud, the growth of peat, and similar means, Mr. Lubbock considers a relative and even something like an approximative chronology may be given of these singular pile-habitations in the Swiss lakes.

CONTEMPORARY SCIENCE.

At the Philological Society, a paper was read by the Rev. Derwent Coleridge on the elementary sounds in the English language, with a view to their notation in the proposed National Dictionary, now in the course of preparation by this Society. The discussion principally turned upon the vowels. These, the author maintained, were to be noted, as they are distinguished by organic form, by quantity, and by accent. Assuming the full Italian A in "mart" to be the central vowel, which gradually closes through the E and O groups, towards the guttural, and labial extremes I=Ee and W=Oo, the author held that the ordinary English *a* in "man" was a little closer, as if lying towards E, while the broad Northern *a*=aw in "call" lay on the other side, towards O; the *e*=eh and *o* were each asserted to have a closer and a more open sound, corresponding nearly to the *e* and *o fermé* and *ouvert* of the French and Italian. The open *u* in "cull" was subjected to a special investigation; and it was further maintained that the I=Ee is susceptible, like the other vowels, of a more or less open enunciation, though the former is heard in the English language only when the vowel is short. All these vowels, it was held, whether free or closed by a consonant, might be either long or short, with or without the accent. This was stated to be primary, secondary, and in some cases tertiary, long words in English being generally characterized by an iambic or trochaic rhythm. The notation, of which a scheme was suggested, should, it was maintained, be at once precise, convenient, and instructive, explained by scientific analysis, and fixed, as far as possible, by reference to foreign standards; thus serving as a guide to foreigners and as a protection against provincial or individual solecisms.

Considerable difference was expressed by several members, not only as to the pronunciation of particular words, but as to the exact sound of particular vowels. This was to be expected, every educated Englishman being ready to uphold his own practice and trust his own ear. Still it was possible, by a wide and careful induction, to arrive, at least approximately, at the true standard; and this, if recorded in a work of authority, would, it was hoped, prove to some extent regulative, with great advantage both to the refinement and practice of the spoken tongue.

Sir Roderick Murchison brought on, at the Geological Society, a subject lately made a matter of dispute by Dr. Geinitz's desire to substitute for the group-name Trias, hitherto employed, that of Dyas, on the ground that the natural divisional arrangement of the beds was binary and not tripartite. The title of Sir Roderick's paper was "The Permian Rocks of North-Eastern Bohemia," which district he has recently visited in company with Dr. Fritsch, of the Geological Survey of Bohemia. From a transverse section of of the rocks exposed by railway-cuttings, &c., between Josefstadt on the south-east and Semil on the north north-west, Sir Roderick arrives at the conclusion that the rocks hitherto termed Roth-todt-liegende by the Austrian and Saxon geologists are of a very different petrological character and of great thickness. He especially stated one case brought under his notice by Professor Keilhau, that of Erlbach, in the adjacent country of Saxony, where the inferior half only of these deposits, or the lower Rothliegende, has been sunk through in search of coal to the depth of 2,300 feet. The deposits are in ascending order: 1st, coarse conglomerate and sandstone, followed by thin courses of schist, with fishes (*Palæonisci*, &c.), and interstratified igneous rocks (basaltic clinkstone, porphyry, &c.); 2nd, alternations of coarse grits and sandstone, with large *Araucarites* and other plants; and 3rd, of bituminous schists in parts containing coal, with some layers of limestone, copper-slate, &c., and many fossil fishes in bituminous flagstone, passing up into red-and-green-spotted sandstones and marls.

From the animal remains enumerated by Geinitz, Sir Roderick is disposed to view the group as having chiefly an estuarine character—the various sauroid fishes leading to that inference. At the same time he admits that portions were probably freshwater and terrestrial accumulations. He then pointed out the chief localities of the large fossil stems of *Araucarites* and other plants, alluding to the opinion of Göppert and Geinitz, that the fauna of this group of rocks, as a whole, is distinct from that of the carboniferous age.

Considering the general relations of these rocks, Sir Roderick maintains that as they vary very considerably in different geographical regions, they are best defined by the old term Permian, which, according to its original definition by himself and his associates in Russia, simply means that such rocks lie between the upper coal, on which they rest unconformably, and the lowest portion of the Trias, by which they are covered.

Proceeding from north to south in Eastern Germany, the Zechstein thins out; and from the vast dimensions which the group assumes there when the true Zechstein is no longer traceable, it may be that the higher members of the Bohemian Rothliegende are the representatives in time of that limestone. Sir Roderick objected to the recent application of the term "Dyas" to the whole group by Geinitz, first, because the reason assigned for the change is based on the erroneous theory that the lower portion of the Permian is exclusively of freshwater origin, and secondly, that the geographical term "Permian," which is widely adopted, is preferable in itself, as involving no theory.

THE PAST WEEK.

HOME.

THE RECEPTION OF THE PRINCESS ALEXANDRA.

In our last number we left the Princess Alexandra with the Royal squadron, which accompanied her from Flushing, off Margate. As briefly as we can, we must now relate her progress from the landing at Gravesend to the hour when, after a day of rejoicing such as England has probably never seen before, she was received into the Queen's embrace at Windsor Castle.

Shortly after ten on the morning of Saturday last, the Royal yacht, *Victoria and Albert*, brought her head down the river opposite the pier at Gravesend, and presently came alongside the pier. The Princess, dressed entirely in white, with the exception of a few coloured flowers in her bonnet, left the Royal cabin, and came over to the starboard side of the yacht. Here she was received with tremendous enthusiasm, which she acknowledged with an expression of pleased astonishment and wondering pleasure at her reception, bowing from side to side, and every now and then speaking earnestly to her mother, apparently directing her attention to the extraordinary scene of delight. "Occasionally," says the *Times* report,

"As the port-side spectators grew deafening in their cheers, as a gentle reminder that they were there as well as the visitors on the pier, she went to that side also, but, as may be guessed, her appearance did not stop the cheering. Nothing did, in truth, till she with-

Digitized by Google

drew at intervals altogether, but not for long. Her white bonnet and delighted face were soon to be seen peeping round from some unexpected window, when in a second she was discovered, and cheered, till she came forward and bowed, and had to go to another."

Presently the signal-bells announced the arrival of the Prince of Wales in Gravesend, and the sixty young ladies who had been chosen to strew flowers before the bride elect, filed two and two from the waiting-room, and ranged themselves—clad in red and white, the colours of the Danish kings—on each side of the path down the centre of the pier. At five minutes to twelve, the Prince arrived, in a plain morning dress, and with a face radiant with happiness, traversed the pier with rapid steps. For the loyal people of Gravesend was destined the most interesting event in the day's history.

"The Princess watched his coming from the window, but, as he neared the vessel, first came to the door, and then, after a moment's hesitation, out upon the deck towards the Prince, who hurriedly advanced, and, removing his hat, gave her an earnest, hearty kiss, in the presence of all the assembled thousands, who thereupon went into such ecstacies of delight and applause as made the shores of the river ring again."

We make no attempt to describe the splendour of the scene;—the river covered with steamers and boats decked with flags, the pier and the shores alive with thousands upon thousands of spectators; "a scene of such enthusiasm, and yet of such impossible beauty from the numbers which made up the display, that we cannot expect to look upon its like again in England for many years to come." At a quarter-past twelve the Princess re-appeared upon the deck, wearing a mauve-coloured silk, with a richly embroidered violet velvet mantle, and bonnet of the same colour, and taking the Prince's arm, came ashore on the pier at a quarter-past twelve, preceded by a brilliant suite, and followed by the members of her Royal family. Again a wild burst of enthusiasm welcomed her, when the Mayoress, Mrs. Sams, advanced to meet her, and presented her with the bouquet which had been subscribed for by the ladies of the town. This she received, thanking the Mayoress in good English, and shaking hands with her; and then, the sixty young ladies throwing their flowers before them, at them, and over them, she and the Prince proceeded to the end of the pier—the ladies clapping their hands, the gentlemen shouting and crying, "God bless them," and everybody apparently out of their senses with joy. There they received the addresses of the Corporation.

So much for the pier at Gravesend. The Royal progress through the streets was accompanied with equal enthusiasm. At ten minutes to one the Royal train left Gravesend, and proceeded to the Bricklayers' Arms at the rate of eight or nine miles an hour through the stations, which were thronged with visitors and guards of honour, amid Royal salutes and *feux de joie*, the route being lined with crowds, which became more and more dense as it approached the metropolis.

The station at the Bricklayers' Arms was a perfect marvel of magnificence. Wherever a garland or a human being could be put they were there. We should quite exceed our limit were we to attempt the faintest description of the display of taste and beauty which was provided at this point for the reception of the Princess. His Royal Highness the Commander-in-Chief, the Duke of Saxe Coburg, the Prince of Prussia, and his Highness the Count of Flanders, occupied a foremost place, apart from all the other personages in waiting, ready to give the first welcome to the Royal bride. At twenty minutes to two the train drove slowly up to the middle of the platform, and a thrill of excitement ran through the assembled company, every one standing up uncovered. As the Prince alighted, with the Princess leaning on his arm, "radiant with youthful smiles and innocent gratification," they were welcomed by a hearty burst of cheers and waving of hats and handkerchiefs. Bowing low and repeatedly in response to this greeting, the youthful pair passed to the refreshment-room. Here luncheon was served, and addresses from the Lord-Lieutenant, High Sheriff, &c., of Surrey, presented, without being read. The gracious and sweet manners of the Princess on this, as on every other occasion, and the frank, manly pride of the Prince, won all hearts.

At two o'clock his Royal Highness the Commander-in-chief led the way to the Royal carriages, and the procession set out, the Lord-Lieutenant of Surrey, the Members for the County and Borough, the High Bailiff, the Lord Mayor and Sheriffs, with their retinue, leading the way through banks of spectators; flags, garlands, arches, banners, streamers, floral devices, and the most deafening acclamations, and ringing of church bells, till it reached the foot of London Bridge. For several days previous the bridge had been almost impassable, so thronged was it with visitors to see the preparations the City had made for the entrance of the bride-elect. The parapets were ornamented with statues of the Kings of Denmark from the earliest period, affixed to Danish standards thirty feet high, surmounted by gilt figures of ravens and elephants, the Danish national emblems. Between these were tripods of burning incense. At each end of the bridge were pedestals bearing statues of Fame, surrounded by Danish warriors bearing the "Danebrog," or national flag. At the entrance to King William-street a triumphal arch was erected sixty feet high, supported by sixteen Corinthian columns, those facing the Borough being surmounted with the statues of Saxo-Grammaticus; Holberg, the poet; Thorwaldsen the sculptor; and Juel the painter—all Danes. As far as the eye could reach on either side of the bridge, the shipping and the houses were decorated with flags; and every conceivable place, even the cage on the top of the Monument, swarmed with spectators.

About half-past two o'clock the procession entered the City by London Bridge, and the City companies fell in, but not before the Royal carriages had been stopped for nearly half an hour about the centre of the bridge by the dense masses of people. This was the first symptom of bad management which was visible along the whole route to Temple Bar. It had not apparently occurred to the authorities that the instinct of the people led them to see what was to be seen, and that if a road for the procession was to be kept, it must be done by the police. With immense difficulty the cavalcade worked its way to the Exchange, accompanied by boisterous cheering, but at that point it seemed doomed to stop short. The whole space in front of the Exchange and Mansion House was so packed with human beings that long before the arrival of the procession it seemed as if fatalities would occur. The shrieks of women were every now and then heard above the uproar, and boys were struggling for life. At one time a baby was held up in the crowd which had all the appearance of being dead or dying. A woman, to save the life of another child, threw it into a passing carriage, and was then swept away into the vortex of the crowd. How dense was the mass of people, and how eagerly every spot which offered a view of the proceedings was seized upon, may be imagined when we mention that people were seated among the hoofs of the Wellington equestrian statue, and that others bestrode the horse itself before and behind the duke. Had not the crowd, and the few mounted police who were present, been pervaded by infinite good humour and perseverance, many lives must have been lost.

"In this emergency," says the *Times* reporter, "it would be unjust to leave unmentioned the signal service rendered by Lord Alfred Paget, who rode as equerry beside the royal carriage. By an adroit mixture of firmness and good-humour, and a skill in 'chaffing' which charmed the multitude, he coaxed a passage where it was impossible to force it, and again and again rescued his charge from what might have proved a serious embarrassment.

In this way the procession crept along Cheapside till it came to St. Paul's-churchyard. This was one of the most splendid scenes along the route. The Corporation had provided sittings for 12,000 spectators, at a cost of £9,000; sittings as handsomely fitted as the boxes of a London theatre; extending from the extreme north-east of the Churchyard to its south-west corner, at the top of Ludgate-hill. This structure was covered with scarlet cloth, and was ornamented with orange-blossoms and wreaths of colossal size, with medallions of the Prince and Princess, and with groups of flags, to the number of many hundreds, of every nation under the sun, but principally of English and Danish. Every house in the churchyard was alive with brilliant flags and streamers, every window with spectators, and even the coping-stones and "chimney-tops" of the warehouses had their occupants.

"The appearance of the whole pageant, as the procession turned in from Cheapside and defiled round the Cathedral, was truly gorgeous and imposing. . . . . But the scene that took place, when the personages of the day came in view, was one of the most extraordinary in the whole route of their Royal Highnesses. Every lady of the many thousands, seated round the glorious edifice that presented itself to the admiring eyes of the Princess, sprang to her feet, a myriad of handkerchiefs were waved simultaneously, the boys of St. Paul's School gave 'the fire,' and the exuberant joy of the multitudes in the streets, in windows and on the roof tops, broke forth in deafening cheers that the roar of artillery would scarcely have drowned, and which were kept up till the Royal party had passed into Ludgate-hill. The young Princess first glanced at the wonderful dome of the stately pile before her, and then looking at the not less marvellous sight prepared for her own especial honour, her Royal Highness became visibly affected, and bowed her acknowledgments with much grace and feeling. Prince Christian (her father) stood up in the carriage, and removing his hat, saluted the people repeatedly; and the Princess Louise (her mother), to whom the Prince of Wales gave some explanations in reference to this magnificent demonstration, returned the warm greetings of the assembled ladies."

Down Ludgate-hill and up Fleet-street to Temple-bar, the procession moved by inches at a time. At Chancery-lane the civic retinue turned off; and the honor of conducting the Princess from Temple-bar was delivered over to the Westminster authorities. What they failed to contribute to the procession in point of display they made up by speeding its progress, for from this point the course was kept clear.

We cannot stop to enumerate the displays of loyalty and welcome which greeted the Princess through the Strand, Trafalgar-square, Pall-mall, St. James's-street, and Piccadilly into the Park. Throughout it was a scene of flags, and banners, and cheering multitudes; the Princess winning all hearts by her modesty and beauty, and her graceful acknowledgment of her hearty reception. In Hyde Park 17,000 Volunteers kept the road, and behind them on either side was the surging multitude. At five minutes past five the procession reached the Paddington Station, and in ten minutes afterwards the Royal train departed for Slough, where the decorations for the reception of the Princess had been entrusted to a committee of taste. The rain, however, had preceded the Royal party and compelled them to perform the rest of the journey in closed carriages. Daylight was gone when they arrived, and the rain fell in pitiless showers. From both causes the progress to Windsor was deprived of much of its splendour. But the town was splendidly illuminated, and the streets were crowded with people who defied the elements, and cheered with all their throats and hearts. For an hour or more before dark the Queen,

Digitized by Google

with the Princesses Louisa and Beatrice, was seen seated at a window immediately above the suite of rooms occupied by the Princess Alice, and did not retire till after dark. By-and-by the sound of distant guns and a volley of rockets announced the approach of the Princess, and at half-past six the procession passed under the York and Lancaster gateway to the grand entrance. In a few minutes afterwards the Princess was received into the arms of Her Majesty on the grand staircase; but little fatigued after the toil and excitement of the day, through which she had borne herself with a grace which won the admiration of all beholders.

THE MARRIAGE.

If we have found it impossible to give more than the feeblest idea of the procession on Saturday, we are fairly dismayed by the hopelessness of conveying to our readers even such an idea of the marriage at Windsor. We must ask our readers to imagine for themselves how gorgeous was the scene in St. George's Chapel, to which the oldest historic associations, joined to all that the rank and pomp and wealth and beauty, and all that is most high and mighty in the England of to-day, contributed their richest emblazonment. By eleven o'clock on Tuesday those who had been favoured with tickets had been conducted to their seats, the ladies exceeding the gentlemen by three to one, representing many of the most distinguished families in the empire, gleaming with diamonds and wonderful in millinery. Next came a gorgeous array of heralds in their magnificent tabards, followed by a *posse* of gentlemen ushers, stiff with bullion and edged about with gold, while the Queen's private band assembled in the gallery, where the ladies who were to sing the hymn of praise were already in their places, Madame Goldschmidt among them. Then the Marchioness of Ailesbury enters and seats herself in a stall of a Knight of the Garter, next to that over which her husband's banner floats. Other ladies, the Countess of Derby is one of them, follow their example; and in a few minutes more the distinguished visitors come in and take their places, all in full Court dress, but without trains, and all dressed in velvet or satin, either of blue, mauve, or violet colour, with feathers and diamonds in their hair, and some with tiaras of brilliants, covering their heads like a regal crown. At a quarter to twelve o'clock the Usher of the Black Rod makes his appearance, and the Knights of the Garter, headed by Lord Palmerston, follow, all robed and jewelled in their almost regal costume, the Premier, "the most observed of all, as he stepped up lightly into his seat and looked round him with a brisk joviality, as if about to quell a troublesome member or evade by a most voluminous reply an awkward question." The Knights being seated, the Lord Chancellor, "a perfect pageant in himself," and carrying the Great Seal, passed on, slow and stately, to his seat at the head of all. Then came the Archbishop of Canterbury, the Bishops of London, Oxford, Winchester, and Chester, and the Dean of Windsor, with the canons and minor canons of the Chapel. For a minute they kneel and pray, then rise and take up their position inside the altar rails. Finally, the whole diplomatic corps take their places underneath the Royal pew—a cluster of gold and jewels.

And now the Queen enters her pew, accompanied by the Duke of Saxe-Coburg and Gotha.

"The Queen wears the simplest and plainest of widow's weeds—a widow's cap, a black silk dress with white collars and cuffs, and black gloves. The only colours which appear upon her are the star of the Order of the Garter, and its blue riband, narrowed to the width her Majesty usually wears, across her left shoulder. She looks well in health, but thinner and older, with the permanent traces of deep grief and care stamped on every lineament of her features. She stands at the window of the Royal pew, a little withdrawn from general gaze, and only to be seen at all by those on the opposite side of the choir glancing quietly into the interior, while the Duke of Saxe-Coburg speaks, and apparently explains to her the arrangements going on below for the great ceremony which has drawn her forth from her mourning and seclusion. After a few minutes she seats herself a little away from the window, and the Duke retires, the Hon. Mrs. R. Bruce, clad, like the Queen, in deep mourning, taking his place."

At twelve o'clock came the procession of the Royal guests, "a blaze of Danish and Prussian, and Belgian and German green and blue, picked out with English scarlet," headed by Dhuleep Singh, Prince Edward of Saxe-Weimar and the Prince Leiningen; but chiefly interesting, because in it are the lovely Princess Dagmar of Denmark, sister of the bride, followed by her Royal mother, the Princess Christian, leading in each hand the Princess Thyra and Prince Waldemar. The Royal guests, as they reach the dais, turn and make a deep and reverend obeisance to her Majesty, and then pass on to their seats on the south of the altar.

Immediately after came the procession of the Royal Family and the Queen's household, conspicuous in which, above all others were the Duchess of Cambridge, the Princess Mary of Cambridge, Princess Beatrice, Prince Leopold, Prince Arthur, Princess Louise, Princess Helena, the Princess Louis of Hesse, and the Crown Princess of Prussia, leading his Royal Highness Prince William of Prussia by the hand,—a procession "slow in pace, brightly coloured, and greatly resplendent." All make an obeisance to her Majesty, the assembly standing; and as the Crown Princess does so, the Queen rises, "and bows to her daughter with a kind and winning smile—the first that has passed across her face since she entered the chapel." Instead of resuming her seat she remained at the closet window, watching her Royal children as they passed one after another to their seats, and even when they were seated she leant over the front, and remained gazing down at them steadily with an expression of fond pride, in which no trace of grief could be discovered.

The sound of louder and more sustained cheers from the outside and the blare of trumpets and the rattling of kettle-drums in the nave of the chapel, now announced the approach of the bridegroom. Again the assembly rose, all save the Queen, and every eye was turned on the Prince of Wales as he came slowly up the choir in his uniform of general, but wearing the insignia and proper mantle of a Knight of the Garter, attended by the Prince of Prussia and the Duke of Saxe-Coburg, similarly robed. The Queen rose and came fully forward as the *haut pas* was reached, when all three turned in line towards her and bowed deeply. The Duke and Crown Prince then retired to their places, and the Prince of Wales, after kneeling a second or so in prayer, rose and stood alone, facing her Majesty, "the watched and observed of all observers, neither bashful nor confident, but with a manly, royal bearing, that became his illustrious birth and exalted station." When the renewed cheering outside heralded the coming of the bride, he turned his head every moment to look for the Princess; and when, with a great clangour of trumpets, the procession at last came, he looked once more, and then kept his eyes fixed upon the Queen until the bride stood beside him.

The *Times'* report, which we have followed, thus describes the entrance of the Princess:—

"The hush was now so deep and breathless that even the restless glitter of the jewels that twinkled everywhere seemed almost to break it, and, despite the stately etiquette which had hitherto regulated every word and gesture, all now bent far and eagerly forward as the hum and rustle in the nave beyond showed the young bride to be drawing near. In another minute she had entered, and stood

"'In gloss of satin and glimmer of pearls,
"'Queen lily and rose in one,'

the fairest and almost the youngest of all her lovely train that bloomed in fair array behind her. Though not agitated, she appeared nervous, and the soft, delicate bloom of colour which ordinarily imparts a look of joyous happiness to her expressive features, had all but disappeared as, with head bent down, but glancing her eyes occasionally from side to side, she moved slowly up towards the altar."

Robed in snowy white, and wrapped in veils, the eight bridesmaids—"the very choice and flower of the fair scions of our most ancient houses"—followed their Royal Mistress, bearing her gorgeous train of white and silver. Arrived at the *haut pas*, the Princess and her bridesmaids bowed low to the Queen; and all others retiring a little apart, the Prince and Princess were left standing in the middle of the *haut pas*, the Princess surrounded by her bridesmaids.

One of the most affecting incidents of the day now occurred. Handel's march from "Joseph" had been played at the entering of the processions of the Prince and Princess, but as the party stood round the altar the music had ceased. Now it rose again in the solemn words of the chorale:—

"This day, with joyful heart and voice
To Heav'n be raised a nation's pray'r;
Almighty Father, deign to grant
Thy blessing to the wedded pair.

"So shall no clouds of sorrow dim
The sunshine of their early days;
But happiness in endless round
Shall still encompass all their ways."

"The exquisitely soft music of this chant," says the *Times* report, "at once solemn and sorrowful, was composed by the late Prince Consort. It may have been this, or the associations and lifelong memories called up by the scene beneath her, but certain it is that as the hymn commenced her Majesty drew back from the window of the pew, and after an effort to conceal her emotion, gave way to her tears and almost sobbed, nor did she throughout the rest of the ceremony entirely recover her composure. The bridal party saw nothing of this; the Bride's face was turned from the pew, and the Queen was withdrawn too much from the front for the Prince to see her, though his looks were often turned in that direction."

The Prelates now advanced to the communion rails, and the Primate commenced the marriage service with the words, "Dearly beloved, we are gathered together here, in the sight of God, and in the face of this congregation, to join together this man and woman in holy matrimony." Then after a solemn pause, he repeated the words, "Wilt thou, Albert Edward, have this woman to thy wedded wife, to live together after God's ordinance in the holy estate of matrimony? Wilt thou love her, comfort her, honour and keep her, in sickness and in health; and, forsaking all others, keep thee only unto her, so long as ye both shall live?" The Prince rather bowed than responded, so indistinct was his utterance; and the reply of the Princess was just audible, to the question, "Wilt thou, Alexandra Caroline Maria, have this man to thy wedded husband?" But the Prince repeated clearly, word for word, after his Grace, the form, "I take thee, Alexandra, to my wedded wife, to have and to hold, from this day forward, for better for worse, for richer for poorer, in sickness and in health, to love and to cherish, till death do us part, according to God's holy ordinance, and thereto I plight thee my troth." The Princess, when her turn came to repeat the words, was heard to answer almost inaudibly. Her cheeks were suffused with a crimson blush, and she seemed very nervous. To the question, "Who giveth this woman to be

Digitized by Google

married to this man?" Prince Christian bowed, and moved towards the Princess, who was hurriedly removing her glove. The Primate then joined their hands, and the Prince, in a clear and soft voice, firmly and deliberately repeated the words, "With this ring I thee wed, with my body I thee worship, and with all my worldly goods I thee endow; in the name of the Father, and of the Son, and of the Holy Ghost.—Amen." All kneeling down, the Primate repeated the prayer commencing "O Eternal God, Creator and preserver of all mankind, Giver of all spiritual grace, the Author of everlasting life, send Thy blessing upon these Thy servants, this man and this woman, whom we bless in Thy name." Then they rose, and the Archbishop joining their hands, said the final words, "Those whom God hath joined together, let no man put asunder." The ceremony then proceeded to the benediction, at which the Queen, who had been deeply affected, knelt down, and buried her face in her handkerchief.

"The bride and bridegroom then joined hands, and, turning to the Queen, gave more a nod of kindly friendship than a bow of state, which the Queen returned in kind. In another minute the Queen, giving a similar greeting to the Princess, quitted the closet, and the whole pageant went pouring in a gorgeous stream or flood of colours, of waving plumes, and flaming jewels, out of the choir. None can tell but those who were present how grand and solemn was the whole ceremony, or with how much deep hope and true devotion the marriage of the second Prince of Wales was celebrated in St. George's Chapel, Windsor."

Shortly after four o'clock the Royal pair left Windsor Castle and departed for Southampton amid frantic cheering. Addresses were presented to them on the way at Reading and Basingstoke. At eleven minutes past six they arrived at Southampton, where the most splendid preparations had been made to receive them. There again addresses were presented. At twenty-five minutes past six they descended to the deck of the *Fairy*, where they stood for some minutes bowing their acknowledgments to the assembled thousands; and then, amidst a perfect hurricane of cheers and waving of hats and handkerchiefs and Royal salutes from the ships of war, the yacht proceeded down the river to Osborne.

The *Court Circular* of Wednesday states, that immediately after the marriage ceremony was concluded the Queen returned privately to the Castle, by the North Terrace, to be in time to receive the Prince and Princess of Wales at the grand entrance, when her Majesty cordially embraced them, and accompanied them to the Princess of Wales's apartments. Invitations will be issued by the Lord Chamberlain, by command of the Queen, for an evening party at St. James's Palace, on Friday, the 20th of March, in honour of the Prince and Princess of Wales, at which their Royal Highnesses will be present. A second party will take place after Easter. St. George's Chapel, with the temporary state rooms at Windsor Castle used at the marriage, will be open to the public from ten to five o'clock to-day and on Monday and Tuesday next. No tickets of admission are required.

PARLIAMENT.

In the House of Lords, on Monday, Lord Grey moved for a select committee to inquire whether the power given to landowners to charge their estates with terminable annuities, in order to raise money for the improvement of their land, should be extended to the raising of money for the purpose of taking shares in railways calculated to increase the value of their property, and under what guarantees and limitations such power should be given. Lord Redesdale thought the proposal mischievous, but did not oppose it, and the House agreed to it. Lord Dalhousie called attention to the inefficiency of the City police in restraining the crowd on Saturday, and recommended an amalgamation of the City with the Metropolitan forces. The Duke of Newcastle and Lord Llanover concurred, and the subject dropped.

In the Commons, the Chancellor of the Exchequer intimated that the Budget would be brought forward on an early day after Easter. Mr. Adderley moved a resolution for an address to her Majesty, thanking her Majesty for having issued a commission of inquiry into the operation of the Acts relating to transportation and penal servitude, and praying that, pending that enquiry, the Acts should be strictly enforced. Sir George Grey said it would be inconvenient for the House, in the absence of the information obtained by the commission, to pledge itself to an address which would not accomplish Mr. Adderley's object. The efforts of the police and the sentences of the judges had checked the crimes of last year, and the House would act prematurely in voting an address while the subject was under consideration, and the report of the commissioners would soon be in its possession. The motion was withdrawn. Sir G. Lewis moved in committee of supply the army estimates, and congratulated the committee on the reduction of £1,000,000 which the estimates presented. The reduction of men from 152,403 to 148,242, had been effected by reducing 100 rank and file in each battalion, the number of battalions remaining the same as last year. He then moved the first vote of 148,242 for the land forces. The vote was agreed to.

In the Commons on Wednesday, Sir J. Trelawny moved the second reading of the Affirmations Bill, the object of which was to admit the testimony in courts of justice of persons having no religious belief. The Attorney-General, speaking for himself alone, moved that it be read again that day six months; and the House on division adopted the amendment by 142 votes against 96. The Bill was therefore lost. Mr. Adderley moved the second reading of the Security from Violence Bill, the principle of which is to add whipping to the punishment of garotting. The Bill was read a second time.

MISCELLANEOUS.

We regret to find that the illuminations of Tuesday night did not pass over without loss of life. Six persons, all women, were crushed or trodden to death; two near the Mansion House, about eight o'clock in the evening, and the remaining four at the foot of Ludgate-hill at a later hour. Of the two women killed near the Mansion House, one was accompanied by her husband, who carried their child, about twelve months old, in his arms. A fearful rush took place, and the woman was thrown down. In attempting to save her, the father let fall the child; the woman was trodden to death, but some one caught the child as it fell, and saved its life by throwing it into a passing van. The crowd at this point—the east end of the Poultry, opposite St. Mildred's Church—was so dense, and surged about so fearfully, that an inspector of police and the gaoler at the Mansion House, both tall and strong men, were obliged to cling to a van to keep their feet. Many other casualties occurred during the afternoon and the evening. A boy received injuries near the triumphal arch at London-bridge, which rendered the amputation of a leg and an arm necessary, and he now lies in a precarious state. About the same place a woman had her leg broken, and a man fell from a van, and broke seven of his ribs. A woman was crushed in the crowd in Mansion House-street, and was taken to the hospital insensible. In Upper Thames-street a man fell and broke his leg. Between twenty and thirty people with scalp wounds, broken legs and arms, dislocated shoulders, &c., were taken to St. Bartholomew's in the course of the night. A great number of fires also took place during the illuminations, and at one time the National Gallery was in jeopardy, owing to the woodwork behind one of the numerous stars in front of the building taking fire. At Manchester, a man was crushed to death. Another had two loaded pistols in his pocket, one of which exploded accidentally, and shot him through the lungs. He died during the night.

The Royal marriage was celebrated in Dublin with magnificent illuminations and a fight between some of the students of Trinity College and the townspeople. The former escaped into the college. Six ringleaders of the latter, captured by the police, were rescued, and got off. During the day, the general good conduct of the crowds was interrupted by some "roughs," who followed the 21st Regiment, as it was returning from the Park to Beggars' Bush barracks, yelling, knocking off people's hats, and insulting all respectable persons. A stone thrown by one of them into a room in Kildare-street, knocked a tumber of punch out of a gentleman's hand, and another hit his wife. Colonel Lake, the Commissioner of Police, followed the mob on a car, marked the ringleaders, and, when the soldiers reached the barracks, the mob, by a clever manœuvre, was enclosed within their ranks, and the most outrageous of the rioters captured.

An explosion occurred on Friday, the 6th, in Coxlodge Colliery, two miles from Newcastle-upon-Tyne, by which nineteen pitmen and pit-lads lost their lives. The pit has been open half a century and its workings are very extensive. The area of the explosion was limited, and it appears that the deaths were principally caused by the men and boys running back upon it and into the choke-damp. At Plymouth an explosion of fireworks took place on Friday morning in a small and wretched-looking house in King-street. The police were passing up the street shortly after two in the morning, when they saw the windows and shutters of the house blown right across the street, and at the same time there was an explosion of rockets and fireworks which went off with a noise as loud as the firing of a file of musketry. The place was instantly in flames. Several people were in the upper part of the house, a portion of which was blown up by the explosion. Two men jumped into the street, and were taken to the hospital in a precarious state. Another made an almost miraculous escape by passing from the attic window over a deeply shelving roof without any ledge to the attic of the adjoining house. Another man, who, with his wife and three children, also occupied the upper part of the house, jumped out of window, but as the wife was about to follow him the flooring of the room gave way, and she and her children were buried in the flames. When the fire was extinguished the remains of five bodies were found "like charred pieces of wood," so burnt that whether they were male or female could not be distinguished. It is certain, however, that six lives have been lost; Mrs. Lismore and her three children; Mr. Lawrance, the pyrotechnist, and his son. The former leaves a widow and nine children, who had but a few days before taken apartments in another house, their own being so over-crowded.

Dr. Kenealy has withdrawn his prosecution against the editor and proprietors of the *Weekly Review*. The author of the "New Pantomime" has been turned from his wrath by an article in the *Times*, deprecating actions for libel, and especially criminal prosecutions for libellous matter contained in a literary criticism. This article has convinced him that it is no longer necessary to continue the proceedings; and he adds that his friends on circuit fully concur with him in this view. There can be no doubt that his friends are right, and as little that he has been wrong. To withdraw from so grave an undertaking as a criminal prosecution argues either that he was in error in commencing it, or that he fears to follow it up. There was no argument in the *Times* article which any man of ordinary intellect could not have suggested to himself. Its remarks were so obvious, as to be almost

Digitized by Google

trite. The *Times* expressed its astonishment that any one, especially a satirist, should think it worth his while to resent the language of the *Weekly Review* by legal proceedings, since its very grotesqueness and extravagance must be its own antidote. This is all true; true also is the remark that the article bore every sign of having been written in a spirit, and from motives, of personal malignity. But there was nothing in it so grotesque and extravagant that it could not have been capped by passages without number from the "New Pantomime" itself. And it is difficult to avoid the suspicion that Dr. Kenealy, having obtained the committal of the defendants, grew uneasy at the prospect of being brought face to face with his own work in the witness-box by some unsparing barrister, and exposed to the ridicule which such a confronting would bring down upon him in a Court of justice. We think he has done wisely in withdrawing from the prosecution. But the act is both a tardy reparation of a fault, and a confession of a weakness. The whole case furnishes a striking instance of the sensitiveness of a class of writers who are reckless in the wounds they inflict on others, while they roar with pain and indignation under the least castigation applied to themselves.

A curious case was brought before the Dublin magistrates on Tuesday, when Joseph Harcourt, a respectably-dressed person, aged 30, was charged with inciting two men to murder a gentleman of property near Newry, in the county of Down. On the 14th ult. he called on William Smith, and said he had come to Dublin to get a job done, and he thought he might as well put it in Smith's way, as he was "hard up." He said there was a person near Newry who did not live amicably with his wife, and that it was the wonder of the country he was not "popped" long ago, as he was in the habit of acting improperly with his servant maid. This gentleman, he said, had a fine estate: "no money would stop the job," and after it was done they could go to America. Harcourt proposed that Smith should be concealed in a shrubbery opposite a window, where his intended victim was to be playing chess with the prisoner. This conversation was resumed in the house of a witness named Graham, who said to the prisoner, "Young man, you had better be very cautious what you are at. It strikes me very forcibly that you only want to get the man out of the way, in order to have the widow and get the estate." The prisoner then offered Smith a revolver and £50 for the job. Both witnesses added that the prisoner told them he had got prussic acid from a person named Donnelly. Upon their sworn informations, the police went down to Newry to arrest the prisoner, and found prussic acid in his possession and a six-barrelled revolver, with a letter from Mr. Donnelly, acknowledging the receipt of one from the prisoner, in which the latter asked for a revolver. The prisoner was committed for trial.

At Dorchester spring assizes, on Monday, Edwin Alfred Preedy, aged twenty, was tried for the wilful murder of Charles Evans, at Portland, on the 8th of September last. He had stabbed the deceased when he came to the prisoner's cell, in the course of his round to collect the prisoners' knives and tins. While the first witness was giving his evidence during the trial, the prisoner, who at first seemed a harmless young man, became restless and endeavoured to get over the front of the dock. The two warders who were in the dock with him at once seized him, and others jumped in to help them. A terrific struggle ensued, the prisoner kicking, fighting, and roaring more like a wild beast than a human being for several minutes, during which it took ten men to overcome him. Finally it became necessary to have him heavily ironed and strapped, and even then three men had to hold him. After this extraordinary scene, never before witnessed in a court of justice, he became completely exhausted, and appeared as if asleep. The opinions of three surgeons were taken as to his sanity, and all pronouncing him sane, the trial proceeded. An attempt was made to raise the plea of insanity for the defence; but the jury found him guilty, and the judge passed sentence of death without holding out the least hope of its mitigation.

Sir James Outram died in Paris at one o'clock on Wednesday morning.

FOREIGN.

The Polish insurgents increase and multiply. More than that, they hold their ground, while the atrocities committed by the Russian troops inflame the resolution of the Poles and further their cause in the public opinion of Europe. General Langiewicz has proclaimed himself dictator and chief of the national Government, in a proclamation which he has issued, dated the 10th instant, and which has produced a prodigious effect. He declares that the great population of Poland, "in the name of the Most High," have commenced a struggle directed against the eternal enemies of liberty and civilization; that under the most disadvantageous circumstances this struggle of an unarmed people has already lasted two months, has gained strength, and developes itself with energy. In the presence of this war to the death, and the massacres, pillage, and conflagrations of the enemy, Poland feels the absence of a visible central power, and therefore, after consultation with the Provisional Government, he assumes the supreme power of Dictator, which he will surrender to the representatives of the nation as soon as the yoke of the Muscovite is shaken off. He then summons the Poles of all provinces beneath the Muscovite yoke to join the struggle. The Emperor of Russia has replied to the French despatch. His answer is described as stating that, whatever may be thought of the abstract justice of the demands of the Poles, the Emperor can listen to no overtures so long as they continue in armed insurrection A Cabinet Council met immediately upon the receipt of this despatch. All parties in France are united in sympathy for the Poles; and there is no doubt that, if the finances could afford it, a war in their behalf would be popular. But the Mexican embarrassment increases. General Forey cannot move; and he has advised his Government that without large reinforcements an advance on the capital is out of the question. It is equally certain that the Poles, unaided, have gained considerable advantages over the Russian troops. In the battle which we mentioned last week, as having occurred at Pryzkowaskala, the Poles, after a fight which lasted an hour and a half, retired upon the neighbouring heights. On the same day, the 4th instant, Langiewicz fought the Russians near Tarnowa and Skala, defeated them, and put them to flight. The previous battle of Malagasz, on the 24th ult., it now appears, was a complete victory for the Poles, in which, under Langiewicz, they routed a body of 6,000 Russians. In council as well as in the field, they seem to be acting with prudence. The two factions of the national party, called the white and the red parties, have come to an understanding. Proclamations, issued by the revolutionary committee, have been printed in Prussian Poland and Galicia, exhorting the people not to be induced to rise in insurrection, as the only mortal enemy to Poland is Russia. Meanwhile the Russian Government is beset with difficulties. The treasury at Warsaw is empty, and the Government dares not send treasure there, on account of the frequent attacks made by the insurgents on the railway trains. The insurrection has revived in the Government of Podlachia, and is reorganized in that of Plock. In Lithuania the insurgents have taken possession of Pinsk, disarmed the garrison, and proclaimed a national Government; and young men are constantly leaving Posen in parties of 200 and 300 each to join the insurgents.

From America, the news is unimportant. An attempt has been made at New Orleans to shoot General Banks, whose administration has been so much milder than that of his predecessors, that he has incurred the displeasure of his Government. A correspondent of the *New York Tribune*, writing from Hilton Head, on the 19th ult., mentions a project for sending 5,000 armed negroes, led by whites, into one of the most densely populated districts of the South, to incite the slaves to rise upon their masters. The bombardment of Vicksburg has subsided into an occasional interchange of shots. On the 25th ult., General Stuart, with a party of Confederate cavalry, crossed the Rappahannock in the night, in order to destroy the railroad communication of the army of the Potomac; but finding himself met by superior numbers, after he had broken the Federal lines, he was forced to return, having captured fifty pickets of the enemy, and lost thirty of his own men. The House of Representatives has passed the Conscription Bill with some slight amendments; and the peace resolutions of the New Jersey Legislature have passed the Senate, and are made the special order in the House for the 10th instant. If we add that General Butler has not yet been restored to his command at New Orleans, and that General Tom Thumb and Mrs. General Tom Thumb have been publicly received by the President and Mrs. Lincoln at the White House, our readers are in possession of the most important American news up to the 27th ult.

The Pope has refused to accept the resignation tendered by Cardinal Antonelli.

In the Lords on Thursday the debate on the second reading of the Great Eastern Railway (New Metropolitan station and branches) Bill was adjourned for a fortnight, that the House might be in possession of the report of the Board of Trade on the general subject of metropolitan railways. In the Commons Mr. Lindsay moved a resolution "That it is not expedient to commence at the present time building wooden ships which are to be cased with iron armour." After an animated debate, the resolution was negatived by 164 to 81.

On Tuesday, Denis Dillane was tried at Limerick, on an indictment charging him with being an accessory before the fact to the murder of the late Mr. Fitzgerald, and found guilty.

An article has appeared in the *Constitutionnel* explaining the relations between the French Government and Mr. Serjeant Glover; and denying that there was ever any agreement between them except for the concession, without subvention, of the telegraph between France and America; a concession which was cancelled owing to Serjeant Glover's failure to execute the project.

The Archbishop of Warsaw, Monsignor Felinski, and the other independent members of the Council of State for Poland, have tendered their resignation. The members of the Municipal Council of Warsaw have also resigned. A proclamation of the Revolutionary Committee at Warsaw was published on the 10th instant, denouncing those whom it terms the "infamous men who would lay Poland vanquished and dishonoured at the feet of the tyrant." It also states that the committee, "in emancipating the peasants, is not led by the fantastic theories which elsewhere threaten to upset European society." The *Schlesische Zeitung* of the 12th states that, before marching, General Langiewicz received 2,700 muskets, with ammunition, a supply of provisions, and a reinforcement of cavalry. A Kattowitz telegram mentions a sanguinary engagement between the Russians and insurgents at Sosnowicz, on the 12th. The Russian officials in the town had taken flight, when reinforcements arrived, and the insurgents were dispersed.

REVIEWS OF BOOKS.

FEDERAL GOVERNMENT.*

Mr. Freeman, in the preface to his very able work, guards himself against the hypothesis that its origin was due to the present American war. Such a disclaimer could be scarcely required by a reader whose studies should extend over any considerable part of the volume. The internal evidence is too strong that an amount of thought and labour has been expended upon it sufficient to raise it out of the category of books produced by such temporary excitement. He adds, however, that the war of Secession has increased his interest in a subject which had long occupied his thoughts, and has hastened the appearance of the work. The publication may be thus considered opportune, in so far that it will tend to contradict some of the vague maxims referring to Federal Government in general, to which the war has given rise. Mr. Freeman, for example, speaks, in the first part of his volume, which is devoted to a general view of the subject, of the condemnation of Federalism as a system, which some hasty writers deduce from the late events in America, and propound as a deep philosophical axiom. He shows conclusively that such maxims can only escape from being unmeaning platitudes by being false or inaccurate. The greater part of the volume is, however, filled with an account of the constitution and history of the Achaian League. Future instalments will be devoted to the history of other Federations, especially to that of the Swiss Cantons, of the United Provinces of the Netherlands, and, finally, to that of the United States of America.

Probably the first question which will occur to his readers is, whether Federal Government is a fair subject for a history at all? The mere consideration of the four great leagues we have mentioned, would seem to suggest that nations so widely scattered in time and space must have too many points of difference to allow of their histories being combined into a whole. A history which is to begin with Aratos of Sicyon, and to end with President Lincoln, of the State of Illinois, passing by way of William Tell and the Prince of Orange, involves some rather incongruous materials. A history of Monmouth and Macedon would scarcely be justifiable on the ground that there were salmons in both; and it may be doubted whether Achaian and American politics can be moulded into a continuous narrative because there was a league in each case. The forces which tended towards cohesion and repulsion in the two unions were so entirely unlike, and the units subject to the common bond so totally different, that we might despair of finding any general proposition that could be affirmed of both. At any rate, the maxims which would hold good with respect to America and England, or with respect to America and any modern country, are so infinitely more numerous than the maxims which would hold good of the United States and of any system of ancient Greek Republics, that the classification implied in the title of a "History of Federal Government" seems to go to the most superficial instead of the deepest characteristics. The resemblance is confined to the external forms of government, and scarcely reaches to the great internal forces by which societies are really moulded. This objection, however, is not a conclusive one. If there are, in fact, any points of resemblance between States so widely removed, the problem of investigating their origin is doubly interesting. If the forms of government which resulted from a union between ten little towns in Greece in the third century before Christ, resemble, in any respects, those of the thirty-four united States which, only two or three years ago, spread over half a continent, it is worth while to inquire into the cause of the resemblance. Mr. Freeman warns us well and emphatically against drawing inferences as to the goodness or badness of particular forms of government. The warning is no doubt wise. Of course no one can say more truly that federal government, for example, is good or bad in itself, without considering the particular circumstances of the case, than he can say that a coat is good or bad, without knowing whom it is meant to fit. But although the influence of particular forms of government has been most absurdly exaggerated by some writers, the nature of that influence will always be an interesting study, and the most legitimate way of studying it is by comparing its results in widely different cases. If we agree, for example, with Mr. Freeman's account of the merits of Ægion as the federal place of meeting, and believe that "it was a better place for the federal government than Corinth or Megalopolis, for the same reason that Washington is a better place for the American Federal Government than New York," we arrive at a conclusion which, if not very important, is very general. The weakness and strength of the American Union, which will supply for many years one of the most interesting problems in modern history, probably depend only in a slight degree, upon tendencies common to federalism in general. In so far, however, as they do so, those tendencies are well worth studying, and we shall anticipate Mr. Freeman's opinion on them with great interest. America has already supplied the subject of some of the most valuable of modern historical inquiries. Tocqueville's great work considered the United States solely as an illustration of the advancing influence of democracy; by tracing those influences with the singular patience and carefulness of thought characteristic of him, he succeeded in throwing more light upon history than has been done by perhaps any other single book.

* History of Federal Government. By Edward A. Freeman. Macmillan & Co., Cambridge. 1863.

Amongst the crowd of works called forth by the present contest, Professor Cairnes's singularly able volume has been perhaps not yet sufficiently remarked for the skill with which it applies the principles of political economy, to explain another most deeply-seated class of influences. There is still room for a history such as Mr. Freeman promises us, which shall treat the questions arising from the action of causes common to all confederacies as such. His general view may be shortly explained. It may be considered as an expansion of one of the thoughtful and compressed chapters in Tocqueville's "Democracy in America." Tocqueville's judgment is there summed up in the words "the Union is free and happy as a small nation, glorious and strong as a great one." Montesquieu had said before, that whilst a confederation of small republics enjoyed the internal happiness of each, it possessed itself by means of the association of all the advantages of large monarchies, and one of Hamilton's papers in the Federalist is an elaboration of the same text. Adopting this point of view, Mr. Freeman carefully compares the relative advantages of the system of large and small States. To the federal system he assigns a place intermediate between the two. The advantages of small States, according to him, consist principally in the intensity of the patriotic spirit and in the excellence of the political education. Mr. Freeman, indeed, admits what can hardly be denied, that the first of these is by no means an unmitigated advantage. Patriotism is a very noble virtue in its proper place, but it is apt to become rather an inconvenient one. It is very right and desirable that an Englishman should be ready to devote his life to his country, and it is excusable if he thinks that England is the greatest, wisest, and freest country upon earth. But when this virtue is applied to a series of small States, each about the size of a London parish, the sublime passes into the inconvenient, if not into the ridiculous. To devote a man's life and fortune to the canton of Uri might be respectable; but a conviction that it was the greatest, freest, and wisest corner of the earth would be equally silly and patriotic. We can hardly conceive anything more obstructive to all real progress than this kind of parish patriotism, where a small country is split up into a multitude of small cantons, each firmly believing in the greatness, freedom, and wisdom of its own diminutive population. The comparative faintness of the sentiment when the country is extended, is more than made up for by the increased nobility of the object. A native of a small village may be prouder of his beadle than the Cockney may be of the Lord Mayor of London; but, on the whole, the emotions kindled by the sight of the beadle are less valuable than those which every true Briton feels in the presence of the Mayor.

In Mr. Freeman's opinion, however, the great gain of the system of small states is the political education of the individual, and this, he says, is an unmixed gain. The chief example of this benefit is, of course, to be found in Athens. "The Athenian citizen, by constantly hearing questions of foreign policy and domestic administration argued by the greatest orators that the world ever saw, received a political education which nothing else in the history of mankind has ever been found to equal." This may be true, and no doubt was true of Athens; but it seems to us scarcely fair from this one brilliant example to draw a general conclusion. It is true that in the case supposed, a large number of citizens would have to deal with political questions of a high order; but it is surely also true that in a system of small States, the ordinary result would be not so much to elevate the minds of the citizens as to depress the dignity of the subjects discussed. In such a system, foreign politics would generally be reduced to the level of squabbles between county towns, and the highest motives which would be present to the minds of the constituency would be of that order which determine a municipal election in England. The important problems relative to trade or to social arrangements which affect a large State would be scarcely capable of either solution or discussion. In fact, the political education of the individual in a small State may be measured by his patriotism. It would be narrower, though more intense. A larger proportion of the population might take an interest in political debates, but those debates would turn upon far more trivial considerations.

Against these advantages of small States, Mr. Freeman weighs the comparative and undeniable disadvantages of less permanence, of more frequent wars, and of increased bitterness of faction. Even in his judgment, though he estimates the advantages more highly than we can do, the disadvantages on the whole prevail. The small republic, he says, "developes its individual citizens to a pitch which, in the large kingdom, is wholly impossible. But it developes them at the cost of bitter political strife within, and of almost constant warfare without." The truth, apparently, is, that a system of small States is incompatible with an advanced stage of civilization. If England was broken up into three or four, much more into twenty or thirty small independent States, it can hardly be doubted that it would neither be so rich, nor so powerful, nor so intelligent as it is now. The test of many of the qualities which go to produce a high order of civilization, is the possibility of holding together a large extent of country in one State. The intelligence of the inhabitants, the closeness of communication between different sections of the community, and the comparative importance of small local factions, all help to make a large State possible and desirable. We should describe a confederation not so much as a compromise between a system of large and small States, as an imperfect attempt to combine the disjointed body of disconnected atoms into a whole in every way superior. Mr. Freeman gives as a definition of a "perfect Federal Government," that it should combine two requisites. Each of the

Digitized by Google

members of the union, he says, should be wholly independent in those matters which concern each member only. On the other hand, all must be subject to a common power in those matters which concern the whole body of members collectively. But, if we except merely municipal matters, this definition leaves precisely the most difficult cases untouched. How are we to decide on those matters, which concern the different members in different degrees—which are of vital importance to some, and of secondary importance to others? Take the case of slavery in America. No one can doubt that it affects the Southern States far more than the Northern; but it certainly affects the Northern also to some extent. Would that be the most perfect union in which the central power could abolish or retain slavery at will, or that in which the question of slavery was left to the decision of each member of the confederacy? We do not see that Mr. Freeman's definition helps us much in this question; but we can hardly doubt that the more powerful the union was in this case, the more "perfectly" it would answer most purposes for which unions are made. But this seems to point to the conclusion that a federal government is more perfect, as it approaches more to that of a consolidated State, and that it would attain perfection when all its members were merged into a whole. The Federal Government in America has failed, so far as it has failed, because the people have not yet reached that stage of education at which it is possible to hold together so vast a continent in the blessings of peace and union. But federal government still exists in both the present confederacies, and must long continue to exist, unless the American people should split up into a disjointed group of small rival States.

We have not room to do justice to Mr. Freeman's history of the Achaian League and his account of its constitution. The history, indeed, scarcely professes to be a complete one. It takes in only those points which have a special bearing upon federalism: in other words, it leaves out a great many of the most interesting details. The especial merit of the narrative is the care with which Mr. Freeman constantly checks the accuracy of his descriptions and increases their liveliness by constant illustrations from modern political history. Thus we hear of the science of electioneering as practised in the Achaian League. We have a notice of an Achaian "caucus" where the leading men of a party met to discuss the general interests of that party, to discuss their ticket for the next election, ending by the nomination of a president and a general of cavalry. The constitution of the Achaian senate and its relation to the general meeting is illustrated by the analogy of the Oxford senate and congregation. In another place, Mr. Freeman shows complacently the incapacity of the best German scholars to understand a problem which, to Englishmen accustomed to free institutions, is sufficiently simple. Finding that in practice the high magistracies in Achaia were always filled by rich men, they had presumed the existence of a property qualification, of the existence of which there is no proof or likelihood whatever. The fact, no doubt, is, that the poor men were prevented from becoming generals in Achaia by the same causes which prevent poor men from becoming cabinet ministers in England. That is, they could not afford it. The constitution was democratic enough, but all that legal democracy can do is, to give a fair start to birth, wealth, talent, and happy accident, and let them find their level.

Another example of Mr. Freeman's method is a careful comparison between the characters of Cavour and Aratos. Cavour had, he thinks, greater advantages, and was not guilty of so black a treason in delivering up Nice and Savoy to Napoleon, as Aratos in delivering up Acro-Corinthos to the king of Macedon. On the other hand, he would shrink from placing the king of Macedon on so low a level as Louis Napoleon. For Louis Napoleon, indeed, Mr. Freeman entertains a hearty aversion which would satisfy even Mr. Kinglake. He never can pass by a Greek tyrant without bringing in a comparison with the French Emperor, in which the Emperor generally gets decidedly the worst of it. Napoleon's character is made into a regulation standard by which to estimate the various shades of atrocity of Greek tyrants, the shade being the deeper the nearer they approach to him.

The notice we have given will sufficiently show that Mr. Freeman has given us a work of great and sterling interest. In the future course he will have to cover a great deal of ground, and to relate histories widely separated from us and from each other. There can be no doubt that, if he pursues the same course as he has done in the present work, he will be able to make them both interesting and instructive, and that we may have the pleasure of adding another to the really philosophical historians of the country.

THE ROMANCE LANGUAGES.*

Considering the rapid progress which the study of language has made during the last thirty years, it is no small praise of a book written in 1833 to say of it, as we do with confidence of Sir Cornewall Lewis's Essay, that it retains nearly all its original value. We admit that we should have liked to have seen it brought down—as the school-book advertisements say—to the present time. It might, for instance, have been made much less controversial in its character. The theory of M. Raynouard, which it was chiefly written to refute, is so universally abandoned that many pages of Sir C. Lewis's elaborate arguments are now directed against mere men of straw; the shadowy ghosts of old opponents. On the other hand, the essay would have gained much in completeness had it been extended so as to include the Wallachian language, which, although not one of the dialects originally called *Romance*, has been admitted with great scientific propriety into the number. However, since Sir C. Lewis's occupations, both literary and political, are so numerous—*cum tot sustineat et tanta negotia solus*—it is, perhaps, too much to expect him to give up the time necessary for the comparatively easy task of enlarging the scope of this essay. It is a signal proof of accuracy and sound judgment that, whatever he might add, he has nothing of importance to withdraw after so long an interval. "The problem is one which," to use the words of Sir C. Lewis's preface, "cannot fail to interest all who have considered the intimate connexion of the development of languages, as well with the political history of the communities by which they are spoken, as with those refined processes of thought of which language is at once the exponent and the evidence." Thanks to the labours of Dean Trench, English readers are already familiar with some forms of this kind of illustration. What he has done for the "fossil" history, poetry, or morality, of various individual words, may be extended to the far more interesting field of grammatical forms. The words upon which Dean Trench expatiates are often technical or unfamiliar; their use is often influenced by caprice; or if caprice is not to be admitted in philosophical etymology, by circumstances of narrow and special operation. Moreover, in many of his most favourite instances—those, for example, in which moral ideas are involved, there is an irony in language, which vitiates any conclusion to be drawn from them. On the other hand, the terminations and little connecting words, without which no meaning can be expressed, and by which each language builds up, in its own way, the indissoluble unity of the sentence, form a system which depends upon the perfectly unconscious operation of mental and physical laws of the utmost generality. Nothing is more markedly characteristic of the advance of scientific philology than the accurate estimate of the relative importance of different classes of words and inflexions, as the basis of its conclusions; and the advantage promises to be equally great of using the like discrimination in applying etymology to the illustration of other branches of knowledge. The immediate gratification of curiosity will be less, and the moral lessons not so obvious; but the results are sure to be more significant for historical and psychological inquiry.

The most striking series of changes that Latin has undergone, and that which throws most light upon the general processes of thought, is summed up by saying, in Sir C. Lewis's words, that "Latin has passed from the synthetic to the analytic class; that is to say, instead of declining nouns and conjugating verbs by the inflexion of their terminations, it resolved the ideas into their component parts, and expressed them by means of propositions and of participles with auxiliary verbs." The only objection to this, as a definition, is that it states the differences between the two kinds of languages in too absolute a form. In all the Romance Languages the number of inflexions both of nouns and verbs is still considerable. Italian, although analytic as compared with Latin, may be fairly called synthetic as compared with English. In fact, no clear line of demarcation can be drawn between the two classes; the distinction is one of degree only. It is none the less remarkable that the changes of inflected languages are nearly always in the direction of analysis; and it cannot be doubted that Sir C. Lewis's solution of the problem is the correct one: namely, that it was the effect of the German conquest.

> "The conquerors, not understanding the complicated and refined system of inflexions on which the Latin language depended, naturally sought to express their ideas by the more circuitous, but less artificial method of analysis; according to which each phrase is, as it were, built up of the single ideas which compose it, instead of their being all expressed by the modifications of one word."

Every one who has learnt to speak a foreign language is familiar with the device of expressing, by a circumlocution made up of easy words, an idea which ought to be expressed by a single more idiomatic phrase. The speaker in such a case is driven to analysis by the mere force of circumstances; having no one word at hand to convey his meaning, he is compelled to do so by a combination, more or less skilful, of several words. If there is a standard by which such mistakes may be corrected, the barbarous idioms produced in this way are soon unlearnt, and thus do not permanently affect the history of the language. But if there is no such means of correction, or if the speakers have no motive for studying purity of idiom, and are sufficiently numerous, their barbarisms become habitual; the same difficulties suggest the same means of evading them, and all the most characteristic forms of the language are translated into roundabout phrases, and soon drop out of use altogether. It is true that changes of this kind, as Sir C. Lewis elsewhere says, take place apart from the influence of a foreign language. In reality, each new generation shows the same tendency, only in a much less degree, to alter and simplify their native language. It is only the influence of books, and the example of an educated class, which prevent a language such as English or French from "breaking up" into a number of still more analytic dialects. We cannot, however, say with some writers, that the Romance dialects were really formed before the German Conquest, and only brought out, ready made, by that event. The presence of the Germans as conquerors in Italy or France must have had of itself a much more active and rapid influence on the language than the mere withdrawal of the restraint imposed by books and regular teaching. While we claim for the barbarians the chief share in the reconstruction of Latin, we must not forget that the Latin which

* An Essay on the Origin and Formation of the Romance Languages. By the Right Hon. Sir G. C. Lewis, Bart. Parker, Son, & Bourn.

Digitized by Google

they encountered in the mouths of the people had already degenerated, in many respects, from the classical standard, and was by no means the same in different parts of the Roman world. On this subject readers of Sir C. Lewis and Prof. Max Müller may be puzzled by accounts in appearance at least, contradictory; for the latter has maintained, with great eloquence, the thesis that no literary language can ever be said to be the mother of another language; that the sources of Italian, for example, are to be found in the old popular dialects of Italy. The contradiction disappears when it is considered that these old dialects were merely Latin as spoken by the common people of the various districts; and, although they may have retained words from the præ-Roman languages, all their grammatical forms were derived from the classical speech. The history of the extension of Latin first over Italy, then throughout the Roman world, is sketched with great terseness and point in the first few pages of M. Raynouard's great work. It runs parallel with the history of Roman conquest, and is neither less systematic nor less ruthless. It throws some light on the method of Roman rule that, as Sir C. Lewis observes, "the Romans should have completely eradicated the Celtic language from a large part of Gaul, while the same causes which appear at that time to have produced so great an effect have, during the last eight or nine centuries, produced so little effect among the Celts of Brittany, Wales, Scotland, and Ireland." The degree in which the different local dialects have yielded before or been assimilated by that of the capital, might be used as a criterion of the centralizing forces in any given community. In Italy the process has taken place twice; and it may be that the greatness of the change from Latin to Italian is owing to the circumstance that it was not the supremacy of the old capital which, at the Renaissance, reunited the scattered *patois* of Italy into a new and beautiful language, but the literary pre-eminence of Tuscany. It was from the provincial idiom of Florence that the second great literary speech was diffused over the peninsula; but the want of political unity seems, as in Greece, to have permitted unusually great varieties in the dialect of the different provinces. In Roman times, on the contrary, there is every reason to suppose that the differences hardly went beyond great peculiarities of *accent* and *style*. Some forms of the popular styles are known from the ancients; others are indicated by certain universal characteristics of the Romance languages. The use of *ille* for the article—the pronominal forms *celui*, *cestui*, *quello*, *questo*, &c.—the use of the prepositions *de* and *ad*—the new meanings and new compounds of other prepositions—the nearly universal loss of the Latin numerals between sixteen and twenty—all these point to an agreement which can scarcely be resolved into the independent operation of similar circumstances. They must have arisen in the common dialect of the soldiers and government underlings quartered in the various provinces, while the more correct Latinity continued to be the official language of pro-consuls and quæstors. They are the more important as they extend to Wallachian, where there was no German element. Sir C. Lewis remarks, that it is a singular circumstance that all the Romance languages should agree in retaining the Latin numerals up to sixteen, and deviating from Latin in the formation of the three numerals before twenty (p. 164). This, however, does not hold good of the two languages which lie at the eastern and western extremities of the Roman world; for in Portuguese *sixteen* (*dezaséis*) deviates from Latin, and in Wallachian all the numerals between ten and twenty are new formations. The loss in French of the original words for seventy, eighty, and ninety, offers a curious parallel. Such facts as these afford illustrations of the law that the hold which a word has upon popular memory, depends partly upon the frequency with which it is used, and partly upon the clearness with which it describes the thing signified. The higher numbers are not so often employed, and they require for their management more of the aid of analysis and calculation. It is a good instance of the extreme accuracy with which the vitality of every word is tested in usage, that in French *sexaginta* has been retained and *septuaginta* rejected.

The general tendency of language to more analytic forms is liable to some important exceptions. The new formations may again become synthetic through the operation of phonetic corruption. Thus, in the well-known instance of the French future, the syllable *ai* in *j'aimerai*, originally an independent word (*j'aimer ai*), has lost its individuality, and become a mere inflexion. This possibility has not been taken into account by Sir C. Lewis, in the valuable remarks at p. 179 of the "Essay on the Analytic Character of the Latin verb." "The destruction of the more perfect form of conjugation which is shown in the Greek verb had already been begun by the change which compounded the Latin language of a Hellenic and a foreign element, so that some of the Latin passive tenses are formed by inflexion; as, *amor*, *amabor*; others by means of the verb substantive, *amatus sum*, *eram*, *ero*, *forem*, &c." But the forms *amor*, &c., are as little Hellenic or original as the more obviously analytic tenses; for, by comparison with the other Indo-Germanic languages, it becomes evident that all the tenses of the Latin passive, as well as a large proportion of the tenses of the active, are new formations, which came into existence after the Latins had separated from the Hellenic tribes. This fact strongly confirms the view advanced by Sir C. Lewis (p. 10), that Latin is a "mixed language, formed by the union of different races in one community." Latin possesses, indeed, a number of inflexions that are more primitive than the corresponding forms of Greek, and therefore it can no longer be derived from Greek; but, upon the whole, Latin is a much more developed, and, therefore, later type. It is a sister, but a much younger sister, of Greek; and bears to it nearly the relation of modern French to Provençal. No one can fail to be struck with the parallel in the number and variety of the grammatical forms between the language of the Troubadours and Homeric Greek. It would be a curious speculation to inquire whether, had any one of the Troubadours possessed the genius of Homer and collected the scattered lays into a great national epic, the language would have gained an ascendancy sufficient to have made the classical language of France. This question, however, we leave to the philosophical historians who can estimate the possible influence of individual genius. By the side of analysis we find occasional instances of new inflexions formed, not by corruption of analytic forms, but by analogy to the inflexions which have become regular in the language. Thus, from *esse* are formed, in Italian, *essere* and *essendo*; and in one dialect of the Grisons the perfect tense of *vegnir* is entirely formed in this way,—*ion vegnitt*, *ti vegnittes*, *el vegnitt*; *nus vegnitten*, *vus vegnittes*, *els vegnitten*. Here *vegnitt* has first supplanted the forms of the other persons; and then the regular terminations have been added to it as a stem. The extent to which this is done is interesting, as showing the hold which the method of inflexion has upon the mind of a people. Originally all inflexions are formed by the amalgamation of auxiliary words with the stem, but when the compounds are established in a language their origin is forgotten, and they are employed as mere inflexions. At this stage of language inflexion has been generalized, and from a series of similar facts has become an idea.

The investigation of the foreign or "intrinsic" element in the Romance languages does not enter into the plan of Sir C. Lewis's Essay, but he has given in an appendix a valuable list of German words in French, Italian, and Spanish. It is an interesting question, what words are most likely to be retained by a people compelled to learn a new language; and an answer from the Romance languages might be applied to other cases where we have less material for inquiry. It will be found that the common remark, that each people contributes words for the objects with which it is most familiar, is far from a complete solution of the problem. Some adverbs, interjections, and particles of affirmation are German; prepositions, numerals, and conjunctions are almost without exception Latin. In many cases derivations present themselves, both from Latin and from German: thus, *siège* is from Germ. *sitz*, rather than from Lat. *sedes*; zanna may be Germ. *zahn*, or Lat. *sanna*. Perhaps in such cases it would not be wrong to ascribe an influence to both possible sources. Such words as were nearly the same in both languages would be the first to enter into the dialect in which the two nations endeavoured to communicate. In some cases there are remains of the earlier language which Latin supplanted. In the language of the Grisons it has been conjectured with high probability that there are words that have come down from the original Rhœtian.

In Wallachian the most recent writer, Mielosich, considers that besides the Latin and the Slavonic elements there are remains of an original language close akin to Illyrian, and consequently to be ranked as a member of the Græco-Italian family. This theory has the advantage of furnishing an explanation of the early spread of Latin in the province of Dacia; it being obvious that the progress of a language must be rapid in direct proportion to the facility of acquiring it.

Very much that is interesting and important might be obtained by extending the inquiry of this Essay to the numberless local dialects of the Roman empire. How many of these are entitled to be called distinct literary languages is a matter in the nature of things somewhat uncertain, and it is a curious illustration of the desire for a fixed definite number, that they are always spoken of as the six Romance langnages. When we inquire which are the languages received into this favoured number, we do not find anything like perfect agreement. In fact, the languages form a vast series, stretching one into another, from Portugal to Wallachia. It gives no inadequate idea of the Roman power to consider that it was able to determine the daily speech of the inhabitants of so vast a territory; and we may venture thence to form a dim conception of the earlier Aryan empire, which has diffused the grammatical system of what was once a dialect of Thibet, over a space reaching from Iceland to the East Indian islands.

LOST AMONG THE AFFGHANS.*

THERE has been of late a great dearth of books of romantic travels. The public are accustomed to the thought of Mr. Atkinson's Siberian eagles which swoop down on packs of wolves for food; even Dr. Gray must be tired of gorillas and Nshiego-Mbouve's, and we were all wanting excitement from a new quarter, when just at the right time a book appeared, which will satisfy the most eager admirer of novelty and the most *blasé* reader of travels. This book is the account of the wanderings of Feringhee Bacha, alias John Campbell, in the wildest parts of Central Asia, from his eleventh to his eighteenth year. He was found by the Affghans, an infant with his nurse, on the field of Tezeen, where the British army was massacred: a noble Affghan adopted the child, having none of his own, and he was brought up in luxury in Affghanistan till his eleventh year. Then having been insulted by Dost Mahomed and hating the people who had murdered his parents, he rode off,

* Lost among the Affghans; being the Adventures of John Campbell (otherwise Feringhee Bacha) among the Wild Tribes of Central Asia. Related by Himself to Hubert Oswald Fry. London: Smith, Elder, & Co.

Digitized by Google

and for seven years managed to travel between the boundaries of Chinese Tartary and Russia, undergoing many changes of fortune and adopting many professions, until soon after the sack of Herat he fell in with the English envoys. To them he stated that he was English, and that he was in fear of death on account of his Christian belief; and they, after many questions about his story, though rather astonished, seemed inclined to believe it. After a further cross-examination by Mr. Thompson and Mr. Lawrence, whom he satisfied of the truth of his wanderings, he was sent by Lord Elphinstone to a schoolmaster at Bombay, and then educated for a short time at a Baptist school in Brighton at the expense of the Government. He has since been appointed Deputy Interpreter at Kurrachee.

As there is no possibility of confirming his strange story from without, it becomes necessary to examine very carefully its internal evidence. The volume is edited by the son of his schoolmistress, who became his great friend, and who states that he has simply taken down the story from Campbell's own lips, adding nothing of his own. We can hardly imagine a position in which a boy would be more tempted to romance than this, where nothing that he said could be contradicted, and where a bold imagination would both captivate his friends and sell his book. A person very carefully brought up might resist this, and confine himself to the bare truth; let us hear what the lady who had charge of him says on this point: "I found much to interest me in our strange guest: he evinced a reverence for religion in whatever form worship might be offered; *but his ideas of truth were decidedly Jesuitical:* he argued that a lie was justifiable if it were to accomplish a right end; which is the theory maintained by Madame de Genlis and other French writers." "During the ten weeks that John Campbell was in our family he gained the confidence of all. His failings arose from circumstances, not from wilful wickedness: he appeared to be naturally gentle, trusting, and affectionate; but his strange destiny had thrown him early on his own resources, sharpened his suspicions, and made him wary, keen, self-reliant, and determined. May we not hope that one so tutored by misfortune, so wonderfully preserved, must be designed to accomplish some great end?"

Thus from the preface we learn, that during the short time in which he was dictating this book he was found very deficient in any respect for truth. It would be very unfair to demand this virtue from him, opposed as it is to all the instincts and habits of savages, but, at the same time, the fact detracts very much from the value of the book.

But we are told that it must be all correct, because he satisfied so many gentlemen of the truth of his story. As to this he does not tell us that he recounted all the marvellous adventures of this book to them; and, most probably, their belief only extended to this, viz., that he has travelled in these wild countries and does know the languages. But, says the editor, had they not believed all his stories, would the Government have had him taught English at its expense, and then appointed him Deputy Interpreter? If he knows the languages of the tribes from Cabul to China and Russia, no one would be more fit for the post or more likely to be helped by the authorities, though they might not believe the personal feats, which, probably, he never told them.

There is one special point in which he does not give a clear account of himself. He never tells us where he picked up the Christianity in an imperfect form, for which he was always offering to die, to the subsequent delight and admiration of his Baptist friends. He tells us of his friendship with the Shitan-parast, or Satan-worshippers, and of his joining in their sacrifices; he travels among the Kaufirs with a small image of Buddh glued to his forehead; he always follows the advice of his friend the prophet of Swat, to have some religion or other and to stick to that, not being particular about which it was; and we think that, in telling these stories about his zeal for Christianity among the Persians, he is following the precepts of the same prophet. The only wonder to us is that his friends did not, by cross-examination, induce him to give the particulars of his conversion. From the preface we learn that his ideas on the subject were very vague, and that, notwithstanding his long study of the New Testament, he was much astonished at hearing of the duty of loving our enemies. If he is so extremely inconsistent and vague in the account of his religion, how can we feel more than a tendency to belief in the special incidents of the story, though its leading statements may, as the editor says, be "substantially correct?"

His account of the Affghans is very interesting. He appears to have made great inquiries about the English war, and to have heard some new particulars. When the English first came to Affghanistan, they said the Affghans called them angels, and imagined their trumpets were the trumpet of Gabriel, and the roar of their cannon they thought to be thunder; but when they saw them eating and drinking, especially when they saw them eat pork, they rose up against them, fought with them, and drove them out of Affghanistan. When the British army encamped at Tezeen, the Affghans pursued with 8,000 men; they turned the stream on the English camp, and overwhelmed the army with water and ice. Dr. Wolff was told that the dissolute conduct of many English officers had a great deal to do with the massacre. It is possible that that may have been the excuse, but the jealousy which the Affghans feel towards any other warlike people, who might interfere with their reputation as the best soldiers in Asia, afford quite sufficient reasons. He was also told that Akhbar Khan himself murdered Burnes and Macnaghten; but the English Government was quite satisfied with the more probable account given at the time, that the chief would have restrained the murderous populace had he been able. When Campbell was eight years old he accompanied the Affghan army in an expedition against a band of outlaws, who came out to meet them, "women, girls, and all." The robbers got the better of the army, which he describes as completely panic-stricken, and after besieging them in a fort, compelled them to capitulate with great loss. The child was now occupied in saving up money to escape with, and describes his pleasant country life in pleasure-gardens near Bangkok, with his adopted mother, and the severity of the winter in Cabul, "where the people are so completely shut up in their houses by the snow that no one knows till the spring what deaths have occurred." Soon after this, when he was eleven years old, he rode off northward with about £250 in his pocket, and carrying a double-barrelled gun and four pistols. In this direction it was said he could travel for a year among people who were so savage as not to understand the use of money. This, however, turned out to be false, as we find him establishing himself soon after as Persian tutor, with a fixed salary in money. Arriving at a place called Swat, he met a great prophet, who fed four thousand people every day, and told their fortunes gratis. His advice to young Campbell was curious, and rather European. "Take a religion, no matter what; only be sure to believe it thoroughly."

The next "sensational" adventure which he records, is a horrible execution at Santropoor, where he with twelve others were made to "see all the stars." The others were massacred, and the child was hung by his wrists from a plank for twelve hours with a weight at his feet; an adventure which would probably be the end of most children of his age. He, however, in about three weeks, escapes with a friend, and proceeds further northward, where "he gives lessons in the use of fire-arms."

Here it will probably strike the reader of the book, that he is always giving lessons in everything; and, from his own account, not only never missed a shot, but was also an expert artilleryman, a general by intuition, and many other things, for instance, professor of Persian and seven or eight other languages. All this may be the unconscious exaggeration of a boy compelled by his circumstances to be thoroughly self-confident and independent; but when he gravely shows how the small army of Khokan, in which he fought, beat six regiments of Russians, with their cavalry and artillery, in two battles; and that he, having turned sides, the Russians, solely by acting on his counsels, beat the Khokans, we must attribute it to preternatural vanity. The absurdity is so transparent, when we consider that the Russians are the next neighbours with the Khokans, and understand their manners perfectly, that we wonder at the editor believing that they would adopt the somewhat old device of leaving a camp full of gold and silver to confuse the army of their enemies (that they might attack them while looting), at the advice of a fugitive from the savages, about fifteen years old. We do not, however, wonder at the boy believing it himself, and we do not think that it necessarily detracts much from the general truth of the story. He records one rather astounding feat of strength, which would have puzzled Shaw, the Lifeguardsman, to do, much more a slim lad. We will give it in his own words: a jealous gunner wished to assassinate him some time before he joined the Russian army, and tried to stab him, upon which—

"With desperate energy I seized the broad-sword that hung at the belt of my enemy, dashed it twice across his face, and swung it heavily down on to his shoulder. The keen blade passed *right through his body*, coming out just over the hip. He staggered and *fell asunder*, deluged in blood, and, horrid to relate, drunken curses mingled with the gurgling sound of the very fountain of blood which continued for some moments to well up from his heart."

It is a pity that such good swords can only, as he says, be found in those Eastern countries, or he might, on his arrival in England, have made a decent livelihood by holding *tours de force*, and perhaps have become an elder among the muscular Christians.

There is a wild story about four naked musicians living in a hut with their servant: he was alarmed at their appearance, as their nails were like eagle's claws, and they kept their heads between their knees. He was about to try if they were flesh and blood with his sword when they called to him, "Young man, what are you about?" Campbell was struck by their prescience, and stayed in their hut some days, during which he was drugged and intoxicated and shown strange sights. Only the most genuine of spirit-rappers could feel much interest in the delirious dreams which he believes that he acted in; and he will obtain their deepest sympathy for his firm belief that his final escape, minus gold and gun, was due to the accuracy of his shots at three enchanted eggs full of fierce demons. However, he got away at last on his horse, Lightning, the winner of a sixty miles for four-year-olds, at the capital of Chiob. This seems an incredible distance for a race-course, but Mr. Burnes is quoted as saying that races of forty and fifty miles long are not very uncommon in those parts. On this horse he goes through many deserts, charges a band of Turkoman robbers, defeats them and gets off by swimming "Zangi" through a whirlpool, while the robbers stand on the bank and clap their hands at his braveness.

At Yarkand he entered the Chinese empire, and gives an interesting account of the place. Here the hotel-keeper told him an anecdote, which, if true, makes Du Chaillu's ghoul-like Fans appear civilized and refined beside some of the Chinese.

"There is," said he, "a district in China called Surboodaly: it is in

Digitized by Google

this place the people are most known to be cannibals. When any of this tribe dies, his brethren do not bury him, but eat him."

Babies roasted in oil seem to be the greatest delicacy of this region. The hotel-keeper came to a house and asked for food, and they brought him "a man's hand most temptingly prepared." On his refusal of it, he was told that he was to be reserved for the table himself. He was, however, saved by a pretty young cannibal eloping with him.

"She informed me that it was her father's amiable weakness to be constantly on the look-out for strangers, whom it was his custom to kill and eat. This was a pleasant prospect for me! I asked the young lady if she could devise any plan of saving me. She replied, 'If you will be my husband, I will deliver you from my father's hand, and be your faithful wife.' We were soon out of danger from her father, and travelled together till we arrived here at Yarkand, where we were formally married, and have lived together very happily ever since."

This story made Campbell give up all projects of visiting Pekin, even under the protection of some Chinese officers who took a fancy to him. He went instead to Ko-ten, which is a great mart for exchanging Chinese goods against those of Russia, Bokhara, and even England and France. The book ends with an animated description of the siege of Herat by the Persians, which they finally take, notwithstanding the temporary success of some stratagems which were adopted at his suggestion; and it is then that he is threatened with death for refusing to become a Mussulman, and his friends massacred for harbouring him.

It is hard to know what to say in conclusion, about this book. With a great deal of bombast and evident exaggeration, it is still very interesting; and though the conversations are necessarily diluted by being translated into English by Campbell, and then thrown into a familiar form by the editor, they seem graphic and vivid. It is evident that Campbell has a very powerful imagination, and has also been tossed about in very curious and little known places, and with these materials has composed an amusing and perhaps instructive narrative.

THE GATE OF THE PACIFIC.*

If the secret of England's greatness is to be found in those free institutions which afford scope for the development of individual energy and enterprise on the part of her citizens, it should also be remembered that the soil is good upon which the seed has been sown, and that the restless character of the Anglo-Saxon fits him, above every other man, to make a proper use of that liberty which he so largely enjoys. Those schemes which have ultimately developed into sources of wealth to individuals and of power to the country, have invariably owed their origin to some obscure projector, whose indefatigable energy and determination have at last triumphed, and who has probably himself been sacrificed in an early stage of the struggle. A knot of traders founded our Indian empire, and a half-pay lieutenant in the navy established the overland route to it, and fell a victim to his zeal. In the work before us, Commander Bedford Pim, undaunted by the fate of his celebrated predecessor, has devoted himself to the task of promoting a railway across the Central American Isthmus, and by way of a beginning has purchased a harbour from the King of Musquito. He has also written a book for the purpose of enlightening the public upon the merits of this scheme; and since, not only as a commercial speculation, but as a question of foreign policy, the subject is full of interest, we gladly call attention to the best practical account which has yet appeared of the Central American republics; of their capabilities for development; and of the mode by which they may be best turned to advantage by this country.

Captain Pim shows conclusively what all persons conversant with the regions he describes will admit, that the policy pursued by our Government during the last ten years has been radically mistaken; it has been influenced partly by a fear of the United States, and partly by a misapprehension of the true bearing of that filibustering crisis through which these republics have passed. The result has been that we have made treaties diametrically opposed to our interests, and instructed our diplomatic agents in those parts to pursue a course which will in all probability produce the very complications we have most dreaded. It was the popular impression in this country that General Walker was prosecuting his aggressive schemes in Nicaragua in the interest of the Cabinet at Washington, and with their connivance—an assumption on the part of our Government which Mr. Marcy did all in his power to encourage, as the great object of his policy was to crush Walker, and he was glad to make use of our fleet for the purpose. Had the British squadron which lay at Greytown in 1856 been under the American flag, it could not have acted more directly in American interests than it did when it prevented the filibusters from forcing their passage up the San Juan river. In other words, the support we gave the Costa Ricans, who were led at the time by Americans—emissaries of Vanderbilt and Marcy—proved the ruin of Walker, and the United States were relieved by us from the danger of seeing a rival Anglo-Saxon Republic, stretching from Mexico to New Grenada. The value of an independent State as a counterpoise to the Northern Union is even more important, in anticipation of the formation of the Confederate States as a separate power, which will no sooner have established its independence, than it will begin to extend southward. It is needless, however, to regret mistakes which the public generally were too ignorant ever to detect, and the nature of which even now they will not understand. We merely allude to the past in the hope that people may be induced to investigate the subject for themselves. It must be clear to the most superficial observer, that, with such colonies as Australia, New Zealand, and British Columbia still clamouring for an accelerated route to England, the Central American isthmus possesses the highest importance, as offering greater advantages as a highway than any other. At present, the only railway which connects the shores of one ocean with the other is in the hands of Americans, and is little used by English passengers, except those bound for British Columbia. Captain Pim proposes to establish lines of steamers in connection with his railway, and gives us all the data of mileage, trade statistics, &c., &c., necessary to enable us to form a judgment on the matter. The success which attended the Nicaraguan route, before the internal convulsions of that country destroyed it, form the best guarantee for another through the same State; and although the line proposed by Captain Pim will involve a greater outlay than the old one, it possesses advantages which will render competition almost hopeless. The merits of the seven different routes which have at various times been before the public are discussed at some length, and the extracts given by our author from the pamphlet of Louis Napoleon in favour of a route almost identical with that proposed by Captain Pim, are not without significance. "England," says the Imperial author, "has more than the other Powers a political interest in the execution of this project. England will see with pleasure Central America become a flourishing and powerful State, which will establish a balance of power by creating in Spanish America a new centre of active enterprise, powerful enough to give rise to a great feeling of nationality, and to prevent, by backing Mexico, any further encroachment from the north. England will witness with satisfaction the opening of a route which will enable her to communicate more speedily with Oregon, China, and her possessions in New Holland." The most convenient route in many respects has always appeared to us one which should cross the Isthmus of Panama at its narrowest point a little to the south of the present railway; a stipulation in the Company's charter gives them a monopoly of transit in New Grenada, however, and we are therefore driven to look for a passage further north. The great difficulty has always been the absence of any harbour on the Atlantic side. The rapid filling up of the river San Juan at Greytown is destroying that port as a terminus, and the population has already begun to leave it. Under these circumstances the discovery of a good harbour about thirty miles to the north of Greytown by Captain Pim is a fact of the utmost significance. The line of railway proposed will be 225 miles long, and the Nicaraguan Government are prepared to grant the necessary concessions upon advantageous terms. The gratuitous abandonment of the Musquito Protectorate by our Government has deprived British capitalists of many privileges they might otherwise have enjoyed in carrying out the enterprise. Still the King of Musquito, in whose territory Captain Pim's bay lies, is anxious to assist an undertaking from which he is likely to derive great benefit.

We do not share Captain Pim's sanguine views with regard to the colonization of the Musquito territory by whites. It is, no doubt, one of the best cotton fields in the world, but the importation of a few Caribs which he proposes would not suffice for its development. The want of labour is the curse of Central America. The country is capable of producing almost anything, embracing within its limits every variety of climate and favoured with a most fertile soil; but the population is too thin and apathetic to develop its resources, and a large importation of coolie labour would be required to bring it into cultivation. These, however, are considerations not directly affecting the scheme we have been considering: before we can venture to pronounce any decided opinion upon its practicability, the country between Gorgon Bay and Lake Nicaragua must be surveyed. At present, all we know is that there is a good harbour at both ends of the line, and that throughout two-thirds of its length it is free from engineering difficulties. When Captain Pim has surveyed the remaining third, he will be in a position to lay his scheme before the public. In the meantime, he has done society good service by collecting a vast mass of most valuable information, and by putting it together in a condensed, and at the same time a readable form.

* The Gate of the Pacific. By Commander Bedford Pim, R.N. Lovell Reeve.

SCAPEGRACE AT SEA.*

What is the worst kind of novel? Probably few persons who read novels with that regularity which is essential to proficiency in the art will have any difficulty in answering this question. Each of them will have his own pet abhorrence. Misplaced moralisings are especially irritating to one, overstrained sentiment to another, ineffectual attempts at being comic to a third. Yet we question whether the variety we are in search of is really differentiated by any of these characteristics. The novels in which they are found do at least make some impression on us. After a course of intense moral analysis there is a satisfaction in feeling recklessly and exceptionally wicked. The lowest spirits may be moved to smile at

Digitized by Google

the touching sentiments of an emotional heroine. When you have once realized that the writer's object is to make you laugh, there is a certain pleasure in observing the curious inefficiency of the means which he takes to accomplish it. Now, if the end of novels be to amuse, it is clear that the novel which gives no amusement at all is the one which misses the end most completely. But none of the kinds we have mentioned succeeds in doing this always and altogether. From all of them you may extract something. You may not experience the right sensation in the right place, but then you are sure to feel the wrong one in the wrong place. You are not amused when the author intends that you should be, but it will be strange indeed if you can keep your countenance when he means you to be serious. You do not profit by his preaching, but it will probably suggest to you some happy remark in depreciation of the virtues he inculcates. In this respect there is a considerable analogy between novels and sermons. After a pretty large experience, we can state with some assurance what is the most trying sermon to be exposed to. Heterodoxy may arouse your indignation, excite your sympathy, or test your philosophical indifference; solecisms in grammar only improve by repetition; peculiarities of delivery suggest a little subdued mimicry; an omitted aspirate is a fund of amusement for the afternoon. The real trial of patience is none of these. It is the stock half-hour's discourse which leaves you at the end wholly ignorant of its drift, but quite unable to pick a hole in its theology, its style, or its pronunciation. It is dull itself, and it is the cause of dulness in you. You try in vain to recall a single phrase on which to hang an appropriate criticism in the walk home from church. Nothing of the kind suggests itself. From the text to the blessing is a series of level platitudes, not one of which lifts its head above its brethren. So, too, there are novels about which you can hardly form an opinion. They give you nothing to lay hold of. They never rise to being absurd, or sink below a commonplace. "Scapegrace at Sea" belongs to this class. It stands in the same relation to fiction as the beforementioned sermon does to theology. Indeed, the resemblance is so striking that we are inclined to believe that the author must be the gentleman who undertakes to supply the clergy with original discourses for twenty-four stamps, and an answer to "Essays and Reviews" for five shillings. We feel a modest confidence in introducing it to our readers as the worst novel we have ever lighted upon.

But even a bad novel must have been published with some object; and this is generally connected, in the minds either of author or publisher, with the idea of pecuniary gain; but in the instance before us it seems impossible that this could have been the case. It never could have been intended to pay. For some time we saw no way out of this difficulty; but at length an explanation suggested itself which we think meets the case. It must have been designed as an antidote to sensation novels—a composing draught to be taken immediately after an overdose of Mr. Wilkie Collins. This end it certainly fulfils to a very remarkable degree. It is an antidote, and nothing but an antidote. Looked at apart from the poison it is intended to counteract, it has no qualities at all. It is merely the most uninteresting of possible stories. But considered as a contribution to mental hygiene, it is obvious that it is this negative characteristic which gives it its value. A short sketch of the course which the narrative takes will prove the care with which the author steers clear of any possible source of excitement, and thereby demonstrate more clearly the therapeutic merits of his work. The story is fitted up with two heroes, Mr. Ernest Plantagenet Montagu and Mr. Julius Montagu Scapegrace. They are brothers, the younger having changed his name for a fortune. One is in the army, the other in the navy. The first half of the first volume contains the events of a day; the principal of them are these. Montagu joins his regiment in country quarters; he buys two horses from a brother officer, who makes by the transaction; his brother comes to pay him a short visit; at night some of the officers attempt to break open the door of his room; the colonel comes to see what is going on, and Scapegrace throws some water over him; Montagu is put under arrest. It must be admitted, we think, that these incidents are admirably chosen for the end in view; but in case the reader should take too much interest in the result of the court-martial which follows upon the arrest, Montagu is described as being indifferent to the chance of being dismissed the service, and quite undetermined whether he shall not quit it of his own accord. Without this precaution it would perhaps have been difficult to endure the suspense of such a conversation as the following, which takes place on the very morning the sentence is made public. One of the speakers has just told the hero that the decision has come down :—

"'Is it against me?'
"'Perhaps.'
"'Is there any chance of its being for me?'
"'Perhaps.'
"'Why, it cannot be both.'
"'Perhaps.'
"'Why?'
"'I suppose I mean what the decision means—everything.'
"'Who is your informant?'
"'Colonel Loosefysh.'
"'What did he say to you?'
"'Nothing.'
. . . . "'Now what am I to gather from what you say?'
"'This, that, and the other.'
. . . . "'Where did you see Loosefysh?'
"'In his own quarters.'
"'What took you there?'
"'My legs.'
"'What did you hear.'
"'Much profane swearing.'
. . . . "'What, then, am I acquitted?'
"'No, I should say nothing of the sort.'
"'Well, then, what do you?'
"'Nothing.'
"'Then what has brought you here?'
"'To tell you everything.'
"'Well then, do tell me everything.'
"'No, I shall not.'
"'Why not?'
"'Because I have changed my mind.'"

The explanation of the mystery is that Montagu has been found guilty, but that the finding has been annulled by the Horse Guards; and as these facts are communicated to the reader upon the same page his anxiety is soon at an end. In the interval between the arrest and the trial Montagu goes to a ball. This takes fifty pages to describe, and of these twelve are devoted to his first interview with the heroine. In real life the conversations which take place under these circumstances present difficulties of no common magnitude, and the attempt at opening one not unfrequently results in finding yourself hopelessly stranded for want of something to say. In this case we are inclined to think that the best course is to abstain from useless and undignified struggles, and to wait calmly until your partner comes to tow you off. If she omits to do this, the opportunity is very favourable for abstract meditation. The unsatisfactory character of earthly enjoyments is an appropriate subject, and one which will probably occur to you without any effort of your own. Montagu and Miss Wyndham, however, were more fortunate. Each it appears had lost a friend, and the lady's friend was the gentleman's cousin, while the lady had once seen the gentleman's friend. Under these reciprocal influences they become rapidly intimate, and in the interval between his asking her to dance and the formation of a quadrille, they respectively express themselves thus :—

"'I have always considered that love is to be the great reward of Heaven; that when our spirits have thrown off the clods of clay, we shall be able to feel in all its perfection that transcendant emotion which deifies, even in this sad, dull world, everything which it illumes. I believe that in a future state its great reward will be the filling of the soul with a love so perfect, that its extacy shall know no more of diminution, hindrance, or cessation, than the flight of time itself.'

"'That idea,' said Montagu, 'never before presented itself in that form to my mind, but now you offer it to my consideration, I admit the picture is a thrilling one, and the happiness sufficiently known to man to be capable of appreciation, and yet at the same time so infinitely beyond his present capacities as to fill the intellect with amazement, and, if I may use the expression, overwhelm it in the labyrinth of an endless maze of joy.'"

If the scenes of the whole work were laid in country quarters it would have given but a poor sample of the author's powers. His best claim to our respectful admiration lies in the fact that when the hero's regiment is sent to the Crimea the same healthy tameness pervades every page. There is a good deal about green coffee and raw pork, and as soon as the author has said his say on those novel subjects, Montagu is wounded, and sent to Scutari, where he remains unconscious for some weeks. No amount of consciousness, however, could have enabled him to turn this interval to better account, since in a very few minutes after he has recovered his senses, he makes the following profound observation :—

"Alas! how little we know of war, when as boys and children we read of the glory of great conquerors. From the little I know of it, I would not accept the greatest fame ever attained by all the conquerors in the world put together, and in fact nothing that I have seen can justify war, except it be in such a case as that of Washington or Tell."

Probably, had he been wounded under either of those commanders, he would not have made this exception. After such a speech as this we are rather disappointed that his remarks on the occasion of the ball being extracted are not more original. As they are very brief we give them in full :—

"'Oh!' shrieked the patient.
"'All right,' said the assistant surgeon, 'here's the ball.'
"'Ah,' shrieked the patient.'"

It is almost needness to say that in the hospital at Scutari he meets Miss Wyndham. We should hardly have thought it worth while to mention so obvious an occurrence, had it not been signalised by a remarkable and, indeed, hitherto unrecorded effect of love. The sight of each other is stated to have produced an "electric shock on both sides of those young beings." So far as we are able to conceive this sensation it must have resembled two digs in the ribs, given simultaneously by two funny friends, between whom you have been walking. We are thus enabled to realise with new force the excruciating torments of this absorbing passion.

To the younger brother, who gives his name to the book, only a small part of its contents is devoted. This is partly accounted for by the fact that he is only fourteen years old, although the sentiments which are constantly escaping from his lips would do honour to any age. At the present moment, perhaps the most interesting of these pearls of speech is one which he drops while dining

Digitized by Google

in the ward-room of H.M.S. Saucebox, shortly after joining her :—

"The Northerners already hate the Southerners to such an extent, there is no abuse in the vocabulary they do not expend in describing each other to strangers. Law and order are things for which they do not even profess the slightest respect. Slavery and trade are both subjects on which all their feelings and interests are opposed; and the whole United States, when I travelled in them with my father, reminded me of a powder magazine with a bonfire burning at the door."

A writer who puts this prophecy into the mouth of a boy of fourteen, ten years before the American civil war, must have an appreciation of human nature, the law of probabilities and the like, which is vouchsafed but to few. The personal history of this hero is marked by even fewer events than that of his brother. The most exciting moment is when he asks leave of absence to go and nurse his brother, and is refused. But even here the author is ready with a palliative. The captain is signalled for by the Admiral, before the midshipman has left the cabin, and immediately after he gets leave from the first lieutenant.

After all, however, there is some reason to fear that the class of persons for whom this work has apparently been designed—the sufferers from sensation novels—may not be much disposed to read it. Any child will eat poisoned sugar-plums if he gets the chance, but it requires some resolution to enter upon a course of lukewarm water by way of corrective ; and we doubt whether the young ladies, who have been kept from their natural rest by "No Name," or the "Woman in White," will care to make up for lost sleep by sitting down to "Seapegrace at Sea." Still we have so much respect for the writer's obviously benevolent intentions, that we feel a real pleasure in suggesting two quarters in which, if it is once properly introduced, it can hardly fail to secure a steady and perhaps even a large circulation. It the first place it will prove a most valuable resource to mothers who have sons in the army, when they are at home on leave. It is strictly a professional novel, for nearly every person in it belongs to one or other of the services ; it has a fast title, and the name of "Colonel Loosefysh" will in itself be a considerable attraction to the young military reader. And yet it is so proper, that any mother may let it lie on her drawing-room table, strong in the double security that none of her daughters will be able to read it through, and that it will prove perfectly harmless if they do. Secondly, it may be of use to the convalescent inmates of a lunatic asylum. There is a stage in the recovery from mental disease in which the patient requires to be provided with intellectual occupation in a form which shall not contrast too vividly with his late unhappy condition. Here is just the kind of thing he wants. The author himself is in full possession of his senses—the book is too dull to leave any doubt of that —while at the same time there is an absence of plot, of character, and of connection between one scene and another, which must attract notice even at Hanwell or Colney Hatch. We strongly recommend the publisher to send copies to the medical officers at all the principal asylums. No one has, up to this time, devoted himself to providing a supply of literature for the mentally afflicted. We are happy to say that the void is now filled up, and we shall look forward to a succession of fictions of approved imbecility from the peculiarly gifted pen which has given us "Scapegrace at Sea."

SHORT NOTICES.

An affluence of poetic words and the power of making them rhyme often delude a young writer into the idea that he is a poet. But neither are more than aids to poetry, and wanting a higher faculty, they do little more than betray. Mr. Spens has them ; whether he also possesses the higher power remains to be seen. His case is not proved by the book before us,* yet if he will control his fancy somewhat, eschew dreams, and addict himself more to realities, there is evidence in what lies before us of superior ability. Some of the minor poems, in which he has done this bear reading frequently, and improve upon acquaintance. After all, no matter what class of readers a poet addresses, he can never afford to lose sight of nature. Whether we peruse a novel or a poem, we look to see something kindred to our own feelings or thoughts reflected in their pages, and the fewer and simpler the words employed to produce that reflection, the better. The poet is a creator, not a vocabulary. Mr. Spens has yet to learn this. His verse is musical after its fashion, but his ideas are choked with fine words and extravagant imagery, of which he must get rid, if he hopes, as in his dedication he intimates, to write anything which will live. Such a rhapsody as this is not promising.

"My heart was somewhat weary, with a sense
Of longing for something yet unknown,
When I saw *her* clothed with an affluence
Of beauty, awe-inspiring as a throne;
Concentrating itself on her alone
The stately hall shed its magnificence,
The music breathed through her, and an intense
Glory of light around her presence shone—
A majesty of soul was poured on me,
New voices woke within my heart and brain,
And then there came a strange strange reverie
Tongue may not tell, heart shall not feel again,
Past, Present, Future chanted melody,
And cried, 'Thy life no longer shall be vain.'"

* Dreams and Realities. Edinburgh : Edmonston & Douglas.

Nor this ;—when after the lady's father has consented, their marriage is appointed—

"All seemed a wond'rous sea of light, when I
Entered her glorious presence, and her hand
Lingered in mine ; the words that I had planned,
Though living in my heart did fade and die
Ere they could reach my lips. Her majesty
Bewildered me, as too excessive day
May the clear vision of the uplifted eye
Dazzle into a dim obscurity."

This is the poetry of sound, not of thought and feeling. To contrast Mr. Spens with himself, it is a relief to turn fron his more ambitious poems to his minor ones. They, too, are occasionally spoiled by his love of airing his vocabulary ; but their metre is too short to admit of long-winded phrases, and compels a simplicity, against which, however, he fights manfully wherever he can. Here are some lines from the poem "Heaven's Shadow," which are worth a dozen of the rhapsodies from which we have already quoted :—

"The shades of stilly evening
In peaceful glory fell,
On the day memory loveth best,
In the sweet mossy dell.

* * * *

"All sweetly ! Oh, how sweetly !
To the wild gush of the tune,
That asked her love responsive,
Came the music of her own.

* * * *

"All sadly ! Oh, how sadly !
Memory brings up the day,
Where her baby at her bosom
I saw her fade away.

* * * *

"Oh, the huge earthquake change within
That time so dear before;
I thought that Nature's music then
Was hushed for evermore.

"And every lightest trifle touched,
And every trifle seen,
Linked with my own lost darling's life,
In curious ways had been."

But for the last poor line this verse would have been unexceptionable. Perhaps it is natural that, as a young poet, Mr. Spens should incline too much to the dismal ; but cheerfulness is an essential element of the true poet.

Mr. McCorkindale's poetry* is of an unpretending character, and though rarely rising above mediocrity, is notable for simplicity of expression and healthy tone of feeling. Many of the later portions of his book, he tells us, were written in moments of convalescence during a severe and lengthened illness, to divert the author's mind. If they succeeded in doing this they have probably exercised the highest influence destined for them. But there are lines here and there that spring from the heart, and we close the volume with the feeling that our time has not been wholly misspent in perusing it.

A lecture upon waste† seems from its title to promise some moral reflections on the imprudence of housekeepers and servants, with hints for their amendment, and practical suggestions on marketing, cookery, and the whole science of household economy. But when we glance down the title-page, and find that the author is not a modern Mrs. Glasse, but a Fellow of the Royal College of Physicians, and of the Royal Society of Edinburgh, we conclude that this idea must be a mistake, and that the "waste" to be descanted upon is of a more highly scientific character. So it proves. It is to the "waste" of the great Housekeeper, Nature, that Dr. Symonds calls our attention ; the waste of the fabric of the earth, of vegetable and animal life, and of man himself, "by his own folly and wickedness," by his fellow-man, "by greed and recklessness, and oppression and cruelty," by the elements, the failure of crops, the poison of marshes and jungles, by floods and earthquakes, and mysterious pestilences. These are topics fruitful of interesting reflection. Dr. Symonds is struck by the very little which man has done, considering how long he has been in possession of the world, and how his race has been multiplied.

"History tells us what myriads lie buried in the old Greek and Roman lands, and in all our modern Europe. Something, too, we know of the human relics that are blown about in the desert dust of Egypt and Palestine. Asia, mother of the nations, bewilders the imagination that tries to call up the series of races that, according to the most limited chronology, have hung on her mighty breast. Whoever has dared to push towards the pestilential interior of that quarter of the world, the fringe only of which, till in these latter days, travellers have been contented to touch, has found human life ever teeming, ever exhaustless : while, in what we call the New World, cities actually overgrown by ancient forests, and remains of old polities long worn out, and traces of a civilization which it must have taken ages to accomplish, and which it has taken ages to efface, tell how man there, too, has abounded. I say nothing of the tribes now dimly looming through the mists which have enveloped the primeval anthro-

† Waste : a Lecture by John Addington Symonds, M.D., F.R.S. of Edinburgh. Bell and Daldy.

Digitized by Google

pology of the earth, but which have had some light thrown upon them by the combined researches of the antiquarians and naturalists of these latter days. Every part of the survey increases our awe, and brings back on us a humiliating feeling of ignorance, far surpassing that which ensues on the contemplation of fossil infusoria and fossil saurians."

There are some interesting passages in the lecture upon that waste which is really transformation, of which the most striking type is seen in the changes of the great forces of nature "ever vanishing, ever re-appearing, ever destroyed yet ever preserved, going through endless phases of regenesis by virtue of their reciprocal convertibility." Again, on the lost literature of the world, and on the decay of aboriginal races before civilized intruders, there is much suggestive matter and good sense. But occasionally subjects are hinted as to which it is especially true that a little knowledge is a dangerous thing, and with this caution we recommend Dr. Symonds' lecture to the perusal of our readers.

Sermons are not in themselves objectionable things, but sermons in disguise are not fair. Under a title which promises something like personal interest, the author of "What my Thoughts are"* sermonizes through some hundred and thirty odd pages upon such topics as "The Meaning of our Life," "The Mystery of Suffering," "Christian Progress," "The Heavenly Kingdom," &c., all important enough, but not what the title of the book promises. Still, to those who are in want of such reading it will be welcome, for it is written with earnestness, and contains much that may be read with profit, and occasionally even with interest.

Mr. John Timbs presents the public with another of his useful books under a kindred title to those he has already published.† It is like his other works, full of information carefully compiled, and upon a wide variety of subjects. Anecdotes are interspersed bearing happily upon each topic; for instance, on "Teaching Young Children," Mr. Timbs tells the following story:—"Coleridge relates that Thelwall thought it very unfair to influence a child's mind by inculcating any opinions before it should have come to years of discretion, and be able to choose for itself. 'I showed him my garden,' says Coleridge, 'and told him it was my botanical garden.' 'How so?' said he; 'it is covered with weeds.' 'Oh!' I replied, 'that is only because it has not yet come to its age of discretion and choice. The weeds, you see, have taken the liberty to grow, and I thought it unfair in me to prejudice the soil towards roses and strawberries.'" "A Trip to Constantinople"‡ will not add much to the information of those who have read anything about the women and eunuchs of Turkey, or concerning Miss Nightingale, her nurses, and the sisters of charity at Scutari.

LIST OF MEETINGS OF LEARNED SOCIETIES FOR NEXT WEEK.

Monday, 16th March.

Medical—At 8½ P.M. "On a Case of Successful Excision of the Elbow Point." By the President.

Asiatic—5, New Burlington-street, at 3 P.M.

White's (D.) History of the Kings of Judah and Israel. Fcap., cloth, 1s.

NOTICES TO CORRESPONDENTS.

The Recent Excavations at Rome.—In our description last week of the discovery of the remains of the church of San Clemente at Rome, we expressed a hope that the money would not be denied which is needful to our countryman, the Rev. Father Mullooly, for the completion of his disinterested task. We have much pleasure in stating that arrangements have been already made for the safe and speedy transmission to Rome of contributions from the archæologists and antiquarians of this country. Through this channel, donations from the Royal Society of Antiquaries of London, and from private sources, have already been remitted to the Prior of the Irish Dominicans at Rome. A subscription book has been opened at the publishers of the *Ecclesiologist*, 78, New Bond-street, and Mr. Murray, 50A, Albemarle-street, and Messrs. Colnaghi, Pall Mall East, have also kindly consented to receive contributions to the fund for these interesting excavations.

* What my Thoughts are; or, Glimpses and Guesses of Things seen and unseen, being Leaves from a Note-book, kept for a Friend. Jarrold & Sons.

DINNEFORD'S PURE FLUID MAGNESIA has been during twenty-five years emphatically sanctioned by the Medical Profession, and universally accepted by the Public as the best remedy for Acidity of the Stomach, Heartburn, Headache, Gout, and Indigestion, and as a mild Aperient for delicate constitutions, more especially for Ladies and Children. It is prepared, in a state of perfect purity and of uniform strength, by DINNEFORD and CO., 172 New Bond street, London; and sold by all respectable Chemists throughout the world.

HARPER TWELVETREES' GLYCERINE SOAP POWDER makes its own Soap, and saves one half of time, two-thirds of Soap, and three-fourths of labour! A Penny Packet will make a Pound of Glycerine Washing Soap, possessing extraordinary Lathering and detergent qualities.—Patentee: HARPER TWELVETREES, Bromley-by-Bow, London. Sold by Grocers, Druggists, and Oilmen, everywhere.

CAUTION.—The extraordinary success attending the use of Dr. J. COLLIS BROWNE'S CHLORODYNE has induced certain unprincipled persons to vend spurious compounds under this name. This wonderful remedy allays pain, soothes the system, and invigorates nervous debility. It effectually cures, as will be seen by medical testimony, CONSUMPTION, COUGHS, ASTHMA, BRONCHITIS, NEURALGIA, RHEUMATISM, &c. Never be tempted to buy Chlorodyne except in sealed bottles, having the Government Stamp, with the words "Dr. J. Collis Browne's Chlorodyne" engraved thereon. A sheet full of medical testimonials accompanies each bottle. Sole Manufacturer, J. T. DAVENPORT, 33, Great Russell-street, Bloomsbury, London. Sold in Bottles, 2s. 9d. and 4s. 6d.; sent carriage free on receipt of Stamps or Post-office Order.

Established 1807.

DR. DE JONGH'S

(Knight of the Order of Leopold of Belgium)

LIGHT-BROWN COD LIVER OIL, prescribed by the most eminent Medical Men as the safest, speediest, and most effectual remedy for

CONSUMPTION, CHRONIC BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GENERAL DEBILITY, DISEASES OF THE SKIN, RICKETS, INFANTILE WASTING, AND ALL SCROFULOUS AFFECTIONS,

Is incomparably superior to every other kind.

SELECT MEDICAL OPINIONS.

Sir HENRY MARSH, Bart, M.D., Physician in Ordinary to the Queen in Ireland.

"I consider Dr. De Jongh's Light-Brown Cod Liver Oil to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

Dr. LANKESTER, F.R.S., Scientific Superintendent, South Kensington Museum.

"I consider the Cod Liver Oil sold under Dr. De Jongh's guarantee to be preferable to any other kind as regards genuineness and medicinal efficacy."

Dr. GRANVILLE, F.R.S., Author of the "Spas of Germany."

"Dr. Granville has found that Dr. De Jongh's Light-Brown Cod Liver Oil produces the desired effect in a shorter time than other kinds, and that it does not cause the nausea and indigestion too often consequent on the administration of the Pale Oil."

Dr. LAWRANCE, Physician to H.R.H. the Duke of Saxe-Coburg and Gotha.

I invariably prescribe Dr. De Jongh's Cod Liver Oil in preference to any other, feeling assured that I am recommending a genuine article, AND NOT A MANUFACTURED COMPOUND IN WHICH THE EFFICACY OF THIS INVALUABLE MEDICINE IS DESTROYED."

DR. DE JONGH'S LIGHT-BROWN COD LIVER OIL is sold only in IMPERIAL Half-pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.; capsuled, and labelled with his stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable Chemists and Druggists.

SOLE CONSIGNEES:

ANSAR, HARFORD, & Co., 77, Strand, London, W.C.

CAUTION.—Beware of Proposed Substitutions.

IMPORTANT WORK CONNECTED WITH EDUCATION.—(Dedicated to LORD BROUGHAM.)

In 1 vol., 8vo., cloth, price 12s.,

CIVILIZATION CONSIDERED AS A SCIENCE, in relation to its Essence, its Elements, and its End: evincing the necessity, not only for general Education, but for supplying in conjunction with it those various institutions and requirements which together constitute the Elements of Civilization, and pointing out the measures essential for its complete accomplishment. By GEORGE HARRIS, F.S.A., Barrister-at-Law, Author of "The Life of Lord Chancellor Hardwicke," "The True Theory of Representation in a State," &c.

"We commend this book earnestly, honestly, to every social scholar. It is written with as much modesty as firmness, with as much fidelity of statement as courtesy, and with a philosophy as deep as its language is simple. It is the most extensive, and by far the most sterling effort, made in the present day to reduce civilization to a science, and to push it forward safely, easily, and quickly, in its magnificent course."—*Social Science Review.*

London: BELL & DALDY, 186, Fleet-street.

PUBLIC OPINION.

A COMPREHENSIVE EPITOME OF FACT AND OPINION.

PUBLIC OPINION gives the Comments of the various leading Journals—British, Colonial, and Continental—on all important current topics, an elaborate summary of Contemporary Events, an extensive selection of General Miscellaneous Intelligence, and a copious variety of Literary and Popular Reading.

To Politicians, Editors and Authors, the Nobility, Clergy and Gentry, Merchants and Manufacturers, and all who take an interest in the discussion of Political, Social, and Commercial Questions, PUBLIC OPINION is invaluable.

British Residents on the Continent and in the Colonies, Men of Business, and persons who are desirous of acquiring a knowledge of the great questions that are ever engaging the attention of society, may obtain in PUBLIC OPINION (for a trifling sum, and at a small sacrifice of time) a judiciously-compressed *resumé* of the sentiments enunciated by the various leading Journals throughout the world on all important topics, thus obtaining a knowledge of every important question in all its various phases.

The Annual Subscription to PUBLIC OPINION (post-free, Payable in Advance) is 13s. It is published in time for Friday evening's post, and sold at all Railway Bookstalls and by all Booksellers and Newsagents throughout the Kingdom and the Colonies.

CONTENTS OF No. 77, MARCH 14, 1863:—

PUBLIC OPINION.

A Weekly EPITOME of FACT and OPINION for all Classes of Readers.

PUBLIC OPINION every SATURDAY, 2d.

VOLS. I. and II. of PUBLIC OPINION now ready. Vol. I. from October, 1861 to March, 1862. Price 6s. 6d. Vol. II. from April to December, 1862. Price 10s. 6d. bound in cloth. To be obtained through any Bookseller or Newsvendor; or at the Office, 11, Southampton-street, Strand.

AN IMPARTIAL HISTORY of the PRINCIPAL EVENTS in GREAT BRITAIN and IRELAND, America, France, Italy, Germany, Spain, Turkey, Greece, Belgium, Denmark, Mexico, Russia, Poland, Portugal, India, China, Japan, Australia, Canada, and the other Colonies for the year 1862, to be found in PUBLIC OPINION, Vols. I. and II., compiled from the English and Foreign Press so as to show the course of all events of interest in all countries, and the views of all parties upon them, by impartially selected extracts from the English papers, and Translations from FRENCH, GERMAN, ITALIAN, SPANISH, PORTUGUESE, MODERN GREEK, TURKISH, and ARABIC Papers.

A CONCISE RECORD of EVENTS connected with LITERATURE, the FINE ARTS, MUSIC, the DRAMA, the CHURCH, the ARMY and NAVY, and the LAW kept in PUBLIC OPINION, so as to give all Facts of Interest connected with each, and to show their General Progress.

ALL NEW STANDARD WORKS found described, together with the conflicting Criticisms of the Press put in juxtaposition in PUBLIC OPINION.

A FAIR HEARING for EVERY ONE.—PUBLIC OPINION, with the object of ascertaining and expressing the thoughts and feelings of the Public in all places, and on all subjects, opens its columns to correspondence from persons of all parties, and inserts the letters alike of Englishmen and Foreigners (furnishing Translations if they are in French, German, Italian, Spanish, Portuguese, Dutch, Turkish, Arabic, or Modern Greek), when such letters are of a nature to throw fresh light on any phase of any question of General Interest.

TO ENGLISH RESIDENTS ABROAD and COLONISTS, PUBLIC OPINION is more valuable, and more adapted to keep them *au courant* of the affairs of Great Britain and the whole World, than any other paper. Persons having Friends on the Continent or in the Colonies, cannot make a more acceptable present than PUBLIC OPINION, which, in most cases, can be sent free by post for a Penny Stamp.

POLITICIANS, STATESMEN, CAPITALISTS, EDITORS, and AUTHORS, have a means of ascertaining, without loss of time, the thoughts and feelings of the Home and Foreign Public on all subjects in PUBLIC OPINION, to be found nowhere else.

PUBLISHERS and BOOKSELLERS can read the taste of the Public, with regard to Literature from the Synopsis of Reviews given in PUBLIC OPINION, and possess one of the best media for advertising such Works in PUBLIC OPINION.

THE WAR IN AMERICA.—All the Great Battles and other Events connected with the Civil War, given in the words of the English and American Press in PUBLIC OPINION, Vols. I. and II.

THE COTTON QUESTION fully discussed in PUBLIC OPINION, Vols. I. and II.

IRON-CLAD SHIPS.—The History of Iron-clad Ships and the Debate upon them, to be found in PUBLIC OPINION, Vols. I. and II.

ARMSTRONG, WHITWORTH, and LANCASTER GUNS. The question of the relative merits of the above Guns discussed in PUBLIC OPINION, Vols. I. and II.

THE BRITISH COLUMBIA EMIGRATION QUESTION. Is British Columbia a Fit Place to Emigrate to? See PUBLIC OPINION, Vols. I. and II.

FEMALE EMIGRATION.—For the *pros* and *cons* of this question, see PUBLIC OPINION, Vols. I. and II.

THE EDUCATION QUESTION, the REVISED CODE, &c. All arguments for and against the New Code to be found in PUBLIC OPINION, Vols. I. and II.

THE INCOME TAX, its Good or Bad Aspects.—See PUBLIC OPINION, Vols. I. and II.

THE ROUPELL FORGERIES, and other CAUSES CELEBRES. For the fullest Accounts see PUBLIC OPINION, Vol. II.

THE QUESTION OF BLOCKADE EXAMINED in PUBLIC OPINION, Vols. I. and II.

THE QUESTION OF INTERVENTION ventilated in PUBLIC OPINION, Vols. I. and II.

THE GREAT EXHIBITION OF 1862.—The Opening, Progress, Incidents, and Close of. See PUBLIC OPINION, Vols. I. and II.

THE THAMES EMBANKMENT.—The Rise and Progress of this Project. See PUBLIC OPINION, Vols. I. and II.

COMPETITIVE EXAMINATIONS.—The Merits of the System Reviewed in PUBLIC OPINION, Vols. I and II.

THE COLENSO CONTROVERSY.—The Opinions of all the Organs of the Press, together with a mass of Interesting Letters on BISHOP COLENSO'S WORK on the PENTATEUCH, in PUBLIC OPINION, Vol. II.

THE TICKET OF LEAVE SYSTEM.—THE GAROTTE ROBBERIES and TRANSPORTATION examined in PUBLIC OPINION, Vols. I. and II.

THE DISTRESS IN LANCASHIRE.—The whole History of the above Calamity and the Efforts made to relieve it, in PUBLIC OPINION, Vol. II.

THE EMPLOYMENT OF WOMEN.—The various Arguments for and against, as brought forward by the different Organs of the Press, in PUBLIC OPINION, Vol. II.

THE ABOLITION of CHURCH-RATES.—For the Agitation in favour of the above, and the Opinions it elicited, see PUBLIC OPINION, Vols. I. and II.

THE VOLUNTEER MOVEMENT.—For the Progress of the above during the Past Year see PUBLIC OPINION, Vols. I. and II.

THE EMANCIPATION OF THE SLAVES.—For American and English Opinions on, see PUBLIC OPINION, Vols. I. and II.

THE YELVERTON CASE.—The whole History of the above Case in PUBLIC OPINION, Vol. II.

DR. LUSHINGTON'S JUDGMENT in "ESSAYS AND REVIEWS"—How looked upon by the Press. See PUBLIC OPINION, Vols. I. and II.

THE TURF SCANDAL thoroughly and impartially sifted in PUBLIC OPINION, Vol. II.

RAILWAY ACCIDENTS and TRAVELLING, and its effect on Health, considered in PUBLIC OPINION, Vols. I. and II.

THE PRINCE of WALES'S MARRIAGE.—All Opinions and Arrangements minutely recorded in PUBLIC OPINION, Vol. II.

THE ENGLISH, FRENCH, and ITALIAN PRESS on the ROMAN QUESTION. See PUBLIC OPINION, Vols. I. and II.

THE ENGLISH and FRENCH PRESS on the COMMERCIAL TREATY with FRANCE. See PUBLIC OPINION, Vols. I. and II.

THE ENGLISH and FRENCH PRESS on the PRESS in FRANCE. See PUBLIC OPINION, Vols. I. and II.

THE "ROME OR DEATH" GARIBALDI EXPEDITION, related in the words of the Italian Papers, with the Opinions of the English, French, and Italian Press on the whole affair, in PUBLIC OPINION, Vol. II.

THE GREEK REVOLUTION, the INSURRECTION at NAUPLIA, &c., the Signs of, Cause and Effects of, stated in the Words of the Greek, English, French, and Italian Papers, in PUBLIC OPINION, Vol. II.

THE MEXICAN EXPEDITION.—The Triple Alliance: the Withdrawal of England and Spain; the Campaign of the French; the Debate in the Spanish Parliament upon, and the Views of all Parties concerned, given in their own words, from the English, French, and Spanish Papers, in PUBLIC OPINION, Vols. I. and II.

THE TURKISH LOAN and the PROSPECTS of TURKEY as discussed in the English, French, Italian, and Turkish papers, in PUBLIC OPINION, Vols. I. and II.

THE HISTORY of the STRUGGLE BETWEEN the KING of PRUSSIA and his PEOPLE, from the German, English, and French points of view, in PUBLIC OPINION, Vol. II.

THE RATTAZZI MINISTRY in Italy: its Rise, Progress, and Fall, with Public Opinion in Italy, France, and England upon it, in PUBLIC OPINION, Vols. I. and II.

A COPIOUS CLASSIFIED INDEX to facilitate Reference to the above and all other Subjects of General Interest, given with each Volume.

PUBLIC OPINION, Vol. I., from October, 1861, to March, 1862, price 6s. 6d. Vol. II. from April to December, 1862, price 10s. 6d., bound in Cloth. To be obtained through any Newsvendor or Bookseller, or at the Office, 11, Southampton-street, Strand, W.C.

ANNUAL SUBSCRIPTION to PUBLIC OPINION, post free (payable in advance), 13s.; half-yearly, 6s. 6d. Post-office Orders to be made payable to J. K. SHARPE, 11, Southampton-street, Strand, W.C.

PUBLIC OPINION is sold at all Railway Bookstalls, and by all Booksellers and Newsagents throughout the Kingdom. Price 2d., stamped, 3d.

PUBLIC OPINION every SATURDAY, 2d.

OFFICE: 11, SOUTHAMPTON STREET, STRAND.

LONDON: Printed by CHARLES WYMAN, at the Printing Office of Cox & Wyman, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the County of Middlesex; and published, for the Proprietors, by JOHN KELLETT SHARPE, at No. 11, Southampton-street, Strand, in the same County.—SATURDAY, MARCH 14, 1863.

THE HOPES OF POLAND.

SYMPATHY with the Polish race is not confined by any means to the Liberals of the Continent. It has suddenly become the fashion in the most eminent and the most Ultramontane circles. His Holiness the Pope has determined, if such be the will of Heaven, to have one more flirtation with nationalities before he dies, and to bestow the affection which Italy asks in vain upon revolutionary Poland. His example has been followed by his European flock. All over Catholic Christendom, pontiffs, bishops, and clergy follow in the train, executing the most sacred and the most paradoxical of dances in honour of the Poles. The Bourbons have caught the general infection. The Orleanists, or such of them as are penetrated with the spirit of true religion, have done the same. M. Montalembert, after a long seclusion, reappears, missal in hand, among the friends of liberty. His Grace of Orleans comes down from his pulpit where he has been cursing Garibaldi, with his face full of beaming love for the Catholic insurrectionists of Warsaw. In that part of the Tuileries which is sacred to piety and beauty, the effect has been, it is said, of a similar description. Tears have been dropped for Poland in a certain *boudoir*. Nor has Compiègne itself—the golden-sandalled, the bare-armed—forgotten to be moved. At so universal a storm of sympathy the saturnine De Morny shrugs his impassive shoulders all in vain. Poland, for the moment, is the rage. The Church and State unite, for the nonce, to tolerate revolutionary sentiments. The Imperial eagle and the golden lilies join in weeping tears of joy over the once truant and apostate, but now converted, regenerate, and Catholic *drapeau rouge*.

It is enough to turn the head of the "Revolution" to find itself suddenly in the very odour of sanctity, with its banners blessed by the Church and its praises sung by the esquires and ladies of the Court. When Austria is seen adding her contribution to the common fund of goodwill, it is time for Poland to reflect whether there is not something unnatural in all this sudden enthusiasm. M. Kossuth at this crisis appears, in the character and with all the solemnity of a political spectre, to warn the Poles that they are the victims of hallucination. He stretches his bony hand and tells them that the friendship of Austria is fleeting and visionary. It is the skeleton of the Egyptian feast. "I once have trusted Austria," he cries, "and lo! here I lie!" With all possible respect for the present decent intentions of the Austrian Court, it is impossible not to feel that M. Kossuth is right. Austria is, no doubt, to be congratulated on the new-found dignity which forbids her, upon any consideration, to play the part of the Russian police; or to return, in kind, the hideous favours she received at the hand of Russia during the Hungarian Revolution. Nor is it improbable that the indignation which the Vienna Cabinet exhibits at the Prusso-Russian convention is sincere, or at all events permanently assumed. A splendid opportunity has offered itself to them of catching infidel Berlin upon the hip. The chaste German Pallas has been found tripping, and the virtue of Imperial Juno shines out with triumphant austerity. Besides all this, there are many Austrians who would view a resuscitated Polish kingdom with anything but disfavour. Austria would reap advantage from it both as regards her influence in Germany and her relation to Russia. For all that, the Revolution had best not trust Austria. Her statesmen come of a reactionary stock, and she cannot gain territorially by European revolution. The flame of Poland may kindle flames elsewhere, and so long as the Poles are in armed rebellion, Austria cannot but tremble lest her outlying provinces should take advantage of the temporary paralysis of the despotism on her northern frontier. *Paries proximus ardet.* The house of her neighbour is on fire. She may resent the officious interference of the bystanders, and take a malicious pleasure in watching the progress of the conflagration; but it will probably be a relief to her to know that all is over.

For all available purposes, Poland has but England and France to look to in the hour of her emergency. England, when it is a question of making war for an idea, is apt to fight shy. As regards the Continent, we live an isolated life. Their politics touch us but little. Their language is as foreign to us as their habits of thought and action; and there is no common revolutionary instinct which makes our heart vibrate with theirs. England, moreover, is keenly sensitive to the horrors of a war. It is easier to kindle the spark than to know whither the wind will blow it, or in what the blaze will end. The natural impression of a bystander would, in all likelihood, be that Englishmen would never consent to a wild-goose chase after Polish independence. The Lord Mayor may hold his meetings and the public may subscribe their thousands of pounds to assist the wounded Poles; but when it comes to fighting, it may be said the Lord Mayor and public will retire and leave the Poles and the Russians to massacre one another. There is some truth in this view of the English nation. We are a generous, but by no means a Quixotic people; and when we are asked for our money or our life, we prefer giving our money. At this moment the French press accuses us, not without a show of plausibility in the opinion of impartial spectators, of a desire that France should bear the burdens of a Polish war, and that we ourselves should enjoy the privileges of neutrality. For these reasons, it cannot be said that Poland should rest her hopes in England or look for the gleam of British bayonets on Polish soil. As the French said in

Digitized by Google

1831, we cannot get to Warsaw in balloons. On the other hand, it is plain that the misery of the Polish people has made a deep impression on all classes in the country. There is far more excitement and anxiety in their favour than there was in favour of the Italians at the beginning of the campaign in Lombardy. The nation, in a word, is in a state of mind in which an able Ministry might lead it as they chose. Lord Palmerston most probably will not be driven to ulterior measures by the public, should he choose to adopt the *laissez faire* policy that we have adopted recently in foreign politics. But the country will be prepared to follow Lord Palmerston, should he think fit to interfere between the Cossack and his victim. The question, therefore, is, Is it right and expedient that an English ministry should so interfere, and can they interfere safely, honourably, and with reasonable hope of success?

For France the question must present itself in a different shape. The epigram of Madame de Staël has at last come true. Napoleonism is now not merely a man, but a system. The Emperor has a part to play as chief and representative of the French Empire, independent of his personal feelings or his personal ambition. That Napoleon III. is made up of contradictory impulses, of a strange mixture of candour and reserve, of audacity and vacillation, of generosity and calculation, is evident. But those who attempt to scrutinize his conduct from this point of view alone, take but a one-sided view. The Emperor is more than an unusual combination of extravagant and romantic qualities; he is the head, and therefore also the slave, of a system. The Empire has taken upon itself a character to which it must be true, or forfeit half its power. France is the armed missionary of the revolution, of national independence, and of all that the French understand by the complex word civilization. Under this guise she has, within the last ten years, wrapped Europe in two wars, and threatened Europe with more than two. As such she has interfered in all quarters of the habitable globe, and is at present maintaining a large army on the banks of the Tiber and on the heights of Orizaba. The inconsistency would be monstrous if she laid aside the apostle's robe simply because it becomes dangerous to wear it. The French are proud and daring, and those who rule them must be the same. The Emperor cannot afford to seem to pocket an affront, or to bate anything of the immoderate pretensions he himself has raised. Much of the popularity of Imperialism rests upon the fact that the Empire found the French flag trailing on the ground, and has restored it to its old position. To obliterate the memory of Waterloo is the chief and foremost portion of the Imperial programme. By that its authors mean, not so much vengeance on those who humbled France in 1815, as to destroy and trample on the arrangements and agreements in which Waterloo compelled the French people to acquiesce. At that period of universal excitement Europe was at the mercy of the great Powers, and they did with her as they willed. To obliterate Waterloo is to undo all that was done after Waterloo. The restoration of Poland and Italy thus becomes dear to the French nation. They are not simply making war in such a case for an idea; they make war for the sake of satisfying a wounded, and yet an insatiable, pride.

When Louis Napoleon mounted the throne, he brought with him a written programme, to the spirit of which he has since adhered. Its main and leading idea was to break up and render for ever impossible a European coalition, and at the same time to place France once more at the head of the Continent, and in the van of progress. "*Ni la guerre universelle*," he cries, "*ni la paix sans honneur*." The wheel of Fortune has presented him in turn with varied occasions for dissolving confederate Europe into its component parts. The Russian war separated Russia and England, and sowed distrust between Russia and Austria. The Italian for ever severed England and Austria, and made Austria hate the very name of Prussia. A Polish campaign would perhaps complete the cycle. Austria, Prussia, and Russia would henceforward be at enmity; and the two sworn allies, England and Prussia, might be parted. Meanwhile old European reactionary systems—for the Emperor is generous and an idealist—would be passing away. A new Europe would be forming under the tutelage of France. The map of the future would define itself, the coming years would not seem all so dark. Such, perchance, might once have been the full purpose of the great Imperial Dreamer who presides over the councils of the Tuileries; and had it been so, Poland might have hoped. But years are thickening upon them. Age takes away the visions of youth and manhood, and even quenches the fiery purpose of Ambition. The great Duellist stands irresolute. Will he accept the courteous rebuke offered him by the Despot of the North, or will he descend into the plain, and submit to the perilous arbitrament of war? Should he decide on the course most suited to his name and least suited to his years, the conflict may be severe, but the result does not lie in shadow. To doubt that Poland would ultimately be free would be to disbelieve in the bravery of Europe's bravest soldiers, and in the progress of liberty and order.

THE BREAK DOWN OF THE CITY POLICE.

THE City authorities admit that their police arrangements broke down on the Saturday of the Royal reception, and that after this ample warning they broke down again on the following Tuesday evening. They exert all their ingenuity to prove that in the nature of things this must have been. Nor is their reasoning without some force, if we admit the premiss from which they start—the absolute necessity of a Lord Mayor and Corporation, with a force of peace officers under their exclusive control. Unfortunately, in an age which questions everything even this great dignitary and his colleagues may be called upon to show cause why they should exist, or at all events why they should retain their present powers. And it is certainly rather an awkward fact with which to commence the inquiry, that on the two days we have mentioned disorder reigned supreme within their jurisdiction, while order was maintained in the rest of the metropolis. No one who is acquainted with the circumstances will accuse Lord Alfred Paget of exaggeration, when he compared his feelings on approaching Temple Bar to those of arctic navigators who, after having been for some time locked up in icebergs, see in the distance open water. In order to ascertain whether it was really beyond the wisdom of man to prevent the Princess Alexandra from being in the hands of a dense and immovable mass of people at the north end of London Bridge for some twenty minutes, and suffering a like detention in front of the Mansion House; in order to solve the still more serious problem which arises out of the crushing, trampling, suffocating to death of some seven or eight persons on Ludgate-hill and in the Poultry upon the subsequent night,—it is requisite to recall the state of things which, by common agreement, existed on these occasions. In reference to the first, we need do little more than allude to the absolute helplessness of the City police, which compelled her Majesty's chief equerry to "chaff" and coax a way for the royal *cortége* through the good-humoured multitude. The indifference of the subordinates, like "No. 68," who refused to worry himself by assisting to prevent persons hanging upon the very carriage in which the Prince and Princess rode, was well matched by the heedlessness of their chief, who allowed the great centres of attraction to be occupied in such a manner as to preclude the clearance of a proper passage. That morning's crowd was, however, stationary; and no accidents occurred. But to those who could learn wisdom, without its lessons being driven home by fatal casualties, it might have been evident what such a crowd must be, if put in motion through the narrow streets of the City. And yet on the Tuesday night no steps were taken to hinder persons from debouching into the space before the Mansion House from each of the seven streets which meet there; nothing was done to prevent two streams meeting in the Poultry, while other streams flowed in from the thoroughfares on either hand, and vehicles forced a passage through the pedestrians; opposing currents were allowed to set both up and down Ludgate-hill without the slightest direction on the part of the police; the confusion certain to be created in a street of this limited width was aggravated by the multitudes who came over Blackfriars-bridge and down Farringdon-street and pushed their way into or against the body moving either east or west; barriers were nowhere erected to assist the constables in managing the traffic; and the constables themselves were barely discernible here and there in the agitated mass amongst whom they were supposed to keep order.

The reply of the Corporation to the heavy indictment involved in these facts is, first and foremost, the standing answer of all feeble and inefficient men or public bodies

Digitized by Google

when anything goes wrong,—"It couldn't be helped." That it was helped west of Temple Bar, strikes them as a matter of no importance. They fall back at once upon the narrowness of their thoroughfares and the superiority of their attractions, which, they say, collected a greater crowd here than elsewhere. But, at the best, this only proves that the difficulty within was somewhat greater than that without their jurisdiction, and that it required to be met with greater precautions and a stronger force. According to their own account, nothing happened but what might have been foreseen, and therefore provided against. The straitness of these streets must have been obvious to them before, as after, the night of the illuminations. They were not insensible to the probable effect of some at least of the shows they provided. We have not forgotten how they sulked at having to turn up Chancery-lane, or the frankness with which they declared that no one would deign to look at the procession east of Temple Bar, unless Sir G. Grey allowed their Royal Highnesses to be set off by the brilliant escort of the Common Council in cabs. What we complain of is, that knowing all this beforehand, they did nothing to prevent the natural results. A narrow street may be passed through safely by as dense a column as can get into it, if this be not met by another column, or cut into and across from the sides. With a sufficient force of police, it is not impossible to prevent those going one way hustling those going the other, for each set can be compelled to keep its own side of the road. The Lord Mayor and Inspector Foulger are doubtless right in deprecating the erection of barriers, so placed as to obstruct the principal lines of traffic; but that does not prove that at the end of the side streets they would have been useless in preventing cross-currents, or in checking the sudden incursions of "roughs." But it is really quite unnecessary to argue this point, because the conduct of the City authorities on every Lord Mayor's Day settles it, so far as they are concerned. They then always erect barriers in exactly the positions we have described, and evidently with the object for which we contend they are useful. Their foresight was therefore shown by omitting, on an extraordinary occasion, the measures they deem judicious on one of so ordinary a character as the annual municipal procession. We might easily mention other arrangements which would have suggested themselves to an intelligent man at the head of an efficient force. But it is not worth while to inquire further what might have been done, when it is perfectly plain that nothing was done at all. The reason of this is not far to seek. Nothing was done, because nothing could be done with so small a body as the ordinary City police force. Barriers are useless unless you have men to keep them; traffic cannot be regulated unless you have the means of enforcing your regulations. No doubt it was felt by the chief, as well as by the rank and file—to quote Lord A. Paget again—"that they were so few in number that they were completely overwhelmed;" and, in point of fact, "they gave it up as a bad job." But that only raises the really important question, Why were they so few? How was it that, while there was an abundance of efficient police protection west of Temple Bar, any one who went east carried his life in his hand? By this time every one is aware that it was because the City, with its 130,000 inhabitants—about the twentieth part of the population of London—insists upon having a separate corps of a few hundred men, and is thus precluded from drawing, like the neighbouring districts, upon the large reserve which a small army like the metropolitan force can always supply for the wants of any locality where unusual crowds are gathered. The latter is elastic in proportion to the smallness of the area in which extra duty is ever required to be done, compared with that whose usual wants it is calculated to meet. The former cannot adapt itself to emergencies like those in question, because if every man were taken from his beat and transferred to the scene of action they could not cope with the multitudes who then fill the long line of streets which require to be strongly occupied. The civic authorities admit as much, by the plea that their police is adequate to ordinary demands; but that, for one so extraordinary as was lately made they cannot be expected to provide. Some of them, indeed, seem to think this is all that need be said, and that the public will thereupon acquiesce in their fatalistic reasoning, and accept as purely inevitable the slaughter of last Tuesday week.

Their friends in the press are, however, quite aware that this is not the inference likely to be generally drawn. They know that the public expects to be protected when the streets are overcrowded, as well as when they are in their normal condition. Conceding, therefore, that the City force is and must be too small to meet the call which great occasions make upon its strength, these writers urge that it is unnecessary to merge it in the metropolitan body, since their assistance can always be obtained when it is wanted. Why then was it not obtained on the 7th and 10th of the month? Or, rather, why were the offers made by Sir R. Mayne refused? Because, we are told, the Lord Mayor and Corporation were so irritated at the treatment they had received from Sir George Grey, that they determined to stand on their dignity and have no interlopers within their boundaries. If they were not allowed to go to Paddington, the metropolitan police should not come into the City. Some absurd notion of this kind must have prompted their conduct, or they would not have rejected assistance which they accepted under much less trying circumstances,—when the Emperor Napoleon visited Guildhall. But can anything show more strongly how inexpedient it is to leave the order and peace of any part of London at the mercy of men who are thus influenced by pique and vanity? We cannot consent to soothe by human sacrifices the wounded self-love even of a Lord Mayor. After our remonstrances with the King of Dahomey, consistency will not permit us to connive at the City potentate having a "grand custom" of his own, every time that his municipal territory is illuminated. It is time to deprive of power those who have shown that they exercise it without any due sense of responsibility. Apart, indeed, from this, it is most desirable, on general grounds, that the police of the whole metropolis should be under one and the same head. The existence of a small separate jurisdiction in the very midst of the large district over which Sir R. Mayne rules, must necessarily cause embarrassment and delay in the every-day work of the police. The action of two bodies under distinct heads cannot be so well combined or so prompt as that of one force under a single chief. And, as we have already pointed out, it is only by dealing with the metropolitan force as a whole that it is possible to concentrate on a particular district the strength requisite to meet unusual pressure. We are, however, told that although practical convenience would be served by this amalgamation, it is not to be thought of, because it would be a measure of centralization—would in some way or other strike a blow at the sacred principle of local self-government. This seems to us a singularly pedantic objection. What principle is saved by keeping the police of one-twentieth part of the metropolis under a head appointed by an elective body, when a Government functionary rules over that of the other nineteen-twentieths? The theoretical gain, if there be any, is certainly not sufficient to compensate for the practical disadvantage. Besides, it is quite possible to push local self-government too far. It is all very well that a parish should manage its purely parochial affairs; and we do not grudge the City the control of those matters which exclusively concern itself. But in the preservation of peace and the protection of life in the City, every inhabitant of the metropolis is interested; and we may, therefore, refuse to leave these entirely to the discretion of men who have shown that confidence reposed in them is peculiarly ill-placed. The day may perhaps come when London, united in one grand municipality, may see her whole police force under the direction of her elected representatives. But we cannot afford to wait until then for the abolition of the anomalous jurisdiction now exercised by the Lord Mayor and Corporation of London. It has proved itself a nuisance and an obstruction. Its maintenance serves no purpose except to gratify the pride of aldermen and common councillors,—a whistle for which we have already paid far too dearly.

THE DEBATE ON GREECE.

THE discussion this week on the policy of the Government with respect to the vacant throne of Greece was a striking illustration of some of the advantages enjoyed by her Majesty's Opposition for the time being. The loaves and fishes of office are, no doubt, chief among the desires of ambitious politicians, but the shady side of the House has also its pleasures, which they must leave behind when they cross the floor to the Treasury Bench. Revenge is proverbially sweet, and so is the self-complacent criticism of our rival's failures. To express the loftiest sentiments amid the

Digitized by Google

cheers of your party, without the fear of receiving on the morrow a demand for explanations from the indignant representative of a great Power, and of creating a panic on every exchange in Europe,—to pour forth a flood of inspired prophecy after the events predicted,—to condemn the conduct of a government out of the mouth of its own results, without feeling called upon to indicate a different line of conduct which might have averted those and even worse results,—to move and set in order of battle the docile army of propositions furnished by "might, could, would, and should," when your opponent has nought but the comparatively scanty and stubborn array of accomplished facts,—surely these must be keen delights to men not gifted with more than an average share of forbearance and magnanimity.

Brag is a good dog, but Holdfast is better; and so, though argument and eloquence are useful things in politics, they are a mere feather in the balance when weighed in the opposite scale to success. And on Monday night the Government were placed in a disadvantageous position for meeting a discussion on the affairs of Greece, by their hitherto unsuccessful efforts to find an occupant for the undesirable throne of that ill-fated country. For this service they have morally bound themselves to the Greeks; but, as yet, their overtures to one prince after another have been rejected, and the well-wishers of Greece are beginning to fear that discord and anarchy may at length grow out of the long interregnum. For whatever is now amiss in the state of Greece, and for whatever mischief may there be brewing, the English Government, say the Opposition, are responsible; but, for our own part, as we have applauded the conduct of the Government from first to last, so now, notwithstanding their partial failure hitherto, we are still of opinion that they could not wisely have acted otherwise than they have done.

Though Mr. Gregory and others did their best to lead the debate far away from the point, the real gist of the charge made against the Government was, as Mr. Seymour Fitzgerald observed, very simple and narrow. It amounted to this, that after Lord Russell had explicitly told the Greeks that they could not have for their king a Prince connected with the Royal or Imperial family of either of the three Powers, he suddenly altered his tone, and instructed his agents to hold such language as gave the Greeks hopes of obtaining Prince Alfred for their king. This charge was evaded, rather than denied, both by Mr. Layard and Lord Palmerston; and it would be difficult for any candid mind to read the published correspondence without seeing that Lord Russell and Mr. Scarlett, after a time, ceased to tell the Greeks that Prince Alfred could not be allowed to accept their crown. Surely, then, it would have been better and more manly in Lord Palmerston to avow the truth, that this was done to baffle the French and Russian Governments; for, so far are we from thinking with Mr. Fitzgerald that it was "a disingenuous and tricky policy," we hold it to have been a perfectly fair manœuvre in diplomacy. The extraordinary popularity of Prince Alfred in Greece put in our hands a diplomatic weapon of irresistible might against the French and the Russians, and the Government would have been guilty of culpable negligence had they not turned it to the best account. There can be no question that the English Government were from the very first prepared to adhere loyally to the Protocol of 1830, and they expected a like fidelity to solemn engagements from the other two Powers; but when their suspicions were aroused, and they found the Russian Government in league with the French to violate the spirit, if not the letter of the protocol, by securing the throne of Greece for the Duke of Leuchtenberg, they at once drew back and put themselves in a posture of defence. "The long delay" (we quote Lord Russell's despatch of December 3rd) "which took place, the doubtful language of Prince Gortchakoff when Lord Napier asked whether the Duke of Leuchtenberg belonged to the Imperial family, and other circumstances, gave rise to the suspicion that the intention of Russia has been all along, in the first place, to exclude Prince Alfred, and, in the second place, to support the Prince Romanoffsky as the choice of Greece; or, at all events, Prince Alfred being removed from the scene without any corresponding stipulation on the part of Russia, Prince Romanoffsky might then have been put forward with every chance of success." Ample proofs of "the shuffling and evasion" with which Lord Palmerston charged the Russian Government are to be found in the correspondence. Mr. Fitzgerald had no words of condemnation for the Cabinet of St. Petersburg; but could any subterfuge be more contemptible than Prince Gortchakoff's "judicial" doubts about the exclusion of the Duke of Leuchtenberg by the terms of the protocol? For the Russian Minister must have known all along that the Duke of Leuchtenberg was not only the grandson of the Emperor Nicholas, but that he had been made a member of the Imperial family by a special ukase, and that his name was included in the official list for 1862 of the Imperial family of Russia. Well might Lord Russell drily say, "the judicial doubt raised by Prince Gortchakoff, and repeated by Count Bloudoff, seems at length to have been resolved by the unbought popularity of Prince Alfred, and the determination of the British Government that the protocol should not hold good for excluding an English Prince, and be deemed invalid for excluding a Russian." It is easy to imagine the taunts and invectives of which the opposition would have been lavish, if Lord Russell had suffered the Duke of Leuchtenberg to escape through the meshes of a diplomatic net, which had caught Prince Alfred. But, says that strenuous and daring statesman, Lord John Manners, it was the duty of the Government to stop the election of Prince Alfred, and then, if the occasion arose, "to proclaim boldly and manfully that England would not accept or respect the election of Prince Romanoffsky." This is all very well, now, for a would-be Cabinet Minister; but let us suppose that the English Government had suffered the exclusion of Prince Alfred without an express exclusion also of the Duke of Leuchtenberg, and that the Russian Government, acting in concert with the French, had thereupon secured the election of the Duke of Leuchtenberg. We should then have been compelled to hurl remonstrance and menace in the teeth of the French and the Russians united; and supposing our opposition to the election of the Duke of Leuchtenberg had been successful, half Europe would have rung with denunciations of selfish and perfidious Albion, who had exposed the Greeks to the perils of anarchy by withholding from them the king of their choice, the man after their own heart. Whereas all these dangers were quietly put aside by the simple device of letting the Russians see that the Duke of Leuchtenberg was out of the field, so long as the Greeks had the faintest hope of inducing Prince Alfred to be their king.

It may, however, be said that this was shabby treatment of the Greeks, and that it was immoral to cheat them with false hopes for the purpose of checkmating a Russian intrigue, but for our own part we do not believe that practically the position of Greece has been made one whit the worse by the policy of England. There is not the smallest reason to suppose that the Greeks would have been deterred from electing Prince Alfred if an English agent had been posted at every polling-place to tell them that the Prince could not and would not accept their throne. They had set their hearts upon him, and they would think of none other. They made no disguise of the conviction that their stedfast will would triumph over diplomatic objections. "We know," said the National Guard to Mr. Elliot, "that there is a certain protocol which places an obstacle in the way of the realization of our wishes, but our act is Divine, for it is called the voice of God—'Vox populi vox Dei;' and who is he among human beings who will assume the responsibility of gainsaying the voice of God? We will persist, then, till our prayers are granted." No one, moreover, has yet ventured to complain, on behalf of the Greeks, that their chances of obtaining a king have been in any degree diminished by the fruitless election of Prince Alfred; and surely it is not for Englishmen to lament that an intelligent people, with a glorious past, have had an opportunity of marking their admiration both for constitutional government and the reigning dynasty of this country. Thus, a little diplomatic reticence did us a vast deal of good, while it did the Greeks no harm.

THE GAME LAWS.

THE House of Commons has maintained the reputation which it acquired last session, as a collection of determined game preservers. Smarting under the organized gangs of poachers, the senatorial sportsmen passed an Act by which the police have been converted into gamekeepers, and persons are practically obliged to account for being in possession of game. All inquiry into the facts which were supposed to justify this measure was denied—there was no evidence

Digitized by Google

except that of some constables upon which its introduction was justified. The country gentlemen and the rich manufacturing sportsmen were determined to have their own way, and they had it in spite of the opposition of the Government and in spite of the strong arguments against such a course.

It was very amiable of Mr. Forster to propose the appointment of a committee to inquire into the mode in which the Act had worked. But the victorious squires had no notion of surrendering what they had just won. Indeed, it was only with great difficulty and amidst the uproar of those around that even the Home Secretary could obtain a hearing. Mr. Forster was defeated; and although the defeat was inevitable, it serves to show the temper of the present House of Commons and the elements of which it is composed. That there were good grounds for inquiry, it is impossible to doubt. According to Sir George Grey, a large proportion of the crime of the country is connected with the Game Laws, and there is a great and continuous increase in that class of crime. The number of persons proceeded against before the magistrates during the year 1857 for trespassing in the daytime in the pursuit of game was 3,567, and for night poaching 1,883; in all, 5,534 summarily charged with offences against the Game Laws. In the year 1861, the last year for which the returns are complete, there were 8,563 persons summarily charged before the magistrates for this class of offences, of whom 7,007 were convicted. The number of game cases brought before the magistrates in 1862 was no less than 10,135. Thus in six years there has been an increase of from 5,534 to 10,135 cases before the magistrates; nor does this include the heavier class of cases under the Night Poaching Act which are sent to the assizes. Now one of the main grounds upon which the committee was granted in 1845, was the connection between the Game Laws and the general crime of the country. And if in six years this class of crime has actually doubled, the same reason applies now with redoubled force.

The truth is that no legislature has any moral right to declare any act to be criminal which is not regarded as criminal by the mass of the people. The only effect of such legislation can be to demoralize our workpeople and to convert tolerably honest men into blackguards. Surely poaching is not worse than adultery or seduction. The peace of families is not less worth preserving than pheasants and partridges. These violations of morality are civil wrongs to be punished by damages in a civil action. But there is neither any rule of law nor any Act of Parliament which punishes them as crimes. On the contrary, they neither incapacitate a man from a seat in Parliament, from a place at the Board of Admiralty, or from filling some of the highest offices of the State. Even if the House of Commons were filled with immaculate angels, it would be unwise to alter the nature of such social offences, because the members of society would not sympathise with the severity of the law. If Parliament were filled with men who really cared for the labouring classes, or with labouring men themselves, the law of last session would never have been passed, because they would never have been brought to regard poaching as a crime. And the only reason why these laws are now maintained, is because the majority of the House of Commons are, in this case, bent upon gratifying their own selfish wishes, and care little for the welfare of their fellow-citizens in the lower ranks of society. Not only is the present Game Law too severe for the general sense of the public, but it does not accomplish its purpose. The real cause of the enormous increase in the number of poaching charges and of poaching gangs is to be found in *over-preserving*. In some counties there is none of that lawless spirit of cupidity which, as in Cheshire especially, induces great gangs to sally out armed at night in order to take game. How is this? Is it that in the counties where crime is rife there is an excess of game-preserving, whilst in those counties in which it is not so, game is preserved only to a moderate extent? However this be, the result of this inquiry would throw considerable light upon the policy of maintaining or extending the Game Laws.

Some men, struck by the admission that game is not property, and yet that attempts are continually made to protect it as property, insist that until this anomaly is got rid of the Game Law must be unsatisfactory. It is argued that pheasants and hares which are reared and fed upon a man's land are just as much his property as his fowls and dogs, and that the person who steals the one sort of property ought to be punished just as a man who steals the other sort. It is true that game has never been looked upon in this light; but then it is answered that game has never been considered of so much value. Perhaps, say the senatorial sportsmen, there is a difficulty about identifying a pheasant or a partridge which has been bred on a particular estate; but then they reply there is the same difficulty in identifying sovereigns and bank-notes. Nevertheless, it is obvious enough that the difficulty of identification is almost conclusive against the idea of making game property. Game is not like sheep or domestic fowls, or even money, because it has never been reduced into possession. If the man upon whose property a pheasant is bred is to possess a permanent property in that pheasant, it would become necessary in every poaching case to show where the bird was hatched. This, as it seems to us, would be practically impossible; and the difficulty of furnishing strict legal proof would compel magistrates and juries to stretch a point against the poacher. On the other hand, if the person upon whose land the pheasant is found is to have a special property in the bird, then there is no reason for any change in the old law.

The ground upon which a property in game is claimed is because of the trouble and expense to which land-owners have been put in rearing and feeding the game. But if the property is to be vested in those upon whose land the game is found, and not upon the land where it was reared, it is clear that the whole argument in favour of having a property in game must be abandoned. Nor is this all. Even if game were like money or cattle in its nature, it ought not to be protected at the public expense more than other commodities. If any man chose to strew Pall Mall with sovereigns, or if Messrs. Garrard or Hunt & Roskell were to allow their stores of jewels to remain open all night, Sir Richard Mayne would be perfectly justified in refusing to increase the number of his police officers, in shutting up the shops in question, and in carrying the distributor of sovereigns to a lunatic asylum. Proprietors must co-operate with the governing powers in protecting their property. And those who expose goods of enormous value, and thus excite the cupidity of their neighbours, must be allowed to do it at their own risk, and not, as is the case under the new Poaching Act, at the expense of the public.

OBSTINATE BELLIGERENTS.

WAR is a course of action which, *primâ facie*, requires an apology. Any war needs for its justification a definite object, and a reasonable prospect of success. A great war, a sanguinary war, a war on a gigantic scale, needs for its justification not only a well-defined but an attainable aim, not only a great purpose but a righteous one,—an object adequate in its magnitude, its desirableness, and its defensibility, to the blood that is shed, the treasure that is wasted, the suffering that is inflicted, the wealth that is destroyed, and the demoralization that is entailed. The original cause of the war may have been just, but the war may still be criminal if the bone of contention be very small, and the cost in men and money be very great. The object of the combatants may be of vast importance, and well worth a struggle; but nevertheless, if success be hopeless, the guilt of those who continue the struggle becomes manifest and heavy. Now, tried by any or by all of these principles, the persistence of the North in their endeavours to subjugate the South is clearly indefensible and wrong.

We may readily concede that at the outset the Federalists were justified, from their own point of view, in saying, "The dissolution of the Union is so great an evil, and so terrible a blow to the greatness of our country, that we prefer trying all the hazards of a civil conflict to tamely accepting such a catastrophe." We do not agree with them; but they might well think this honestly, and were therefore warrantable in acting accordingly. But having tried and failed—having found the task incomparably more difficult than they anticipated—having fought for two years, and raised two armies, and yet made no approach to the desiderated aim—the very grounds of their argument are cut from under them, and their obstinacy stands self-condemned. For not only has the preservation or restoration of the Union become, month by month, more utterly and obviously impossible, but the war itself has proved a greater blow to the grandeur, and a more complete sap to the strength of the country, than the dissolution itself could be. It becomes clearer and clearer that the subjugation of

Digitized by Google

the South—even if any politician capable of weighing means, and facts, and chances, deemed it within the limits of sane anticipation—would not restore the Union, in any sense or shape in which such Union could be a source of either power or grandeur, since the intense animosity felt by the Secessionists to their foes, and now pretty well reciprocated by the Federalists, would render them far more formidable enemies, far more fatal elements, if re-incorporated, than if independent and outside. It would not be easy to picture to ourselves the degree of weakness for external action and of disturbance, suspicion, and danger within, to which the United States would be reduced, if the result of the war were so far favourable to the North as to impose upon that section the task of permanently keeping down, under Republican or quasi-Republican institutions, eight millions of fierce, exasperated, humiliated fellow-citizens, rendered still more ferocious and despairing by the disorganization of their daily life and industry which must follow upon the forcible and (so to speak) *penal* emancipation of their negro labouring class. The war, therefore, being no longer waged for an object which is at once distinct and attainable, has become a crime on the part of those with whom the question of its continuance or cessation rests.

Again. At the commencement of the conflict and before as yet any actual blow had been struck, all the most able and eminent statesmen of the Republic took a very clear and unassailable position. They avowed that, according to the fundamental principles on which the Governments of America were framed, if the people of the Seceding States really and unanimously, or by a considerable and indisputable majority, wished to leave the Union, the other States had neither the power nor the right to retain them by force; and that it would be at once suicidal, hopeless, and unjust to attempt it. This was the language, as we well remember, and as Mr. Russell's "Diary" has lately recalled to the world, of Mr. Seward, as well as of every other leading politician of the least weight and reputation. But they declared, at the same time, that they were satisfied that the majority in the South were in favour of remaining in the Union; that this party were coerced by a tyrannical and overbearing minority who had got the reins of Government into their own hands, and prevented any free or fair expression of public opinion. It was to liberate this silenced and cowed majority, to give this fancied section the means and the opportunity of speaking out, of organizing themselves, of asserting their freedom and their views, that the war was professedly commenced. "You will see," was the cry, "that as soon as our fleets and armies penetrate into the Southern States, all these loyal citizens will flock to our standard, repeal the Secession ordinances, and dissolve and disperse all these pseudo-Congresses and illegal Conventions, and the Union will be at once restored." Well, the experiment has been tried, and no one pretends now to doubt the result. There is *no* Union party in the South, and only a very modified one even in the Border States. The few, or the many, who, before Mr. Lincoln's warlike proclamation and first levy of 75,000 men, were opposed to Secession, soon disappeared, or became as vehement Secessionists as Jefferson Davis or Mr. Benjamin; and each succeeding month and every fresh opportunity of expression has brought to light a degree of unanimity of hatred and determination such as has scarcely been paralleled, except when Prussia rose against Napoleon, or when France, in 1792, conceived herself menaced with invasion by the Continental despots. On the very principles and showing of these Federal statesmen, therefore, they ought to abandon the war as no longer justifiable on any plea whatever; for the moment it ceased to be an attempt to enable the suppressed Unionists of the South to show their strength and avow their sentiments, it became an endeavour to suppress and enslave the Secessionist majority. No one now doubts that if the South were polled by the freest and most honest ballot, the result would show an almost or altogether unanimous vote in favour of total separation and independence; and no Federal politician dares to put the question on that issue. They are fighting, therefore, not to free the coerced Unionists, but to coerce the unanimous and ardent Secessionists; and there is no *American* doctrine on which such a fight can be defended. But those who saw clearly and justly in 1861 have become blinded by their exasperated passions in 1863, and have forgotten their old position.

The South, then, it is now almost universally admitted, cannot be forced back into the Union, and would be useless and worse than useless, if it could; a source of weakness, not an element of strength. The object, therefore, which in a certain sense warranted the war at first—or, at least, made the attempt worth while—cannot now be put forth as the justification for its continuance. But there is more than this. It is becoming abundantly evident that those very interests of the Union, which dictated, or were supposed to dictate, the war at first, now as peremptorily forbid its longer prolongation. Many Americans defended their resolution to bring back their "wayward sisters" by compulsion, on the plea that if they were suffered to go, others would follow the example, and that the first secession would not be the last. They fought to prevent the *further* disintegration of the Union—or, at least, they said they did, and the plea was admitted to be a strong and plausible one. But it now appears—and each successive mail seems to make it plainer—that the continuance of the war, the methods by which it is being carried on, the policy which it is developing, and the measures to which its exigencies compel the Federal Government to have recourse, are fast preparing that further disintegration, that second secession, which were so much feared. The Border States, though originally they desired the preservation of the Union, have, as we well know, far stronger sympathies with the South than with the North. Slavery, and the character which that institution developes, make them far more in harmony with the Confederates than with the Federals; and it is becoming probable that as soon as they are free to choose, their hesitation will not be as to which party they should join, but whether they will join either, and whether they had not better form a distinct confederacy of their own. The South-Western States, moreover, have given some warning intimations that they have elements and ideas of secession fermenting within them, and Illinois and Ohio in particular are little disposed to submit to the dictation of New England and New York, or to permit their interests to be trampled under foot or their citizens to be sacrificed in order to carry out the plans and crotchets of a party Government at Washington. They dislike slavery, and they insist upon the free and equal navigation of their great common artery; but they are not fanatical abolitionists like the men of Maine and Massachusetts, and they are weary of the bloodshed and disorganization consequent on a series of fruitless and bungling campaigns. If the war were to terminate now, there might be formed two powerful nations on the American Continent, each of which would have a grand future open before it. If the war continues much longer, it may well end in the creation of three or four confederacies—of which that of the New England States will assuredly not be the most populous, the most fertile, nor the most powerful. They should consider this very probable contingency in time.

THE POSITION AND PROSPECTS OF VOLUNTEERING.

SIR GEORGE LEWIS'S new Volunteer Act will soon be in the hands of the House of Commons, and the time is favourable for taking stock of the position and probable future of the Volunteer force, who by this Act are to be put on a more defined and regular basis, and are to be acknowledged as a permanent institution of the country. Originating in a moment of panic, and looked upon at first as a temporary resource, the system is now seen to be thoroughly suited to the genius of the nation, and all are agreed that it must be kept on foot were it only for the purpose of preventing panic for the future. Indeed, the Volunteers may be considered as a luxury which we have got accustomed to; and just as Sam Slick found that, wherever he left one of his clocks for a month on trial, it became a necessary of life, and was sure to be paid for when he called for it at the end of that time; so now "human nature" requires that we should pay what forfeit may be necessary in order not to lose our "third line of defence." Already the nation has been drawn on some way in this direction. First ten per cent. of the rifles, then all the rifles,—then ammunition, adjutants, drill instructors, have been given by the War Office. But still the Volunteer corps, like a legion of Oliver Twists, opened their mouths, and asked for more; till the Volunteer Commission was appointed to decide in effect the question, for how much the fee simple of the Volunteers might be bought; at what price the Government might hope to keep up their numbers at the present point, so as to increase the efficiency and not

Digitized by Google

to interfere with the general character of the force. Of the witnesses examined nearly all earnestly asked for further aid, for pecuniary aid; and all persons, Commission, witnesses, and public, are quite agreed that finality should be the object aimed at; that a settlement should be made, once for all, of the claims of the Volunteers; that they should be admitted into the Estimates on a recognized system, and that no hope should be held out to them of getting anything more.

That the Volunteers do require further aid may be taken as admitted. The captain of a corps in the rich suburban district about Harrow, and one commander of a country corps in Sussex, whose affairs seem to have been managed with unusual judgment and economy, told the Commission that they could do without it. But these are exceptional cases; and if such corps as these will not be the better for the aid proposed, they will scarcely be the worse for it. On the other hand, the evidence was overwhelming to show that, without aid, especially in clothing, very great efforts would be necessary everywhere to keep the force at all on its present footing, and that many of its most valuable portions, as for instance the artisan corps of Glasgow and other places, must infallibly fall to pieces. The country has scarcely a right to call on Volunteer officers for such efforts as in some places they are making, for what is, after all, a national purpose, even if it were likely that such efforts could continue. In one great English town, it is said, the method of obtaining new uniforms is as follows. The Volunteer, when he finds his uniform getting shabby, absents himself from drill. On remonstrance from his captain, he informs him that he regrets his inability to attend, but that his uniform is not fit to appear in; upon which the captain writes back to say that if the Volunteer will call at a certain tailor's, he will be measured and supplied with a new uniform, of course at the captain's expense. This state of things is scarcely desirable, and must soon end. On the other hand, the proposed extra vote of £200,000 for Volunteers, a mere drop in the ocean of the army estimates, will relieve many zealous supporters of the movement, and will be felt as a burden by nobody.

There seems little reason to doubt that the form of aid proposed, that of a capitation grant, to be applied to certain purposes by the commanding officer at his discretion, will prove the best form which could have been adopted. This system, applied by Government to schools with success, has nevertheless found strong objectors in the case of the Volunteers. Yet the cases are very nearly parallel. If a school produces a certain number of boys trained in a certain way, each boy having attended so many times, and can satisfy a Government inspector, you give so much public money in aid of the school, calculated upon the number of boys trained. By a complete analogy, if a Volunteer corps can muster a certain number of men trained as per regulation, with so many attendances each, and who satisfy a Government inspector, you may fairly give it a sum of money calculated upon the number of Volunteers trained. The principle is precisely the same,—aid to voluntary effort in a matter in which the State is interested, and payment by results. The confusion has arisen from mixing up the idea of payment of £1 per head to the managers and supporters of Volunteer corps for each man drilled, with payment of £1 per head to each man drilled. This is what no one has for a moment thought of proposing. But even this, at which we all hold up our hands in horror now, is no more than is contemplated by the old Volunteer Act, under which the present Volunteers are raised; and the Volunteers of the war against Napoleon were regularly paid as soldiers are, whenever they assembled for drill and training. Moreover, the existing Act gave exemption from the hair-powder tax, then a real exemption from a tax of over £1 a year certainly to many, and probably to all Volunteers; and exemption from the Militia ballot, then an important privilege, now a dead letter. The only public privilege the modern Volunteer enjoys is that of passing a toll-gate when in uniform for nothing. Besides these exemptions, and their pay when called out, it appears from a War Office return appended to the Blue-book, that the old Volunteers received a free outfit, a clothing allowance of £1 per man every three years, and 6s. 8d. per head per annum for repair of arms; and that their average cost per man per annum was £4, exclusive of arms and ammunition.

In view of these advantages enjoyed by the old Volunteers, some of the witnesses before the Commission suggested that some really valuable exemptions should be extended to the Volunteers of the present day; that the horse-tax or the dog-tax at his option should be remitted to an effective Volunteer, and even that he should be exempted from serving on juries. We may even hear, if Mr. Walpole should be again at the Home Office, that it is proposed to confer the elective franchise upon the Volunteers. They certainly are fitter for it as a class than the Militia. It is not, of course, probable that Parliament really will grant any new exemption to the Volunteers, because there is now no tax which belongs to and affects volunteering as the hair-powder tax would have affected the old Volunteers whenever they dressed for parade, and as the horse-tax would affect the Yeomanry.

On the whole, the recommendations are wise, and it is to be hoped the Act may pretty closely follow them. But there are points on which much caution will be required, especially in dealing with the constitution of administrative battalions. These are a necessary innovation of the War Office in the last few years, and are not contemplated by the old Act. Colonel M'Murdo, indeed, in his evidence before the Commissioners, treats them as entirely provisional, and holds that in case of invasion almost every one of the corps composing them would become the nucleus of a separate battalion. But whether this be probable or not, it is very desirable that their present organization should be made as efficient as possible; and we hope the Government will deal satisfactorily with this knotty point of the modern Volunteer question.

But are the Volunteers worth all this expenditure? Adam Smith somewhere says that for a people to be untrained to arms is as disgraceful as for a man to be effeminate or emasculate. And surely in modern, as in ancient times, it may well be thought the duty of the State to promote the physical as well as the moral training of its inhabitants. It is no small thing to have, in case of invasion, 160,000 men well-armed, tolerably trained, subject to martial law, and organised in companies and battalions. But whatever would be the worth of the Volunteers if called on to face an enemy, at least they have given confidence, prevented panic, taken away our reproach as a shop-keeping nation, utilized in some degree for warlike purposes those sturdy and laborious classes whom, otherwise, nothing but the conscription or the Militia ballot could ever have touched. Rifle shooting steadily extends and improves. We have, and as long as volunteering continues we are sure to have, the best rifles, rifle instructors, and shots in the world; and our schools of musketry have been raised from mere army into national institutions. We have lately seen what the Volunteers are as part of a great national pageant or festivity. Again, the effect of volunteering upon the habits of all classes has been excellent: a sergeant in the London Scottish, himself a jobbing workman, actually declared, in his evidence before the Commission, that he considers "that a man who is a Volunteer is worth, in money value, 3s. a week more to a jobbing master than a man who is not." The proportion of town to country population every day grows larger; and if the Volunteer movement can be consolidated by Government help, the town corps, admitted to be the most valuable, should year by year steadily increase. Every great centre of population, where wealth most tempts invasion, would have its own citizen army, which, if invasion threatened, could meet and train in brigades and divisions without deserting their usual occupations. Bristol, Liverpool, Brighton, London, can concentrate with ease their 5,000, 10,000, 15,000, or 20,000 men; and what is done now for purposes of mere amusement and holiday making, is but a small measure of what would surely be accomplished, if patriotism called for it and the country really needed it.

THE REVIEWERS REVIEWED.

Our highly-instructed contemporary, the *Saturday Review*, after having devoted no less than four elaborate articles to the unqualified glorification of Mr. Kinglake's "History of the Crimean War," has now undertaken the difficult task of keeping that gentleman's reviewers in order. In what might fairly be supposed, from the nature of the authorities quoted in it, to be a *communiqué* from the historian himself, the *Saturday Review* attempted last week to meet a portion of the numerous objections which have been urged against the prejudiced and passionate gossip upon which Mr. Kinglake has founded many of his most telling slanders; and it has announced the probability that, in future numbers, further

Digitized by Google

efforts will be made by it in the same direction. In a word, the *Saturday Review* has constituted itself Mr. Kinglake's official organ.

We are pleased to see that our highly-instructed contemporary has not accepted this onerous appointment without serious misgivings. He cautiously withdraws the entire confidence and admiration which he had previously expressed in the accuracy of Mr. Kinglake's facts, and in the justice and moderation of his sentiments, and now warns the public that henceforward he by no means pledges himself to all the details, much less to all the expressions of opinion which the History contains. All that he purposes to attempt is modestly to show that, "in having accepted Mr. Kinglake's book as history, he has not been as credulous or as precipitate as some of his contemporaries would make him out to have been." But an arrangement of this kind has its defects as well as its obvious advantages. If the *Saturday Review* is to be Mr. Kinglake's official organ for the future, its writers must unquestionably have free access to the reserved authorities upon which any disputed statements are supposed to be founded, otherwise it can hardly do effective battle in its client's behalf. Now, we will undertake to say that few persons can have read the preface prefixed to the History of the War without entertaining strong doubts whether Lord Raglan's representatives are justified in having handed over that nobleman's private and confidential papers, as they are stated to have done, to an extraordinarily violent partizan, to be utilized as his indiscretion or his passions may dictate. Mr. Kinglake tells us that the papers thus placed at his mercy comprise "not only all the military reports which were from time to time addressed to the Commander of the English army by the generals and other officers serving under him (including the holograph assertions of the part they had taken in the battles), but also Lord Raglan's official and private correspondence with sovereigns and their ambassadors, with ministers, generals, and admirals; with the French, with the Turks, with the Sardinians; with public men, and official functionaries of all sorts and conditions; with adventurers, with men propounding wild schemes, with dear and faithful friends." The entire secrets of the campaign appear to have been thus laid open to Mr. Kinglake, from "the strategic plans of the much contriving Emperor, still carrying the odour of the Havannahs which aid the ingenuity of the Tuileries," to "the rival schemes of the enthusiastic nosologist who advised that the Russians should be destroyed by the action of malaria; the elaborate proposal of the English general who submitted a plan for taking Sebastopol with bows and arrows; the hurried scrawls of commanders writing to their chief under deep emotion." In our humble opinion, the only party to whom this mass of most secret and strictly confidential matter ought with propriety to have been confided was the Government by whom Lord Raglan had been employed. It is clear that any subsequent misuse or abuse of such delicate materials might seriously discredit and embroil this country with her allies; might stamp with undeserved infamy the memory of the gallant dead; or might blight the professional reputation, or ruin the private characters of living men. Nevertheless, we are told that Lord Raglan's representatives have thought fit to hand over all these papers to Mr. Kinglake to deal with as he thinks fit, laying no restrictions upon him of any kind. The trust is indeed an important one; and one which should be scrupulously and delicately discharged. Documents such as those in Mr. Kinglake's possession ought to be carefully guarded and conscientiously handled; they ought neither to be hawked about the clubs and *coteries* of London by garrulous and over-officious quidnuncs, nor ought they, as we fear they have been, to be placed at the disposal of even such discreet and amiable commentators as the practitioners of the *Saturday Review*.

We say this, because we find, in last week's impression of that paper, a passage quoted from a private letter of Lord Raglan, which has not yet been given to the public, and which we therefore conclude forms a portion of the secret and confidential papers entrusted by Lady Raglan to Mr. Kinglake, and to Mr. Kinglake alone. If the letter in question was a letter fit to be published at all, it ought surely to have appeared unmutilated in Mr. Kinglake's work; and we cannot but consider it somewhat indecent, that papers handed to that gentleman for serious historical purposes, should, with his sanction, thus be doled out to the public piecemeal by professional controversialists. If Mr. Kinglake is himself the author of the article in question, our strictures are of course at once deprived of their point; but until we have positive evidence of that fact, we shall prefer supposing that it has emanated from the incapable pen of some indiscreet friend.

The disputed points to which the Reviewer, whoever he may be, has chiefly adverted, are—the alleged misplacement of the buoy by the French, and the imputations on the French Emperor's personal courage, in which Mr. Kinglake is asserted to have indulged.

The Reviewer considers that he triumphantly establishes the fraudulent misplacement of the buoy, by citing an isolated paragraph from an unpublished letter of Lord Raglan, which seems to state that when the *Agamemnon* came upon the buoy at daylight, Lord Lyons "found that the French naval officer had deposited it at the extreme northern end of the beach, and had thus engrossed the whole of the bay for the operations of the French army."

The Reviewer does not pretend to consider this testimony as conclusive, inasmuch as it was not Lord Lyons, but his flag-captain—Mends—who had been entrusted with the practical arrangement of the disembarkation, and who knew exactly where the buoy ought to have been placed. But he conceives it to be of sufficient importance to entitle him to crow with considerable shrillness over the *Times* and other critics, who have pooh-poohed Mr. Kinglake's absurd hypothesis, that the trick was designedly played by the French, in order to bring the expedition, of which they disapproved, to a premature and disastrous end. "When Captain Mends comes forward," says the Reviewer, "we shall know the truth."

Well, it happens, curiously enough, that Captain Mends has come forward, and has had his say on this point at considerable length, although neither Mr. Kinglake nor his exponent in the *Saturday Review* appears to be aware of the fact. In the *Journal of the Operations conducted by the Corps of Royal Engineers, published in* 1859, *by order of the Secretary of State for War*, Vol. i., p. 264, is to be found a report of the landing of the English army, by Captain Mends, "the officer who designed and had the charge of the arrangements for the disembarkation of the troops." Captain Mends gives a detailed account of these arrangements, accompanied by numerous carefully prepared diagrams, and states that the operations were accomplished with the most perfect order and success, and with no other *contretemps* than what was occasioned by heavy weather:—

"On the morning of the 14th," writes Captain Mends, "the *Agamemnon*, *Sanspareil*, and *Spitfire*, steam tug-boats and transports, anchored at 6.50 a.m., abreast of the strip of beach which separates lake Kamishly from the sea, known on the charts as Old Fort, as did the French and Turkish fleets about the same time a little further south. *Owing to the circumstance of no enemy appearing to oppose the landing of the troops, the original arrangements were, to a considerable extent, departed from.* The French, on discovering the absence of an enemy, commenced disembarking their troops at 7 a.m., before the British ships of war, excepting those named above, and some few of the transports, had taken up their appointed stations. Lord Raglan (who by this time had come on board the *Agamemnon* from the *Caradoc*), Sir Edmund Lyons, and Sir George Brown, after a short deliberation, decided that the signal should be made to land," &c. &c.

A little further on Captain Mends says:—"The disembarkation occupied four days. Our allies, the French, having commenced landing before we did, and having a smaller number of men and no cavalry, completed the operation before us. On the evening of the 16th a French steamer towed alongside the *Agamemnon* six *chalandes*, placing them at our disposal in case we needed them; an act of courtesy that was duly acknowledged." And this is positively all that Captain Mends says in his report as to the conduct or misconduct of the French during the disembarkation of the armies at Old Fort. It is very singular that Mr. Kinglake should not have come across Captain Mends' report during the nine years which he has employed in collecting materials for his history; if he had, it is presumable that we should have heard nothing of this "profoundly designed scheme of the French to bring the enterprise to a premature conclusion by displacing the buoy, and thus criminally creating a scene of ruinous confusion, which would have mixed up our troops with the French, and have ended in angry and violent conflict between the forces of the Allies." Nor would there, in that case, have been any occasion to tell us that "Lyons, moving before dawn in the sleepless *Agamemnon*, saw where the buoy had been placed by the French in the night-time, and gathered in an instant the perilous import of the change. He was more than a mere performer of duty, for he was a man driving under a passionate force of purpose." Therefore, seeing an equally good beach to land upon a few hundred yards lower down, this wonderful man is stated by Mr. Kinglake to have actually landed the English troops upon it, and thus to have saved our army, and baffled the sinister machinations of our infamous allies! And this he is said to have done so quietly and secretly, that even Captain Mends—upon whom all the arrangements of the disembarkation devolved, and who subsequently made the detailed report from which we have quoted—never knew anything about the perils

Digitized by Google

which the expedition had thus escaped, until Mr. Kinglake's book was published a few weeks ago!

The other point on which Mr. Kinglake has been arraigned before the bar of public opinion is the ignoble charge of personal cowardice which he has, not directly made, but persistently insinuated, against the Emperor of the French. The Reviewer flatly denies that Mr. Kinglake has ever made any such charge, and quotes a passage from the History, which we admit contains no charge of the kind. But this sort of defence is but a poor imitation of that made by the Irish prisoner, who considered that he had satisfactorily rebutted the evidence of two credible witnesses who had seen him commit a murder, by producing four other equally credible witnesses who were ready to swear that they had not seen him commit it. When a writer states that a General at the head of an army turns green when exposed to personal danger, and becomes incapable of giving either coherent or useful orders, we conceive that we may affirm, without fear of contradiction, that that writer has accused the General of personal cowardice. And this Mr. Kinglake has said of the French Emperor. The Reviewer, having energetically denied that Mr. Kinglake has accused Louis Napoleon of poltroonery at all, simply enough adds that he has evidence to adduce in support of what Mr. Kinglake has not said of him, viz., that he is a poltroon. And his evidence turns out to be that of one Kirwan, a barrister, who deposes that he was at Boulogne in 1840, when the Emperor landed there, and that he was there acquainted with a market-woman, of Bonapartist principles, who was in the habit of affirming that Napoleon was *un poltron*, and *un faux brave*, and who professed to be greatly scandalized at his appearance because he had the colour and complexion "*d'une feuille morte*." The Saturday Reviewer considers "that this expression exactly confirms one of Mr. Kinglake's most graphic touches, the accuracy of which has been especially called in question."

Now, if Mr. Kinglake, as the Reviewer declares, has brought no charge of poltroonery against the French Emperor, we cannot for the life of us perceive what this rigmarole story about an Irish barrister's acquaintance with a French *poissarde* of Bonapartist principles, who was in the habit of calling Louis Napoleon scurrilous names, has to do with the argument; nor do we see that the fact of a Mr. Kirwan, an entirely obscure and unknown person, having given permission to the Reviewer to mention an absurd piece of worthless gossip, and to give his name, enhances anything but the ridicule which ought to attach itself to an historian who is so gullible as to mistake such rotten chaff for good grain.

Mr. Kinglake has thought fit to question the truth of the description given by the *Moniteur* of the personal danger to which the French Emperor was exposed at Solferino, on the ground that but one of his staff and escort was wounded on that occasion. He states that "all these horsemen covered altogether a good deal of ground, ground as broad and long as many a whole street; and if they had really intruded themselves into any part of the field where there was what might be called 'fighting,' then, humanly speaking, they must have undergone dreadful carnage. It so happened, however, that of all this acreage of horsemen, not one was killed, and but one wounded." The Reviewer, on what authority we know not, states the exact number of the Emperor's staff and escort at Solferino to have been 250. Assuming the statement to be exact, we must remark that if either Mr. Kinglake or his exponent had been military men, they would have known that 250 horsemen do not cover ground as broad and as long as many a whole street, and that the entire acreage which they would have covered would have been something less than a quarter of an acre. They would have known, too, that a General taking his staff with him under fire for purposes of observation or example, would certainly not expose his escort also if he could avoid doing so; and they may ascertain, if they like to inquire, that Lord Raglan at Inkermann did not suffer the two troops of Hussars who formed his body-guard to accompany him to the front, where they could only have served to draw down upon him and his staff the attention of the enemy's gunners and riflemen. And we repeat that a reference to pp. 204-5-6 of the second volume of the History will show, that as far as the historian himself and Lord Raglan and his horse "Shadrach" were concerned, Mr. Kinglake considers it quite possible for both man and beast to be subjected to a fiery furnace of the most intense temperature for a very considerable time, and yet to emerge from it unsinged. Indeed, we consider those three pages to be the most graphic and thrilling portion of the whole book. We read in them of Russian gunners making admirable practice both with round shot and shell, the latter bursting "a little above the white plumes of Lord Raglan and his staff," so judiciously were their fuses cut.

"This method," says Mr. Kinglake, "was tried so industriously, and with so much skill, that *a few feet over the heads of Lord Raglan and those around him there was kept up for a long time an almost constant bursting of shells*. Sometimes the missiles came singly, and sometimes in so thick a flight that several would be exploding nearly at the same moment, or briskly one after the other, right and left, and all around. The fragments of the shells when they burst tore their shrill way down from above harshly sawing the air; and when the novice heard the rush of the shattered missile along his right ear, and then along his left, and imagined that he felt the wind of another fragment of shell come rasping the cloth on his shoulder almost at the same moment, it seemed to him hardly possible that the iron shower would leave one of the group untouched."

Now, supposing that the *Moniteur* had written all this of the Emperor of the French at Magenta and Solferino, and had added, what Mr. Kinglake is unluckily obliged to add, that "none of the staff were wounded at this time;" what merciless fun the historian of the Crimean War, and his exponents in the *Saturday Review*, would have made of that much bespattered monarch—what withering gibes he would have hurled at the impudent mendacity of the Men of December, bold only on the boulevards of Paris against peaceful citizens, cravens of the greenest hue when opposed to armed foes in real battle?

The odd grievance with which the Reviewer concludes his article possesses one merit,—that of originality. He complains that all the distinguished men whose reputations have been assailed by himself and his *protégé* perversely persist in maintaining a contemptuous silence, and utterly decline entering into a paper war with either of them. He asks whether this is creditable or fair conduct towards Mr. Kinglake and himself. "Why," exclaims he, "does not Sir George Brown write to the papers, and conclusively contradict what we have said of him? Why do not the surviving members of Lord Aberdeen's slumbering Cabinet plead before the tribunal at which we have arraigned them? Even Captain Mends cannot be provoked by our misrepresentations into pen and ink. Are we so insignificant or so unworthy as to deserve such mortifying neglect? What can this ominous reserve possibly mean?"

We should have little difficulty in answering these impassioned queries, but we have some delicacy in doing so, inasmuch as our explanation might not be perfectly agreeable either to the Historian or the Reviewer—we therefore forbear.

WIVES OR ANGELS.

The large number of marriages which took place on the 10th inst. show that in matrimony, as in other things, the example of Royalty is infectious. There can be little doubt that the Registrar-General will have to report an unusual increase of matches in this year 1863, and especially in the first quarter or so. Why ardent lovers should become more ardent at the spectacle of a Royal wedding may be difficult to explain on philosophical grounds; but, constituted as human nature is, there can be no doubt that the constant perusal in the newspapers of details of nuptial bliss—the constant sight in the shop-windows of the portraits of a young couple illustrious by station, but more tenderly interesting from the light of romantic affection that hangs about them—acts as a perpetual incentive to those who are not yet mated, but who desire to be. This, of course, is particularly the case with women; but even men are not altogether free from the genial influence. If the marriage of the Prince and Princess of Wales be really all that report has told us, it goes far to realize some of the pleasantest incidents in the fairy literature of our youth. Had Albert Edward but won his bride by perilous adventures and chivalrous achievements, it would be a story for some living Madame d'Aulnoys (if we only had one) to chronicle in alluring legends.

That the marriage may be as happy in its entire course as it has been at its commencement, we all desire. But what shall we say of the other marriages that have taken place in consequence of this bright example? We may hope the same; but how far are such hopes likely to be realized where the numbers are so large? It is one of the saddest facts in life that marriage is often a failure; and it is so, in many cases, not because of any great vice on either side, but simply by reason of a false estimate of the conditions by which the married state, like all other states, is governed. The root of the evil lies in perverse principles affecting the whole social intercourse of the sexes. In the minds of a large proportion of young men, the feeling with regard to women is a mixture of sham gallantry and real disrespect. They have no opinion of the female intellect, and no reverence for the female character. How so low an estimate of the feminine nature can be arrived at by any man who recollects that he has, or has had, a mother (for

Digitized by Google

we may set aside as of no account the few monstrous exceptions to the sacredness of the maternal character), is difficult to explain; but the fact is too often manifest. It is a vice of fashion and of training, which, like most vices, has the power of reproducing itself by the contagion of example. We may deplore its existence, but we must take it into our calculation. Young men often find themselves expected, on entering the world, to be extremely complimentary and deferential to women before their faces, and cynically contemptuous of them behind their backs. The old schoolboy sense of scorn for "those girls" is retained, but is decorously hidden behind a thin veneer of gallantry. Perhaps it would be more correct to say that there is an attempt to hide the rougher and more genuine feeling, for the untruthfulness of the profession is made manifest by its fulsome exaggerations. The showy nonsense uttered by young men in ball-rooms is resented at heart by all girls of intellectual capacity and common self-respect; but it is unfortunately encouraged by the more frivolous, who do not detect the real indifference it masks, or who yield themselves willingly to an enchantment which they know is false, but which they feel is pleasant. There are, of course, two forms of gallantry—the true and the spurious. That feeling of tender, protecting regard for women, as the weaker of the two sexes, which seems to have originated with Christianity, or at any rate to be more directly encouraged by the religion of equality than by any other, is the genuine gallantry of cultivated and considerate men. It finds its loftier expression in the solicitude with which manly natures shield women as far as possible from the rough accidents of life; and its lighter in the brightness and gaiety of social intercourse. The spurious development of gallantry we all know too well. It is the reproduction in general society of the simpering airs of a Beau Brummell, rendering service itself distasteful by officiousness, and compliments offensive by their grossness. The type of true gallantry may be seen in the Chevalier Bayard; that of false gallantry in the vulgar gentility and barely disguised selfishness of Samuel Pepys, Esq., Secretary to the Admiralty, and hanger-on at the Court of Charles II., or in Charles II. himself. It was, indeed, in the reign of that monarch that spurious gallantry became first systematised, and both professed and practised as an article of social religion. Women being regarded as nothing better than as ministrants to sensuality, there was no limit either to the hyperboles of flattery with which they were sated, or to the depths of degradation through which they were dragged. Few things in the whole round of literature are more horrible than the mingling, in the comedies of Wycherley and Congreve, of extravagant compliments to women with the systematic expression of a gay and laughing belief in their unvarying profligacy, worthlessness, and deceit.

We have long ago risen out of the worst corruptions of that evil time; but we have not yet entirely shaken ourselves free from the low estimate of women which was fostered and vaunted in the latter half of the seventeenth century. The misconception, as we have shown, is widely diffused among the unthinking, and it results in the frequent failure of the married state. The young fellow who from his eighteenth to his five-and-twentieth year has prided himself on having "no opinion of women," excepting as a kind of pretty plaything, suddenly finds at the latter period that he is under very heavy, yet very pleasant, bonds to one of that despised community. He has had flirtations and trifling fancies a dozen times before:—

> "The summer pilots of an empty heart
> Unto the shores of nothing;"

but now he is really in love. To that extent he is sincere, and so far his sham gallantry merges in the true. But he has been so accustomed to false pretences, that his very sincerity takes a form which is in itself insincere. He has no idea of truth apart from exaggeration, and has so accustomed himself to the language of excess, that he can speak in no other tongue. The old habit of unreality clings to the new-born truth, and ruins it. Because he finds the lady amiable and kind, considerate for others, and prone to do gracious things graciously, he fancies her supernaturally perfect. He constructs an ideal out of her best qualities, and does her a substantial injustice by expecting that she is always to act up to that impossible measure of perfection. She ceases to be mere woman (which ought to be sufficient to satisfy any reasonable man), and floats in the ether of his fancy a winged angel. Her admirer is never modest enough to ask his conscience what right he has to expect an angel for his companion, himself being none. He probably makes no effort on his own part to rise above the weaknesses of humanity—the petty accidents of temper, common at times to all of us; the sordid instincts of daily life; the selfishness that insinuates itself under so many crafty forms; the meanness, distrust, and want of charitable allowance, that grow with our growth, unless perpetually checked and beaten down. He does not consider how far perfection on one side, and imperfection on the other, would be a possible or even a desirable association. He pays his sweetheart the egregious and even cruel compliment of trying her by a standard wholly impracticable and artificial, arbitrarily fixing her to it, and shaping all his future prospects by a law which he ought to know is non-existent. Perhaps he takes to writing poetry; which is generally a bad sign in one who is not naturally poetical. The man who is poetical by disposition and by habit can mark with the utmost exactness the limits between fact and fancy; and hence it is generally found that real poets are men remarkable for the plain common-sense of their views on all practical occasions. They have traced the windings of both worlds, and know their way in either. They understand the value of proportion and fitness; in a word, of truth, which is God's poetry. The prosaic man may be lifted by some overmastering passion into a brief sympathy with the ideal; but he is pretty certain to lose himself, to mistake emphasis for sincerity, and to confuse and bewilder his perceptions, instead of exalting them. True poetry makes the world grow clearer; false poetry darkens at once the intellectual and the moral vision, and turns truth itself into a lie. In the worst cases of breach of promise of marriage, we generally find that the defendant, during his courtship, wrote sentimental verses to the plaintiff. He may have thought for the moment that Mary Jane was "all his fancy painted her;" but he did so in obedience to an ostentatious habit of exaggeration, arising from confirmed irreverence for truth. We do not mean to say that every man who writes bad poetry to his intended, and decks her in flaring and preposterous figures of speech, will for that reason falsify his word, or act with harshness and neglect after marriage; but the proneness to conscious hyperbole is very apt to be its own Nemesis, by leading to painful reactions. The illusory ground breaking down under the first solid footsteps of life, the self-deceived suffers grievously from the fall, and learns, for the first time (if, indeed, he learns even then), the value of a correct appreciation of natural facts.

The man who began by thinking all women fools, and who passed out of that opinion into the belief that one particular woman was an angel, marries in the glamour of the latter faith, and anticipates a lifetime of celestial ministrations. Let us say the honeymoon is *all* honey; still, when the active, yet monotonous, round of daily existence commences, it will be strange if the angel do not sometimes prove mortal. She may be a true-hearted, loveable woman; she may have all the devotion, the self-sacrifice, the quiet grace and harmony, of her sex; but she will also have her wayward humours. She will be out of spirits once in a way, out of health sometimes, out of temper at others. Why did not Jones, her husband, think of this before? Why does he resent it now, as if his wife had married him under false pretences? *She* never put herself forward as a seraph; that was *his* mistake. Yet Jones thinks himself deceived because, after a little while, he finds those gauzy wings which he would needs fasten to the human shoulders of Mary Jane dropping off into nothingness. Affection and trust, sustained and rectified by mutual charity, are not enough for him. Those are the conditions of the best of mortal friendships; but they will not satisfy the prodigious requirements of Jones. He had bargained for an angel; and because he has not got one, all is a failure. Thence follow heart-burnings and quarrels; separation ensues, and perhaps the Divorce Court brings the miserable error to a close.

Marriage is the touchstone before which the deceptions of courtship fade, and are forced to declare themselves for what they are. Shakspeare, with that wonderful power which he possessed of implying a profound remark in the verbal mistakes of some of his characters, makes Slender say to Justice Shallow, when the latter recommends him to marry Anne Page, and asks whether he can love her:—"I will marry her, sir, at your request; but if there be no great love in the beginning, yet Heaven may decrease it upon better acquaintance when we are married, and have more occasion to know one another. I hope upon familiarity will grow more contempt; but, if you say, 'Marry her,' I *will* marry her." The great dramatist knew from his own experience, as well as from general observation, that the love in the beginning, whether much or little, is frequently "decreased upon better acquaintance," when the couple "are married, and have more occasion to know one another." Did he, with all his insight, make the mistake of expecting too much? Certainly Shelley did in his first marriage. This would seem to militate against our assertion that real poets are not likely to fall into such errors; but it should be recollected that both Shakspeare and Shelley were mere youths when they were wedded,

—the one to Anne Hathaway, the other to Harriet Westbrook. The worst of the matter is, that the mistake is frequently committed by men of mature years.

We are not forgetful that the fault is sometimes on the woman's side. When a girl has kept on her company manners till the reading of the marriage service, and has then considered herself at liberty to indulge in all the vagaries of unchecked caprice and wilfulness, she has no right to complain of any unhappiness that may result from her fraud. We cannot agree with the remark which Southey is reported to have once made to Shelley, that "a man ought to be able to live with any woman;" for this is to suppose that Socrates is as common a character as Xantippe. But men owe it to themselves, and to those whom they contemplate as the companions of their lives, to act in the spirit of sincerity, and not to prepare the way for disappointments which they need never have endured.

RAILWAYS AND CITY POPULATION.

In the infancy of railroads many towns viewed them as of old pest-houses were viewed, and drove them far off as intolerable nuisances. After awhile, however, these sapient municipalities found themselves stranded high and dry whilst they had the mortification of seeing the main stream of life and commerce passing through hitherto unimportant hamlets, and suddenly swelling them into towns of consequence. One would have thought that a lesson still fresh in the minds of most middle-aged persons of the community would not have been without its influence, and that in these days citizens and the Legislature would be as ready to receive the rails into their midst as they were of old to banish them afar off. But if we are to believe the statements of a few noble lords of the Upper House, metropolitan lines are still greater nuisances than were the lines of old traversing the country. Lord Shaftesbury thinks the Great Eastern Railway Company ought not to possess themselves of Finsbury-circus. Open spaces are so many lobes of the metropolitan lung, without which the "tailors and shoemakers" cannot breathe. So far so good; and speaking generally we agree that we should rather multiply than diminish such wells of fresh air; but it does seem rather extraordinary that in the very next breath his lordship is found complaining that upwards of a thousand houses will be cleared by this same company for the continuation of its main line and branches into the metropolis. Now, to make a line is to make a very wide street, and to open up avenues of fresh air. In the one case the company are flagellated for building in an open space, and then, again, they are threatened with the lash for wishing to open new ones. It is quite clear that, hit high or hit low, his lordship is not to be satisfied. Then, again, we have a dismal picture painted by his lordship of the fever jungles in which tailors and shoemakers are obliged to live; and yet, when it is proposed to ventilate these fever districts with open lines, the hardship of turning them out "at a week's notice" is insisted upon. In our opinion, the only way to get rid of the pestilential nest of dens in which the working population of this metropolis at present live, is to separate them by moving among them railway lines in every direction, and in this manner disintegrating and breaking them up, just as the police do dangerous multitudes, by moving among them wedge-like divisions of their force. The Great Fire of London, which swept away the old town, was a mercy attended no doubt with much suffering; but we believe that the introduction of the scores of lines which are intended to form links of intercommunication between the great stations in the suburbs will end in a second destruction of London—a London, we may say, that, with all our boasting, is not in its back slums very much in advance of that of two centuries ago. The look of Mr. Stanford's Map of the Proposed Metropolitan Railway Schemes for 1863 is at first appalling enough, but it is quite clear the new lines make a greater appearance on paper than they will in reality, as many of them are to run underground. A very important feature of most of them is that they strike at the very heart of the metropolis instead of keeping in the far distant background. No doubt this very boldness will raise up opposition against them, but, as far as we can see, wholly without cause. The dealings of the great masses of the population are with the old channels of communication; we want to get into the great thoroughfares, and the great centres, and not into far-off boulevards and shabby half-populated neighbourhoods. The great drawback, for instance, of the Metropolitan Line is, that it runs far away from the points to which West-enders are mainly bound. Watch the lines of omnibuses, and where they gather thickest there the pulse of population throbs the fullest. We hear people expressing horror at the idea of a railway station at Regent's-circus. Of course, if it were proposed to run trains, or even to open an underground station in the centre of this crowded thoroughfare, the scheme might justly be pronounced absurd. But would it be supposed, from the outcry, that the plan is to clear away an open space for a station in the frowsy cholera district lying between Queen-street and Brewer-street, near to Golden-square, in order to put the many great roads that debouch close upon this spot in railway communication with the Great Northern station and the northern district of the town?

Go near to the great centres of traffic! Of course they do, just as fishermen make for the densest part of a shoal of herrings—for railway companies are but fishers of men. Then, again, we hear loud complaints against the route of the Kensington, Knightsbridge, and Mid-London line, because it proposes to run from the Great Western station, under Kensington-gardens and Hyde-park, and under Piccadilly to Leicester-square, and so on. Now, if there has been one road more demanded than another by the public voice, it has been one through these public parks, which, as far as public carriages are concerned, divide in half two of the most important portions of the town night and day, and during the hours of darkness even pedestrians. We know an underground line would do all that the public needs, and leave the greensward intact; yet the scheme is denounced, because for a short time it may necessitate some unsightly earth-heaps appearing there. A great sewer may be driven at a vast depth, and with infinite mess, along the same route, but a tunnel for the circulation of the people rouses an indignant population of objectors. We have seen Leicester-square cumbered by a private speculator with a most hideous building, without a word of protest on the part of the inhabitants, and we have seen the same building cleared away, and the site devoted to the purpose of a vast dust-heap, and yet the proposition to erect a comparatively low building for a most useful purpose is met by a yell of derision. If we kept our public spaces as well as they do abroad—planting them with shrubs, and laying them out with flower-beds and public fountains, into which the public had a free right of entry, the cry of those who are for protecting our open spaces would be tenfold more reasonable than it now is, considering that we lock up our squares, and rigidly exclude the great unwashed from touching its sooty and desolate-looking sod. If our open spaces are to be anything more than the "potatoes and point" of the Irish peasant—their flavour only to be enjoyed in imagination—we do not see that the public have so very much to lose by their appropriation, here and there, as railway stations.

There is one argument, however, on the part of those who are frightened at finding the metropolis threatened with being carried by the railway companies by assault,—an argument, by-the-bye, which even the *Times* has not hesitated to use; namely, that "cities are meant to live in," and not to be cut and carved about by railway companies. Now, that cities are made to live in seems a very obvious truth, but in reality sometimes it is not a truth at all. The City of London, for instance, is almost wholly deserted at night; the railway companies and the omnibuses every evening disperse the vast crowd to suburban houses, and return it in the morning. This attraction and repulsion from the central heart is going on year by year with redoubled force, and the end of it will be that railways, instead of condensing and compressing human beings together by reason of the room they take up, will spread the population over an area twentyfold the size they at present occupy. The time will come, no doubt, when London proper will consist of a series of vast suburbs connected by railroads with a central business district. Foreseeing this tendency of the time so clearly, we cannot but smile at the fears of those who apprehend that railways are about to exclude every mouthful of fresh air left to us. There are certain classes of the population who must be, at all times we suppose, resident citizens, but they will get more air in consequence of the flight of the wealthier portion of the population towards the suburbs; but we by no means apprehend that large portions of the working population are necessitated to dwell close to their work. In our opinion, the Legislature should exercise its authority over the railway companies, in the direction of obliging them to run early and late trains at such times and prices as would meet the means and needs of the working-classes, rather than begrudge them station space, in order to conserve the wretched dwellings that Lord Shaftesbury's "tailors" and "shoemakers" now inhabit, at a rent far higher, considering their accommodation, than his lordship and his class pay for their own houses in the comparatively pure air of the West-end.

We confess we do not put much faith in the value of the promised edict of the Board of Trade. The want of system in our railway communications cannot now be mended by the hurried consultations of a few officials. To attempt a consolidation of the different lines, such as shall give a free intercommunication between

Digitized by Google

all parts of this vast metropolis, on any symmetrical plan, considering the want of symmetry that already exists in the exterior lines themselves, would be like attempting to mend a Gothic building by piecing it together with Greek work. All that we can now do is to gather up the ends of the different threads of communication in the best way we can, leaving that way to the ultimate judgment of the shareholding public.

THE PEOPLE'S ALMONER.

When the future historian, perhaps in the twentieth century, shall explain our social machinery of the nineteenth, he will have to take account of the part discharged by one institution which belongs especially to this age. Public journalism, as it now exists among us, differs essentially from anything in the literature of former times. It is not the individual utterance of certain writers claiming, by the authority of their superior knowledge or insight, to lead the opinions of the rest of the world. It is confessedly but an organ through which literary expression is given to the floating mass of thought and feeling engendered upon every topic of present interest by the active intelligence of the time. The paper which, besides reporting each day's news, and advertising everybody's needs, digests the common stock of current notions in a readable and effective form, is really a product of the general movement in the minds of the educated and influential classes. It is the business of the editors to watch this movement, and to keep pace with it.

In this vocation, as in others, the greatest abiding success naturally falls to those who best understand the principle upon which it is carried on. If one journal has won, and is likely to keep, an unapproached position in the favour of the higher and middle ranks of English society, that is because, consulting their average moral and intellectual standard, and renouncing all pretensions of didactic eminence, it reflects with marvellous fidelity the ideas by which this nation is actuated in the ordinary affairs of life. Indeed, the mental characteristics of the English race, if we can suppose it hereafter to become extinct, will be most vividly displayed, to the future students of our ephemeral literature, in the leading columns of the greatest London newspaper of this day. The national temperament, in all its robust and burly vigour, will be found pervading the style and prompting the direction of its comments upon every subject of passing concern.

In the relations, however, between the chief of our periodical press and that majority of the intelligent and active classes whose opinions and sentiments are daily combined for publication by the editorial committee which speaks the English mind, there is one feature of curious interest on which we mean here particularly to remark. This is the direct intervention of the paper, upon some occasions, in aid of those spontaneous efforts of public bounty which are among the most interesting features of our social state. The public press does, in fact, become the People's Almoner in these cases. It is not requisite to suppose that the conductors of any journal are animated by one whit more of the spirit of beneficence than most of their neighbours. Our observation merely goes to this,—that since the journal, as we have seen, lives in close sympathetic connection with a very large part of the community, including those who possess the means and opportunities for promoting voluntary subscriptions towards objects of charity, it has very naturally become their instrument for many purposes of that kind, accommodating itself to the pressure of a multitude of correspondents in various ranks of private life. If the most convenient organ of publicity has thus been converted into the most powerful financial agent for performing certain laudable works, we should yet imagine that it is far from the thoughts of any one concerned in its management as a newspaper to claim the least personal merit for its services in that respect. What, indeed, is shown by such facts as we are about to notice, is the unfailing spring of social benevolence which does exist in this country; and they are, secondly, remarkable as another singular instance of the functions discharged by a journal in serving expressly as the channel of a popular feeling, the tangible results of which in such cases are the pounds, shillings, and pence announced, and sometimes even collected, through the newspaper office. We must distinguish, however, between those very rare occasions upon which the proprietors of a journal like the *Times* may have consented to receive donations for a special object recommended by its advocacy, and those instances which occur almost every day, where the editor permits individual correspondents, of whose good faith he is assured, to make known some authentic particulars of distress, inviting contributions for its relief.

As a middle class of instances, we may observe that where the merits of the case, or the need to be provided for, have first been reported by the newspaper, in its ordinary business of gathering information, the subscriptions of money so procured have usually been paid in to some parties not connected with it. The most striking example of a successful appeal of this sort is that which was made on behalf of the Field-lane Refuge, in the winter of 1858, and renewed at Christmas, in each of the two following years, for the profit of other similar institutions, giving nightly shelter to many hundreds of homeless wanderers in the London streets. A description of the place at Field-lane and its inmates, by the graphic pen of Mr. Woods, accompanied by a leading article, in which the Christmas comforts of the respectable classes were forcibly contrasted with the misery of those who are destitute, was the instrument of provoking an extraordinary outflow of public compassion, attested within a very few weeks by adding to the funds of that one institution more than £8,000. By the next winter, that of 1859, an association had been formed, under Lord Shaftesbury's presidency, to erect houses of reception, in several parts of London, where numbers of poor vagrants, who are shut out from the casual wards of the workhouses, might be saved from perishing of hunger and cold. The *Times* and the founders of this society again most properly kept Christmas together, by co-operating in so merciful a design; the voice of that great organ of social feeling was lifted up as before to call for pecuniary aid. The pockets and purses of all who had enough and to spare felt a strange twitching, and were perhaps charmed open, as they perused, over a plentiful breakfast, the morning paper which preached the duty of Christian charity in its largest and fairest type. The result was that the subscriptions presently amounted to £15,000, of which sum one-third has been invested, under the name of "The *Times* Fund," for certain specific uses. The balance, having been set apart for a new building, and increased by successive appeals in later years, may now be seen in the substantial form of a large, roomy, and convenient mansion in Mutton-lane, where many human creatures have each winter been kept alive who else must probably have died from exposure to the frost or the wet in the midst of this rich and luxurious city. Altogether, we believe, something above £25,000 has been raised for this good object by means of articles in the *Times*, or as the direct result of its interposition. Jupiter thus descended in a shower of gold, to cherish with the embrace of kindly charity the shivering outcast Famine, who had not where to lay her head.

But of the *Times* undertaking, by its own agency, the collection and management of large sums of money sent in for benevolent or patriotic uses, there is only one instance which we at present remember. Other journals of a popular character, which may bear towards the multitude of a somewhat lower rank in society the same intimate relation that the *Times* seems to bear to the more influential classes, have recently followed this example. The *Daily Telegraph*, a skilful and sympathetic interpreter of the popular instincts, has thus started a special fund of its own for the relief of Lancashire distress, and raised already, we believe, £6,000 or more. *Lloyd's Weekly*, in a more professedly devoted spirit, bestowed its own profits for three weeks to feed the cotton-spinners out of employ. The great precedent, however, for these acts, was the *Times'* fund, created by subscription among its readers, to provide comforts for our soldiers in hospital during the Crimean War. In spite of Mr. Kinglake's paradoxical account of that journal, as a sort of mill which had been set up by a joint-stock company of speculators, to grind popular sensations into a form remunerative to themselves, we believe that the historical importance of the part it actually took, by encouraging, warning, advising, and criticizing a shiftless Administration, in the Russian War, will be recognized by wiser authors than Mr. Kinglake, when his volumes shall have been long forgotten. Never was there a more genuine example of that which we have defined as the characteristic function of the public press in our own day,—that of giving utterance, without any reserve or adulteration, to the sentiments and to the half-formed convictions of society in general. The editors of the *Times* frankly, as usual, declared one morning that they put themselves completely in the hands of the public on this question. They followed the general opinion. Excepting the letters of Mr. Russell—which were so eagerly read by all the world a few hours after they arrived—no means of information about the real state of our army was exclusively at their disposal; but their table was heaped, by every post, with private communications from a multitude of writers who, through their personal friends or family connexions in the camp, had learned its deplorable plight, and who pressed the *Times* to become the mouthpiece of their indignation. The next step was equally prompted by the natural relations of the paper to its host

Digitized by Google

of readers and correspondents, as the agent of their purpose to remedy the crying distress of our sick and wounded in the East. Money was offered for that object by many of the people, who day after day wrote so many hundreds of letters to the editor of the *Times*. Before any special organization, such as existed at a later period of the campaign, had been formed, the *Times* found itself under the responsibility of either rejecting these offers, by which our suffering heroes were to be relieved, or else undertaking a very difficult task, to receive and to apply the funds subscribed. This charge, which the *Times* felt it a duty to accept, involved first the disposal of £10,000, raised in a very few days, in October, 1854. Believing that this sum would be enough for what they supposed to be only a temporary emergency, the proprietors then closed the subscription; but while doing so, additional gifts came in, making the amount as much as £12,000. Mr. Macdonald, one of their permanent staff, went at once to Scutari, to ascertain what stores the military hospital required, and to purchase in the local markets of Constantinople supplies of nourishing food, blankets, and clothing for the patients' use. Although the official commissariat had failed, and proved in fact quite incapable of attempting to meet this sudden need, we doubt if he would have obtained permission even to make good its avowed deficiencies, but for the presence of Miss Nightingale, who, in the attractive form of the volunteered personal exertions of English Sisters of Charity, had obtained access for the freely offered bounty of this nation, to assuage the pain that was notoriously caused by helpless inefficiency, if not by improvidence and neglect in the War Department. After several months of zealous labour, the expenses of his mission being wholly defrayed by the *Times*, Mr. Macdonald, whose health had given way, returned home when it seemed probable that the immediate necessity was past. But, as we all remember, the first months of 1855 displayed, owing chiefly to the want of proper transport at Balaklava, scenes of confusion, and of misery thence resulting to our soldiers, which were pronounced "horrible and heartrending" by the Ministers of the day. Again the *Times* opened its subscription-lists, and an additional fund of £14,000 was quickly raised. Mr. Stowe, the gentleman intrusted with its administration, hastened to the seat of war, and having exerted himself as much as any public servant who succumbed to the toils and dangers of that campaign, died there, leaving a balance of £8,000 to be further disposed of. By that time, however, the Government had been roused to action, and the worst was over. Of the money which has since remained in hand, £3,000 was given in 1857 to relieve the sufferers by the Indian Mutiny, while the £4,000 which now stands at interest, is, we believe, designed to form the nucleus of a provision for those poor broken soldiers, who, returning from an unhealthy service in tropical climates, and having no claim to a pension, are, when discharged from hospital, too often thrown destitute upon the country. We may observe, that when the *Times*, going beyond its usual course, assumed, in compliance with the popular feeling, this very onerous and responsible task, it furnished a good answer to the vainly censorious attacks of a Saturday detractor, which sought, in those days of England's stern grapple with the vices of her own system and with the Russian foe, to win its spurs by a weekly diatribe against the chief exponent of our national resolve to overcome both the one and the other.

The third category of instances, in which the publicity of journalism will often lend most useful aid to the efforts of private benevolence, may be illustrated by citing those frequent appeals for the relief of particular cases of distress, which go forth upon the authority of persons known to the editor, or holding some position, such as that of the parish clergyman, which is taken as a guarantee for their honest intention. The examination of a file of the *Times*, in which letters of this kind have abounded for the last six months, would supply a great variety of curious anecdotes, throwing much light upon our social condition, and proving, to an extent not perhaps duly estimated by mere cursory observers, the compassionate readiness of our people to bestow their alms wherever they are made acquainted with cases of human suffering, if properly attested, by such facilities as the public press can afford them.

A LOYAL DON.

Our amiable and elegant contemporary, the *Saturday Review*, last week surpassed itself in vivisection. Like Alexander, the critic "thrice routed all his foes, and thrice he slew the slain;" a "favoured doctor of divinity," and an opponent of High Church, was characterized as having produced "a noisome and offensive jargon of semi-religious, semi-cabalistic cant, or part-ludicrous, part-horrifying vaticinations of woe, in the vein of Zadkiel or Solomon Eagle." "The great Panjandrum of prophecy himself," their time-honoured butt, is "gaily bespattered with polemical mire," to use their own expressive phrase. One would think from this that a foolish doctor of divinity was indeed a *rara avis;* and we should perhaps rejoice in his discomfiture, were it not for the melancholy fact that the great organ of Anglo-Catholic opinion always ignores the follies and the offences of the "favourite doctors of divinity" on the other side. It is perhaps more pardonable to do a foolish thing than to write a silly book; it is certainly better to write anything, however much opposed to high orthodoxy, than to invent and apply a gratuitous and offensive insult.

There has been diffused through all classes a deep and genuine feeling of joy at the happy marriage of the Prince of Wales, and consequently a great number of congratulatory addresses presented to him. The University of Oxford has determined to follow this example, and, in a meeting of the Council, composed of heads of houses, professors, and members of Convocation, with whom rests the initiative of all university legislation, proposed to congratulate the Prince on having found a Protestant Princess, whom the Act of Settlement permits him to marry. One would think that this form, long sanctioned by usage, had nothing in it objectionable; yet a well-known (if not quite a favourite) Doctor opposed it and carried an amendment. Our readers will be surprised to hear that his objection was that the Princess Alexandra, being a Dane, could not properly be called a Protestant! He argued that Denmark was given up to Rationalism, and on that ground the obnoxious word was left out by a majority. Now, in the first place, though it may be true that many classes of Danes *were* infected with Rationalism, it is certainly not true now. There has been a double reaction in Denmark towards ultra-Lutheranism on the one side, and on the other to that school which in England is called Evangelical. So that the accusation was not even true; if it were true, it would still remain a monument of glaring bad taste.

Our readers will be still more astonished to hear the name of the learned divine who led the University on this occasion. It was Dr. Pusey.

Theodore Hook is reported to have crossed the street on one occasion to an old gentleman passing by, and, raising his hat, to have asked, "Pray, sir, are you any one in particular?" On this occasion we profoundly salute Dr. Pusey, and ask the same question of him. He is, and he is not. In Oxford he is renowned for having escaped a trial for heresy by a hair's breadth (which trial he has lately retorted on those who helped him in his trouble), for being a Regius Professor, and for preaching before the University (when not suspended for anti-Protestant dogmas). Out of Oxford he is remembered as the father confessor of a "Protestant nunnery" in the West, as the expositor of ingenious theology in the *Times* and elsewhere, and possibly most of all as the derivation of Puseyite. It seems, indeed, strange that this man should be allowed to define what is Protestant and what is not. He was unfortunately allowed this privilege, and joyfully took the occasion of firing the double shot of spleen against the Princess who would not put off her wedding for the Puseyites, and a sneer at his late reluctant opponent, Professor Jowett.

How did he know that the Princess had not heard of the indulgence kindly produced by a courtly bishop from the armoury of the unconscious Primate? Nay, how did he know that she would not sign the Articles "in a strictly natural sense?" The extreme High Church party did not appear to advantage in the late rejoicings. Some refused to take any part in the festivites,—one backed them in their ungracious work and then deserted to the enemy, and now we have Dr. Pusey rampant. Mr. Hallam once picked out an ancient scandal as a proof of "the folly and ignorance of learned academics." If the University of Oxford is thus easily led by its polemical prize-fighters to gratuitous unpleasantness, it may incur similar charges of sourness and bigotry.

We hope that this was merely a mistake or a carelessness, after all; for we know that the day has long gone by when Oxford would be responsible for the acts and opinions of an obsolete Professor and an ill-tempered party.

THE WATERLOW BUILDINGS.

Alderman Waterlow has erected several blocks of houses for the use of the working classes, which he alleges will prove in every instance remunerative to the landlord, and an immense accession to the convenience and comfort of the tenant. By adopting a sort of stereotyped and uniform pattern of the internal fittings, he is able, with the aid of machinery, to provide fittings at far less ex-

Digitized by Google

pense than is usually incurred. His description of the whole process of manufacture is as follows:—

"1. A ground plan easily adaptable to any plot of ground, capable of repetition to any extent, and presenting in the elevation a pleasing and attractive appearance. 2. Suites of rooms at different rents, so planned as to secure the greatest economy of space, materials, and labour in the erection of the building, and at the same time provide for the exclusive use of each family, within the external door of the lettings, every essential requisite of domestic convenience. 3. The construction of a flat roof, capable of being used as a drying and recreation ground, so as to leave as much space as possible available for building. 4. Planning the positions of the doors, windows, and fireplaces with reference to a suitable arrangement of the furniture of the apartments, and the placing of proper fireplaces, cupboards, shelves, &c., in every room. 5. An efficient system of drainage and ventilation. 6. Making the joinery as near as possible to a uniform size and pattern, so that machinery might be brought to bear in economizing its manufacture to a considerable extent. 7. The discovery and adaptation of a new material combining the properties of strength and durability, adaptability, attractiveness of appearance, and cheapness, in an eminent degree. 8. The combination of these advantages in buildings which, when let at fair rentals, would produce a good return on the outlay incurred in their erection. 9. The selection of a locality where the ground-rent would not be excessive, although the tenants would be sufficiently near their work to enable them to take their meals at home."

The rent he requires for each suite of rooms—three in number—ranges from 5s. to 7s. 6d. a-week; and the return to the landlord, he thinks, will amount to nine per cent.

Taking the working classes as we commonly find them, it is doubtful if they will be able to afford 7s. 6d. a-week for three rooms, out of wages oftener less than 30s. a-week, and only in the case of skilled mechanics reaching £2. This accommodation, in order to yield seven or nine per cent., must be restricted to a superior class of workmen—that very class of men who are most likely to select, if such can be found, suitable and comfortable homes for themseves. We do not deny that Mr. Waterlow has accomplished a good work, and met what is a general want; and heartily do we wish him success. But we feel he has not overtaken, or even touched, the great and urgent necessity of the age. It is for a poorer class, squatting on a still lower level, that some more decent sanitary and habitable provision is most demanded. There are, at the very lowest calculation, 250,000 tenements in wretched, fetid, and filthy courts and "rents," or blind alleys, the tenants of which scarcely ever touch the crumbs that fall from the rich man's table, and would be thankful for a much less provision of convenience, comfort, and domestic cleanliness than falls to the lot of the rich man's dogs. Mr. Waterlow's buildings are, for the upper class of respectable mechanics, very expedient and useful. But, to supply the more imperative want, we must bore deeper still. If we would lessen the area and intensity of fever, cholera, and epidemic disease—if even we would consult the safety of St. James's, we must do something for St. Giles's. What is required is a number of tenements at a weekly rental of two shillings, into which air, water, and light may flow freely, and attached to which shall be provided the decencies and necessities of civilization of the lowest type. If building ground can be secured at a reasonable rent, we are persuaded capital would be profitably remunerated on this plan, were it to provide blocks of houses divided into tenements of sufficient size, each adapted to a family of three or four persons. If this cannot be accomplished—and on a large scale, it is all but impossible—the problem that remains and demands to be solved is, how to repair and redistribute, and otherwise make habitable, such tenements as we find in Lincoln's-court, Drury-lane, and other retreats into which has drifted and settled the very refuse of a great metropolis. We do not want sentimental and elegant cottages or pretty and picturesque homes for fine ladies and *dilettanti* architects to admire. We want rough and coarse, but cleanly and well-ventilated tenements, such as can be created out of existing materials at little expense and at low rents, for costermongers, chance porters, matchwood-splitters, and hodmen, who at present live in dens and pigstyes, and create and localize and radiate disease, in due time, far and wide.

ART AND SCIENCE.

MUSIC.

Not even at the Popular Concerts has a more unexceptionable programme ever been offered than that of Monday last. Both in selection and performance it deserves to be cited as a model of its kind:—

PART I.

Quartet in E minor, Op. 44, for two Violins, Viola, and Violoncello, MM. Sainton, L. Ries, H. Webb, and Paque ..... Mendelssohn.

Song, "The Violet," Miss Robertine Henderson ..... Mozart.

Recit. and Air, "Deeper and deeper still," "Waft her angels," Mr. Sims Reeves ..... Handel.

Sonata in C major, Op. 53, for Pianoforte solo, dedicated to Count Waldstein, Mr. Charles Hallé ..... Beethoven.

PART II.

Sonata in B flat, for Pianoforte and Violin (Dedicated to Mdlle. Strinasacchi), Mr. Charles Hallé and M. Sainton ..... Mozart.

Songs, "Stars of the summer night," "When the moon is brightly shining," Mr. Sims Reeves ..... Molique.

Song, "Swedish Winter Song," Miss Robertine Henderson ..... Mendelssohn.

Quartet in G minor, for two Violins, Viola, and Violoncello (by desire), MM. Sainton, L. Ries, H. Webb, and Paque ..... Haydn.

Mendelssohn's Quartet, one of the most impassioned and fervid of its composer's works, was admirably led by M. Sainton, who has now earned high rank among the few intellectual interpreters of classical music. With all the mechanical skill of an accomplished solo player, M. Sainton unites that intelligent appreciation of the distinguishing characteristics of various styles, without which mere executive power is but of small account. He was well supported by the other members of the quartet, M. Paque being an efficient substitute for Signor Piatti. Mr. Charles Hallé's performance (from memory) of Beethoven's sonata was in every respect admirable, both for finished mechanism and definite intention in the reading. This work contains some of the greatest difficulties to be found in Beethoven's solo pieces, and when composed must have been far in advance of the average powers of execution. The last movement especially, with the series of shakes combined with the subject of the Rondo given to the right hand, anticipates some of the difficulties of the modern school of pianoforte playing. Not less difficult are the rapid passages of octaves for both hands, which we have heard some eminent performers reduce to passages of single notes. All these were executed by Mr. Hallé with faultless precision, as written; and the Sonata throughout was given with a power and passion which do not always characterize his performances. The Sonata of Mozart was rendered with a perfect *ensemble* by Mr. Hallé and M. Sainton—indeed both these artists appeared throughout the evening to be in their best vein. Mr. Sims Reeves, notwithstanding the March winds, was in excellent voice, and sang evidently *con amore*. Miss Robertine Henderson (one of the best recent pupils of the Royal Academy of Music) sang with much unaffected expression. This young lady, who was warmly applauded, bids fair to become a favourite.

The London Glee and Madrigal Union have resumed their performances (at the Dudley Gallery) of glees, madrigals, part songs, and other vocal pieces: which are given with the careful preparation which has earned a high reputation for this party. The English school is here effectively represented by the works of Arne, Shield, Webbe, Bishop, Horsley, and other native composers.

The Vocal Association commenced their season at St. James's-hall on Tuesday evening; when, in honour of St. Patrick's Eve, the first part was largely composed of Irish airs, some of them harmonized for a full choir, and accompanied by six harps. These pieces were sung with great smoothness and refinement, and a delicacy of expression which is of modern growth among English choristers. The first portion of the concert, however, was generally of that *ad captandum* character which frequently distinguishes "benefit" concerts, and was unworthy of a society claiming the position of the Vocal Association. The second part of the programme consisted of a cantata, entitled "Harvest Home," composed by Mr. G. B. Allen. The vocal performances were varied by some clever pianoforte-playing by Miss Eleanor Ward.

The third concert of Mr. Henry Leslie's choir took place at the Hanover-square Rooms on Wednesday evening, when the selection comprised motetts, anthems, and psalms, by Palestrina, Bach, Farrant, Mozart, Spohr, Mendelssohn, Goss, and Henry Leslie. This choir has earned honourable distinction among London choral institutions by the excellence of its performances, and the general interest of its programmes. It is only by a moderate number of voices that the delicate refinements of expression and the gradations of light and shade can be effectively given. A chorus of from one to two hundred will always have an advantage, in these respects, over the enormous masses assembled at the Exeter Hall performances; the larger number being necessarily more sluggish in movement and coarser in tone. Mozart's motett "Ave verum," as given on Wednesday, was a good illustration of the distinction just pointed out. Nothing could well exceed the refinement with which this piece was sung, or the pathetic expresssion, which is generally lost when dispersed among large numbers. One of the chief features of the evening was Bach's motett for two choirs, one of that series of noble works which Bach composed for his pupils, the scholars of St. Thomas's School, Leipzic. These fine compositions, sung, as intended, without any instrumental accompaniment, offer a severe test for any body of singers; and the excellent performance of the specimen selected by Mr. Leslie thoroughly proved the efficiency of his choir.

Her Majesty's Theatre is announced to open on Saturday the 11th of April with Verdi's "Il Trovatore;" the cast including Mdlle. Titiens, Madame Alboni, Signor Giuglini, and Mr. Santley. The company is to comprise, in addition to the artists just named, Mdlle. Artot (her first appearance), Mdlle. Louise Michal, Mdlle. Kaiser (first appearance), Mdlle. Rosa de Ruda

Digitized by Google

(first appearance), Mdlle. Kellogg (first appearance), Madame Lemaire, and Mdlle. Trebelli, Signor Bettini, Signor Baragli (first appearance), Signor Gambetti (first appearance), Signor Delle Sedie, Signor Fagotti, Signor Fricca (first appearance), Signor Bagagiolo (first appearance), Signori Bossi, Vialetti, Rovere, Zucchini, and Gassier. The orchestra is to be again under the conductorship of Signor Arditi. Verdi's last work "La Forza del Destino," Gounod's "Faust," and a new Opera composed by Signor Schira to a libretto by the Marquis d'Azeglio, are promised as the novelties of the season; with revivals of "Linda di Chamounix," and "Fidelio." The ballet is, as formerly, to form a feature at this theatre. Mdlle. Pocchini and Mdlle. Ferraris are re-engaged, with several dancers new to this country, but of Italian celebrity. The programme, altogether, promises a brilliant season for Her Majesty's Theatre.

SUNBEAMS AND STARBEAMS.

THE knowledge obtained two years ago by the analysis of the spectrum of solar light of some of the mineral constituents of the sun struck every one with amazement. The chemical analysis of the incandescent vapours of burning metals in a distant globe millions of miles away was indeed a triumph of science. Whatever credit is due—and it is very much—to the German philosophers who made such good use of the prism, honourable notice should be made of some Englishmen who had before laboured in this field of research and performed the excellent work which laid the basis of Bunsen and Kirchoff's success. One of these, Dr. Miller, has lately, before the Royal Society and the Royal Institution, given an account of his latest discoveries, and which show that that wonderful analysis of the sun is not the only marvellous result to be accomplished by the persevering continuance of these researches. We some time since noticed a series of experiments by Dr. Miller, on the photographic transparency of various media, by which it was shown that various solids, liquids, gases, and vapours, all seemingly equally or nearly equally transparent to the eye, yet exerted very different effects upon the chemical rays of a beam of light. Thus rock-crystal, ice, fluor spar, water, oxygen, nitrogen, hydrogen, and carbonic acid, allow 74 per cent. of those rays to pass, while thin glass only permits 20, oil of turpentine 8, and sulphuretted hydrogen 14 per cent. to go through them. The photograph of the spectrum of the luminous rays of any incandescent object would vary, therefore, as those rays passed through these or any other influencing media,—more or less of the spectrum being cut off in the photograph. These results guard us against error. But there is another set of phenomena acquired from recent experiments, which seem to encourage the hope of future important advances.

The chemical rays emitted by different luminous objects vary greatly in quality as well as quantity, some sources of light emitting rays of much higher refrangibility than others. Thus rays emanating from the intensely hot jet of the oxy-hydrogen flame are without action upon a sensitive collodion plate, but if the jet impinge on a ball of lime, the light emitted contains chemical rays to the full extent of the solar beams. The most remarkable source of chemical rays is the electric spark or voltaic arc, the chemical spectrum from which is actually three or four times longer than that displayed by sunlight itself.

In this class of experiments the most interesting results have been obtained by examining the spectra produced by varying the metallic electrodes employed as terminals to the secondary wires of the inductive coil. Wheatstone, many years ago, showed that a perfectly characteristic spectrum is displayed when the electro-magnetic sparks are transmitted between two surfaces of any metal; and more recent experiments have shown that even the various gaseous media become so intensely heated by the passage of the electric spark, as to furnish characteristic spectra; so that when the electric discharge of the secondary coil is intensified by the Leyden jar, the sparks not only produce the spectrum due to the metal points, but the spectrum also of the gaseous medium in which the electrodes are immersed—that of the metals being characterized by bands of which the extremities only are visible, while the gas spectra give continuous lines which traverse the whole width of the spectrum.

When the electric discharge passes through a compound gas, the spectra of the elementary components of the gas are exhibited, as though at the intense temperature of the electric spark chemical combinations were impossible. The ignition of a solid or a liquid always yields a continuous band of light containing rays of all degrees of refrangibility, but the same body converted into vapour usually produces a spectrum consisting of bright bands of particular colours separated by dark intervals,—gaseous bodies emitting rays of certain definite refrangibility only. The striped character of these spectra being preserved in their photographs, proves that the optical vibrations are emitted from the vapour of the metals, and not from mere detached particles projected from the electrodes by the disruptive discharge; and as it is uniformly observed that the higher the temperature the more refrangible are the vibrations, it is evident we are thus furnished with a rude but valuable means of estimating the exalted temperatures at which these variations in the spectral phenomena take place. And this means has been turned to a very remarkable purpose by Dr. Miller. The hottest wind-furnace yields a temperature not much over 4,500° Fahr. By calculations it has been shown that the temperature of the oxy-hydrogen flame cannot exceed 14,580° Fahr. By introducing lime and sulphate of magnesia into the oxy-hydrogen jet he has obtained the peculiar spectra of calcium and magnesium coinciding in their lengths with their equivalents in the solar spectrum. He therefore infers that the temperature of the sun is not higher than that of the oxy-hydrogen flame, but certainly far below that of the electric spark. The latter for this reason: magnesium, in the electric spark, gives a remarkably strong band just beyond the limits of the solar spectrum, and magnesium being clearly proved to exist in the solar atmosphere as an element, inasmuch as this special high-temperature magnesium band is wanting in the solar spectrum, it would seem conclusive that the temperature of the solar atmosphere must be below that of the induction spark.

From a comparison of the spectral lines of various metals with the dark lines of the solar spectrum Kirchoff concluded that potassium, sodium, magnesium, iron, nickel, chromium, and possibly cobalt were present in the solar atmosphere. Angstrom continuing the examination into the blue and violet extremity of the spectrum believes in the existence of hydrogen, calcium, aluminium, and possibly of manganese, strontium, and barium. These observations on the solar spectrum give great interest to similar observations upon the stars. But how different the dim and twinkling beams that tremble from those distant orbs from the glorious flood of light that makes our day! Of rays so feeble as the threads of light that reach us from the distant realms of space, how difficult, how delicate the examination! Fraunhofer examined four or five of the brightest, and considered that the light of Sirius and Castor had lines differing decidedly from those of the sun; Capella and α Orionis resembling the solar light more closely. More recently, Dr. Rutherford has made similar observations in America.

In conjunction with Mr. Higgins, Dr. Miller has, through his friend's eight-inch refractor, obtained some interesting results, and has *measured* the principal lines in Sirius, Betelgus, and Aldebaran, and obtained more minute details than any previous observer. At his recent lecture, the magnification of *a microscopic spectrum of Sirius* was projected by the electric light in view of a delighted but most critical audience. Sixty times bigger than our sun, its light, diminished by a journey of a hundred and thirty millions of millions of miles, appears no bigger than a radiant point. Yet this fine ray, that started on its way one-and-twenty years ago, enters as an agent in the chemistry of our earth, and paints its likeness on the photographic plate. Nay, more: the rays that left Capella more than sixty years ago possess the power to do the same! What shall be hidden from human intellect that can wrest out facts like these?

CONTEMPORARY SCIENCE.

THE meeting of the Royal Society of Literature was one of considerable interest. The first communication was by Mr. R. S. Poole, "On the list of the confederacy defeated by Thothmes III. before Megiddo." This document has been already commented upon by M. de Rongé, and Mr. Poole accepted and extended his results. The battle to which the list refers is proved by the Annals of Thothmes III. to have been fought in the 23rd year of his reign, according to the general opinion, B.C. *cir.* 1450. The Annals state the king's line of march, proving that the city before which he conquered the confederacy is the Megiddo of Scripture, famous for the defeat of Josiah by Pharaoh Necho. The list is shown by its title to be an enumeration of the cities or tribes of the confederacy, of which the territory is stated to have extended from Megiddo to NeHAReNA, generally held to be Mesopotamia, certainly a country either to the east or to the north-east of Palestine. The list is not in geographical order, as is proved by the position in it of places mentioned in the account of the march. M. de Rongé had identified the following names of cities:—1. KeTeSHU, the great Hittite city on the Orontes. 2. MAKeTEE, Megiddo. 6. TeBeKHU, Tibhath in Zobah. 11. MARAMA, Merom. 12. TeMeSKU, Damascus. 14. AUBEERA. Two cities Abel. 15. HeMTU Hamath; ASTeRATU Ashtaroth. 30. RAWEESA, Laish. 31. HeTARA (HeZARA) Hazor. 33. KeN-NARATU, Cinnereth. 37. SHeNAMA, Shunem. 39. AKSeP, Achsaph, 52. 53. APRA, the two cities Ophrah. 54. KHASHBU, Heshbon? 56. NeKBU, Negeb, the south of Palestine. 61. YePU, Joppa. 79. KeRARA, Gerar. For the remaining names M. de Rongé proposes several probable Hebrew etymologies. The most remarkable is that of No. 100, YAKBA-ARA, which he reads JAAKAV-AAR, remarking, "La transcription hebraïque donne forcement יעקב־אל, nom au sujet duquel il serait facile de se livrer à des conjectures séduisantes; il est exactement composé comme Israel. . . . . Est-il permis de supposer que le nom de localité conserve un souvenir d'un des établissements de Jacob in Palestine?" The name, as here read, would, Mr. Poole held, most probably signify "God will supplant," for it commences with the future form, Jacob, which, in the case of the patriarch's name, is held to mean "He will, or does, supplant," but may mean "God will supplant (for him)," the name of God being in such forms almost always the nominative. A name perfectly analogous occurs earlier in the list, YeSHeP-ARA, which Mr. Poole proposed to read יסיף־אל, "God will add." We have no instance of the Hebrew samech being transcribed by the Egyptian SH, but conversely its Egyptian correspondents are used for the Hebrew shin. The name of Joseph signifies "He will add," the nominative understood being the name

Digitized by Google

of God. Supposing that these are the names of Jacob and Joseph in the forms, Jacob-el and Joseph-el, there are instances of the same variation in Nathan, Nethaneel (Nathanael), Nethaniah, and Jehonathan or Jonathan, Jephthah (Jephthah) and Jiphthah-el. Mr. Poole was thus led to look for other possible tribe-names. RABANA may be Reuben, like KANANA for Canaan, SHeMANA possibly Simeon, though the equivalent of ע is wanting; ASHUSHKHeN, Issachar (Heb. Issaskar, the s's being ש), and KAUTA may, perhaps, be Gad. Supposing that these are tribe-names, it was remarked that the confederacies of the time of the Judges, mentioned in the Bible, were, if Canaanite, of cities; if Abrahamite, of tribes. In this period the Israelites do not seem to have united under all the tribes, but in smaller confederacies, always of tribes. A confederacy would, therefore, if of Canaanites and Hebrews, have been of cities and tribes. But, as we have no indication of any such confederacy, it may be supposed that the tribe-names indicate the service of mercenaries, especially as the large numbers of confederates precludes the idea of any but very small contingents in general. The names Jacob and Joseph are sometimes put in the Bible for the twelve tribes, but Joseph being for Ephraim and Manasseh, it seems possible that Jacob should be put for Judah, in the time of the judges separated from Ephraim as Ephraim and half Manasseh from the northern tribes, and all from them beyond Judar. The majority of the identifications proposed may be doubtful, but those of Jacob and Joseph could scarcely be controverted. M. de Rongé finds a difficulty in this trace of Jacob from his assumption that at this period the Israelites were in Egypt. The addition of the name of Joseph shows that his supposition of a reminiscence of some establishment of Jacob is untenable and that the Israelites must have been in Palestine in the time of Thothmes III. Mr. Poole showed that this would necessitate our adopting the date of about B.C. 1650 for the Exodus. In this case, the period in Palestinian history would about correspond to the oppression of Israel by Jabin, King of Canaan, whose capital Hazor is alone mentioned in this list of all those on the Egyptian monuments. The head of the confederacy, routed by Thothmes, was apparently the Prince of KeTeSH, not to be confounded with Kedesh-Naphtali, and not the King of Canaan. Was the King of Canaan, the only one mentioned in history, established by Thothmes after the overthrow of this great confederacy?

Mr. Birch remarked upon the reasons in favour of the concurrence of the Exodus in the reign of Menfilah, son of Rameses II., B.C. in 1300, and Sir C. Nicholson spoke to the same effect. Mr. Poole, however, contended that little could be inferred from the absence of any notice in Scripture of a conquest of Palestine by the Egyptians, as we had but scanty accounts of the period of her Judges, many years being often passed by, and as the Israelites were then mainly confined to the mountainous and hilly tracts, out of the route of the Egyptians to Mesopotamia and Northern Syria. Mr. Poole also observed that the APERIU—a servile people, thought to be the Hebrews—were still in Egypt in the reign of Rameses IV., which was later than the lowest date of the Exodus.

The second paper was by Prof. Tagore, "On the Ethnological Value of the Institutes of Manu." The writer traced in the names of the tribes of the military class certain original nations. The Chinas he held to be the Chinese; the Pehlevis, Persians; the Cambogas, a people on the north-east frontiers of Persia; the Javanas, Ionians; the Deradas, Druids; the Chasas, Cushites; the Critos, Cretans, &c. In the statement of Herodotus that Media was colonized by the Arii, or Aryans, he found a trace of the direction of the Aryan migration; and in the list of Median tribes given by the historian, he discovered the originals of tribes mentioned in the Institutes. So also, in the Shah-námeh of Ferdoosee, the names of the castes preserve traces of the nomenclature of those of India in the Institutes. Professor Tagore was disposed to think that some of the names furnished him by Mr. Poole, from the list of Thothmes, were traceable in those of the military tribes in Manu. In any case, he saw in the ethnic character of the tribe-names of the Institutes the formation of castes in their elemental state.

Mr. Vaux read a third paper, by Mr. Fox Talbot, containing a translation made by him of the "Annals of Esarhaddon," preserved on a clay cylinder, in the British Museum. In these annals, the Assyrian King describes his conquests of Sidon, the overthrow of Hazael, the conquest of the marsh country of Lower Chaldæa, a war with the Elamites or people of Lusiana, a war with Media, with a notice of the civil administration of the King after the wars were ended, together with an account of the magnificent palaces which he built.

THE PAST WEEK.

HOME.

PARLIAMENT.

In the House of Commons, on Monday, Mr. Cochrane, in moving for copies of correspondence relating to the affairs of Greece, described the conduct of her Majesty's Government towards that country as neither just nor generous. He believed that Lord Palmerston was not aware of the course pursued by Earl Russell, which—especially in reference to the demonstrations in favour of Prince Alfred—he contended had been wanting in fairness and candour, in good faith and justice, and had involved the Greeks in difficulties and perils for the sake of a diplomatic triumph. Mr. Gregory, in seconding the motion, thought that Earl Russell's conduct had been clear and aboveboard, but condemned the proceedings of Mr. Elliott at Athens. He assented to the cession of the Ionian Islands to Greece, and thought that the preservation of the integrity of Turkey should not in future be the standard of our policy in the East. Mr. Layard defended the Government and Mr. Elliott, and said that the prospects of peace had been marred by internal discords and extravagance. He warned Mr. Gregory of the terrible consequences of setting Greeks upon Turks, recollecting that in European Turkey there were no fewer than 4,550,000 Turkish landholders, and that if they were provoked to rise the result would be too horrible to contemplate. Lord Palmerston said that the Greeks were told at the earliest moment that they could not have Prince Alfred for their king. The British Government had lost no time in endeavouring to secure an acceptable candidate for the crown of Greece. It was for the Greeks to choose; the British Government could only suggest a choice. With regard to Turkey, he said that education was spreading there, and that the Christians, though many privileges and equalities remained to be conceded, were much better off than formerly. If Mr. Cochrane withdrew his motion, when further papers on the subject of Greece were received they could be laid on the table.

On Tuesday, in the Commons, Mr. Somes moved for leave to bring in a bill for closing public-houses on Sundays. Sir George Grey, without giving his sanction to the bill, did not oppose its introduction. On a division leave was granted by a majority of 141 to 52. Mr. W. Forster moved for a select committee to inquire into the operation of the game laws, and to report whether any and what alterations are necessary. He objected to the new power given by the Act of last session to the police, and thought it important to examine the question whether game should be regarded as property. The increase of poaching and the morals of the labouring classes necessitated the inquiry. Mr. Thompson moved, as an amendment, a resolution that it is desirable to postpone the appointment of a committee till further experience is obtained of the working of the late Act. He contended that the Act was working well. Sir George Grey said that the large proportion of the crime of the country which was connected with the game laws, demanded the serious consideration of the House. He thought there was abundant ground for inquiry. But the amendment was carried by 176 against 157. Mr. Roebuck moved for an address for returns of the names of all persons who have applied for licences to change their names since 1850; of the instances in which the licences had been refused, with the reasons for such refusal; of the principles which have been observed in granting or refusing such licences; and of the fees taken for licences, and the manner in which they had been applied. The motion was granted with certain modifications, and accepted by Mr. Roebuck. Leave was given, on the motion of Mr. Cowper, to bring in a bill for the embankment of part of the south side of the river.

MISCELLANEOUS.

The Queen has commanded Sir George Grey to convey to the Lord Mayor the expression of the grief and concern with which her Majesty has read the account in the newspapers of the lamentable loss of life which occurred in the streets of the City on the night of Tuesday, the 10th inst. The Queen also desires that her sincere sympathy with the families of the sufferers should be made known to them; and it is, moreover, her Majesty's wish that an inquiry into their circumstances should be made, that the result may be submitted to her Majesty. The Prince of Wales has conveyed to the Lord Mayor a similar wish.

On Tuesday a meeting, convened in the name of the Lord Mayor, was held at Guildhall, to express the sympathy of the English people with the Poles in their present struggle. Lord Shaftesbury, Lord Harrowby, Lord Zetland, several other noblemen, members of parliament, &c., were present aiding and abetting. The resolutions did everything but recommend war, but some of the speakers supplemented this defect by maintaining lustily that it would not do to give Russia the idea that under no circumstances would England go to war for the Poles. The first resolution declared that Russia had, by a system of confiscation, exile, and massacre, forfeited all right to the possession of Poland, and exposed the peace of Europe to danger. The second declared that "it is the duty of every Englishman to labour to obtain the cessation of all diplomatic intercourse with Russia until the present state of things in Poland be put an end to." The third proposed the embodiment of the preceding resolutions in a petition to be presented to both Houses of Parliament. In proposing the first resolution, the Earl of Harrowby limited our power of interference to moral intervention. He said "we could throw the whole moral weight of England into the scale, and tell Russia that, as far as the Treaty of Vienna went—and it was by that she held Poland—she had broken all her obligations, and the people of Poland were free to act for themselves," and "that all countries were entitled hereafter to look upon the Poles as freed from any obligations to a Sovereign who had betrayed his trust. That, he was sorry to say, was all we could do. He did not see that we could enter into hostilities against Russia." But this is poor comfort. It is saying no more than has been said ever since the partition of Poland. The Hon. G. Denman, in seconding the resolution, spoke more to the purpose. "He, for one, should maintain that if it were allowed to go forth to the world that England would never go to war on behalf of that unhappy country, we should not be doing our duty," a sentiment

Digitized by Google

which the meeting cheered loudly. Still he did not counsel war "at the present moment," believing that the object we have in view may be attained by other means. But for England to allow any man to say "that she who had gone to war to preserve the integrity of Turkey and the independence of other nations from time to time, should on no account take active steps to secure her freedom from oppression to Poland, would be to tie her hands in a manner in which no man had a right to bind them." The tone of Sir H. Hoare, who proposed the second resolution, was still more warlike. He believed that Langiewicz and his fellow patriots would succeed of themselves in putting an end to the present state of things; and he described his camp as composed of 12,000 men, "who were spending their days in drill and other active preparations, and their nights in prayer for the success of their country." But "sooner than 'order' should reign in the Imperial sense at Warsaw; sooner than a stillness should prevail in the cities of Poland, broken only by the wailing of the orphan and the lamentation of the widow, the citizens of London would raise their voices in favour of a war with Russia." (Great cheering.) Mr. Pope Hennessy followed in the same strain. He asked if the assembly had met "to express a barren sympathy with Poland, or was it to strengthen the hands of the English Government in a very grave undertaking?" "If it went abroad that under no circumstances would England go to war on behalf of her own treaties, that meeting was an idle farce." The Earl of Shaftesbury thought it was not necessary to say how far we might be prepared to follow up an expression of opinion with blows. But nothing that was said at the meeting was more calculated to rouse a warlike feeling against Russia than his burning denunciation of the atrocious wrongs she had inflicted upon Poland. Mr. Danby Seymour, M.P., and Mr. Edward Beales insisted strongly on the propriety of helping the Poles with the sinews of war. The former urged the appointment of a committee in London to receive subscriptions for them—subscriptions in which other nations should be invited to join; and with that view he trusted that the Lord Mayor would communicate with the Prefect of the Seine. Towards the close of the meeting a letter was received from Mr. E. Romilly, enclosing a subscription of £20; and Sir H. Verney, M.P., read from a letter he had received from Florence Nightingale the following words: "If there is a fund for the sick and wounded in the Polish insurrection, would you kindly pay this little sum (£10) into it? It makes my heart burn to hear of that noble nation struggling again for freedom. God prosper her and bless her efforts, and bring her safe to port." When our women speak thus, what should our men feel?

Fears have from time to time been expressed that the prolonged subsistence of the Lancashire operatives on charitable funds would produce demoralization as one of its results, and we regret to see that there are symptoms that this anticipation is in course of being realized. The operatives are dissatisfied, and complain loudly of being reduced by the relief committees to a footing with the class of hereditary paupers. At Staleybridge they have memorialized the Home Secretary, complaining that "language of a harsh, brutal, and disgusting kind is habitually used, not merely by the agents of the committee, but by some of the gentlemen who compose it, and not merely to men, but to their wives and daughters;" and that the receipt of relief has for some time been accompanied by conditions little less humiliating than the oakum-picking, the stone-yard, or the crank of the Poor-law guardians. When, however, we examine the conditions referred to, and find that they consist in the compulsory attendance of women at sewing-schools and of men at reading-schools, their comparison to the crank and the stone-yard seems, to say the least, exaggerated. It may, however, be a hardship that no excuse for non-attendance is admitted, except at the discretion of the schoolmaster; and to apply either condition to persons of advanced life is clearly a mistake. Dr. Bridges, of Bradford, states that in a reading-school at Ashton-under-Lyne, he saw 800 men, some of them between 70 and 80 years of age, kept under lock and key. Again objection may fairly be taken to the practice of stamping every article of clothing contributed by the public with the word "Lent," and of distributing handbills, warning the recipients of clothes that they are not their own, but belong to the committee, and may be resumed if the wearers prove unworthy of them. The excuse that this is done to prevent pawning, though admissible, ought hardly to be pressed, if it is true that but few cases of pawning have occurred. The practice of feeding the people *en masse* may tend to break up home life, by separating the members of a family from each other; but it is not a ground for complaint. When the homes, or the power to support them, are gone, the committee must feed the people with regard solely to the most economic means of doing so. But surely it is not necessary that a policeman should be stationed in the soup-kitchens to compel the operatives to remove their hats when a member of the committee comes in. We do not question the difficulties with which the relief committees have to contend, or that, do what they will, they will not succeed in giving their myriad of clients perfect satisfaction. But looking to the fact that the latter were not long ago independent heads of families, with a social position of which they were justly proud, and which they merited by high qualities, it would be better that the funds and clothes of the committees should suffer some malversation at the hands of unworthy individuals, than that the whole body should be demoralized.

The Mansion House Relief Committee have again considered the question of affording facilities, by grants of money, for the emigration of the Lancashire operatives; and they have come to the same decision as before, that is, not to make such grants. But the Committee hold themselves at liberty to entertain the general question at some future period. It appears that both Mr. Villiers and Mr. Farnall were in favour of the Committee making the particular grant before it, on the application of Mr. Bazley, M.P. for Manchester; and Mr. Cubitt, M.P., the Chairman of the Committee, urged that it should be made. The Committee, however, refused the application.

The bonfire of bonfires on the day of the Prince's marriage was that at Aldershott on the brow of Cæsar's Camp. It was built in the form of a cone, fifty feet high, and 180 feet in circumference at the base, and was constructed thus:—A stout fir tree, 35 feet in height, was let into the ground to the depth of five feet, and supported by four struts. Round it was stacked the stouter timbers and materials to a height of ten feet, and to them succeeded fir branches to a height of five feet more. On this pediment five full tar barrels were secured round the central pole with wire, and the stacking of fir and furze bavins was continued to a total height of above twenty-five feet, the whole being pinned vertically with stakes. Then four more full tar barrels were secured round the pole, and the top of the pile covered with a layer of hurdles, pinned with stakes, forming a sort of staging. A topmast twenty-seven feet in length was now hoisted, and seven feet of its length secured by wire to the lower pole. The stacking from this point was continued till the pile reached forty-five feet, tar barrels being now and then emptied over the bavins, and allowed to trickle down—to the number of 300 gallons of tar. When the pile had reached forty-five feet it was covered in after the manner of the top of a sugar-loaf, and an empty tar barrel was placed on the topmast head. Surmounting all was a topgallant-mast, with a royal standard nailed to it, floating seventy feet from the ground and 670 feet above the sea. Seventy stout fir trees, about thirty-five feet long, were placed around the cone, forming its outer casing; the whole containing 42,000 cubic feet of material. On Tuesday evening a number of men armed with portfires were stationed at intervals around the pile, and at 8 o'clock, on the signal being given, they plunged their portfires into the mass, which immediately took flame, and presented a sight "grand in the extreme." For twenty-eight hours it blazed away, and had the weather been clear, this monster bonfire would have been seen over the greater part of Hampshire, Surrey, and Berkshire, an area of 2,000 square miles.

An instance of simplicity almost unique has just come to light at Salisbury. On the 3rd of the present month, a Mrs. Yarlett, who about five weeks before had been confined, was going to visit her mother at Salisbury, when she was accosted by a strange woman, who begged her to go with her to a neighbouring public-house, that she might get some peppermint, as she had been suddenly taken ill. Mrs. Yarlett complied, and away they went. But they had not been long in the public-house when the stranger said she was too ill to go for a parcel which had been left at a draper's in the town for a Mrs. Brown, and would feel mightily obliged if Mrs. Yarlett would fetch it for her, and that she meanwhile would take charge of her olive branch. Wise Mrs. Yarlett consented; but presently came hurrying back to say that the draper knew nothing either of Mrs. Brown or her parcel, when she found the stranger had decamped, taking baby along with her. On the same evening the woman, who was the wife of a shepherd named Shipsey, at Milston, rapped at her husband's door, calling out "Oh dear! oh dear! I have got your bargain!" The husband opened the door and said, "What in the world have you got?" to which his wife, handing him a baby which had nothing but a calico bandage round it, replied, "Oh, do take hold of it, and let I go upstairs." The happy shepherd, who thought that Providence had blessed their hitherto barren union, proposed, with marital fondness, to run for a surgeon; but to this the wife objected, bidding him call some of the neighbours; and two women being called, Mrs. Shipsey was placed under their tendance, while the baby was entrusted to her sister to nurse. This was on Tuesday. The police were meantime started in pursuit of Mrs. Yarlett's missing olive branch. On Thursday Superintendent Caldow made his appearance at the cottage, and found Mrs. Shipsey's sister nursing the little stranger, while the happy mother was upstairs in bed, doing as well as could be expected. Mr. Caldow, thinking the child unwontedly well grown for a five days' baby, called in a surgeon, of twenty years' practice at Amesbury, paid him the usual fee, and desired him to ascertain whether the woman had been confined or not. Mr. Pyle saw her, and, returning to the superintendent, told him that she had, that she had also milk, and that the offspring was a genuine five days' infant. Still doubting, Mr. Caldow called in two other medical men on the following day, who declared that the woman had not been confined at all, and that the child was at least four or five weeks old. A warrant for the apprehension of the husband and wife was now obtained; but the latter, shamming inflammation of the bowels, was not removed till the following Sunday. In the mean time, Mrs. Yarlett was brought to the house, where she at once identified her lost treasure and the bandage. Shipsey, the husband, was discharged by the magistrates, who also discharged Mr. Pyle, who had been summoned as an accessory. But the would-be mother was committed for child-stealing, having first called Heaven to witness that the child was her own, and finally protesting that if she had stolen it she had no recollection of having done so.

A notable character has lately disappeared from the scene, whose

Digitized by Google

career is chronicled in the congenial columns of *Bell's Life*. In his latter years Mr. Gully bore the appearance of a gentleman of a commanding and dignified figure; and at one time he had a seat in the House of Commons, and was the owner first of Upper Harepark, near Newmarket, and then of Ackworth-park, near Pontefract, for which he was twice returned to Parliament in the Liberal interest. His early occupations did not promise such results. He was at first a butcher's boy at Bristol, where he was born. Like other butchers' boys he was ready with his fists, and to the ability with which he handled them he owed his first success in life. At 21 he came to London and was found by his fellow-townsman, Pearce, better known as "The Chicken," languishing in one of the London lock-ups, a prisoner for debt. Here "the Chicken" visited him, and, to cheer him up and beguile his solitude, brought a set of boxing-gloves and sparred with him. In their bouts Gully showed such ability that his fame began to be spread abroad, and the "fancy," thinking it shame that a man of such superior talents should rot in gaol, paid his debts, and made a match in which he and "the Chicken" contended at Hailsham, in Sussex, on the 8th of October, 1805. Gully was so awfully punished after the fifty-ninth round, that his friends interfered and stopped the fight. But though beaten, he was not disgraced. His pluck won him public admiration, which in those days meant much more for the pugilist than we can imagine now, and he was backed against a Lancashire Heenan whom he beat in two contests for 200 guineas each. On "the Chicken's" retirement he was offered the title of Champion of England, which, however, he declined. After his second fight with Gregson, he left the ring, opened a public-house, and commenced those operations on the turf by which he amassed his wealth. On the 9th instant he died at Durham, 80 years old.

At Maidstone, on Wednesday, a young man named Burton, eighteen years of age, was tried for the murder of a boy between nine and ten, on Chatham Lines, last summer. The prisoner's statement was that he had an impulse to kill some one; that he sharpened a knife, and went out with it for this purpose, and that as the boy was the first person he saw, he took him to a convenient place upon the Lines, knocked him down, and cut his throat. For the defence all this was relied upon as proof of insanity, but the jury, to the satisfaction of the audience, found Burton guilty, and the Judge, strongly approving of their verdict, passed sentence of death.

The Dean of Westminster has acceded to the wish of Sir James Outram's friends, that the remains of that distinguished soldier, of whom a memoir was some time ago published in the *London Review*, should be interred in Westminster Abbey.

INDIA.

THE Calcutta mail brings us news to the 9th ult. On the 5th the Governor-General left Calcutta for the North-Western Provinces, with the view of making himself acquainted with the whole country and people under his government. He will spend at least two hot seasons at Simla, and will be absent more than a year and a half from Calcutta. Sir Charles Trevelyan promises a large surplus in his budget, which he is endeavouring to produce by the end of April. The revenue from opium alone is expected to be one million sterling above Mr. Laing's estimate, and Sir Charles hopes that the general surplus will be sufficient to enable him to abolish the income-tax, which now yields a million and a half. When he has got rid of his budget he proposes to address himself to a reorganization of all the civil establishments, and the education of the people in their own vernaculars; and with the assistance of the Statistical Committee he will draw up, for trade, finance, and civil government, tables and papers, to be published periodically, on the basis of those adopted by the English Board of Trade. Dr. Forbes's report on the cotton gin factory of Dharwar, in the south of Bombay, for the half-year ending May last, has attracted much attention. To secure the cultivation of cotton from violent reaction, he holds that India must produce a staple equal to the ordinary kind of America. This is to be done by the use of American seed. Experimental farms for this purpose were established in 1843-44, and by 1848 the cultivation had spread over 20,502 acres. 1849 commenced the period of free cultivation; and in the Dharwar collectorate there are now 214,310 acres under America seed, the cultivation of which has also spread largely into the Nizam's country and Madras. Experience shows that the seed does not degenerate into the native variety. The want of proper machinery for cleaning the cotton, was supplied by Dr. Forbes in 1855; and American seed is now popular with the peasant, because it adds one-fourth to his produce without additional cost in labour. Since the demand for this cotton as many as 591 peasants have applied and paid advances for cleansing machinery; and now that the high prices are reaching their pockets they pay for the gins themselves instead of depending on the dealers. Another advantage gained to the cultivation is the establishment of the port at Sedasheghur, by which the cotton of the Dharwar—which is "Middling Orleans," the kind most in demand,—and the districts behind it, will reach England within six months from the time it is picked, instead of eighteen months or two years. Dr. Forbes promises that if the demand for cleansing machinery is fully met, the extent of ground under American cotton in West and South India next year will be 600,000 acres, which, at the rate of four acres to the bale, will give 150,000 bales of New Orleans cotton. By the time the new harbour of Sedasheghur is prepared there will be 300,000 bales of cotton ready for exportation. It is interesting to know that as the acreage under American seed increases, that under the native seed is on the decline. But Dr. Forbes insists strongly on the supply of cleansing machinery being kept up. Contrary to the popular belief here, India is under-populated, and has only sufficient labour to clean the ordinary produce; whereas, by the new gin, one man can turn out 100 pounds of cotton wool a day, while with his own "churka" he can clean only twenty pounds in twelve hours.

FOREIGN.

AMERICA.

The Federal Congress expired at twelve o'clock on the 4th inst. Its latest acts have placed in Mr. Lincoln's hands powers almost unlimited, and so plainly directed towards the suppression of all freedom of action in the States which remain to the North, such as Illinois, Indiana, Ohio, and Missouri, where dissatisfaction with the Government is at its height, that they can be destined for no other object. He is empowered to suspend the Habeas Corpus whenever he shall deem fit. He may imprison and keep in prison without trial, and for any length of time, any person in any of the States of the Union, not excepting judges, members of the various legislatures, or the Governors of States themselves. The press is placed wholly at his mercy, and he can stop any printing-press, imprison any public speaker or public writer when and as he pleases. Practically, this power is without limit; for, although the Secretary of State and the Secretary of War are to furnish the judges with the names of persons arrested as soon as may be practicable, the President and his Secretaries are alone to decide on this practicability. By the Conscription Act Mr. Lincoln can call out the whole able-bodied population between the ages of eighteen and twenty-five after the 10th of July next, and the first call is to embrace 600,000 men; and the provost-marshal is empowered to arrest all conscripts enrolled under the Act who may be "suspected" of treasonable practices. Finally, the Government is authorized to issue about 1,100,000,000 dollars in greenbacks, a sum which, with gold at 72 per cent., represents about £137,000,000. The Democrats have been powerless to defeat these measures; and what they will be able to do under the reign of terror which they will create remains to be seen. The Republicans are working might and main to remove from the Cabinet the last vestiges of Conservative influence, and to replace Mr. Seward with Mr. Charles Sumner. Mr. Lincoln, however, resists their efforts, maintaining, to use his own phrase, that Mr. Seward is "the bottom of the tub." By a disgraceful juggle the Bill granting an indemnity to the President and his Ministers for the arbitrary arrests of last year was smuggled, though that is hardly the right term, through the Senate. The discussion lasted till 4 o'clock in the morning of the 4th instant, when a motion was made to adjourn, which was not carried. Mr. Bayard, of Delaware, who had been opposing it, resumed his speech; but the chairman called him to order, declaring that the Bill was no longer before the House, and had been carried. Subsequently it was arranged that a vote should be taken to decide whether it had been carried or not, when the House declared that it had, by a majority of 25 against 13. The attempt, however, to extort a party triumph, created alarm and disgust.

Rumours were current in Washington and New York on the 3rd instant, of a disastrous repulse of the Federal arms before Vicksburg, but they have not been confirmed. The Confederates have captured the *Indianola*, a Federal ram, twenty-five miles below Vicksburg. She had been sent to retake the *Queen of the West*, but was so fiercely attacked by that vessel and by three Confederate gun-boats, that, after an obstinate resistance of several hours, she was compelled to surrender. A brisk engagement took place on the 25th between the Federals and Confederates, near Strasburg, Virginia. A detachment of 80 Confederate cavalry entered the Federal lines, and captured 12 of the Federal pickets and a number of horses. They retired beyond Woodstock, pursued by 500 Federal cavalry, who recovered most of the prisoners and horses. Shortly afterwards the Confederates, being in their turn reinforced, fell upon the Federals, threw them into confusion, and drove them twenty miles, capturing 200 of them in their flight. The other New York journals deny the statement of the *Tribune*, that an expedition of negroes was being prepared at Hilton-head, to proceed into the South, and raise the slaves. In consequence of differences between him and General Hooker, General Sigel has resigned his command in the Federal army. The disagreement between Generals Hunter and Foster is said to have been adjusted. Mr. Opdyke, the mayor of New York, a prominent member of the Republican party, has voted a series of resolutions, adopted by the Board of Aldermen, condemning the dismissal of General Porter from the Federal service, and tendering him a public reception at the City-hall. One of the last acts of Congress was an amendment to the National Tax Bill, designed to check gold speculations. It provided that all contracts for the purchase of gold and silver must be reduced to writing, and stamped under the Stamp Act, at the rate of one-half per cent. on the whole amount, and bear interest at the rate of 6 per cent. per annum. Loans or deposits made for less time than three days, when renewed or extended, are to bear the same burden; and all loans of currency made by brokers on security of gold or silver shall not exceed par value of the coin, under penalty of non-recovery before courts of law. This produced a panic in Wall-street, and sent the premium on gold from 71¾ to 74.

News to the 6th inst. states that the Federals have again sustained a defeat, in a battle which was fought on the 5th inst. at Springfield, Tennessee; the Federals, under Coburn, and the Con-

Digitized by Google

federates under Van Dorn. The fight lasted all day. The Federal forces consisted of three regiments of infantry, 500 cavalry, and one battery of artillery. Nearly all the infantry were captured or cut to pieces; the cavalry and artillery escaped. Van Dorn was said to have 18,000 men under him.

POLAND.

The cause of the Poles is steadily making way. On Saturday last the committee of the French Senate appointed to consider the petition in favour of Poland made its report, the sum of which is that, confiding in the determination of the Emperor's Government to do all that is just, possible, and politic, in favour of Poland, the matter should be left unreservedly in its hands. This was followed, the day after, by the production of documents relating to Poland, which were laid before the Senate. These despatches show that in 1855 the French Government thought the time opportune for reminding Russia of the obligations she had contracted towards Europe in reference to Poland. The French Minister in London was desired to ascertain the opinion of Lord Clarendon, then Foreign Secretary, on this subject; and Lord Clarendon's opinion was that it would be expedient to take advantage of passing events to bring about, as far as possible, some change in favour of Poland, but not to make such an arrangement an absolute condition for the re-establishment of peace with Russia. More important than these is a despatch of the 17th ult. to M. de Talleyrand, in which M. Drouyn de Lhuys regrets that Prussia had departed from her neutrality in making the late convention with Russia; and observing that the Polish question has thereby acquired European importance, that the idea of unity between the different populations of Poland has been revived, that a really national insurrection has been brought about, that the Prussian Government had by this means cast itself into serious embarrassments, and that it has created a political situation already a cause of grave uneasiness, and likely to prove the source of future complication for the Cabinet. Another despatch, addressed to the Duc de Montebello, is dated the 18th ult. In this M. Drouyn de Lhuys states that the Polish question possesses, above any other, the privilege of exciting in France the sympathy of all classes; and he adds that, in a conversation with Baron de Budberg, he had not concealed that even "despite of us, events may grow embarrassing, and the pressure of public opinion become greater as the gravity of circumstances increases." He adds that, if the hopes aroused by the accession of the Emperor Alexander should not be realized, Russia would create embarrassments for herself, and place France in a disagreeable position.

Since these despatches were laid before the Senate, the *Moniteur* has published others. On the 21st ult., M. Drouyn de Lhuys writes to Baron Gros, the French ambassador in London, directing him to ascertain whether her Majesty's Government would join that of the Emperor and of Austria in a note to the Government of Prussia; at the same time inclosing a draught of the proposed note. This draught, after reciting the origin of the Polish insurrection, and stating that it was desirable that no incident should add to its troubles, proceeds to observe that the Emperor of the French has "learnt, not without anxiety, that the Cabinet of Berlin has signed a convention with that of St. Petersburg, by which the Court of Prussia consents to allow Russian troops to enter its territory in pursuit of armed bands seeking a refuge there, and engages to drive back on to Russian territory, until a sufficient national force presents itself, the insurgents in presence of the Russian troops." The note states that such an agreement would transform an incident in the affairs of Poland into a European question; that the co-operation it sanctions exceeds the rights of the Berlin Cabinet as laid down by the law of nations; and that it appears to emanate from a preconceived idea of a political responsibility, not established by European treaties, in settling the fate of Poland, and which might be detrimental to the general interests. Therefore, the Government of his Majesty the Emperor considers that it is its duty to itself and to Europe to point out to the Court of Berlin the anxiety caused by the convention; and flatters itself that these observations will be received in the same friendly spirit which dictated them.

Then comes a circular of M. Drouyn de Lhuys to the French diplomatic agents abroad, dated the 1st instant, in which he states that the English Government has not adhered to the proposal of a joint note; and that Austria, while adopting the view of the French Government, has not thought herself justified in officially blaming a convention with which she had from the first declined solidarity. "In this state of things the Government of the Emperor has no further result to give to the proposition which supposes an agreement." Still it hopes that the two contracting parties to the convention will appreciate the observations which its arrangements have occasioned. "For our part," M. Drouyn de Lhuys continues, "we shall continue to follow those events with the degree of interest which they are calculated to inspire. Our duties in this respect concur with those of other great Powers placed in the same position as ourselves. The efforts which we have made to subordinate any proceedings of the cabinets to previous concert testifies, moreover, to the sentiments which we feel in an affair which involves on our part neither private policy nor isolated action."

The debate on the Polish petitions in the French Senate commenced on Tuesday. M. Bonjean spoke in favour of sending back the petitions to the Government. M. de Lagnéronnière thought there was yet time for Russia to carry out the treaties on the fulfilment of which the peace of the world depended. M. de Poniatowski could not understand how the Senate could reject the petitions by disdainfully passing to the order of the day. On Wednesday the debate was renewed. The Marquis de la Rochejaquelein supported the passing to the order of the day. M. Walewski opposed him. Prince Napoleon also would not pass to the order of the day. He enumerated the barbarous measures of the Russian Government. He said that men of all opinions and all ranks take part in the insurrection. "With this state of things it would be deplorable to be only able to give to the Poles counsels of resignation. To pass to the order of the day is to vote against the national feeling of France. Circumstances are more favourable than ever. The Emperor is in the prime of his years and his genius. Our prestige is great abroad, and affairs at home are on a solid basis. The moment has come to act."

Meantime the Poles are adding to their successes. On the 5th instant, under Lewandapski, they defeated the Russians near Breznuka, and captured two guns. On the 7th, under Lelewel, they beat the enemy near Wladowa, on the Bug; and also near Rataji, where the Russians were in considerable force. On the 9th they defeated the Russians near Myszewo, in the government of Plock, and killed 100 of the enemy. On the 16th, at Londek, three miles from Kalisch, 3,000 insurgents routed a body of Russian troops in an important engagement. Besides this, the insurrection is daily gaining ground; and the Poles appear determined to preserve their cause entirely distinct from all other revolutionary movements. General Langiewicz has just given a proof of this in declining the offer of Garibaldi's services. He had served with him in Sicily, and Garibaldi, it appears, wrote to him lately, assuring him of his devotion to the cause, and offering the aid of his sword. Langiewicz replied in terms of affection, but declined the offer for the present, saying he had need of the co-operation of all classes in Poland, and Garibaldi's presence might, for various reasons, alarm the public mind, and give to a patriotic movement an exclusively revolutionary character. If the statement is true, General Langiewicz has acted wisely. Another sign of wisdom is to be found in the letter of General Dembinski to *La Presse*, in which, after alluding to an article in that journal stating that "all the Poles share the sentiments of M. Mickiewicz"—namely, that Russia, Prussia, and Austria are alike to be regarded as foes of Poland—the General says, "I consider as an enemy to Poland, whether he calls himself Louis Kossuth or Ladislas Mickiewicz, any man who endeavours to give Austria the least ground for uneasiness as to the attitude of Hungary." To use the insurrection in Poland as a pivot for creating a revolution in Hungary, would be insane policy. Poland has enough to do to fight her own battles; and any one who would add to her difficulties is her enemy.

On the 17th, the head-quarters of General Langiewicz were at Dzialoszyce. On the authority of a Silesian paper, we may state that the General is a native of the Grand Duchy of Posen, and the son of a physician. He first entered the University of Breslau, whence he went to Prague to devote himself to the study of the Slavonian languages. He then returned to Breslau to study mathematics, and subsequently acted as tutor in the family of a Polish landed proprietor. Two years later he returned to Breslau to complete his studies, and then went to Berlin, where he served his year in the Artillery. Thence he went to Paris and to Italy, made the campaign of Sicily and Naples under Garibaldi, and at its conclusion was appointed one of the instructors at the Polish military school at Cuneo. He is of small stature, and about thirty-four years of age.

Other accounts describe Langiewicz as small, thin, but muscular; the head in proportion, but with a weather-beaten though fresh complexion; dark hair, and somewhat spare beard; the eyes dark and large, but very beautiful; his entire expression mild, but decided. He is very devout, and he advises his men to keep their consciences in good order, as there is hardly a moment in the day in which they are not exposed to danger. With him in the camp of Goszcza were Jiezieranski, Czieszewski, and other distinguished partisans; besides, a Miss Pustowojtow, a young and delicate brunette, who is attired in man's apparel, and fights like a man. She has been present at all the battles; on horseback flies like a bird, and is generally respected and beloved on account of her bravery and cheerfulness. There was a Capuchin friar also, who doubles the characters of field-chaplain and magazine man, and who, notwithstanding his multifarious duties, is ever polite, agreeable, and cheerful. The Poles serving under Langiewicz are in excellent health and spirits. Most of them are in the prime of life, some in the very bloom of youth, and others the grey-bearded patriots of 1831. Langiewicz is described sitting at the end of a table, round which, sitting or standing, were his officers carrying on an incessant conversation, in the midst of which, undisturbed, the General wrote, answered questions, and gave orders to persons who were continually coming in and out. Answers and orders were short and decided.

The *Times* Posen correspondent, writing under date the 13th instant, states that a fortnight before that date M. Petrikow, a dignitary of state, and one of the favourite squires of M. Wielopolski, repaired to General Langiewicz with proposals of peace, promising that if Langiewicz would lay down arms, or assent to a cessation of hostilities for a fortnight, the Government of the Grand Duke Constantine would not only endeavour to obtain the sanction of the armistice at St. Petersburg, but would also advocate the bestowal of a charter upon the kingdom, to be modelled upon the Constitution of 1815, with such alterations as the Czar might

Digitized by Google

think indispensable. A general amnesty and administrative independence were also promised; but Langiewicz declined the offer.

The anticipation of favourable results to the Polish cause from the accession of M. Mieroslawski has not been realized. It appears that, though an able general, his views as a politician have not found acceptance with the Provisional Committee. He is an enemy to the nobility, and too strongly tinged with socialist theories to be desired by them; and he was also in favour of an extension of the movement beyond the Russian frontier into Prussian and Austrian Poland. On these grounds the Revolutionary Committee refused his services.

PRUSSIA.

In the Chamber of Deputies, on Monday, Herr von Forckenbeck proposed the following paragraph as an amendment to the law on the military organization of the country:—"The strength of the army in time of peace shall be fixed by a special law. The yearly budget of military expenses shall be based upon this law." With a slight addition, the paragraph was almost unanimously agreed to, only two members voting against it. None of the Ministers were present; but the Royal Commissioner who represented the Minister of War on the committee, declared that the Government would not agree to the amendment, and would not bring forward an organic law on the military organization. And he said further, that by such discussions the conflict between the Government and the members would not be avoided, but, on the contrary, increased. In the Upper Chamber, on Saturday, when, after the reading of the Royal Message, thanking the Chamber for having voted increase of pensions, &c., to the veterans of the wars against Napoleon, the President proposed three cheers for the King, they were given. But in the Lower House the deputies heard the Message standing, but in silence.

LATEST.

In the House of Lords, on Thursday, Earl Granville stated that the Home Secretary had taken measures to inform himself generally on the subject of the amalgamation of the City and Metropolitan Police, but at present no other steps would be taken by the Government.

On Thursday a large number of students, at the conclusion of a lecture delivered by Professor St. Marc Girardin, set out for the palace of the Senate, with the object of making a manifestation in favour of Poland. On arriving at the Place Odéon, they were dispersed by several brigades of police, who afterwards patrolled the Place Odéon and the Rue de Vaugirard in order to prevent the people from collecting together. Some arrests were made.

In the Senate, M. Billault regretted that words had been spoken likely to compromise the cause of Poland, and render more difficult the course of the Government. He said: "The Polish question is not forgotten, but a fresh insurrection can only bring fresh misfortunes; and it is neither good, useful, nor humane, to encourage it. The French Government persists in this language." He continued that Russia has replied to the communication of France by benevolent words, promising concession and amnesty; and said that if the destiny of Poland must be settled by a Congress, the voice of France would be listened to. The Senate passed to the order of the day by 109 votes against 17.

It is reported that all the marshals of the corporations in Lithuania, all the judges and judicial officers, and all independent public functionaries, have sent in their resignations *en masse*, resolving not to receive any communication from the Government in the Russian language.

A telegram received at Lemberg, from Tarnow, on Thursday, announces that Langiewicz defeated the Russians under the command of General Schachowsky, on the 17th and 18th, and captured considerable quantities of war material.

American news to the 7th inst. states that a great meeting was held on the 6th at the Cooper Institute, New York, at which a resolution, approving of the action of the President and Congress in declining, as unfriendly, the mediation of foreign Powers, was carried unanimously.

At Detroit, as some soldiers were escorting to prison a negro accused of an outrage on a white girl, the mob endeavoured to seize and lynch him. The soldiers fired upon the crowd, and a great riot ensued, in which every negro who could be laid hold of was violently maltreated. Several houses were burnt or gutted, and from ten to fifteen persons killed.

Richmond papers report from Savannah that the Federal fleet commenced bombarding Fort M'Alister at 8 o'clock on the morning of the 3rd instant. The firing continued heavily during the day.

A loan to the Confederate Government has been introduced into the English market, and has constituted the main topic of attention on the Stock Exchange. On Thursday it ranged between 3 and 5 premium, with large and numerous transactions. The applications in London alone amounted on Thursday to £5,000,000. Sir Hugh Cairns has given his opinion that the loan is legal. Very little political feeling is manifested in the business, and as far as London is concerned, the loan derives its attraction from the fact that it is regarded as a cotton speculation; otherwise, the majority of capitalists wish that it had not been introduced.

REVIEWS OF BOOKS.

GERVINUS ON SHAKESPEARE.*

In reviewing such a work as the present, which to many of our readers will be entirely new, it is absolutely necessary that, with our limited space, we should confine ourselves to a consideration of the author's scope, and his treatment of the subject, passing over the translator with far less notice than he deserves. We will therefore merely record our opinion that the thanks of all English students of Shakespeare are due to Mr. Bunnett for rendering accessible to those unacquainted with the original this valuable commentary of Professor Gervinus. In the few passages where we have tested the translator's accuracy we have found him remarkably faithful; but if, as is not unlikely to happen in the case of so long and laborious a work, oversights are discovered by friendly or unfriendly critics, we can only hope that Mr. Bunnett may soon have the opportunity of correcting them in a second edition.

We fear that it cannot be disputed that to Germany we owe nearly all the best philosophic criticism on Shakespeare. Certain it is that many profound German scholars were engaged in penetrating the true significance of Shakespeare's genius at a time when Coleridge and Hazlitt stood almost alone in England as the founders of a more genuine appreciation of our greatest poet than we, misled by the artificial dogmas of the French dramatic school, had hitherto conceded. It may even be doubted whether Voltaire's estimate of Shakespeare, which was very much the same as that which Mr. Newman now applies to Homer, is not even at the present day widely prevalent among superficial readers of Hamlet and Othello. The doctrine that Shakespeare's genius, though grand, is essentially savage; that there are in him great faults compensated by great beauties, and a general absence of anything like art in the construction of his dramas, is not yet thoroughly extirpated. We are not now concerned with English writers who have combated this heresy; but, without in the least undervaluing their services to the cause of true interpretation, we do not hesitate to say that it is mainly through the teaching of Lessing, Goethe, the Schlegels, Tieck, and many others, that England, as well as the rest of Europe, has learned to weigh Shakespeare in a balance different from the one in which we test Corneille and Racine, and to recognize in him not the mere impatience of all rule, but the embodiment of an art more universal and sublime than any which had found utterance in the form of the Aristotelian unities. It is true that this instructive German criticism has been accompanied with much that Englishmen feel tempted to call nonsense, and that Shakespeare himself would have stared aghast at some of the amazing philosophical profundities which the most casual expressions of his exuberant spirit have been found to intimate. We could point out many passages in the book of Professor Gervinus which we think based on this non-natural principle of interpretation; but we believe his commentaries to be on the whole a worthy and not unimpressive result of a long devoted study, and in some sort a culmination of Shakespearian criticism in that country where the grand Elizabethan poet has found a second home. Accordingly we shut our eyes to whatever might tempt us to cavil, and content ourselves with indicating, so far as we are able, the character of the work before us. We will therefore refrain from any discussion of that part of the book which treats of Shakespeare's life, for the double reason that it is merely subordinate to the main subject, and that it exhibits a tendency to speculate on insufficient data. Indeed the Professor makes a curious avowal on this point. He tells us that every historical work of art reflects the mind of the narrator no less than the subject presented. His own recital, he fears, will be rather "a poem of the historian's than a history of the poet," and is in danger of containing "more fiction than truth." Truth being one and fiction manifold, it cannot be denied that a history evolved for the most part from the internal consciousness of the writer is likely to possess more of the latter element than of the former.

It will have been already anticipated that Dr. Gervinus, in the main body of his work, has attempted to tread the path pointed out by Goethe in his masterly analysis of the character of Hamlet. His great object is to show that every work of Shakespeare is, as it were, a Kosmos, and that a general unity of design may be discovered in each by those who seek for it. There is, according to him, everywhere a pervading symmetry, marred by neither defects nor excrescences. Irregularity may exist on the surface, but, from the true inner point of view, the proportion of parts is admirable. In the words of the translator:—

"He has perceived one ruling idea pervading every play, linking every part, every character, every episode, to one single aim. He has pointed out the binding thread in all that before seemed disconnected, and has found a justification for much that before seemed needlesly offensive and perhaps immoral. And in doing this, in thus weaving together materials apparently scattered, and in giving us a guiding thread through the intricacies of the plot, he has opened out to us a new source of interest, and has afforded a yet firmer basis to our former appreciation of the works of Shakespeare."

It will be far better to endeavour to follow him in a single instance than to scatter brief remarks upon the general success of his method as applied in a number of plays. For many reasons, which it is unnecessary here to enumerate, we select the drama of "Macbeth." According to Dr. Gervinus, it is the aim of this

* Shakespeare Commentaries. By Dr. G. G. Gervinus. Translated, under the author's superintendence, by F. E. Bunnett. London: Smith & Elder.

Digitized by Google

play to lead Macbeth from a noble disposition and a fine nature up to that point of what was once called *security*, at which all moral restraint ceases to operate. To understand the deep poetic art by which this result is attained, we must first comprehend the exact character both of Macbeth himself and of the wife in whom he found (as the author well shows in opposition to Schlegel and others) his only external temptation; for in no case did the weird sisters do more than harp, by vague oracles and half-lying phantasms, upon the man's own already existent feelings: they originated nothing. Macbeth, then, is a complete contrast to Hamlet, the more so because there is a certain degree of resemblance between the two men. Both possess an excitable imagination, and at the outset the voice of conscience is in each equally loud. But that heroic physical strength, which Goethe found lacking in Hamlet, joined with an insatiate thirst for action and a profound spirit of ambition, places such a gulf between the two natures, that we find Macbeth, even early in the play, ready, for the sake of certain gain in this world, to "jump the life to come," which filled Hamlet with fear and irresolution. Thus the one is led on through blood and lawlessness to usurp the throne of his king and benefactor; while the other shrinks from reclaiming by a lawful act the throne that is his by right. Hamlet, again, finds a certain sort of delight in the torture of his forebodings and fancies; Macbeth rushes into action to escape the agony of mental struggle and terror. His heated imagination can show him air-drawn daggers, can assail his ear with ghostly voices, can make even spirits visible; but against the temptation to crime it is powerless, because he feels that action is the true remedy for his brain sickness, and the only field of action before him is crime. Hamlet may doubt and soliloquize, but Macbeth must *do*. All this is brought out at considerable length and with abundant detail by Dr. Gervinus; and even those who, following the remark of Coleridge, have been in the habit of recognizing this contrast, will probably find in the analysis much that they have been unable to think out for themselves. As for Lady Macbeth, she is the complete opposite of her husband; being unimaginative, calm in judgment, cold in blood. No presentiments alarm her before the deed; during it, no hesitation assails her; after it, she would have been able speedily to forget what had happened. She scorns the bare idea of failure, is always mistress of herself, and plays her part so perfectly that no suspicion falls on her. But though, from one point of view, she is almost devilish, she is altogether a true woman, though a bad one. We doubt whether any writer has exhibited this real womanly nature so successfully as the present author. The true redeeming point in her character is to be sought, not in those mere flashes of tenderness which occur in her speeches, but in the fact of her absolute devotion to her husband. It may be questioned whether she loves him, but she most certainly esteems him. She is far more filled with the idea of what he might and should be than he is himself; she knows him to be the worthiest to rule, and she wishes to confer the crown upon his merit; his manly nature is her pride and glory; where he sees danger, she, in her idea of him, is sure of the happiest success. She lives only in him; of herself and her own elevation she never speaks. She has also the true weakness of a woman. When the stimulus to exertion is gone; when, instead of realizing her golden expectations, she beholds only the ruin of the land and of her consort, her powers suddenly relax and sink. Her violated nature, though still repressed during the day, avenges itself in her sleep, and she finally dies by suicide.

Such being the two chief characters of the play, we at once discern the exquisite insight with which Shakespeare has made the woman invariably strike that chord in her husband's heart which would be sure to respond. He for his part, being what he was, could never bear to be despised by his wife for want of manhood. Accordingly, on this side of his nature she attacks him again and again, representing the scruples of conscience as mere cowardice. When she reproaches him with want of love, it does not move him; when she confidently promises him a certain success, it rather makes him hesitate; but when she says in effect, "Art thou afraid?" she manages him like a child. This was the spur which, as he says of his ambition, "pricked the sides of his intent," and made him overleap the bounds of humanity; and it is very remarkable that Macbeth, when he instigates the murderers of Banquo and his son, employs the very means which had wrought most effectually upon himself: he appeals to their manliness. We regret that we have not space to show how the whole machinery of the play tends to this result—the development of Macbeth's innate thirst for action, till he arrives at that state of mind in which he fears neither God, man, nor devil. Let us see him, however, as Professor Gervinus describes him on the brink of this moral ruin.

"This fear and this conscience are once more to shake his resolute manliness, when the ghost of Banquo appears to him. This unhinges his nature; his wife silences the company, palliates and excuses his paroxysms with her old presence of mind, and reminds him of his weakness with the old stinging reproof, 'Are you a man?' 'Ay,' he answers, 'and a bold one, that dare look on what might appal the devil.' She continues her bitter sarcasms at his want of manliness: 'These flaws and starts would well become a woman's story at a winter's fire.' Upon this he grows so bold as even to drink the health of the just vanished Banquo; and yet again the apparition shakes his iron nerves. He may assert, 'What man dare, I dare!' and yet his manliness disappears at this awful sight. These are the last struggles of his conscience and of his fearful imaginings. Yet before long (it ought to be *not long before*) he looked back amid the stings of remorse almost enviously upon Duncan's sleep 'after life's fitful fever;' he now sees himself 'stept in so far in blood' that 'returning were as tedious as go o'er.' Hitherto he had shrunk from Banquo's suspicion and pursuit; now he keeps spies in every house, threatens the escaped princes, summons the absent Macduff, and orders the slaughter of his family. Hitherto the qualms of conscience in the man who had murdered sleep, had manifested themselves in that he had murdered his own sleep, that he had lost this refreshment of nature, and suffered from terrible dreams; now, through all his cruel schemes he will sleep calmly 'in spite of thunder.' The time had been when his lively fancy would have been excited by a 'night-shriek;' now, 'supp'd full of horrors,' he had almost 'forgot the taste of fears.' Formerly he pondered over his actions, and consideration and reflection preceded and accompanied his deeds; now he has 'things in head which must be acted ere they can be scann'd;' he considers himself still young and unripe in deeds, until he has brought it to this, that the deed shall go with the purpose; that the 'firstlings of his heart shall be the firstlings of his hand;' that all boasting 'like a fool' shall be given up; and 'be it thought and done' shall be his only motto."

His end is thus described:—

"When Macduff says to him that he was 'from his mother's womb untimely ripped,' he yields to fear, and exclaims, 'I'll not fight with thee.' But a taunt in Macduff's words, as formerly in his wife's, and at once the hero revives, as a hero to die. Grand, like that Hagen in the 'Nibelungen Lied,' he compels admiration even while rising in cruelty; the impress of innate heroism is visible in him to the last; so that the greatness of his manly strength and the might of his resolution almost outweigh and equal the magnitude of his guilt."

BRITISH COLUMBIA AND VANCOUVER ISLAND.*

THERE was a legend long ago in England that a passage had been discovered at the end of the sixteenth century, between the mainland of North America and what is now Vancouver Island. An old Greek sailor, so the story went, Apostolos Valerianos by name, but better known as Juan de Fuca, was found in Venice, in 1596, who had sailed to and fro many places in those western seas, and had made discoveries of much importance. In his wanderings he had reached the 48° of latitude, entered a narrow strait between the 47° and 48°, and sailed therein for more than twenty days, until he came to the North Sea, when he found it "wide enough everywhere." The story of this ancient mariner was long current in England. There were many who believed it, and many who were sceptical, but none who had the courage to test its accuracy. In 1778 Captain James Cook was sent out to examine the shores and seas as far as the 65°. He searched with care for the old Greek's passage, but he failed to find it, and pronounced it to be a fiction, and Vancouver Island to be a portion of the mainland. Fourteen years later, Captain Vancouver, an officer in the English navy, and not a Dutchman, as has been erroneously supposed, was despatched to settle some official business with the Spanish Commission, and to survey the western coast of the new continent. He found San Juan's Straits, and entered on the Gulf of Georgia, which separates the island which now bears his name from what is now British Columbia; and after a long and difficult navigation, he forced his way among the islands of the gulf, and through the strait named by him Johnstone, until he came at length into the Pacific at Queen Charlotte Sound, probably at the very point where Juan de Fuca, the old Greek sailor, found it "everywhere wide enough" two hundred years before. Vancouver Island was thus discovered, and began to be colonized by Englishmen at the beginning of this century. But the colonization did not proceed rapidly until 1857, when the gold discoveries were made on the Fraser River, in the adjoining continent. Since then both the island and British Columbia have prospered, and one day they may be among the most valuable of the British possessions. In the mean time we look upon them as little known and very distant lands. We know that Vancouver Island is about half the size of Ireland, and that it had been granted to the Hudson Bay Company on condition of its being colonized. We know that British Columbia is about three times the size of Great Britain, that it has a coast line of some 500 miles, and that it is made up of lake, mountain, forest, marsh, and prairie. But that was about the sum of knowledge possessed till lately by the majority of the public who have not made our colonies an object of special interest. This book of Commander Mayne's gives much new and valuable information about these countries, and, though somewhat monotonous in style and tone of thought, it is on the whole not unpleasantly written. Portions are dry and statistical, but they are relieved by a judicious intermixture of personal adventure and practical speculation, and the reader is carried on without much weariness to the end.

Commander Mayne spent four years in the colony. He went out on board H.M.S. *Plumper*, despatched in 1857 to survey the waters between Vancouver Island and the mainland and the coasts and inlets of the colony, during the international dispute between the Americans and ourselves upon the question of the boundary line. The merits of the dispute are very clearly put in this book, and the reasons of the forcible occupation of San Juan. The question remains open for settlement at some future period. At present the island is held by equal bodies of English and American troops, about one hundred of each nation. If the question should arise again at the conclusion of the present war in America, the

* Four Years in British Columbia and Vancouver Island. By Commander R. C. Mayne, R.N., F.R.G.S. London: John Murray Albemarle-street. 1862.

Digitized by Google

distinct statement of the geographical difficulties given by Commander Mayne will be studied with interest. The *Plumper* left England on the 20th of March, 1857, and arrived at Honolulu, Sandwich Islands, on the 16th of October. She remained there about ten days, during which time her officers spent some time at the friendly court, and in the general society of King Kamehame-ha II., and his consort, a pleasant, sensible woman, daughter of an Irish settler in the islands. From the Sandwich Islands the *Plumper* went northwards to her station, and Commander Mayne remained with her till October, 1861. During that time he was constantly employed both on the coast and in the interior of British Columbia in exploring and surveying the country. He has given the result of his explorations in the earlier part of his book. The latter part contains an account of the Indian races, both in the island and on the Continent, and a general summary of the state of the countries.

The Indians are divided into the Coast, or Fish-eating tribes, and the Inland tribes—like the sea and land Dyaks of Borneo—and they number altogether about 60,000. The Coast tribes are more numerous, but much inferior both physically and morally; proximity to the white man seems to cause degeneration. Those who live far inland are fine, handsome, intelligent men; but they gradually fall away as they approach the coast, and those who live around Victoria are more degraded than the lowest negroes. Their ceremonies in celebration of any domestic event, birth, marriage, death or burial, are sufficiently peculiar. Their traditions and religious feasts, the savage ceremonial on the initiation of their "medicine men," their "palavers," and their unquenchable taste for fire water and gambling, and the consequences of their indulgence in such tastes, are well described, and are brought out in a manner indicative both of considerable insight and observation.

Among other idiosyncrasies and fashions, there is one which is peculiar to these Indians, and which is interesting on antiquarian grounds; it is their respect for the representation of certain animals which they look on as of especial virtue. They carve strange figures upon the fronts and roofs of their houses, which are intended to represent various members of the animal kingdom, such as whales, porpoises, eagles, ravens, frogs. These are adopted as crests by different families, and are considered to form close ties of relationship between those who bear them. Those of the same caste may not marry; a whale may not marry a whale, or a frog a frog. The crests, however, descend by the mother's side, so that if a male frog were to marry a whale, the frogs become absorbed in the whales, and unless there should be female frogs, they become extinct.

The most useful and practical information, however, in this book, relates to the productions of the country and the prospects for the settler. A colonist can get out to British Columbia by the Isthmus of Panama—which he crosses by rail in something under three hours—to San Francisco in about forty-five days, and at the cost of some £90. This is the most convenient route, but the most direct goes across the American continent. There is a regular route opened between New York and San Francisco, a distance of 3,000 miles, which, partly by rail, partly by coach, is travelled in about seventeen days, and passes by St. Louis on the borders of Illinois and Missouri, and across Nebraska and Utah, by the Great Salt Lake, into California. Once established at Victoria or New Westminster, there are two lines of life open to the settler. He can proceed up the Fraser River and take to gold digging, or he can purchase good land at 4s. 2d. per acre, and become a prosperous agriculturist. There is an area of nearly 120,000 square miles from which he may choose his land, and every facility is given to him to settle and thrive. The climate closely resembles our own, the cold during winter is never excessive, and the summer heat rarely rises above the average of an English summer. The soil is rich, so far as it has been tested, and what has already been cultivated has invariably proved fertile. The only drawback to extensive cultivation is the occasional want of rain, and the lengthened periods of drought. But owing to the great abundance of water in the colony, the innumerable rivers, streams, and lakes, this apparent difficulty is obviated by means of irrigation. It is no exaggeration to say with Governor Douglas, that "there is a watercourse and rivulet for every moderate-sized farm that will be opened in the district." To this abundance of water may be ascribed the richness of the pasturage, which is one of the striking features of the colony. In Vancouver Island neither the arable nor the pasture land is so valuable as on the mainland, but that drawback is more than counterbalanced by the excellence and abundance of the timber. In Columbia the best land is inland, some sixty miles from the sea. The coast, which is deeply indented by a variety of inlets running far into the interior like the fiords in Norway, is fringed with dense forests of pine trees, sometimes growing on low ground, but generally covering mountain ridges of various sizes which terminate inland in a number of irregular peaks shooting up in every possible form and in heights varying from one to ten thousand feet. Behind all these minor ranges and inland of the heads of the inlets, some sixty miles from the sea, there is a long range of mountains running parallel with the coast called the Cascade Range. It rises to a great height, and forms a barrier which must be surmounted before the settler can reach the Eldorado that lies beyond. There is no friendly valley leading up by easy approaches to the interior. The Fraser river has forced its way through the barrier, but the rocks close in upon it so precipitously as to form an impassable gorge or "cañon," as it is called, in which there is hardly footing for a goat along the high precipitous banks. The Cascade Range, however, once passed, the whole aspect of the country changes. The dense pine forests cease, and the country is open, clear, and, in spring and summer, covered with bunch grass, excellent for cattle. There are no enormous prairies, as in Australia or the eastern portions of the American Continent, without a hill or wood to break the green monotony of the scene. It is rather what the Californians term "rolling country," broken up into pleasant valleys and sheltered by mountain ranges of various heights. These hills are generally well clothed with timber, but with little if any undergrowth. The valleys are clear of wood, except along the banks of the streams which traverse them, on which there is generally a sufficiency of willow or alder to form a shade for cattle. The timber upon the hills is very light compared with its growth upon the coast; indeed, there is nothing more than the settler wants for building, fuel, and fencing. The prospect for the colonist is, on the whole, a good one; but, besides the more substantial advantages, there are other attractions which may tempt some visitors to the country, even if they be not settlers. Sport is always plentiful. There are salmon and trout in all the rivers and streams and lakes in numbers that seem fabulous in this country. "The quantity of salmon," says the author, "is almost beyond description, but it will give some idea of it to say that a Hudson Bay Company officer, who lived many years on the Columbia, told me that on a sudden falling of the water such numbers were left upon the bank as to cause the river to stink for miles." The average weight of the fish taken, either by the spear or net, varies from 15 lb. to 25 lb., the average value of a fine salmon from 2d. to 6d. In England such a fish would cost from £3 to £4. Game is more plentiful on Vancouver Island than on the mainland, but in both there are Wapiti deer, elk, buffalo, grizly bear, black bear, racoon, and wild sheep, in sufficient numbers to keep the most ardent sportsman in constant occupation. On the whole, whether for a sporting tour or for a permanent residence, these colonies form a land of promise to which Commander Mayne is an admirable guide.

SELECTIONS FROM THE POETICAL WORKS OF ROBERT BROWNING.*

With the confidence of anonymous partisanship, the editors of this selection avow in their preface that they expect to accomplish a very unusual feat. They believe that they will reverse a popular judgment of more than twenty years' standing. "This little book," as they somewhat affectedly style a volume which contains not less than the whole works of Virgil or of Milton, "originated with two friends who, from the first appearance of 'Paracelsus,' have regarded its writer as among the few great poets of the century, who have seen this opinion since gain ground with the best readers and critics, and who believe that such a selection as the present may go far to render it universal." Even were the selection, which has been much overweighted with the dullest of all extracts—extracts from plays, more judicious, we fear that the *vox populi*, through the wisdom and the folly that are in it, is little likely to fulfil the editors' expectation.

Immediate popularity is, indeed, no proof that first-rate poetical merit exists. But, where it does exist, we are disposed to think that immediate popularity is very rarely wanting. English literature alone supplies a great number of cases in point. The world of readers (not a large world, unhappily) has now and then underrated a poet on some other ground than his own characteristic powers,—as the glory of Shelley was long obscured by theological anathema, and the coarse, unintelligent criticism of Wilson and Croker for a while placed Keats under a cloud of political disfavour. An earlier instance of contemporary misappreciation, arising from very similar causes, was conspicuously dwelt on by Wordsworth in one of his remarkable prefaces. He treated the reception of "Paradise Lost" as a proof that high and original poetry is naturally destined to a period of non-recognition. Nor is it to be denied that Wordsworth was himself (though not without extenuating circumstances for the readers of the day) one of the clearest examples that his opinion may be occasionally verified. Yet, on the whole, a survey of the fates of books will lead to a different, to a more pleasant conclusion. When such subsidiary and personal incidents as we have alluded to have been eliminated, we shall find almost all true poets the pride of their day from the first. Chaucer was honoured throughout his life after the only fashion in which popularity could then display itself. The fame of our Elizabethan poets appears to have been steady from the beginning. Before 1616 Shakespeare was already enthroned in a supremacy only less decidedly recognized than now, because no one could then foresee that it would remain so long unapproached. It is enough to name Dryden, Pope, Swift, Addison, Johnson, Goldsmith. Even Gray is only an apparent exception to the rule of immediate popularity. What prevented the "Odes" from sharing the instantaneous recognition of the "Elegy" was not their profusion of poetry, but their profusion of learning.

There is, in truth, sound reason why the contemporary estimate of genuine poetry should in general be a trustworthy verdict. High and elevating pleasure is the end of this, as of the other fine arts. The poet is, by necessity, rather the child of his age than the forerunner of his age. He is more the seer than the prophet of his generation. To anticipate the future of religion and politics, to preach unwelcome novelties in science or criticism—this is rarely

* Selections from the Poetical Works of Robert Browning. Chapman & Hall. 1863.

Digitized by Google

his province. Hence his work, in its subject, appeals almost always to present feelings and intelligible interests, the things "which have been, and may be again." And whilst thus amenable to immediate judgment in its matter, as a pleasure-giving art it also submits itself to immediate judgment in regard to its form. So essentially popular in its aim is poetry, that we might almost say its excellence is measured by the area of the circle to which it is addressed, and by which it is ultimately accepted. No doubt, by virtue of the law that genius only adequately comprehends genius, those who grasp the whole force of high utterance will be scanty in proportion to its height,—it is they who are the "fit audience, though few." Yet this same highest song must be also, like "the common sun, the air, the skies," comprehensible and enjoyable by the multitude. That poetry which is "caviare to the general" condemns itself. Excellent as it may be, it has somewhere lost sight of its vocation. It should please not only much, and long, but many. All who please at once are not true; all recognition does not last; yet in the vast majority of cases what we call eternal fame, is but the echo of the voice which hailed and encouraged the singer.

Where such fame has for many years been wanting, although no subsidiary or personal prejudices have intervened, it must always raise a strong presumption that the *silentia populi* (if we may venture on the phrase) rest on grounds which it is in vain to expect will be abandoned. Like Mr. Browning's, the poetry may be true and high in an uncommon degree, yet in matter or in form there cannot but be a *too little*, or a *too much*. And it does not appear difficult to discover the causes which have hitherto rendered the gifted writer before us unfamiliar to his contemporaries, and which, we fear, are not less likely to render him such to their children. The editors claim for the contents of their volume "range and variety of power." This praise hardly appears discriminating. Mr. Browning, indeed, possesses not only power, but an intensity of power rarely exceeded. Some of his descriptive touches rival Dante or Lucretius in pregnant picturesqueness. Many lines show a strength of sad irony acrid as that honey which of old suggested the word sardonic. The subtle analysis of passion, the anatomy of the uncertain heart or the perplexed conscience, are touched with a lucid and almost poignant brevity. The reproduction of the circumstances of past phases of life is often, though perhaps not uniformly, successful. The verse, though in general to our ear deficient in music and in flow, is generally adapted with rare skill to the expression of the thought. All this is power; but it is power exercised upon subjects more remote from the ordinary experience of men, than in the work of any other true poet we are acquainted with. Mr. Browning has a profound feeling for the English character, and for the English landscape. Yet none of our lyrical writers has taken so few of his pictures from England. Excluding the fragments from plays, which not less unfairly to the poet than unwisely for his readers have been inserted, we find in one of the most elaborate pieces a minute analysis of the aspect in which the old Florentine painter, Lippo Lippi, regarded his art. Another is a similar study on Andrea del Sarto. A third paints the composite feelings with which a sensual and æsthetic bishop of the Cinquecento regarded his monument. Two are devoted to different phases which poisoning assumed at the same corrupt period. "Cleon" is intended to paint the eclectic mode of thought on life and on art prevalent in Greece at the Christian era; "Probus" is a sketch from the least familiar portion of Byzantine history. The sermon which the Jews of Rome were compelled annually to attend,—the wrath roused in a modern reader by the pedantry of a mediæval schoolman, and the consequent persecution of his book,—the ideas of an idle Italian in the country and of a bad monk in a Spanish convent,—the fashion in which a sensible worldly Roman Catholic bishop in England might talk religion with a Saturday Reviewer, supply other motives. It may be doubted whether the highest poetical genius could render these and analogous subjects more than what readers at large must consider literary curiosities. At least they must be either dramatised with Shakespearian force, or treated as canvasses to display elementary human sentiments, if they are to fulfil the common conditions of first-rate poetry, and be at once the delight of the many and the passion of the few.

Mr. Browning's are, indeed, finished works of art in their way; but that way (we must think) fails to satisfy these conditions. That he recognizes that his genius does not lie in the dramatic form, we may infer from his abandonment of it announced in the dedication to his last drama. With high and unusual excellences, his plays appear to confirm the author's decision. In his dialogue each character is prone to the same searching introspective habits, the same hesitating self-analysis. They are, indeed, often skilful monologues in disguise: the poet answering the poet through the long procession of subtle and well-elaborated verses. Nor, again, are the passions represented or the phases of life described, such as most men can sympathize with. They are often such as few men can follow. The reproduction of the past is generally excellent, the details especially marvels of sharp, decisive handling. The intricacies and dark corners which most writers would not perceive, are brought out with lucid keenness. But the wider interests of life, the elementary passions of mankind are so subordinated meanwhile, that the excellence of the work is almost as much archæological or psychological as poetical. It is addressed to students of the bye-places of the heart,—of the cross-lanes of history. Thus the success of the poem is too deeply staked, not on its universal poetry (as in "Coriolanus"), but on its historical accuracy. Yet even here we must doubt whether any real phase of Greek thought is represented by what at least seems to us the pervading modernism—the subjective self-scrutiny—of "Cleon,"—whether any Arabian before the preaching of Mahomet would have written in the spirit of "Karshish,"—whether the Bishop's Tomb be not anachronistic in its fine details. The peculiar style of the art, the notice of "brown Greek manuscripts" as a legacy, of the law-Latin of the Bishop's predecessor,—these elaborate touches refer—or seem to refer—to fifty years earlier than the date of the Gesù Church, also mentioned. So arduous a task—so hopeless—is it even for such ability as the author's to photograph the past!

Quitting the subjects chosen by the poet for his manner of handling them, it will not be disputed that Mr. Browning is an artist who has a genius for vivid point, rather than for harmonious completeness. There is a frequent sacrifice of repose to accent. Quaintness in thought, words, and metre, as in subject, runs through all he touches. It is undoubtedly the quaintness of genius; yet, of all the qualities of genius, the history of literature proves that this is the least easy to combine with the high harmonies and passionate sweetness of immortal poetry. The unconscious sense of the multitude knows this, not less than the critical sense of the few—the demand of art, to put it in a word, is curves, not angles—whence our reluctant fear that the *vox populi* is likely to be here once more ratified. Everywhere we find a keen rhetorical faculty, a direct reference to nature, an only too decided originality. Each line has a telling touch of detail and character; yet the picture, as it is unfolded before us, though it advances in force, does not always equally advance in artistic unity. The parts are often of striking excellence, the rounding into a whole less perfect. Hence Mr. Browning appears comparatively unsuccessful in his longer pieces. They are far too brilliant and forcible to be tedious; yet we have a sense that the writer does not know when to hold his hand. Half (to quote the old proverb) would have been more than the whole of the dithyrambs of the "Saul," or the ingenious *pros* and *cons* of Blougram over the wine and walnuts. The openings of the tales are admirable, but the flight is not always sustained. Thus, the "Flight of the Duchess" turns on a gipsey song, which is described as having had such a force of melodious magic in it as to allure the heroine from the Duke's castle to the Bohemian camp. In lieu of this, we find a rather obscure discourse, for the poorness of which the supposed narrator offers an apology:—

> More fault of those who had the hammering
> Of prosody into me, and syntax,
> And did it, not with hobnails but tin-tacks.

But this defence is not valid for the poet. We want, not the apology, but the song:—especially when half a dozen lyrics are close by to prove that he could have given us one which would have added to our treasures for ever.

Mr. Browning's command of concentrated force and colour renders him most successful in his shorter pieces. Those who can master the strangeness of the situations, and accustom themselves to his manner in language and metre, will find it difficult to forget many of these lyrics. The "Ride to Aix," the "Laboratory," "Love among the Ruins," "In a Year," grasp their subjects with a vital insight, a downright originality, which leave us in no doubt under what class Goethe would have ranked them, when he said "There are so many echoes in the world, and so few voices!" And others might have been added, although it is in another form that we venture to think the poet's power most satisfactorily exhibited. His genius is eminently successful in that "brief form" of picture which has lately regained the name of Idyl. Amongst these, the peculiar gifts of his nature render him happiest in the descriptive monologues; in the poems which more directly involve thought or argument, he appears to us to be no exception to the law which places these matters within the grasp—not of the singer, but the thinker. The problems of the schools, the riddle of the earth, receive imaginative treatment in his hands, but are not interpreted. This is not the poet's function. But taking them within their peculiar limits, for what they aim at, several of those named in the earlier part of our essay are perfect. Taking the larger standard of universal art, little appears wanting (to name two special favourites) to the perfection of that sketch of a poet which is named "How it strikes a contemporary," or to the stanzas in which Mr. Browning has repainted, in sweeter colours, the "Guardian Angel of Guercino." We quote these lines, because they contain a repose and music, which we sometimes desiderate in the other masterpieces of the volume.

> Dear and great Angel, would'st thou only leave
> That child, when thou hast done with him, for me!
> Let me sit all the day here, that when eve
> Shall find performed thy special ministry,
> And time come for departure, thou, suspending
> Thy flight, may'st see another child for tending,
> Another still, to quiet and retrieve.
>
> Then I shall feel thee stop one step, no more,
> From where thou standest now, to where I gaze,
> And suddenly my head is covered o'er
> With those wings, white above the child who prays
> Now on that tomb—and I shall feel thee guarding
> Me, out of all the world; for me, discarding
> Yon heaven thy home, that waits and opes its door!
>
> I would not look up thither past thy head,
> Because the door opes, like that child, I know,
> For I should have thy gracious face instead,
> Thou bird of God! And wilt thou bend me low

Like him, and lay, like his, my hands together,
And lift them up to pray, and gently tether
Me, as thy lamb there, with thy garments spread?

If this was ever granted, I would rest
My head beneath thine, while thy healing hands
Close-covered both my eyes beside thy breast,
Pressing the brain, which too much thought expands,
Back to its proper size again, and smoothing
Distortion down till every nerve had soothing,
And all lay quiet, happy, and suppressed.

How soon all worldly wrong would be repaired!
I think how I should view the earth and skies
And sea, when once again my brow was bared
After thy healing, with such different eyes.
O world, as God has made it! all is beauty:
And knowing this, is love, and love is duty:—
What further may be sought for or declared?

SISTERHOODS IN THE CHURCH OF ENGLAND.*

THE interest of this book lies, not so much in the religious as in the psychological considerations which it suggests. It is curious, and scarcely credible to find, that in the nineteenth century, the educated classes of the most enlightened country in the world should produce the description of intellect which receives comfort and satisfaction from works of charity only when they are performed under conditions calculated to inflame the imagination and degrade the mind. It is true that this remark applies only to the ladies, and that charity is not the only motive by which they are actuated. The idea that a life of penance may propitiate an exacting Deity, and secure for themselves eternal salvation, no doubt operates strongly; and if the home circle is not congenial, and its duties are irksome, an additional reason is supplied for seeking heaven in a more romantic channel.

As the novices generally join these religious establishments at an early age, we may also be permitted to suspect that those tenderer motives which often induce their poorer sisters to fling themselves into the Regent's Canal, sometimes drive young ladies into sisterhoods. We can, indeed, understand and make allowances for circumstances under which home might be trying and the world distasteful, and we should be the last to object to female organizations, formed with a view to mutual comfort and the interchange of sympathy. That charity and good works should be the ostensible, if not the real object, of those who thus unite together, is most natural, and that when a number of women are collected together stringent rules should be necessary in order to secure harmony and concord, we should most readily admit. But we must protest against the notion of religion having anything whatever to do with the matter. No one who reads Miss Goodman's book will fail to see that the travestie of religion, which is the result of this sort of weak feminine enthusiasm, damages its best interests; and although fortunately few minds are sufficiently puerile to be influenced by it, a certain degree of contempt and ridicule is brought upon the cause. The Bishop of Oxford's objection to the religious character with which these sisterhoods seek to invest themselves, exactly meets the case:—

"One single word," says his lordship, "on the use of the word 'religious.' I confess, after all that has been said, that I have the very deepest objection in any way whatever to applying the word 'religious' to such a life. I think it was adopted at a time when the standard of lay piety was very low; and at all events, as no good seems to me to be got by the use of a word ambiguous, at least, in its meaning, and which seems to imply that God can be better served in the unmarried sisterhood, than in the blessed and holy state of matrimony, I think it is a pity it should be used."

The subject is worthy of notice, for there are no less than twenty-five houses of Protestant Sisters belonging to the different orders scattered over the country. We will give some idea, by extracts from the work before us, of the one at Devonport as a specimen. "The sisters dress in brown serge and go about with bare feet; they take it in turns to sit up and watch all through the night; moreover, the watchers join in prayer seven times in the day with the Mother of the three rules, though they may be separated by distance." One of these is the rule of holy obedience, by which the novice repudiates all allegiance to her parents and acknowledges "that the Superiors bear the image of the divine power of God, which he vouchsafes to imprint upon them. And he will surely require it at your hands if ye despise his authority in them." Of course, each sister is bound, on the day of her entrance, to "renounce in favour of the community not only the possession, but the use and disposition of everything which is hers or shall be given to her." Perhaps the Devonport sisters took this very practical idea from the Plymouth Brothers. Occasionally "the Mother, in imitation of the act of our Lord and Saviour, the night before his crucifixion, washes her children's feet." The service is not worth quoting at length. It runs in this wise:—

"V. The love of God has gathered us together.
"Ant. As before.
"Let us rejoice and be glad in him.
"Ant. As before.
"V. Let us fear and love the living God.
"Ant. As before.
"V. And search ourselves with a true heart.
"Ant. As before.
"Let wicked quarrels cease. Let strife cease.
"Ant. As before.
"For endless ages. R. Amen."

The mother then girds herself with a towel, and in the costly basin described in another part of the book, washes the feet of each sister.

The following allusion at the commencement of one of the collects seems to imply some doubt on the part of the sisterhood as to the position which females occupy in creation: "O God, who didst form the body and breathe into the soul, who despisest no age, *rejectest no sex, &c.*" But the originality consists rather in the forms than in the wording of the services. The novice says: "My Mother, I will, by the help of God, obey you, as our rule doth direct, in all love, honour, and humility."

The Mother holds the Cross, and says:—

"The sign of the Cross is a sacramental symbol, in which lies a deep mystery. When thou shalt have learnt this mystery, thou shalt perceive that of self-surrender. When thou shalt have accomplished self-surrender, thou shalt have discovered wherein lies the mystery of Peace."

Courtesy to each other is so strictly enjoined and respect to rank enforced, that one of the younger members, who "was at immense pains to calculate how many reverences she herself gave during the day, found that she had bent the knee 321 times; but she added that she did not feel in the least fatigued; she had grown so accustomed to the exercise; only she lamented that she found herself acquiring a halting gait, as if one leg was a little shorter than the other."

The next in rank after the Mother Superior is the Mother Eldress. Then comes a lady called the Deane, dedicated specially to John the Baptist, "the symbol of whose office is a silver ring worn on the forefinger of the left hand, and this ring is provided with seven blunt-pointed knobs; the Deane being supposed to be constantly, with the forefinger and thumb of her right hand, turning it round her finger, that thus she may be reminded to be diligent in spying out any breach of the rules committed by those intrusted to her guidance." We are told elsewhere of this lady, that whenever any of the novices said, as they often did, of any task, "I cannot finish it in time," she would answer, "Ask the angels to help you, my dear; you should never say you cannot do anything when you are told to do it,—this is a breach of your rule of holy obedience; however hard and impossible the task may seem, you can do it with the help of the holy angels." To assist the Deane—and the angels—there are Eldresses appointed; then come the "Sisters" of the Society, next "Children," and lastly "Novices." We should have been inclined to class them all in the last category but one; children they certainly are, playing at nunneries, but the game is not to our taste, and leads to unpleasant results; not only does it destroy all family ties and break the hearts of parents, but it drives many to the Church of Rome, where their position, if it is in our view erroneous, is at least logical and consistent. More than half the ladies once connected with St. Saviour's House, in Osnaburg-street, are now in the Church of Rome. And the sisterhood some two or three years back went over bodily to Rome. That is to say, the Superior and all her "children" were received at one time. "Even to Dr. Pusey," says Miss Goodman, "it cannot be a small matter that twenty out of one sisterhood, and that not Miss Sellon's,—twenty whose consciences were for years in his hands, who obeyed his teachings and followed his leadings with the simplicity of children,—are now in the Romish Communion." Perhaps Dr. Pusey's success with the ladies has been greater than that of Professor Jowett with the youths at Oxford; but at all events, if we were to judge of teaching by the result, we should be inclined rather to back even the defendant in the case of "Pusey *v.* Jowett." "Friends," says our authoress, "whose good opinion I value, have objected that, by making public the weakness of a divine who has written upon personal piety so eloquently as Dr. Pusey, I may injure the cause of religion and piety." We must be permitted to differ from Miss Goodman's friends; that description of weakness on the part of a divine which drives young ladies to Rome by the score ought certainly to be published. Nor do we think many will be tempted to join a sisterhood after reading this exposure of these establishments. "In the arrangement of her household," says Miss Goodman, "Miss Sellon fell into a great indiscretion, though with the best intentions. She permitted women whose previous lives were not unsullied to live with pure women, and mingle with them freely." We will not allude to scandals which have arisen in connexion with these sisterhoods, let us hope without any foundation. The very fact that they are enriched by the reception of a wealthy novice naturally gives an opening to ill-natured criticism, and we have a story of a lady who wavered for some time between a nunnery and a sisterhood. "Ultimately a kind of struggle for her person took place" (this was at the door of a church between Romanist and Anglican ladies) "which ended in the triumph of the Anglican ladies, two of whom seized her by each arm, and she was dragged rather than walked into the Anglican church. I may mention that the sister was at that time of mature age, nearer forty than thirty, and also that a large fortune was at her disposal." It is to be regretted that the Anglican ladies who engaged in this personal struggle had not taken that vow of silence which on another occasion prevented one of their number from helping a sister in distress. A sister afterwards said to child

Hombeline, "Why did you not pull child C—— out of the mud?" "I would not have broken my rule by putting out my hand even if she had been drowning," was the reply.

We have specimens in the work before us of the style of literature by which Dr. Pusey trains the intellects of his children. One of the most popular books is called "Rodolph, the Voyager," written in the form of an allegory, which, like John Bunyan, proposes to show the pilgrimage of the Christian, with the numerous by-ways which would lead his feet from the true paths. In the modern allegory, the place of Greatheart, the guide, is filled up by a certain Lady Althea, a sentimental middle-aged lady, very handsome, but very much out of health; and an ordinary reader of the volume would accuse this lady of being given to flirting with middle-aged gentlemen. Lady Althea is intended to represent the Holy Church. We trust that we have said enough to whet the curiosity of our readers; if the result be to induce them to read the book and avoid the errors it so graphically pourtrays our object will be gained. Meanwhile we congratulate Miss Goodman on the courage which she has shown in exposing the internal economy of these establishments; and if the daughters of England are too foolish to profit by the warnings her work contains, we trust that their mothers will, at all events, see the necessity of impressing upon them at an early age the distinction which exists between practical and sentimental religion.

MEXICO.*

M. Vigneaux has a better claim to tell us what he knows about Mexico than most men who take advantage of political excitement to assume the character of a guide. He has been in Mexico; he has been through it; he has fought in Mexico, and has fought, as he believed, for the good of Mexico. He invaded her for her own good, and was made prisoner by an unappreciating people; he had a narrow escape from the bullet, and did not altogether escape the gaol; he went through all the annoyances of duress within the tropics, and the agonies of a sea-voyage in an overburdened yacht, and never lost his temper. Nay more, he looks back with pleasure and regret to his adventure, and he has dared, even at the present conjuncture, to say a word for the Mexicans, and to breathe an honest hope for their welfare.

He introduces himself as a cosmopolite of some years' standing, animated with a zeal for liberty and the Latin race, and waiting at San Francisco for an opening to employment. He takes service with M. de Raousset Boulbon, an adventurer or filibuster after the model of Walker, in whose unsuccessful attempt upon the province of Sonora, in the year 1854, he had the misfortune to join. M. Vigneaux is himself, what his leader evidently was not, a man of sentiment and aspiration; he mourns over the distractions of Central America, and laments that republican institutions there have not had fair play. But with singular perverseness he ignores the share such expeditions as his own have had in rendering those distractions incurable. He does not, perhaps he cannot, perceive that the piratical invasions of wealthy and designing cosmopolites, shielding themselves, when unfortunate, behind the ægis of America or France, were precisely that unfair play which no struggling government can survive. But he was then young and sanguine. There is nothing like seeing a stronger hand playing your own game, to disenchant you of the illusions that veiled your own motives from yourself. There was a gentleman in Fleet-street the other day, who could not resist a tempting corner of his friend's pocket-handkerchief; but having (with the best intentions) transferred it to his own coat-tail, he immediately received his own from a well dressed individual, with the whisper, "I did not know, sir, that you belonged to the fraternity." When M. Vigneaux reads a certain recent letter to General Forey, he condemns the acts of an imperial adventurer; but he must blush to reflect that he, too, belongs to the fraternity.

With M. de Raousset and his schemes we have no sympathy, and with his historian, so long as he is occupied with them, little patience. He was devoted to the cause of liberty; but he had questionable intrigues with Santa Anna, the Domitian, as he is described, of Mexico. He was bound to combat, as a Frenchman, for "the Latin race" alone; but he opened negotiations with Walker. He lays claim to military honour; but he did not blush to effect an entry for his troops into the country by a feigned enlistment under the tyrant's banner. He set up the standard of democracy, and had letters from the Orleans princes in his pocket. M. Vigneaux supplies us with a climax; he was a disciple of Voltaire all his life, and he died in the arms of a priest. He was shot by the Mexican authorities, and we cannot agree with our author that he did not deserve his fate.

The second part of the volume before us contains its chief interest. Once free from the baneful influence of his chief, M. Vigneaux's notes expand from daily annals of a quarrelsome crew, and windy declamations about ideas, to a lively, faithful, and interesting sketch of his experiences by the way. The survivors of the expedition were marched up into the country, and afterwards shipped from Vera Cruz. Our author was employed by the authorities to superintend the board and lodging of the troop. He thus had more opportunities for useful experience of the country than a single traveller could reap even from unfettered movements. As purser of the party, he had melancholy proof of the debasement of Mexican coinage. Brigandage, not only in village rumours and hypothetical calculation, was brought constantly under his notice. The cities swarming with population in the extremes of degradation and superstition; the villages scourged by robbers and recruiting officers; the dead absorption of a Central Government with no organization but an army; the foul corruption of a priesthood that drained the life-blood of the body social at every pore: all these are laid before us not in general statements or inferences, but with a fund of lively anecdote and illustration which excites the reader's interest, while it supplies copious material for his conclusions. In the little tales of sentiment and manners among the lower orders, which we constantly stumble upon, M. Vigneaux is peculiarly happy. In nature and natural beauty he feels a keen enjoyment. Upon regaining his liberty, and starting alone upon his travels, he dives into the desert with a rhapsody of genuine pleasure:—

"Si ce n'est pas pour vous seul que le soleil éclaire, que le vent souffle, que la source jaillit, du moins ce rayon qui tombe sur la solitude, ce souffle caressant qui y cherchait en vain un homme, cette eau murmurante ou se désaltérait en vain l'animal peu soucieux de l'avenir, et le palmier et la fleur qui se balançaient melancholiquement à la brise, prodiguaient en vain, l'un son ombre, l'autre son parfum; toutes ces merveilles sans temoins doivent tressaillir de joie au bruit des pas du roi de cet univers, comme à la venue d'un nouvel Adam, et s'apporter a lui faire fête en reconnaissance de son admiration."

With this genial disposition M. Vigneaux is soon tired of finding fault: at all events, he soon finds excuses for transferring his censures from Mexican misgovernment to the objects of his greater antipathy at home:—

"Je n'oserais affirmer que le cancan, cette plaie de la province, ne fleurit pas dans l'Amérique espagnole; parce que je crois qu'il est un des fruits naturels du désœuvrement et de la stagnation de l'existence; mais du moins peut on y éviter, si l'on veut, cette solidarité, cette tyrannie, cette horrible espionnage de chacun sur tous et de tous sur chacun, qui rendent la vie de nos petites villes insupportable à tout homme d'énergie, qui pétrit l'individu dans le préjugé local, le moule dans la coutume locale, et ne lui laisse de sa nature primitive que les angles développés par un intense ennui."

One great defect we notice in our author's description of the inhabitants. He tells us much about the Indian population, but nothing of their masters of Spanish blood, except as regards the one point in which he came in contact with them—their uniform politeness. Reserving his descriptions almost exclusively for the lower orders, in whom he finds so much to praise, he leaves us curious to know how he will deal with the problem of Mexico in a state of social and political bankruptcy. A Frenchman is debarred from the careless superciliousness with which some Englishmen attribute the cause to race; for it is his pride to be the champion of all whom he calls "Latin," and he deems the Spaniard his cousin. Neither is he likely to ascribe it to corruption of blood; for the Frenchman has united in blood more freely with East and West than any other colonist. He is too liberal to ascribe it to free institutions; he is hardly mercantile enough to deduce it from neglect of political economy. An Englishman examines the good and bad qualities of the people; if Mexico is ruined, he will say it is because the Mexicans behaved badly. The Frenchman believes in the excellence of unsophisticated man; he is not satisfied without an external deteriorating cause, and he finds it in the agency of the priesthood. He has much to say on this head that is good and forcible; but he does not succeed in satisfying us that the superstition common to a whole nation is attributable to a peasant clergy, themselves drawn from among the people; or that the extraordinary prosperity of the United States is in any sense due to the absence of a Church Establishment.

His remarks upon the evils of foreign loans are newer and deserve attention. He is unfair upon the merchant creditor, without whose aid few popular revolutions could at this period be carried out; but there is something in a trenchant satire which may call attention to abuses of that resource; and that it is just now abused, the history of the present day will hereafter show.

The third cause of ruin he assigns is centralization. He would wish to see Mexico a Federal Republic, with municipal institutions. The latter are heartily to be desired in such a case; the former, though out of fashion just now, has its recommendations for such a people in such a country. Whether the material for any such edifice is to be found among these singular races, we doubt. M. Vigneaux anticipated a prosperous and improving future under Juarez: of this our doubts would have been still greater. But we heartily sympathize with the purpose visible through every page of his work; to deprecate, namely, the foundation of a Mexican Algeria by way of regenerating the Mexican people. Of their unwillingness for denationalization he has much to say, and we think he has made out his case.

* Souvenirs d'un Prisonnier de Guerre au Mexique, 1854—1855. Par Ernest Vigneaux. Paris: L. Hachette et Cie. 1863.

SHORT NOTICES.

One could hardly have a better instance of the force of an idea than the desire of the Ionian Islands to be united to Greece. But to estimate it fully we must regard it at a time when the rule of Otho weighed upon the kingdom, and when the clamour of the Ionians for union was much louder than it has been since Greece has shaken off her royal incubus. We cannot read Captain Whyte-Jervis's book* without being struck by the contrast

* The Ionian Islands during the present century. By Captain Whyte-Jervis, M.P. Chapman and Hall.

Digitized by Google

between the state of the Seven Islands prior to the British Protectorate and afterwards. Without roads, without police, without laws, the prey of rapacious governors on the one hand and brigands on the other, they were entrusted to us by the Allied Powers in 1815 as the power least likely to abuse the commercial and political advantages their position offered; and unfit as a people with such antecedents necessarily were for constitutional government, the promise of a constitution was faithfully fulfilled. Sir Thomas Maitland, the first Lord High Commissioner, found on his arrival a peasantry ground down by the usurious loans of their landlords, judges openly bribed, and a treasury containing but three obolis. All this he changed. The peasantry were released from their bondage to the signori, courts of justice were released from the control of the higher classes; and a supreme court of justice, consisting of two British, and two Ionian judges, was established at Corfu to hold appeals from the local jurisdictions; roads were cut throughout the islands, the churches were repaired, and public credit restored. This wise policy was so faithfully carried out by the subsequent Commissioners that in 1851, Panajotti Soutzo, an intelligent Greek gentleman, writing to a friend, declared that in contemplating the advantages enjoyed by the islands in contrast with the state of things in the kingdom to which they desired to be united, he had "lived to envy servitude." Writing from Zante, he says—

"When contemplating the happiness of the Zantiots, and comparing it with the misery of us independent Greeks, I wept with grief.

"Unfortunate that we are! It is now nineteen years since royalty has been established amongst us, and we have security neither for money nor for property. Here you can proceed, loaded with gold, from one end of the island to the other, without the least fear. At home, we cannot, without the greatest danger, go even from Athens to Kiphissia.

"Here, what roads! what joyous hamlets! the children play, the women work peaceably within their dwellings, fearless of either the movable columns of official bandits, or of the bands of brigands.

"Do the Zantiots purchase so great a security by heavy taxes?

"In no ways. In the Ionian Islands, no tithe, no internal taxes; but simple duties on importations and exportations.

"Such is the state of the ENSLAVED Zantiots; and such is that of us Greeks, said to be free; men who have poured torrents of their blood and piled up heaps of their bones to reconquer independence.

"Panajotti Soutzo has lived to envy servitude. . . . . Shame, a thousand times, shame, on the system which reigns in Greece.

"After having spent a loan of sixty millions, with four hundred millions of taxation, we have neither harbour, bridge, nor road; we are a prey to robbery, assailed by pirates, infested with a thousand diseases; and, far from enjoying liberty, we are bowed down under the vilest slavery!"

But while the condition of Greece grew yearly worse, sinking deeper into a mass of corruption, with a despotic king, a bribed and servile assembly, the peasantry decimated by fevers caused by want of drainage, the courts of justice a mockery, and the police the mere agents of the banditti, the desire of the islands for union increased with the development of all those advantages which they owed to the British protectorate.

Captain Whyte-Jervis deprecates the idea of giving effect to this desire, believing that the union of the Ionian islands is the first step to the annihilation of Turkish rule. He ridicules the idea that the modern Greeks are the descendants of the ancient, and this passage is one of the most interesting of his valuable little book:—

"It may be that Providence does purpose that the Greek race should again form a mighty empire in the Levant. But it is right that this country should clearly understand of what the Greek race of the present day consists. It is idle for us to speak of them as descendants from those from whom we derive the arts that civilize nations, and to whom therefore we should owe a special debt of gratitude. When, century after century, hordes of barbarians devastated every province of the Eastern Empire, and at each invasion left some of their wild warriors, who preferred the sunny climes of the South to their own dark forests, in some cases even settling in such large numbers as to give their name to whole districts; when, in more civilized times, lordly adventurers from France, Italy, and Spain, looking upon Greece as a land which was destined only to be parcelled amongst themselves and their followers, without the trouble of a contest, divided it into numerous petty feofs, and erected their baronial castles on every inaccessible height; when to these succeeded the remorseless bands of Ottomans, who, with fire and sword, soon spread their dominions from the banks of the Danube to the southernmost point of the Morea, crushing Frank and Barbarian under an equal yoke; where are we to look for the descendants of the Greeks of old? Travellers tell us that, as late as the sixteenth century, Athens was but a castle with a small village; and that Sparta, divided by two tribes of the Slavi, the Ezeriti and the Milingi, had not only lost her ancient name, but it was impossible to recognize the site on which she had stood of old. As to the Ionian Islands, for hundreds of years they have had no connection with Greece. The Volterra's and Salamos's of Zante; the Loverdo's, Metaxa's, Tibaldo's, and Vocca's of Cephalonia; the Zambelli and Valaoriti of Santa Maura; the Bulgari, Dandolo's, &c., of Corfú, are all of Italian origin. But, like the Anglo-Irish, who became more Irish than the natives, these Ionian Italians are the loudest in calling out for a union with a country with which their forefathers had nothing in common.

"The Greek race are but the remnants of those various nations which once constituted the Eastern Empire, and who feel there is a bond of union in their geographical contiguity, in their profession of the tenets of the Eastern Christian Church, and in their hatred of the Turk."

Before the translator of Pastor Fisch's work* committed it to the public it would have been well if he had obtained the author's permission to modify those prophecies which he has made on behalf of the North, and of which, to speak mildly, the chance of fulfilment is wofully small. Of the nine months which Dr. Fisch spent in the United States only two were within the course of events which followed the breaking out of the war. It was reasonable at that time, pardonable at least, that he should look hopefully for the success of the Federal arms, and predict that the North would triumph in the ordeal through which it was passing. But what was excusable then is ridiculous now. Right or wrong in their attempt to subjugate the South it has long been evident that all hope of success has disappeared; and the prophecy that the triumph of the North "will be a moral prodigy well calculated to rouse up the latent energies that are slumbering amongst worn-out nations," becomes childish when every fresh mail for months past has been bringing us news of fresh defeats, of hopeless financial embarrassments, and of the gradual extinction in the North itself of all that has hitherto been its boast. Whatever, therefore, relates to political life, and to the prospects of the war in this book, is out of date. But there is much in it that is interesting respecting the state of religion in America, where the voluntary system exists without check. Dr. Fisch dissents from the common notion that the religious state of America is one of innumerable sects, varying like the forms and colours of a kaleidoscope. He maintains that the Evangelical Church is composed of communicants of four or five denominations, distinguished only by secondary differences. But this view is hardly consistent with his statement that the Presbyterians, who, after the Congregationalists of New England, are the most important of these denominations, are constantly forming large minorities, who, defeated in the deliberative assemblies, separate and form new communions of their own. Indeed, when we examine the Pastor's statement, we find that the comparison of the kaleidoscope is more in point than he admits. The minorities who have fallen away from the main Presbyterian body have divided it into six fractions. Again, "the question of origin prevents the Dutch and German Reformers from joining the American Presbyterians, and attachment to an old Version of the Psalms keeps together, as it were, a separate communion, the Reformed Presbyterian Church." Then, we are told, a little before this, that whereas for a time Congregationalists and Presbyterians by tacit arrangement joined each other's churches when passing from a Presbyterian into a Puritan state, and *vice versâ*, the Congregationalists are now forming churches of their own out of the New England States, which are their head-quarters. The Episcopalian church, again, is the resort of the fashionable world, and it has preserved the sacerdotal authority of its clergymen, while in other denominations "the idea of authority has completely disappeared." Even amongst the negroes there is a fashionable and an unfashionable church.

"Methodism and Baptism have long been the religious forms most in favour amongst artisans, as well as amongst the negroes. These two denominations share between them the task of evangelizing the slave population, and most admirably have they succeeded. Those who speak of the blacks of the South as hordes of savages or herds of wild beasts, ever ready to spread devastation and death, know well how unfounded is this assertion, for frequently these same blacks are depicted as angels when the object is to show how happy they are with their lot, and as model Christians, when the object is to prove that slavery is the best of missionary societies. A very large proportion of these unfortunate sons of Ham are men of great piety. This is the explanation of the admirable attitude they have maintained during a conflict from which they anticipate their emancipation. What particularly attracts them in the Baptist form of religion is the ceremony of immersion, which attests to them, under a sensible form, the remission of their sins and the renewing of their hearts. As a general rule, it is the most intelligent of the negroes that embrace the Baptist form. I was surprised at Louisville, in Kentucky, to find the slaves divided into two coteries—the aristocracy, who were Baptists, and the common people, who were Methodists. The former had a free negro preacher, whose sermons, in perfect academic style, were excellent in substance as well as in form. The toilets of the negro ladies far surpassed those of their mistresses. American Methodism is also in favour amongst the negroes, because of its somewhat vehement form of worship, which at times is accompanied by absolute thunders of *hallelujahs*. I was unable to be present at any of the camp-meetings, which I am told are amongst the most singular spectacles in America; but I was present in Cincinnati at a love feast, where extreme religious fervour prevailed. Solid nerves are, however, needed to stand these exciting scenes."

Apart from that portion of his volume which the writer devotes to the religious phase of America, there are chapters upon public instruction, the national character, and slavery which will well repay perusal.

M. Fenwick de Porquet, whose name is too well known to require mention of the works which have made it so, has compiled a book of fables† upon a plan calculated to promote general conversation in schools, the teacher questioning the pupil after each fable is read, and the pupil answering in the words of the fable.

* Nine Months in the United States during the Crisis. By the Rev.. Georges Fisch, D.D. Nisbet & Co.

† Fables Parlantes. By Louis Philippe R. F. De Porquet. Simpkin & Marshall.

For example, take the first paragraph of *Le Malade et Le Médecin*. "Un monsieur, très malade, fut un jour interrogé par son médecin sur l'état de sa santé; lui demanda comment il avait passé la nuit; le malade lui répondit, qu'il avait beaucoup transpiré." This having been read, the teacher asks:—"Que dites-vous d'un malade?" The pupil replies: "Il fut un jour interrogé." Teacher: "Par qui, je vous prie?" Pupil: "Par son médecin." Teacher: "Sur quoi lui fit-il des questions?" Pupil: "Sur l'état de sa santé." And so on. The plan is simple, and promises well.

"The Religion of School Life"* is one of those subjects which men of a religious turn of mind, anxious for the welfare of youth, are apt to treat from a mistaken point of view. We fear that Mr. Cornish has done this, and that his addresses are too dogmatic for the limited patience and seriousness of boys. The success of his effort would have been more probable had he illustrated each of his addresses by some interesting example. This fault apart, the book is good. Messrs Virtue and Brothers have published vols. 138† and 139‡ of their rudimental and scientific series. Both volumes are carefully executed. The "Handbook of the Telegraph" will be useful to candidates for employment in the Telegraph service. Too much pains can hardly be spent on the production of children's books. The author of "Stories of Old" has written a little work§ to correct, by simple stories, those tendencies in children which display themselves in such sayings as "I don't care," "I quite forgot," &c. The book is level to a child's understanding, and is prettily, though somewhat sparingly illustrated.

LIST OF MEETINGS OF LEARNED SOCIETIES FOR NEXT WEEK.

Monday, 23rd March.

Architects—At 8 p.m. "On the Abbeys of Ireland." By Rev. J. L. Petit, M.A., F.S.A.

Geographical—At 8½ p.m. 1. "March from Kurrachee to Gwadier, on the Mekram Coast, in the Cold Season of 1861." By Major F. J. Goldsmid. 2. "On the Harbour of Shedashagur." By Dr. Duncan.

Medical—At 8½ p.m. "Case of Obturator Hernia Operation." By Mr. W. J. Coulson.

London Institution—At 7 p.m. "Opera." By J. Pittman, Esq.

Tuesday, 24th March.

Anthropological—At 7½ p.m. 1. "A Day Amongst the Fans." By Capt. R. F. Burton, V.P. 2. "Indian Tribes of Loreto, North Peru." By Prof. Raimondi. (Translated by W. Bollaert, Esq.)

Civil Engineers—At 8 p.m. 1. "Description of the Lydgate and Buckhorn Weston Railway Tunnels." By Mr. J. G. Fraser. 2. "The Public Works in the Province of Pernambuco, Brazil." By Mr. W. M. Peniston.

Medical and Chirurgical—At 8½ p.m. 1. "On Diphtherial Nerve Affections." By Dr. Greenhow. 2. "On the Treatment of Stricture of Urethra." By Mr. Henry Thompson.

Royal Institution—At 3 p.m. "On Animal Mechanics." By Professor Marshall.

Zoological.—At 9 p.m. 1. "On a New Bat from British Columbia." By Mr. L. Lord. 2. "On Anatomy of Sea Otter," and (3) "Anatomy of Humming Bird." By Dr. Crisp. 4. "On New Birds from China." By Mr. Swinhoe.

Wednesday, 25th March.

Archæological Association—At 8½ p.m. 1. "On Thuribles." By Mr. Pettigrew. 2. "On Ancient Snuffers." By Mr. Cuming.

Royal Literature—At 4½ p.m.

London Institution—At 7 p.m. "Vertebrata." By C. Carter Blake, Esq.

Society of Arts—At 8 p.m. "On the Present Sources of the Supply of Quinine, with Special Reference to the Introduction of the Cinchona Plant into India and other Countries." By Mr. Clements R. Markham.

Thursday, 26th March.

Royal Society—At 8½ p.m.

Antiquaries—At 8½ p.m.

Artists and Amateurs—At 8 p.m.

Royal Institution—At 3 p.m. "On Chemical Affinity." By Dr. E. Frankland.

Friday, 27th March.

Royal Institution—At 8 p.m. "On the Discovery of the Metal Thallium." By Wm. Crookes, Esq., F.C.S.

London Institution.—At 7 p.m. "On Economic Botany." By Professor Bentley.

Saturday, 28th March.

Botanic—At 3¾ p.m.

Royal Institution—At 3 p.m. "On the Science of Language." By Professor Max Müller.

* The Religion of School Life. Address to School Boys. By D. Cornish. Freeman.

† The Handbook of the Telegraph. By R. Bond.

‡ Treatise on the Mathematical Theory of the Steam Engine. By T. Baker, C.E. Virtue Brothers & Co.

§ Children's Sayings; or, Early Life at Home. By Caroline Hadley. Smith, Elder, & Co.

LIST OF NEW PUBLICATIONS FOR THE WEEK.

Allison's (M. A.) Child's French Friend. Twelfth edition. 18mo., 2s.
Anderson's (J., the Fugitive Slave) Life. Crown 8vo., 2s. 6d.
Barrière's (P.) Les Ecrivains Français. Crown 8vo., 6s. 6d.
Bible (The) in the Workshop. Part II. Crown 8vo., sewed, 1s. 6d.
——— Complete. Crown 8vo., cloth, 3s. 6d.
Blossoms in the Shade. 32mo., cloth, 1s. 6d.
Blunt's (Rev. J.) Undesigned Coincidences of the Old and New Testament. Eighth edition. Crown 8vo., 6s.
Campin's (F.) Engineer's Pocket Remembrancer. Crown 8vo., 5s. 6d.
Chronica Monasterii S. Albani. Edited by H. T. Riley. Vol. I. Royal 8vo., half-bound, 10s.

Bishopsgate Terminus, March, 1863. J. B. OWEN, Secretary.

DINNEFORD'S PURE FLUID MAGNESIA has been during twenty-five years emphatically sanctioned by the Medical Profession, and universally accepted by the Public as the best remedy for Acidity of the Stomach, Heartburn, Headache, Gout, and Indigestion, and as a mild Aperient for delicate constitutions, more especially for Ladies and Children. It is prepared, in a state of perfect purity and of uniform strength, by DINNEFORD and CO., 172 New Bond street, London; and sold by all respectable Chemists throughout the world.

CAUTION.—The extraordinary success attending the use of Dr. J. COLLIS BROWNE'S CHLORODYNE has induced certain unprincipled persons to vend spurious compounds under this name. This wonderful remedy allays pain, soothes the system, and invigorates nervous debility. It effectually cures, as will be seen by medical testimony, CONSUMPTION, COUGHS, ASTHMA, BRONCHITIS, NEURALGIA, RHEUMATISM, &c. Never be tempted to buy Chlorodyne except in sealed bottles, having the Government Stamp, with the words "Dr. J. Collis Browne's Chlorodyne" engraved thereon. A sheet full of medical testimonials accompanies each bottle. Sole Manufacturer, J. T. DAVENPORT, 33, Great Russell-street, Bloomsbury, London. Sold in Bottles, 2s. 9d. and 4s. 6d.; sent carriage free on receipt of Stamps or Post-office Order.

KEATING'S NEWFOUNDLAND COD LIVER OIL is distinguished by Testimonials from eminent Physicians, among whom are the following:—Professor TAYLOR, M.D., &c. &c.; Dr. SCOTT, M.D., L.R.C.P., F.L.S., &c.; Dr. EDWIN PAYNE, M.D., L.R.C.P., M.R.C.S. This Oil, being purely of *hepatic* origin, is pronounced to be of the greatest *therapeutic* value, in which the prescriber and patient may have the utmost confidence.

Sold in half-pint bottles, 1s. 6d., pints, 2s. 6d., quarts, 4s. 6d., and five-pint bottles, 10s. 6d., imperial measure, by THOMAS KEATING, Pharmaceutical Chemist, 79, St. Paul's Churchyard.

PUBLIC OPINION.

A COMPREHENSIVE EPITOME OF FACT AND OPINION.

PUBLIC OPINION gives the Comments of the various leading Journals—British, Colonial, and Continental—on all important current topics, an elaborate summary of Contemporary Events, an extensive selection of General Miscellaneous Intelligence, and a copious variety of Literary and Popular Reading.

To Politicians, Editors and Authors, the Nobility, Clergy and Gentry, Merchants and Manufacturers, and all who take an interest in the discussion of Political, Social, and Commercial Questions, PUBLIC OPINION is invaluable.

British Residents on the Continent and in the Colonies, Men of Business, and persons who are desirous of acquiring a knowledge of the great questions that are ever engaging the attention of society, may obtain in PUBLIC OPINION (for a trifling sum, and at a small sacrifice of time) a judiciously-compressed *resumé* of the sentiments enunciated by the various leading Journals throughout the world on all important topics, thus obtaining a knowledge of every important question in all its various phases.

The Annual Subscription to PUBLIC OPINION (post-free, Payable in Advance) is 13s. It is published in time for Friday evening's post, and sold at all Railway Bookstalls and by all Booksellers and Newsagents throughout the Kingdom and the Colonies.

THE STANDARD LIFE ASSURANCE COMPANY

ESTABLISHED 1825. Constituted by Special Acts of Parliament.

ANNUAL REPORT, 1863.

The THIRTY-SEVENTH ANNUAL GENERAL MEETING of the STANDARD LIFE ASSURANCE COMPANY was held at Edinburgh, on Friday, the 27th of February,

JOHN DUNDAS, Esq., C.S., in the Chair.

The Manager submitted to the Meeting a Report by the Directors as to the Progress of the Business during the year ended 15th November, 1862. He also submitted—

Report on the Books and Accounts by the Auditor of the Company.

Balance Sheet certified by the Auditor and three of the Directors, in accordance with the Acts of Parliament constituting the Company.

General and Comparative Statement explanatory of the Progress of the Business, from 1825 to 1862.

The following results, showing the operations of the Company during the year 1862, were communicated in the Report:—

	£.	s.	d.	£.	s.	d.
Amount proposed for Assurance during the year				630,630	0	0
Amount of Assurances accepted, and for which Policies were issued				506,120	0	0
Annual Premiums on New Policies				15,158	1	6
Claims by Death during the year, exclusive of Bonus Additions				104,255	13	11
Annual Revenue at 15th November, 1862				322,896	18	8
Arising from Premiums	236,837	7	1			
„ „ Interest on the Invested Funds	86,059	11	7			
	322,896	18	8			
Accumulated Fund, invested in Government Securities, in Land, Mortgages, &c.				2,017,261	2	8

THE REPORT THEN PROCEEDED AS FOLLOWS:—

The most important duties committed to the Board of Directors are the selection of the lives proposed for Assurance, and the careful investment of the Company's funds.

The Report made on the State of the Investments, as at 15th November, 1860 (the date of the last investigation of the Company's affairs), by a Committee of Professional Gentlemen, who examined into the character and nature of each investment, was, as you are aware, most satisfactory; and the Directors feel confident that all their investments made since that date have been chosen with no less care than those which were on the books at the date of investigation. This Company have always proceeded on the principle that the Investments of an Assurance Company should be of a permanent character, as far as possible, and sound beyond all question; and it is with great satisfaction that the Directors are enabled to state that the Company's Funds, amounting now to upwards of Two Millions Sterling, are not only most satisfactorily secured, but of first-class character, consisting almost entirely of advances on the security of Land by Bond and Mortgage, of Land itself, and of Government Securities, the average return being upwards of 4½ per cent.

To the selection of lives the Board of Directors continue to give their constant attention. They are ably assisted in the performance of this duty by their eminent and efficient Medical Officers; but it is of great importance that the result of this care and attention should be demonstrated in a more appreciable manner than by a general statement, and the Directors are gratified in being able to report that the Manager has prepared and placed before them a most satisfactory detailed calculation of the Company's Mortality for the last Quinquennial Period, showing various results, from which highly important practical conclusions may be drawn.—A comparison of the actual with the expected mortality in Scotland, England, and Ireland, which have been separately computed, proves that the mortality has been very considerably less than that exhibited by the Tables known as the Carlisle Tables, on which the Company's Rates are based, and their investigations proceed. The calculations referred to have likewise been so tabulated as to show the power or influence of selection during the earlier existence of Policies when the lives are more select than at more advanced stages. The rate of mortality in the different classes of Assurances, with and without profits, has also been separately exhibited, showing results of great practical importance in connection with the selection of lives. The Directors do not propose to place these calculations formally before the present Meeting, but the Manager will be happy to submit them and explain them to any person connected with the Company who takes an interest in the subject. At the approaching Investigation in 1865 the mortality of a further Quinquennial Period will be added, and the Directors are confident that the results of those combined inquiries will be not only instructive to those interested in the Company, but be useful to all engaged in the business of Life Assurance.

In submitting to the present Meeting the satisfactory results this day exhibited, the Directors trust they will be excused for again referring to a feature which, in their opinion, should greatly tend to secure and extend public confidence in the Institution. They refer to the continuous steady character of the first-class business which the Company transacts. The Company has not allowed its business in any one year to fall behind in its results; thus retaining a foremost place among the Assurance Offices of this country. It has not lagged behind, or been inert at one period to be followed by awakened efforts at another, but its progress has been continuously successful; and it would be a false reserve to conceal the pride which the Directors have in stating that during the last sixteen years the Company have transacted a larger average amount of business than any existing Life Assurance Institution, and that without the aid of personal loan business or foreign agencies, to which many Offices have recourse for the extension of their business. The average amount transacted in the period referred to is upwards of Half a Million sterling of new business per annum.

But it is not only to the steady character of the new accession of business yearly to which the Directors would point in proof of their constant solicitude for the advancement of the Office; they also point with satisfaction to the lead they have taken in simplifying the Contract of Assurance, so as to render it a more perfect security on all occasions and under all circumstances. They would refer particularly to—

The system of declaring all Policies unchallengeable after five years' existence.

The system by which Policies of a certain standing cannot be forfeited until two annual premiums remain unpaid, the value even then being reserved for those interested for a period of years in a lapsed Policy Account.

"Free Policies," which are free from all restrictive conditions as to residence, in the case of professional and settled persons who have no intention of going abroad.

In short, they have so simplified the contract that nothing but wilful fraud or the very grossest neglect on the part of the Assured can vitiate the Policy.

The Directors of this Company have not carried out any of these important changes unadvisedly or in the mere spirit of competition, but each step was tested in various ways by diligent investigation, founded on the Company's experience; and probably the best proof of the soundness of their views is afforded by the adoption of these resolutions, in whole or in part, by the most successful of the Scottish Offices.

It has been alleged that no Policy is a complete Assurance unless it is declared unchallengeable from the moment it is effected; but the Directors wisely fixed on five years as a proper period during which the good faith of the Proposer should stand the test of circumstances. It would be most easy to give out Policies unchallengeable from the first, but no Assurer in good faith requires such a contract; he knows that with a first-class Office he has nothing to fear, while it is a safeguard to him that no designing person shall be able by false statements to obtain a contract, and then hold the Company bound to his (the honest Assurer's) disadvantage.

At the same time it is deeply to be deplored that cases occasionally arise in the Courts which tend to retard greatly the advancement which had previously been secured by an enlightened progress. One English Office has lately disputed a policy on the ground that the interest in the life, if it ever existed, had ceased, alleging that payment of the debt which the Assurance was effected to cover had been made otherwise, and the Company gained their case, the contract having been treated by the Court as an indemnity, to which Life Assurance has no resemblance. In Life Assurance the proof of interest is of great importance at the commencement of a Policy, to prevent speculative transactions, but it should not affect in any degree the payment in full of the claim after death.

The Directors do not ask public support on any grounds but those of sound principles, liberal dealing, and cautious management. Year after year passes away and the Company increases in magnitude, but they feel in that very increase a fuller weight of responsibility; and while they cannot but feel pride in their steady business, the increasing revenue, and rapid accumulation, they feel also this, that the more confidence the public place in them, the more careful must they be to fulfil the responsible trust which they hold in their hands, and on which the future support and happiness of so many thousands rest.

The CHAIRMAN, in moving the adoption of the Report, then addressed the Meeting in the following terms:—

Gentlemen,—It would be out of place for me on the present occasion to enter into any of the details embraced in the full and satisfactory Report which you have heard read. But looking generally to the state of our Funds and Investments—the number of Policies effected during the past year, notwithstanding the prevalence of unexampled depression in an important branch of industry—and the small percentage of deaths on Policies previously effected, I am sure you will concur with me in thinking that we have good cause of congratulation for the past, and encouragement for the future. And I therefore propose, with confidence, that the Report and relative statements of the Manager be approved.

We must not, however, forget how much of our success is due to the Manager and the other Officers of the Company, and I beg you will join me in a hearty vote of thanks to them for their zealous and effectual services.

The Report was unanimously adopted.

The election of new Directors to supply the places of those who retire by rotation, in terms of the Company's Acts of Parliament, then proceeded; and the Board was constituted as follows:—

EDINBURGH, 3, GEORGE-STREET.

ORDINARY DIRECTORS.

John Lindsay, Esq., Woodend, Perth.
John Dundas, Esq., C.S.
Andrew Wood, Esq., M.D.
Alex. J. Russell, Esq., C.S.
William Moncrieff, Esq., C.A.
George Ross, Esq., Advocate.
George Patton, Esq., Advocate.
Charles Pearson, Esq., C.A.
Jas. Hay, Esq., Merchant, Leith.
George Moir, Esq., Advocate.
H. Maxwell Inglis, Esq., P.C.S.
Anthony Trail, Esq., W.S.
T. G. Murray, Esq., W.S.
Andrew Blackburn, Esq.

LONDON, 82, KING WILLIAM-STREET.

CHAIRMAN OF THE BOARD—THE RIGHT HON. LORD ELCHO, M.P.

ORDINARY DIRECTORS.

John Griffith Frith, Esq., Austin Friars.
Charles Hemery, Esq., 28, Threadneedle-street.
Lieutenant-Colonel James D. G. Tulloch.
Alexander Gillespie, Esq., 3, Billiter-court.
Lestock Robert Reid, Esq., 122, Westbourne-terrace.
John Scott, Esq., 4, Hyde Park-street.
Francis Le Breton, Esq., 21, Sussex-place, Regent's Park.

MANAGER—Will. Thos. Thomson, F.R.S.E.

RESIDENT SECRETARY in London—H. Jones Williams.

JOINT SECRETARIES in Edinburgh—Thomas Robertson and A. Wood Stewart.

A vote of thanks was presented to the Chairman, and the Meeting separated.

By Order of the Directors,

WILL. THOS. THOMSON, Manager.
H. JONES WILLIAMS, Resident Sec.

London, 82, King William-street.

LONDON: Printed by CHARLES WYMAN, at the Printing Office of Cox & Wyman, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the County of Middlesex; and published, for the Proprietors, by JOHN KELLETT SHARPE, at No. 11, Southampton-street, Strand, in the same County.—SATURDAY, MARCH 21, 1863.

AMERICA AND LANCASHIRE.

EVERY day that the desolating and suicidal war in America continues is an additional day of folly and of wrong. Every day demonstrates more clearly the hopelessness of Federal success. Every day unveils more distinctly the sinister and impure motives which actuate the principal advocates for the prolongation of the strife. Every day adds to the severity of the distress which that strife inflicts on those industrious classes who are remote from its scene and are wholly innocent of its origin. The correspondence lately laid before Parliament, especially the reports of Mr. Anderson and the despatches of Lord Lyons, throw much light on the first of these points, and the riots at Ashton and Staleybridge render the last only too sadly certain.

There is said to be an appearance of a revival of the war spirit in the Northern States, and some persons are of opinion that those prospects of peace which were supposed to be indicated by the democratic victories at elections and the obvious and increasing discontent of some of the Western States, are, for the time at least, obscured. We scarcely think this. It is true that the Democrats do not seem at present prepared to avow either that they despair of the restoration of the Union, or that they are prepared at once to commence negotiations for an amicable separation. It is true also that the Republicans seem to be nerving themselves for one more desperate and unscrupulous attempt to crush their antagonists, without regard to the consideration whether liberty and justice may not also be crushed in the encounter. It is true that the rising discontent and the incipient desertion of some of the Western States appear to have been checked, for the time, by the peremptory threats and the repressive hand of the military chiefs. But all this does not invalidate our conviction, that the only parties who are now resolute and sincere in urging the prolongation of the conflict are the contractors and jobbers, who know that peace would bring about a cessation of their plunder, and might possibly involve the necessity of disgorging their ill-gotten gains,—the officials, high and low, who dread lest peace should bring about a day of retribution and punishment for their lawless and unconstitutional proceedings,—and the fanatical Abolitionists, who are conscious that peace must entail the abandonment of that Emancipation policy for the sake of which they seem willing to spend any money, to run any risk, to do any mischief, and to shed any blood. Now, enthusiasts who dread failure, administrative malefactors who dread arraignment, and corrupt tradesmen who dread detection and impoverishment, constitute together a very influential section of the people, no doubt, but still they are neither the whole people, nor even the majority of the people. We have no doubt that the jobbers will persist as long as "green-backs" and Treasury bonds pass current at any reasonable discount; that the government will endeavour to make the war last as long as Mr. Lincoln's term of office, and that the New England Abolitionists will move heaven and earth rather than voluntarily abandon their favourite scheme. But we think, nevertheless, that all these parties feel the ground crumbling away beneath their feet.

The last-named party, especially, are standing upon very hollow and indefensible ground. Only a very small minority of the people even in the North are "anti-slavery," in our sense of the word. The Emancipationists desire to free the negro, but not to fraternize with him. They wish to embarrass and injure the planter against whom they fight, but not to benefit the slave, in whose name and for whose sake some dreamers would persuade us the war was undertaken and is now being waged. The Anti-Negro riots in Detroit, the prohibition of negro immigration in several of the Western States, the bitter feeling which is nearly everywhere manifested against the negroes when they penetrate towards the North, combine to make this very clear. Mr. Anderson, who was sent to the Border and Western districts by Lord Lyons, speaks thus:—

"Nowhere in the Abolitionist States could I find that the freedom of the slave was connected in men's minds with the idea of the amelioration of his condition; nor did the question ever seem to have been seriously agitated what was to be done with the mass of emancipated negroes. I found there was only one point upon which opinion seemed to be unanimous, which was, that no general immigration of negroes into the Free States could be permitted: they must be freed, but they must be kept at a distance; but with these two conditions satisfied, there seemed to be little disposition to pursue the question any further. One of the few persons I met who had devoted thought to this matter, and who had brought very great intelligence to bear upon it, confessed to me that he could see no solution; that the North would not admit the vast body of fugitives, while they could not be returned to the South; and that any scheme of emigration would fail, from the unwillingness of the negro to leave the country. He said the question had been forced upon the country before it was prepared to deal with it, and that he could only trust that the future would develope a solution."

To us it seems very clear that a cessation of the war is as imperatively demanded by the interests of the negro as by those of the white men of both sections. We can conceive few things more deplorable than the prospects of the slave at the present moment, or more criminally reckless than the conduct of his *soi-disant* advocates and liberators. They are very desirous to free him, but appear to have no notion of befriending him. They will take him from his present position, but will place him in no other. If the war lasts much longer, and if it can really be carried into the interior of the Southern States, and if the Abolitionists are to be allowed, as is now rumoured, to decide and direct its

Digitized by Google

movements and proceedings, it is by no means improbable that large masses of the negroes may become embroiled with their former masters, have their position made quite untenable, and their notions and habits utterly disorganized; may be emancipated into helpless destitution, with the certainty that, when they appeal to their liberators to ask what they are to do and where they are to go, they will be met with a repulse, if not with insult, and with the reply, "Do what you like, and go where you like—only don't come near us." Assuredly, slaves as they are, and maltreated as they are liable to be, we cannot conceive it to be for the interest of the negroes that the Federals should conquer.

Now let us turn for a moment to the suffering English working-class who lie nearer to our homes and hearts. For upwards of a year the operatives in our manufacturing districts (to say nothing of those in France and Germany) have been deprived more or less completely of their ordinary means of living. During that period they have been subsisting on about one-third of their usual earnings, have pawned their clothes, have sacrificed their property, have exhausted the savings of long previous years of industry and self-denial. During that period they have been assisted by the liberal charity of the country and by heavy burdens laid upon the ratepayers. Upwards of a million and a half of money has been distributed among them, and probably at least as much more will have to be contributed in one shape or another before the crisis is past. All this distress and all this pressure have been laid upon them by no fault of their own, and as the result of proceedings which no effort on their part could have averted. The suffering of England has arisen solely from the quarrels of America. The present prolongation of that suffering is due solely to the persistence of the Federals in a hopeless and almost objectless contest. Our operatives want nothing but cotton to be again prosperous and happy. The Confederate States wish only to be allowed to grow cotton for us and to sell it to us. Great quantities of it are actually at this moment waiting in the interior to be packed and shipped for our behoof. But the Northerners interpose their blockading squadron, and say that it shall not pass,—that Lancashire mills shall still be silent, and that Lancashire workmen shall still starve or beg. Hitherto we have borne this patiently. The blockade was an unquestionable right of the belligerent Federals; and so long as they were fighting for a definite aim, in which it was possible to fancy a good cause, and with a reasonable prospect of success, we bore the infliction without a murmur, accepted it as a dispensation of Providence, and magnanimously resolved that the Northerners should have fair play, and should coerce and subdue their adversaries if they could. They have tried hard for two years, and have not only failed, but appear further from victory than ever. Naturally enough, therefore, we are growing tired of this. We are weary of men who can neither advance their cause nor candidly abandon it as impracticable. Our operatives are weary of being destitute and idle; our capitalists are weary of seeing their mills standing still, and their wealth rapidly wasting away. Ratepayers are weary of demands for levies of 5s. and 8s. in the pound, which many of them are unable to pay. Relief Committees and Boards of Guardians are growing weary of their difficult and painful task. The people are growing turbulent and angry; the military have had to be called out to suppress riots; our towns have been disgraced by violence; and discontented citizens have been marched off to gaol. And all this because the Washington Government will neither listen to reason nor look at facts.

Now, we do not say that all this is a basis for positive interference or for diplomatic action. We do not think Lord Stratheden's proposal for a recognition of the Southern Confederacy would of itself do anything towards terminating this deplorable conjuncture. We do not say that we ought to insist on the raising of the blockade, and refuse to be kept without cotton because two sections of a distant people choose to engage in an internecine and interminable struggle. But we do say that the North should consider well that we cannot see our people demoralized, our purses exhausted, our industry paralyzed, and our prisons filled, and know that it is the Northern obstinacy alone which inflicts all these evils upon us, without sentiments of more than simple disapproval.

THE INNISKILLING DRAGOON.

WE are glad to observe that a question has been put to the Minister of War with regard to the now notorious case of Sergeant-Major Lilley, of the Inniskilling Dragoons. It is neither for the interest of the army nor for the interest of the public that such cases should be discussed in Parliament or in the press; but, unfortunately, experience shows that, without such discussion, it is difficult for any soldier, without powerful connections, to obtain justice. If Sergeant-Major Lilley, instead of being the son of a poor Lincolnshire carrier, who relied solely upon his own merits for his advancement, had possessed the social advantages of such officers as the Earl of Cardigan, General Windham, or Quartermaster-General Airey, there would have been no need to appeal to the public. Their commanding officers would never have dared to treat them as poor Lilley has been treated; or if they had ventured to do so, they would readily have obtained the most ample redress. In such a case as this it is difficult to be temperate. On the other hand, where so many eminent persons are to blame, it is difficult to believe that there has not been some exaggeration. It may be that the statements which have been made by the relations of the Sergeant-Major have been gross misrepresentations. Whether this be so or not, they certainly demand investigation. If the story told by Lilley's friends is false, Colonel Crawley and the military authorities in India have suffered, and are suffering, under the most grievous calumnies; and the press, both in India and in this country, have made themselves liable to no ordinary penalties. If, on the other hand, the story told by Lilley's friends be true, he was cruelly wronged by his commanding officer. Matters cannot be allowed to remain thus. The memory of the dead sergeant or the reputation of the living colonel must be vindicated. The honour of the British army and the character of the Royal Duke at the head of that army imperatively require the elucidation of this mystery. The facts of the case are sufficiently simple.

On the 25th of January, 1844, John Lilley, the son of a carrier in Lincolnshire, was attested for the Inniskilling (6th) Dragoons, at the age of nineteen. On the 19th of December, 1848, he became a corporal; and on the 16th of July, 1852, a sergeant. The next year he was promoted to the rank of troop-sergeant; and on the 3rd of July, 1853, to that of regimental sergeant-major. On the 25th of May, 1862, he died in prison. From the beginning of his career, until that period, he had continued to acquire the good opinion of all his superiors, and had, at least upon one occasion, been called to the front of his regiment, and had been highly complimented for the steadiness, coolness, and courage he had evinced on more than one occasion. If any further evidence were needed of the character which Sergeant-Major Lilley bore, it would be found in that furnished only last year, after his lamentable death, by Colonel Shute, of the 4th Dragoon Guards. This officer some years ago commanded the Inniskilling Dragoons. He "knew Lilley well during his whole service in the army," and, in answer to a letter from the Sergeant-Major's relatives, Colonel Shute thus wrote:—"I considered Lilley one of the most straightforward, truthful, and worthy men I ever knew, thoroughly sober and trustworthy, an excellent soldier, and respected by all who knew him." To prove the sincerity of Colonel Shute, it may be mentioned that whilst in command of the Inniskilling Dragoons, he recommended Lilley for his commission as an officer, and for the adjutancy of the corps.

So long as Colonel Shute continued to command the Inniskilling Dragoons there was no cavalry regiment in the service more contented or in more admirable discipline. No sooner, however, was Colonel Shute replaced by Colonel Crawley, than a transformation ensued. The causes of that transformation it is unnecessary to enter upon; it is enough to say that in the meantime the regiment had returned to India, and that whilst at Mhow the Paymaster, Smales, wrote a letter to Colonel Crawley, reflecting upon his conduct, whereupon a court-martial was ordered to assemble to try the Paymaster. The investigation lasted thirty days. The evidence was singularly contradictory—a counterpart of the celebrated Bentinck business at Dublin. But among the witnesses who were summoned by the Paymaster in his defence were three non-commissioned officers of the regiment, Sergeant-Major Lilley, and Troop-Sergeants Duval and Wakefield. Now it should be observed that none of these men were voluntary witnesses. They were summoned

Digitized by Google

by Paymaster Smales. He was entitled to summon them, and they were compelled to attend. It was, no doubt, an awkward thing for Colonel Crawley to find that three of the most respectable non-commissioned officers in his own regiment were about to appear against him, and therefore it was not unnatural that he should wish to damage their testimony. However this may be, it is undoubtedly the fact that as soon as the summons to appear as witnesses was served, Lilley, Duval, and Wakefield were ordered to attend at the private quarters of their Colonel, were there privately examined as to having spoken disparagingly of their commanding officer —which, however, they indignantly denied—and were at once marched as prisoners to their respective quarters and placed in close confinement. Here we are told was a double injustice. In the first place the examination took place in the Colonel's private house instead of in the orderly room. In the second place, although there were two field-officers present with the regiment at this very time, and although these officers ought to have been summoned, no one was present in Colonel Crawley's house except his private friends. Nor was this all. The Sergeant-Major's house was a small bomb-proof building built upon arches, to which no doors were affixed, so that a sentry posted in one part had a view of most of the interior of the whole building. The unfortunate Sergeant-Major was a married man. His children had died a short time before the arrest, and at that period his wife was in the last stage of consumption, kept alive, in fact, only by stimulants ordered for her by the surgeon. Colonel Crawley, with his own lips, it is said, and in presence of several officers, desired the sentry "not to lose sight of his prisoner." Thus not only was the dying woman deprived of all intercourse with her friends or persons of her own sex, but she was compelled to perform every act of life in his presence. No wonder that Lilley, when he came to give his evidence before the court-martial assembled to try Paymaster Smales should have said, with tears in his eyes: "The last act (of harsh conduct) is still in existence by a sentry being placed over my bedroom where my sick wife is lying. The door is quite open, and the sentry is posted about two feet from my bed." Such conduct was barbarous. It was more. It was grossly illegal. The Articles of War distinctly declare that "no officer or soldier who shall be put under arrest or confinement shall continue in such arrest or confinement more than eight days, or until such time as a court-martial can be conveniently assembled." Neither Sergeant-Major Lilley nor his comrades had been tried by court-martial, and their confinement continued for more than a month. If they were really guilty of conspiring against their commanding officer, as he alleged, or if Lilley was a notorious drunkard, as he also alleged, his obvious duty was to put them upon their trial. If his object had been to maintain discipline, he would have done so. But if his object was to silence them, or to damage their testimony, he followed a more effectual course. No European, however strong, can endure for a month the heat of an Indian sun in quarters so confined as those occupied by these sergeants. Harassed and exhausted, poor Lilley and his comrade were gradually sinking, when, on the 25th of May, 1862, the order for his release arrived. But it was too late. That very morning he died. The other two serjeants were transferred to the hospital—Wakefield on the verge of madness, Duval utterly prostrated by his long imprisonment. Such are the facts alleged against Colonel Crawley. Are they true, or are they false? If they are true, how comes it that Colonel Crawley still bears the Queen's commission? If they are false, let there be a court of inquiry, that he may vindicate his character.

POLAND AND THE WESTERN POWERS.

M. BILLAULT'S speech upon the Polish question deserves the appreciation of Europe; for it is one of the most masterly expositions of the Imperial policy yet given to the world. The line of conduct sketched out by the Minister for his Imperial master is a sound and stable one. Prince Napoleon had represented with great oratorical ability the sentiments and wishes of democratic France. The Emperor stands in a peculiar relation to democratic France. The triumph of France and of her opinions shall be assured, but not by the hasty and feverish expedient of a desperate war from which all Europe, except France, is to stand aloof. For a single day Prince Napoleon took Paris by storm, and confounded the Bench of Ministers themselves. In the morning M. Billault returned with confidence to the charge, reinspired with courage by the reflections of the intervening night, and perhaps by direct communications held with his Sovereign. The Emperor of France shares all the sympathy which is felt by the French people for Poland. But are we, he asks, not unnaturally, by the mouth of M. Billault, to fling ourselves singly upon Russia, and by a one-handed enterprise to excite the envy, the jealousy, and the suspicion, of the united Continent? Not such is the lesson which the Imperial student of the Tuileries has learnt from the history of the First Empire or even from the experience of the last ten years. At the head of Europe, and supported by the public opinion of Europe, France is all powerful. But single-handed wars in the teeth of European opinion brought France to Waterloo. As the Apostle of a great movement a Napoleon is irresistible. As a solitary and suspected missionary no Napoleon is secure. Such is the view of the monarch who holds in his hand the destinies of the French Empire and the peace of Europe. He is ready to act with Europe in favour of the Poles. But if England and Austria decide upon inaction, nothing is left for the French nation but inaction too. It will be for those who steer the helm of empire to watch and bide their time, to neglect no opportunities, to make the most of chances, and to endeavour to secure by moral power and influence those salutary changes in the state of Europe which at present cannot safely be brought about by French bayonets.

There can be no reasonable doubt but that it is the English Foreign Office which has prevented active interposition in favour of the Poles. It would have been a piece of political Don Quixotism if the Cabinet of the Tuileries had broken with Russia only to awaken on this side of the Channel the same murmurs of dissatisfaction and suspicion that made themselves heard at the beginning of the Lombardy campaign. Not much Liberal sympathy could have been expected to grow upon the borders of the Austrian Dead Sea. Prussia has already pronounced for despotism; and Napoleon III. might have suddenly found himself face to face with an armed reactionary coalition. There is enough in the prospect to bid the most revolutionary dreamer pause. The Emperor has paused accordingly, and he has very fairly published his reasons to the Continent. It was his clear duty to France to engage in nothing singly. England, it seems, on the other hand, was determined to venture nothing—not even diplomatic remonstrance—in common. It will be for the Cabinet of Lord Palmerston to explain their reasons for the policy they have chosen to adopt. Once more the line this country has been compelled by her Government to take seems *primâ facie* to justify the ill-natured criticisms of the Liberals of other countries. A considerable crisis has occurred at which an unhappy and miserably-oppressed race is found struggling for existence against a semi-barbarous and despotic power. Proposals are made to the English Foreign Office for a joint action in the matter, in concert with the other leading Powers. These proposals Lord Russell has declined. He probably was of opinion that, at a great European crisis, the great thing for him to do was to write a letter. The noble lord is a fluent and a pertinacious correspondent, and by this time he has probably covered reams of paper upon the Polish question. Every English envoy, both in the Old and New World, down to the Secretary of Legation at Japan, has doubtless been gradually informed of what Lord Russell does think and what he does not think about Poland, and is undergoing the usual amount of instruction about all the various treaties on the subject of the Poles for the last hundred years. During the past month all the clerks of the Foreign Office have been working double time at the history of the Poles. Nothing is to be seen in that diligent department but maps, and indexes, and documents. Five or six of the ablest young noblemen, whose business has been to analyze everything they can lay their hands on, have almost written themselves away. Lord Russell himself never lays aside his pen except to look out a word in a dictionary; and whatever becomes of the Polish revolution it will be handed down to posterity with a careful and complete correspondence touching on everything that has happened, either at St. Petersburg or at Warsaw, since the era of Stanislaus. The spirit of autobiography and of historical research is making tremendous play in Downing-street.

We do not say that England ought to go to war for

Digitized by Google

Poland, far less to push the French Emperor towards war. But certainly it lies upon Lord Russell to show why England, under his direction, has refused to act in diplomatic conjunction with France. The ways of the English Foreign Office are dark, and it may be that Lord Russell has hidden grounds for holding back. Unless he explains them satisfactorily the double responsibility will rest upon his head, of exposing us to the certain reproach of selfishness and sluggishness, and of gravely disappointing the friends of liberty all over the world. English hearths and homes are too dear to us for us to desire to see England wrapped in the flames of a great war. As yet there has been no question of war, nor can we believe that no alternative presents itself to us except either a desperate war, or, on the other hand, a sullen attitude of isolation on the Polish question towards France and the rest of Europe. Isolation Lord Russell seems to choose, and isolation England will probably find her portion when she wants it least. It is this policy of isolation on our part which has before now left Europe exposed to the dangers of war and revolution. We protest against it most solemnly and with all our strength. England does not wish for foreign alliances any more than for foreign enmities. But when the interests of civilization are at stake, and there is a question of a simultaneous expression of opinion on the part of liberal Europe, to take refuge in political isolation, as the only means of keeping safely out of trouble, is a policy that can only be excused by grave and indisputable necessity.

As for the Polish revolution, it seems that it is destined to run its course. The rival claims of Langiewicz and of General Mieroslawski to the Dictatorship point to an old and incurable Polish disease, namely, that of internal civic jealousy. Whatever the cause, the effect must be to dishearten the national forces. In time, it is more than probable that a bloody and cruel order will again reign at Warsaw. Poland will have to return to her chain, and the savage soldiery that now can scarcely make head against the Polish scythemen will be permitted to revenge themselves for their many defeats upon the unarmed women and children of Poland. It is a sad fate; but the Poles, while they undergo their destiny, will have the glorious consolation of reflecting that nothing has tempted England and France to break through the golden law of non-intervention. The women and children, too, while they are being tortured, will be able to bless Heaven that at last the great principle of non-intervention is safe. Let us hope they will appreciate the privilege of martyrdom in such a cause. To every generous mind in this country it will be a pain and a grief to look on while these things are being done. We are told it is a necessity to remain inactive; but at least we may be allowed to say that it is a sad necessity. Englishmen will not be the better pleased with a European *status quo* which leads to such miserable results, or with a foreign policy of which the necessities are so deplorable. The world is out of joint; and it is at best a meagre satisfaction to be able to think with Lord Palmerston that we are not born to set it right.

THE EQUALIZATION OF THE INCOME-TAX.
